CINCHING UP.

PICTURES OF THE FAR WEST.—VI.

It is difficult to define the charm of a day's riding in the West where the sun is hot, the country barren, the horses generally bad. It must be the simplicity, the touch of reality so prized by children in their play, the truth to circumstances, that distinguish it, as a pursuit, from showy meets of town and country clubs, anise-seed hunts, and masquerading of one sort or another in the saddle.

One must go far to find the indispensable conditions: they are usually the reward of a rather bad time in other ways. The play must be played in earnest, not with an eye to spectators. If possible, it should be part of the business of one's life, yet only lately so, for novelty is one of the conditions; good company, and not too much of it, is another.

One should start early in the morning, with serious intentions. The horses should know their business as well as the men, and for this reason the horses of the country are the best. If there is a woman in the party, she should return in spirit to her primitive condition of dependence upon direct masculine protection and leadership: by the abandonment of her rights she will receive a corresponding measure of her privileges. There should be food in the saddlebags; for women cannot travel as men can, hour after hour without eating, however sure of their powers in this respect they may be at the start. Without food a woman's courage in the saddle, and frequently her temper, give out; and it is not wisdom on a journey to strain either the one or the other more than is necessary. An inevitable strain a woman will endure with dignity, while a trifling but needless one irritates her.

There should be no definite picture of the country in the minds of the adventurers beyond such suggestions as the local names afford — Robie's Gulch, Sour-dough Dick's, the Idaho City road, the road to Silver Mountain. There should be some discomfort to remember with complacency when the ride is over, and the stages should be long enough to give the women of the party the simple pride of showing that they can keep the pace beside the men, with the odds against them of a side-saddle instead of a pair of stirrups. There should be important changes of scenery by the way, such as every few hundred feet of elevation will give in the West, from plain or treeless park to lightly wooded foothills; from these to the deep old timber upon the flanks of the range; and from this again to the crooked trees and dwarfish vegetation on the borders of the snow.

But a journey from valley to valley across the divides between, if not so sensational, is more beautiful and less severe than a steady climb; for in every valley there will be a cabin or a ranch, if not a settlement, and the sight of new faces and strange interiors is part of the rest.

Montaigne, who seems to have been one of the most sensible as well as (by his own account) hardiest of horsemen, says: "I have learnt to frame my journeyes after the Spanish fashion, all at once and outright, great or reasonable. And in extreme heats I travell at night, from sunne-set to sunne rising."

It is impossible to read the mere statement and think of the countries he traversed in this manner without a vivid conception of his wisdom. No woman who has ridden in the blazing West but can sympathize with him when he says, "No weather is to me so contrary as the scorching heat of the parching sunne; for those umbrels or riding canopies which, since

the ancient Romans the Italians use, doe more weary the armes than ease the head."

Have we not dreamed—all of us who are amateurs, and not proud, like the cowboy, of wearing upon our cheeks "the shadowed livery of the burnished sun"—of cool night marches during the season of unvarying weather, when Perseus is striding up the east, and Lyra the beautiful hangs like a lamp in the heavens? That lack of atmosphere which leaves the traveler at the sun's mercy by day gives wonderful brilliancy to the spectacle of the night sky. Soon after sunset the dry summer gale begins to blow; the stars "rush out"; the cloudless sky is dark as on frosty winter nights. Or if there be a moon, the breadth and tenderness of her light in a wide and treeless landscape will be a revelation to those who only know moonlight beset by shadows.

All the night journeys in the fiction of one's early reading come back to revive the restlessness such nights will bring: Sir Kenneth, exiled from honor and slave of the Arab physician, looking back at the Crusaders' camp, at the tents and banners glimmering in the

moonlight, as he rides away into the desert; Quentin Durward mustering his little troop of lances at the hour of midnight beneath the Dauphin's tower. The days of errant heiresses, of Lady Ediths in Palestine, are no more: the Kenneths and the Quentins are engaged in earning their individual livings, instead of guarding banners or convoying disguised ladies across unscientific frontiers. Yet there are nights of the dry season as haunting in their lonely beauty as the nights of Palestine or that hour of the rendezvous at the Dauphin's tower; there are stretches of uncelebrated country as lovely by moonlight as the Syrian desert or the majestic plain of the Loire. And there may be a man, now and then, in the West, though he rides a shock-haired cayuse instead of a stately war-horse, as brave in his way and as simply true as the young gentlemen to whom those important undertakings were intrusted so long ago. And it is to be hoped that such confidence as that of the noble ladies of Croye, who asked but the name of their knight, his degree, and one look at his face, may be ready when called for in the women of the West.

* * *

ORCAGNA (ANDREA DI CIONE). 1308–1368.

(ITALIAN OLD MASTERS.)

WHATEVER difficulty there might be in determining the relative position of Giotto and Memmi, the contemporary chiefs of the Florentine and Siennese schools, through the unfortunate destruction of the work of the latter, there should be no question as to the rank of Orcagna; and if we do not put him higher than either of the other great painters mentioned, it is because the general progress of art had made it possible for him to do what a greater mind could not do in the state of the arts in which Giotto found them; and we might give him credit for what was due purely to the general development. But of all those who follow in the succession of time and work Orcagna stands, like Saul, head and shoulders above the crowd—great in all the great qualities of art.

Andrea di Cione was the second of four brothers, all architects, sculptors, or painters, though the others were incomparably his inferiors. During his lifetime he was always known as Arcagnolo, of which Orcagna is a corruption. He was at once painter, sculptor, architect, and master in every branch of art,

and had so thoroughly assimilated Giotto's great maxims that he took painting where that master left it and carried it on to new triumphs.

Orcagna came to the front in a time when art had greatly degenerated in the hands of the Giottesques, and by recurring to the principles on which Giotto had founded his art, with the aid of all the light that the rival school of Siena threw upon it and a profoundly original insight into nature,—a healthy objective imagination,—he raised his school from what seems like the Byzantine conventionalism of his immediate predecessors. This is the dangerous tendency of all subjective art, to drop into formalities and conventional iteration.

Orcagna was by nature versatile, and had he lived in an era when nature asserted the influence over art which it exercised in the later schools, he certainly would have ranked among the greatest painters of that age. Vasari says that Stefano Fiorentino and Giotto surpassed Giotto in perspective; but Orcagna deserves this praise far more than they, for, owing to his studious scrutiny of Nature, he was better able to conquer the difficulties of rendering her. In his frescos we find the figure drawn and foreshortened with much boldness, and

FIGURE OF THE VIRGIN, BY * ANDREA ORCAGNA.

(FROM THE "LAST JUDGMENT," SANTA MARIA NOVELLA, FLORENCE.)

they bear the impress of his genius far more clearly than his panels, though unfortunately, like most frescos of the fourteenth century, they have suffered much from the ravages of time—enough of them remaining, however, to enable a critic to judge of the artist's power.

Vasari mentions Andrea Pisano as the master of Orcagna, and the tabernacle of Or San Michele makes the statement probable. It would have been impossible to find any teacher fitter to train, in that severe style which his work developed, a man of such comprehensive genius as Orcagna; and it is perhaps in part due to the influence of sculpture on the general evolution of painting that Orcagna's pictures possess the measure of plastic quality, unprecedented at that time, which he shows. It has been remarked that the sculptors of the centuries from the twelfth to the fifteenth were in advance of the painters; and in fact it was not until the Venetian genius became an element in the art of Italy that the balance was restored. It is only necessary to compare the work of old Niccola Pisano with any contemporary painting to see how far beyond the painters of his day that sculptor was in the perception and expression of the essentials of art—apart from color. The dealing with forms as they are felt, and not as they seem, is characteristic of all genuine art, and this was the character of Niccola's work. Who was Orcagna's master in painting is neither certain nor important, for the art education of that epoch was so "all round" that the passing from one branch of it to another was not a difficult matter. The world of Florence breathed an atmosphere of art, by which even Dante was greatly influenced.

What Orcagna did beyond the attainment of the sculptural qualities of painting was to unite with the Florentine traditions something of the elements of Sienese art, then in its fullest vigor. Cavalcaselle says that he united the dramatic qualities of Florentine art with the more vivid coloring of the Sienese school; but it is difficult to accept any such distinction, for what Giotto had shown of dramatic power could hardly be said to have been handed down to the Giottoesques, whose work remaining to us is mainly tame repetition of Giotto's types. The Florentine school was in decadence when Orcagna came on the stage, and he naturally turned for comparisons to Siena, where art had not been thus depressed, and as the works of Memmi were then accessible, he came under the influence of Giotto's great rival and his own only other great predecessor.

Sacchetti makes mention of a banquet given by a number of artists at San Miniato, where,

much wine having been drunk, Orcagna proposed the question, Who was the greatest painter after Giotto? That the jury disagreed is tolerably certain as well as that the palm was not then awarded to Orcagna himself, though he had then executed his principal frescos—the entire chief chapel of Santa Maria Novella, besides the retro-choir and the altar-piece in the same church. In 1357 we find as members of the commission of architects and painters summoned to decide on the completion of the Duomo of Florence, Orcagna, Taddeo Gaddi, and six other painters. After repeated trials and competitions the model of Orcagna was accepted. In 1358 he was called to Orvieto to design the mosaics for the ornamentation of the façade of the cathedral there,—a church destined to commemorate the miracle of the mass of Bolsena,—in which it was intended to employ the highest talent of the day.

We have no clue as to the time when Orcagna painted the retro-choir of Santa Maria Novella. Baldinucci mentions the fact of his pictures there having been injured by a storm in 1358, and a century later Ghirlandaio repainted them and repeated many of the subjects treated by his predecessors. The altar-piece of Santa Maria Novella was painted in 1357, but it is not known whether the frescos in the Strozzi Chapel were executed before or after that date. The first, representing the Last Judgment, occupies the partition behind the altar. The Christ appears in an oblong aureole, half hidden by clouds, surrounded by rays, and with his arms outstretched. Three angels on each side play on musical instruments and hold the symbols of the passion, while the Virgin and St. John kneel lower down, gazing at the Saviour in adoration, each with six apostles seated on the clouds behind them. Below are patriarchs, prophets, saints, kings, and popes, and a group of women dancing for joy. In one corner an angel helps one of the elect to leave his tomb. The elect looks steadfastly towards Paradise, which is painted on the wall to the right. Sinners tear their hair and gnash their teeth, and a demon is dragging off a lost soul to Hell, which is painted on the wall to the left, opposite the Paradise.

The expression of the Christ in the "Last Judgment" is noble, and that of the Virgin is sweet and gracious, while St. John is thin and austere. The apostles are grave and majestic. These are the best preserved portions of the fresco. The group of dancing women is most graceful in design and action, and may be looked upon as the original conception of the heavenly dances which so delight us in the pictures of Beato Angelico. In this splendid composition Orcagna has scrupulously obeyed the laws of composition then recognized; the

fingers are well proportioned and full of movement, and the foreshortening is masterly.

In the "Paradise" the Saviour and the Virgin, crowned and surrounded by aureoles, are seated on a throne upheld by clouds. On each side are angels, cherubim, and seraphim in adoration. Below the throne are two angels singing and playing, and on each side of them stand saints and martyrs, apostles and prophets, each carrying the symbol of his or her martyrdom, and accompanied by a guardian angel in the act of playing, singing, or praying. On the clouds are men and women dancing, while an angel invites a woman to take part.

The "Hell" has been entirely repainted, and we can hardly guess at the original design.

Under these three frescos is a false base, painted in imitation of white marble, and surrounded by a frame. It is upheld by columns, between which are painted busts in *chiaroscuro*. On the ceiling are figures of various saints, the symbols of the four Evangelists, and the arms of the Strozzi. The stained window was probably designed by Orcagna also.

This chapel must have been decorated before 1354, the date on which Orcagna received the commission to paint the altar-piece for Tommaso di Rosselli. Part of the agreement was that the picture should be completed within a year and eight months, but we learn that Orcagna failed to comply with the contract. The panel is in five parts, with a *predella*. In the center, surrounded by an oval ring of cherubim and seraphim, sits the Christ, offering with his right hand the gospel to St. Thomas Aquinas, and with his left the key to St. Peter. The two kneel before him, the former presented by the Virgin, at whose right stand St. Catherine and St. Michael; the latter by St. John the Baptist, with St. Paul and St. Laurence on his left. The *predella* is painted with three legends: a priest in ecstasy before the altar, Christ saving Peter on the waves, and a dispute between St. Michael and a demon for the soul of a dead king.

In this work there is much energy and vivacity of action, and the color is clear and vivacious, but there is not the mastery which we find in Orcagna's frescos. The same is the case with his other easel paintings; for example, the panel in Santa Maria del Fiore, representing St. Zenobius, patron of the city of Florence, treading under foot Pride and Cruelty, while Charity and Humility hold a canopy over his throne, and two minor saints kneel on each side of him.

The painting by Orcagna which once hung in S. Pietro Maggiore in Florence is now in the National Gallery of London. The central panel represents the Madonna being crowned; two angels stand beside her, and ten others

kneel before her, playing on various instruments. On the side panels are twenty-four saints kneeling, among them St. Peter, holding on his knees the model of the Church of S. Pietro Maggiore designed by Orcagna.

In 1355 he set to work on the Church of Or San Michele, one of the noblest examples of architecture, sculpture, and mosaic of the day. The bas-reliefs here show that Orcagna was even a better sculptor than painter. They are full of energy and delicacy, and possess the grandeur of composition and grace of type which distinguish his frescos.

In 1364 and 1366 we find Orcagna again called in to give his advice on the completion of the Duomo. Vasari says that he lived till 1389; but this is certainly incorrect, for in 1376 we find one Ristori named guardian to his two daughters, Tessa and Romola. The last certain date concerning him is 1368, in which year he was dangerously ill.

According to Vasari, Orcagna painted in the Campo Santo of Pisa the great frescos of the Triumph of Death and the Universal Judgment; but this assertion is open to doubt, if indeed not certainly wrong. Modern research has shown that some of the frescos are by Andrea di Firenze, a painter who lived some years longer than Orcagna. It is more than probable that Vasari confused the two painters, and, not knowing which frescos this Andrea had painted, chose these two without considering whether the style and technical execution were attributable to Orcagna.

It is very probable that Nardo Cione, elder brother to Orcagna, was his assistant in many of his labors, and that even in executing commissions on his own account Nardo got help from the younger brother, who was the artistic head of the family. It is quite natural that both Nardo and Jacopo, painting with Andrea, should follow his style, both in painting on his frescos and in their own works. This is the case in the frescos in Santa Croce and the Badia of Florence, in which we recognize the conception of Orcagna, but not his execution. Another follower of Orcagna, to whom may be attributed many of the paintings wrongly considered to be by his master, is Niccolò Tommaso, who took part with Orcagna and Taddeo Gaddi in the council of painters consulted about the Duomo.

In dramatic conception Orcagna can hardly be said to rival Giotto; but without in any way falling into the modern manner of following Nature through the use of the model, it is certain that he had a far more delicate perception of her beauty than any of his predecessors, and some of the female heads in the Spanish chapel are not surpassed in subtle spiritual qualities by anything in later art, certainly not

GROUP, BY ANDREA ORCAGNA.

(FROM THE "PARADISE," SANTA MARIA NOVELLA, FLORENCE.)

by anything of Fra Angelico's, while in plastic qualities—in the modeling of the heads and flesh—they are far beyond the suggestions of any of his contemporaries or predecessors.

Orcagna, as we have seen, designed the mo-

saics for the façade of the duomo of Orvieto, but they have long been replaced by more modern work, and even the designs have perished, for I could find no trace of them in the archives of the cathedral.

W. J. Stillman.

NOTES BY TIMOTHY COLE, ENGRAVER.

ORCAGNA'S fresco of the "Last Judgment," from which the detail of the kneeling figure of the Virgin is taken, is represented above and on the sides of the window of the Strozzi Chapel in the north transept of the Church of Santa Maria Novella, Florence. Above is seen the Son of Man in glory, half of his figure visible above the clouds, that portion surrounded by light almond or heart-aureole, from which radiate sharper beams. His head is crowned with the celestial diadem, and encircled by a golden nimbus in which appears the figure of the Cross. His aspect is full of majesty and grave almost to sadness, as with his left hand he condemns the wicked, turning softly from them with a glance and action befitting the words "Depart from me." His right hand is less consciously extended in blessing towards the good. The fresco thence extends downward on each side of the window, terminating at the dado, and is symmetrical in its distribution, side answering to side. Issuing from the clouds on each side below Christ are his attendant angels sounding the trumpet of the dead and exhibiting the emblems of the crucifixion—three on each side. Below these are seated the apostles upon the clouds, six on each side in two rows of three each: preceding the group on the left of Christ is John the Baptist, kneeling in adoration; and in like attitude preceding the group on the right of Christ is the Virgin,—the subject of the engraving,—her countenance full of veneration and as though inspired. Underneath these groups, and separated by the thick bright cloud on which the apostles sit, is shown the "Resurrection," which occupies the lower portion of the fresco. The condemned represent the rich and powerful wicked ones of the earth, and are made up of kings and emperors, popes and cardinals, princes and princesses, arch heretics, false prophets, and the like. Among the blessed on the right hand of Christ are kings and princes, popes and cardinals, martyrs and saints, and the poor of this world, rich in faith, among whom the head of Dante in profile appears unmistakable, his hands together as in prayer, looking up towards the Virgin. How beautiful is the action of her hands, and what an unconscious expression of purity there is about her countenance! The peculiar adjustment of the veil over the chin and forehead and about the neck seems to be a favorite fashion with Orcagna. Fra Angelico sometimes uses the same costume. The background to the Virgin is a deep blue.

THE detail of the group of women is from Orcagna's fresco of "Paradise," which adorns the entire western

wall of the same chapel. It measures about twenty-six feet wide by about thirty-three feet high, not including the frescoed border or frame which runs around it. The top is arched and terminates at the ceiling of the chapel. It is disposed into three divisions, running from top to bottom, which are filled in the following manner: In the upper portion of the central division (which measures seven and a half feet wide) are seated Christ and the Virgin Mary side by side—the Virgin upon the right hand of Christ—upon a magnificent throne. They are colossal in size, being about three times larger than the other figures about them. This occupies about fifteen feet down of the middle division. Underneath this and down for about ten feet is a clear space in the center of which are two angels upon the clouds. One is playing upon a viol and the other is in an attitude of adoration looking up towards the throne. Below this is the company of the redeemed men and women in the dress of the times—from which the detail is taken. The divisions on each side of this central one are filled from top to bottom with the saints and angels of heaven, twelve rows each and seven in a row, an angel and a saint alternately, but the two lower rows on each side are of female saints only. Most of them are distinguishable by the emblems which they bear. In front of the lower row of the right-hand division an angel is seen leading a woman to join the central group of the redeemed, who seem to be about forming into a stately dance. These figures measure about five and a half feet high. The figures become larger as they near the top, and approach the colossal forms of Christ and the Virgin. The coloring is a delightful play of cool gray tones, enlivened here and there with sweet clear bits, the whole delicate and unobtrusive and yet gay in its tints, with shimmerings of golden halos around the heads of the saints, which are engraved in rays radiating from the center. A finer wall-decoration could not well be conceived. Wonderful and magnificent as this is, it is not the thing that would appeal to the ordinary tourist, who, unfortunately, has no time to lose, and gets not a glimmer of its beauty. One must come prepared to see it in a calm state of mind and ready to devote at least two hours to it. The morning light is the best, for then the sun shines upon the opposite wall and reflects a pleasant glow over all. The attitudes of the figures are graceful; they have a noble bearing and a quiet dignity, and their faces are sweet and refined, expressing in some instances a glow of subdued rapture.

SAMOA: THE ISLES OF THE NAVIGATORS.

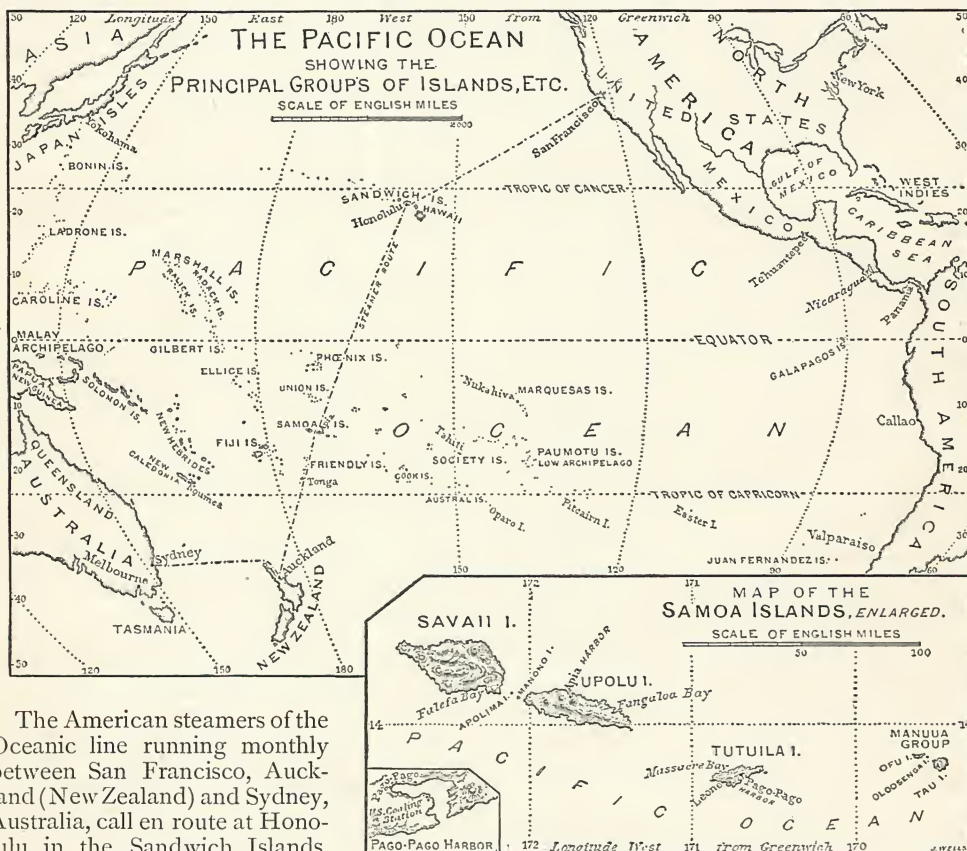

CIRCUMSTANCES which were entirely unexpected compelled us to visit Polynesia in the early part of 1886, and the greater portion of that year was passed in visiting the various groups of islands scattered throughout the Pacific.

Again, in the beginning of 1887, we found ourselves sailing away to the South seas, with fair prospects of a prolonged sojourn among those remote and interesting islands. It was our good fortune that much of the time was passed in the Samoan group.

The group is made up of three large islands, Savaii, Upolu, and Tutuila, and of five others of inferior size, Manuua, Oloosenga, Ofu, Manono, Apolima, making a total area of about three thousand square miles, and containing at the present date not over forty thousand inhabitants, although at one time it is said to have been peopled by over fifty thousand souls.

The position of these islands has been known since 1722, when the Dutch navigator Roggeveen visited the Pacific with his three ships; but his explorations in this particular group were of little importance. Nothing was definitely known of them until the renowned French

The American steamers of the Oceanic line running monthly between San Francisco, Auckland (New Zealand) and Sydney, Australia, call en route at Honolulu in the Sandwich Islands, situated a little over two thousand miles in a south-westerly direction from California. Leaving Honolulu, the steamers continue in much the same course for a distance of twenty-two hundred miles before reaching the Samoan group of islands, which are in the direct line of the steamer's route.

navigators Bougainville and La Pérouse visited them, the former in 1768 and the latter in 1787. It was Bougainville who, observing the skill of the natives in paddling canoes, aptly gave to the group the name of the "Isles of the Navigators."

APIA, THE CAPITAL OF SAMOA.

During La Pérouse's visit to Samoa an unfortunate occurrence took place on board the ship *Astrolabe*. While some natives were inspecting the vessel an accidental discharge of firearms caused the death of a native. The savages were so provoked that a few days after the accident they attacked a boat-load of sailors, among whom were the Comte de Langle and M. de Lamanon, a naturalist who accompanied the expedition, and massacred almost the whole crew. On account of this ferocious act the natives were supposed to be generally cruel and warlike, and they were accordingly feared and avoided until about 1830, when the London Missionary Society established a mission among them, and found them to be a gentle and peaceable race, with few if any atrocious acts of violence such as were characteristic of cannibalistic Fiji. This mission continues in operation up to this time, and has accomplished much good for the people.

The steamers of the Oceanic line pass through the group but do not stop, merely "slowing down" off the western end of the island of Tutuila sufficiently to transfer the European and American mails to the small cutter which is used for the purpose of transporting to Apia the monthly mail matter.

Savaii, the westernmost and largest of the group, is some forty miles long by twenty in width, and is unmistakably of volcanic origin. It is ridged with lofty, cloud-encircled mountains, which are covered with a mantle of dense rich tropical foliage, giving to them an evenness of outline and a softness which delight the eye of the new-comer.

Ten miles to the eastward

of Savaii is the beautiful island of Upolu, perhaps the most important of the group, having an area of five hundred and sixty square miles, diversified by mountain peaks three thousand feet high, volcanic caverns of symmetrical shapes, plateaus of remarkable fertility, and many valleys of exceeding beauty. The volcanic fires having been extinct perhaps for many centuries, the three craters on Upolu have been curiously changed into lakes of great depth and beauty, unknown except to those bold enough and strong enough to climb the rugged mountain trails through a trackless growth of tropical foliage.

The seat of government, Apia, a town of fifteen hundred inhabitants, is situated about the bay of the same name, on the north-western side of Upolu. Here the various ruling monarchs have from time immemorial lived, ruled, and held their court. The bay is an incomplete semicircle in form, extending from Matautu point on the east to Mulunu, a low point of land stretching away to the westward over a distance of two miles. The ever busy coral insects have thrown up a barrier reef, ex-

SAMOAN SISTERS OF CHARITY.

tending from point to point, which receives and dissipates the huge swells of the Pacific, whereby under ordinary conditions of the weather protection is secured to ships at anchor in the bay. During certain seasons of the year, however, when hurricanes prevail, the anchorage becomes unsafe.

In Apia the California redwood cottages of the foreigners built along the thoroughfares, which extend parallel with the outlines of the beach from Matautu to Mulunuu, are surrounded with flowers and tropical plants. One of the old landmarks by which ships steer their course into the harbor is the Catholic mission church, situated near the center of the town, built entirely of coral blocks cut from reefs near by, and inclosed within a wall of the same material. Half a mile distant, on a hill in the rear of the church, stand a college and a chapel belonging to the same Church, in which native men are educated for missionary purposes. The mission also possesses a convent school for the education and training of Samoan girls. Some of the native women renounce the world, take the same vows and assume the same garb as their white sisters, and devote their lives to acts of charity and mercy.

Continuing forty miles to the eastward, we come to Tutuila, a mountainous island nearly a hundred miles in circumference and containing eight thousand inhabitants. The interior of Tutuila is so rugged and the jungle is so dense that it is seldom visited by the natives. There are comparatively few inland villages, most of the inhabitants living in proximity to the sea. On the south side of Tutuila is the entrance to the magnificent harbor of Pago-Pago. The natural beauty and grandeur of this bay are extensively known throughout all Polynesia. Being land-locked, and bounded by mountains on one side and a perpendicular wall of solid rock fifteen hundred feet in height on another, it affords the safest refuge to ships of all sizes during the hurricane season. It was

THE STREET OF APIA.

conceded to the United States by King Malietoa in the treaty of 1872, for the purpose of establishing and maintaining a coaling station for ships of war, and for a number of years past the United States naval vessels cruising in the South seas have drawn their supply of coal from this place.

Sixty miles to the eastward of Tutuila we find what is generally known as the Manuua group, which comprises Oloosenga, Manuua, and Ofu. These are as much a part of Samoa as are any of the other islands mentioned; but it is a curious fact that the inhabitants of these three islands live apart from the others, have a king of their own, make laws to suit themselves, take no hand in the political differences of the others, and will not submit to any interference by them.

It is from this group that the royal family of Samoa is supposed to have sprung. The

NATIVE CHURCH BUILT OF CORAL.

inhabitants still retain many pagan customs and superstitions regarding their king, whom they do not allow to drink water, to bathe in the sea, or to walk from place to place.

Three miles off the westward end of Upolu are situated the two small islands of Manono and Apolima. The latter is an extinct volcano projecting out of the sea, one side of which has tumbled into the water and forms an entrance into the interior.

PAGO-PAGO BAY FROM THE U. S. COALING STATION.

COCOANUTS.

The people of Manono have long held the reputation of being the most proficient seamen, while those of Apolima have the distinction of being the bravest and finest warriors among the islanders.

The islands of Tutuila, Upolu, and Savaii bear a striking resemblance to one another. The mountain peaks are clothed in perpetual green, and all are surrounded by barrier reefs of coral, over which the breakers, never ceasing, dash into spray. The rivers are simply tortuous mountain streams, which at times of heavy rainfall become turbulent torrents, frequently uprooting and carrying away large forest trees. As they rush down to the sea, many cascades, falls, and cataracts of impressive beauty and grandeur are formed; one of the latter plunges over a precipice three hundred feet in height.

The cocoanut, bread-fruit, taro, and banana form the mainstay and daily food of the people. In the economy of a Samoan household nothing enters so largely or assumes such conspicuous importance as the cocoanut. The Samoan chiefs affirm that it was sent direct from heaven. Nothing is more acceptable to a tongue parched with tropical heat than its cool, palatable, and refreshing milk, while its soft, tender meat is fit for a meal. Although these trees grow naturally and abundantly, and to a perfection perhaps unknown in any other part of the world, still, in order that the demand shall never equal the supply, a number of nuts are planted each year. Of later years cocoanuts have been largely cultivated for commercial purposes.

The bread-fruit tree is distributed throughout Polynesia and furnishes food for thousands of inhabitants of the various islands. It is a

MATAUTU, EASTERN END OF APIA.

BREAD-FRUIT.

about six inches in diameter and is of a bright golden yellow, with a rough and pitted surface. When roasted—the usual way of cooking it—it is not a bad substitute for bread, and its taste and merits soon become appreciated by strangers. Next in importance after bread-fruit is taro, or *arum*, which grows in thirty-odd varieties. This is a tuber, oblong in shape, that frequently grows to be fifteen inches long and six in diameter. Its large-ribbed, heart-shaped, heavy leaves, growing from the top of the root, are always conspicuous in Pacific island landscapes.

Although the Samoans now have a written language, the old chiefs, who possess fertile imaginations, rich in resource and abundant in material, delight in recounting the wonderful deeds of valor of their ancestral chiefs and heroes, all of which traditions have been passed to the chief when a boy by word of mouth from his fathers, and he in turn passes them in the same way to his descendants.

Like all other races of eastern Polynesia, this people originally sprung from the Malay Archipelago. Those who have studied Polynesian

handsome tree, with large dark-green dentated leaves. The fruit, when ripe, measures

migrations, traditions, customs, and similarities do not for a moment doubt this fact.

Quatrefages, in his work on "The Polynesians and their Migrations," illustrates satisfactorily the manner in which the Polynesians reached the various groups of islands in the Southern Pacific; and it will only be necessary for one to investigate New Zealand, Tonga, Tahiti, the Marquesas, the Sandwich Islands, and Samoa to find convincing proofs in both the physical and philological characteristics of their inhabitants that clearly indicate one com-

A COCOANUT AVENUE.

most graceful. In disposition they are the most gentle, and in manners the most attractive, while mentally and morally they are much the superior of their neighbors. Their color varies through shades ranging from a dark brown to a light copper, and occasionally to a shade of olive which is exceedingly pretty. Their hair is straight, coarse, and black, although one daily meets a number of bleached red-heads, artificially produced by the application of coral lime, which is used to stiffen the hair so that it will the more easily stand erect—a style greatly admired. The hair is generally worn short, combed upward towards the crown, and receives frequent and liberal applications of cocoanut oil. Varieties of adornment prevail according to the fancy of the individual; these usually express themselves in the use of flowers and leaves, which are twined into wreaths and garlands and worn with becoming effect.

Their language, containing thirteen letters, is, like all the Polynesian dialects, soft and liquid, but not musical, although by some it has been called the Italian of the Pacific. A

superficial knowledge of it, answering for ordinary requirements, may be easily attained; but as it is virtually a language of idioms, it would take years of study to master a sufficient command of it for anything approaching oratory.

Previous to the arrival of the missionaries in the year 1830, these people were supposed to be destitute of religious belief, and by some

were called the “godless Samoans.” This idea was, however, found to be erroneous, and it was discovered that they possessed a religious belief peculiar to themselves. At the time of his birth each individual Samoan was dedicated to some imaginary god, who kept constant watch over his daily actions and guided his destiny. This god was supposed to appear in some visible incarnation, which to that individual remained forever afterwards an object of veneration. They believed in a soul, or disembodied spirit, which they called *Anganga*, meaning a going and coming. This to them was represented in the functions of sleeping and waking. When sleep overtook one they supposed his soul had been called away to wander with other spirits in the lower regions, the location of which they referred to as being under the sea; and when the *Anganga* returned, awakening was the result. They possessed also a system of mythology of their own, in which everything relative to themselves was intimately connected; and by this means they were able to explain, to their own perfect satisfaction, the origin and cause of every obscure phenomenon.

Notwithstanding the influences of Christianity at the present time, the greater number of Samoans of to-day live under the powerful influence and constant dread of some of their old deities. This induces them to perform strange acts of heathenism.

Hospitality is a part of the Samoan religion, politeness one of their chief characteristics, and a dishonest act the exception. Food and shelter are vouchsafed to every one entering their homes or villages, and the stranger has but to consult his own wishes when he is ready to depart. Attached to every village is a *Pale-tale*, or guest-house, set apart for the reception, lodging, and entertainment of visitors. Generally this is situated in the middle of the village, and is also used as a council-house on occasions when the chief and the people assemble to discuss subjects of importance. Foreigners and visitors from other villages are at once conducted to this house set apart for their occupation, a journey of considerable distance often being made especially to meet them, when they are received by the chief of the town and the maid whose duty it is to look after the welfare of

of her dusky attendants, begins to masticate the seductive root. In the meantime the villagers, being advised of the arrival of the visitors, have assembled in another part of the village, collected articles of food, and begun to sing and march in procession towards the *Fale-tale*. Boys and girls, young and old, making a festive display, their persons anointed with cocoanut oil and arrayed in scanty toilets of leaves and flowers, join in demonstration of songs of praise and welcome. The music of their well-attuned voices, first heard faintly in the distance and increasing in sweetness and volume as they approach nearer and nearer, produces a charming effect, the impression of which is long retained by strangers. In the meantime the guests, who have remained seated and silent, as if unconscious of what is going on, preserve a wonderful solemnity of countenance as each donor in turn modestly places his offering at the feet of the most honored one, with salutations inimitable in gracefulness. On such occasions food, consisting of fruits, fish, and sucking-pigs, is sometimes given in sufficient quantities to sustain a visiting party for days and weeks.

No occasion of ceremony or importance takes place without the use of kava, a root of the pepper family, and all exchanges of sociability are conducted under its influence. The concoction of the seductive beverage made from this root is attended with so many ceremonious observances and acclamations of approval that an account of the customs of these people would be incomplete without reference to the manner in which the drink is prepared.

A wooden bowl, a cocoanut cup, and a strainer are the implements used in making the brew. That personage of the chief social importance in Samoa, "the maid of the village," is invariably called upon to brew the beverage, which ceremony, with her attendants, she conducts with becoming dignity. After carefully washing out her mouth in the presence of all assembled, she seats herself upon the matted floor with the bowl in front of her, and with resigned manner and preoccupied countenance begins to masticate the bits of root handed her by the attendants. Piece after piece is chewed until the mouth is full and the cheeks bulging, when the mass is ejected into the palm of her hand and with a graceful swing deposited in the bowl. This operation is repeated until the proper quantity of the root is secured. Then her hands are washed scrupulously clean, and an attendant having poured the required amount of water into the bowl, the maid proceeds with the compounding. With a graceful rolling and twisting movement of the hands she mixes all the undissolved portions of the root in the "fou," or strainer, which, after wringing, is shaken out, and the straining repeated until the brew is finished.

KAVA-BOWL.

A vigorous clapping of hands three times announces that it is ready to be served, whereupon the highest chief, or toast-master, in a loud, monotonous tone, exclaims: "Ah, here is kava! Let it be served." Then one of the attendants produces the cup and presents it at the bowl to be filled by the maid, which she does by plunging the strainer in the liquid and afterwards squeezing it over the cup. She will then, says a writer on Samoan customs, face about, and with the cup held delicately by the outer rim, level with her dimpled chin, and with her arm raised, stand in the most charming attitude of expectation, awaiting the crier's instructions as to whom she is to take the cup. The toast-master, having decided who is to be honored by taking the first cup, calls out his name with a loud, sing-song voice. The louder and more prolonged the name is pronounced the greater the compliment. The maid bows with dignity and presents the cup to the honored one with her most irresistible grace of manner, then stands with a becoming air of simplicity awaiting the command of the person whom she has just favored, who either returns the cup to her with a gracious acknowledgment, or with dexterity spins it along the floor-mats towards the bowl, the perfection of which practice is to cause the cup to stop immediately in front of the bowl. The

THE SIVA DANCE.

accuracy with which this feat is sometimes accomplished is surprising.

The cup is again filled, and in the same manner the Samoan nectar is presented to the person next in rank, until all the chiefs have been served. Kava is tabooed to women, so they never partake of it except upon occasions of very great ceremony, and then only to touch it to their lips. The effect of kava is slightly exhilarating to the mental faculties, and under its influence the imagination becomes active and poetical, while a happy feeling of indifference to surroundings is experienced. It never intoxicates, but when consumed in excessive quantities it has a paralytic effect on the lower extremities, which is sometimes sufficiently pronounced to prevent the individual from standing erect and walking.

The Samoans are a joyous, fun-loving people, and under the slightest pretext for an excuse they gladly indulge their buoyant natures in singing and dancing. The latter is a pleasure largely indulged in by all ages and classes. Among the young people a number have reputations for the grace of movement displayed in the "Siva," a dance of a variety of figures made up of graceful posturing, executed to the time of humdrum music and accompanied by singing in high-pitched notes.

An experience in which every stranger vis-

iting Apia is invited to indulge is a jaunt of about three miles to what is known as *Pupaa-seaa*, a sheet of water falling over smooth rocks, where he is introduced to the novelties of a Samoan picnic, which is in reality a day's frolic in the water.

Generally the party is decided upon several days previously, so that an ample supply of refreshments may be prepared and sent ahead early in the morning, cooked in the Samoan fashion, with hot stones, in the ground.

At about 8 o'clock, while the dew is still on the leaves, dusky maidens, resplendent with cocoanut oil and attired in festal wreaths of flowers and bright-colored *lava-lava*, assemble with the young men and invited guests at the appointed place preparatory to the march. Shouting, laughing, and singing they spring lightly along the path leading to the falls, and as soon as they arrive one after another eagerly jump into the clear cool pool of water at the base of the falls, diving and splashing in the water with screams of laughter and delight that make the valley ring with their enthusiasm. The greatest feat, which, when first attempted, fairly takes the breath away, is to go above the rocks over which the stream rushes, and with three or four seated together, toboggan-fashion, slide over the smooth rock for a distance of eighteen feet at an angle of forty degrees and plunge into the pool below. The sensation produced is indescribable, and can hardly be imagined unless realized. After spending a few hours in the water it is forsaken to partake of dinner, served upon banana leaves for plates, and with fingers

BAMBOO PILLOW.

for forks. Then all return to the aquatic sports, which are kept up until it is time to return home.

The only industry engaged in by the people, aside from fishing, collecting copra, planting taro, and cultivating fruit, is the making of *tapa*, or cloth from the inner bark of the paper mulberry tree, and since the introduction of cotton prints among them its production is annually decreasing.

The various pieces of cloth are glued together with arrow-root paste until pieces sometimes a hundred feet in length by eighteen feet in width are formed, which the old women, who make all the *tapa*, color and figure into stripes, squares, triangles, etc., according to their wishes. A certain color and figure, however, are set apart for high chiefs and royalties, and are never used by commoners. Until fantastically figured and gorgeously colored prints were imported into the island, a piece of *tapa* a yard square, worn about the loins and called a "lava-lava," was all the clothing used by the natives. Fine mats of straw and of twisted fiber of the paper mulberry, the elaboration of which frequently consumes years, are considered the most valuable of Samoan possessions, and are handed down from one generation to another. A fictitious value is placed upon these mats, and only occasionally can they be purchased.

The Samoans have not varied the architectural features of their houses for many generations. A fairly correct idea of a Samoan house is represented by a huge beehive, forty feet in diameter, raised from the ground by a number of posts, varying from four to six feet in height, according to the size of the structure, and separated one from another around the circle at intervals of four or five feet. In the center are two and sometimes three main posts sunk into the ground to support the roof, and securely braced to give stability to the structure. To these the rafters are lashed, curving gracefully downwards and outwards to the circle of posts. The rafters are made of pieces of bread-fruit wood, and, in order that

THE PAPAASEAA.

they may have the necessary curves, are made of pieces spliced and lashed together with sennit, a rope made from the twisted fibers of the cocoanut leaf. The rafters are crossed with ribs about two inches wide, made of the same kind of wood, and are lashed to the rafters with sennit.

The roof is thatched with sugar-cane leaves strung on pieces of reed four or five feet long, and secured to it by overlapping one end of the leaves and piercing them with small ribs of cocoanut leaf fiber, the whole being lashed down with sennit. The process is slow, but when properly done a roof is formed which lasts for

A SAMOAN HOMESTEAD.

years, notwithstanding the heavy rains prevailing at certain seasons. Cocoanut leaves plaited together, forming mats four feet long by eighteen inches wide, fastened with sennit, inclose the sides of the house at night. The floor of the house is made of smooth pebbles and pieces of coral brought from the sea, over which are spread coarse mats for ordinary requirements. The interior of the house is one large apartment used for all purposes except cooking, which is done in an adjoining hut used exclusively for that purpose. For sleeping purposes the room is divided into a number of apartments by means of tapa, swung on sennit ropes, as curtains. Folded tapa and a few mats form a comfortable bed, which is removed in the morning and the curtains lifted. For a pillow, bamboo of various sizes and lengths, raised a few inches on short wooden feet, is used. This crude device serves an admirable purpose in the tropics, but it can, however, during one night's effort to sleep, cause more annoyance to one unaccustomed to its use than anything the writer can recall, unless perhaps it be the indomitable energy of the Polynesian mosquito. Fire being unnecessary for heating purposes, the Samoans never have

fireplaces, but in their stead possess a "family hearth"—a small excavation in the floor, walled with rocks, where formerly flaming fires of dried cocoanut shells and leaves were made as offerings to their gods, and around which, after the evening meal, the family gathered, bowed their heads and prayed to the gods, great and small, for prosperity and happiness.

The negotiations between the skilled and wily carpenter and the prospective Samoan house owner would amuse, but hardly meet the approval of, the business man of to-day. Under the propitiating influences of kava, the necessary presents are produced to induce the carpenter to undertake the construction of a house. It is begun at once, without any terms of agreement, and the work advances until the carpenter thinks more presents necessary, and he ceases work. Additional gifts being made, the carpenter continues the construction until he deems it necessary to demand another contribution, when he again stops work. If the contribution is not forthcoming, labor is suspended on the incompleting house, never to be undertaken for completion by another of the craft; and forever afterwards it remains unfinished and a public reproach to

the good name of the unfortunate owner, who, at the time of its beginning, not knowing what may be the ideas of the carpenter as to the

A SAMOAN CANOE.

A WAR CANOE.

cost of its construction, must either call upon the community for aid, which is generally freely extended, or suffer the humiliation of this unfinished monument.

In the construction of their large canoes these people have shown great ingenuity and skill. Their smaller canoes are made after the pattern of outriggers, which is the prevailing form used throughout Polynesia.

The larger canoes, capable of making inter-island passages, and carrying from fifty to seventy-five persons, are models of aboriginal skill and patient labor. Unlike the smaller ones, they are made of many small pieces accurately fitted and sewed together with sennit on the inner side by a novel process of sewing which leaves the outer surface perfectly smooth. A small deck in the bow is the seat of honor, and is occupied by chiefs and the pilot, who stands erect and directs the course of the canoe as it passes through the many small and dangerous openings in the coral reefs. The helmsman occupies a corresponding deck in the stern, where, sitting cross-legged, with the aid of a long pole he steers the boat with remarkable accuracy and dexterity. Four persons occupy each thwart of these sea canoes. Sitting cross-legged and fac-

ing the bow of the boat, with short, heart-shaped paddles they literally dig their way along at a rate of speed varying from one to five miles an hour, keeping perfect time in stroke to the music of the songs they sing. By lashing together two or more canoes and building a thatched deck-house over them, accommodation for two hundred warriors is secured. In time of war these boats cruise from island to island, using cocoanut leaves woven together for sails.

The government of Samoa is a limited monarchy, presided over by a king and a vice-king, and, since 1873, by a parliament of chiefs, divided into an upper and a lower house which is called the *malo*. In the year 1873 Malietoa Laupepa, the noblest born of all Samoans, a direct descendant through twenty-three generations of Savea Malietoa I., was proclaimed king, and recognized by England, Germany, and the United States. At the same time Tamasese, a high chief, was made vice-king.

Malietoa was carefully educated in the mission school. Personally he was retiring and unassuming. He was of studious habits, and among his subjects was considered a man of

KING MALIETOA, AND ORATOR.

much learning, and by them revered and beloved. His reign was quiet and peaceful until the close of 1884, when conniving intrigue became active, which finally resulted in Germany's attaching the king's sovereign rights to the municipality of Apia. About that time, Tamasese, the vice-king, became prominent as

a rebel, and being openly supported by foreign representatives, who conceived the idea of overthrowing Mali'toa for their personal interests, he was induced to revolt against the legitimate king, who was eventually seized and deported in January, 1888.

The most respected and honored person-

ages among the people, next to the chiefs, are the orators, or "talking men," who are the mouthpieces of the chiefs. This is a profession aspired to by only the few who become proficient in rhetoric, which they use with telling effect when addressing an assemblage according to the dictates of the chiefs whom they represent.

who consider that they possess equal rights in their distribution. So long as this condition of affairs exists the individual distinction acquired by personal wealth is impossible, and they will never progress to the state of those nations where the reign of personal interest is supreme.

It would be unnatural for the visitor who understands these brave, generous, and noble-

RESIDENCE OF MALIETOA.

There is an established communism among the people. To go among their friends, take up their abode, and remain with them as long as they please is a liberty that all enjoy alike; and with aboriginal naïveté they borrow or beg of one another whatever may please their fancy.

Stingy or disobliging are epithets so opprobrious and insulting to Samoans that they will give almost anything they possess, or will adroitly perpetrate an untruth, rather than acquire so repugnant a distinction. No matter how energetically one may labor, his earnings soon pass from his possession to his family or clan,

hearted people not to feel great sympathy for their future and welfare. "*Talofaa*" ("Love to you") is their word of greeting to him, always accompanied by a smile and an honest handshake. "*Tofaa*" ("God be with you") is their parting benediction, the significance of which was never appreciated until the hour arrived when with regret we took leave of our dusky friends who had assembled on the beach and at the boat landing, and heard their gracious last parting, "*Tofaa alii, alii tofaa*" ("Good-bye, chief; chief, good-bye"), which lingers like a melody in our memory after months of separation.

Hervey W. Whitaker.

OUR RELATIONS TO SAMOA.

BY THE COMMISSIONER SENT TO SAMOA BY THE UNITED STATES IN 1886.

WITHIN the last few months the agitation of the subject in Congress and in the press has made known to the country a group of islands superior in location, in natural advantages, and in the character and intelligence of its people to the

rest of Polynesia; and we have learned that we possess treaty rights of the utmost value, including the opportunity to control the most magnificent harbor in the Pacific, the loss of which to the British Empire was long ago bewailed by the most intelligent Englishmen. The change of sentiment in this country on this subject is well reflected by the action of

VICE-KING TAMASESE AND ORATOR.

Congress with respect to it. Though hitherto suggestions from the Navy Department as to the necessity of an appropriation for the improvement of this harbor and for the establishment of a naval station received no attention whatever, a substantial sum has recently been voted in both Houses for that purpose, and the attention of Congress and of the country has been thoroughly aroused to the necessity of asserting and maintaining our right to the permanent neutralization of Samoa and the establishment of its autonomy on a firm foundation.

Mr. John Williams, the martyr missionary,

who claimed to be the first Englishman to visit the group, found the Samoans peculiarly susceptible to the influence and teachings of the missionaries, and he relates that in less than twenty months chapels were erected and the people ready and anxious for instruction. The islanders are now generally Christians by profession, and their consistency in practice is quite up to the standard of more civilized people. They are particularly rigid in their observance of Sunday, and cannot be induced to engage in any work on that day.

Nine years after the first visit of Williams,

Commander Wilkes not only touched at the islands during the course of his famous expedition, but made a thorough examination and survey, and his narrative contains an extremely interesting report of the group and its inhabitants. He was much struck with the manliness and intelligence of the natives, and found that the greatest restraint on the conduct of the chiefs appeared to be the fear of losing the good

observing and reporting upon Samoan affairs, and to impressing those in authority there with the lively interest which we take in their happiness."

During his second visit Steinberger resigned his position as an agent of our Government and became premier of a Samoan government, formed under his direction. His prominence and influence excited the apprehensions of the

TAMASESE'S RESIDENCE.

name of their ancestors, and of not handing it down to posterity pure and unspotted. His conclusion was that with instruction and civilization they would probably become a thriving people.

After the visit of Wilkes the attention of our Government was again attracted to the group by the report made by Commander Meade, United States Navy, of his agreement with the chief of Tutuila in 1872. About the same time the attention of President Grant was directed to Samoa by a report of an investigation of the resources of the islands by private individuals on the Pacific coast, and the result was the appointment of Colonel Steinberger as a special commissioner of the United States.

The commissioner sailed from San Francisco June 29, 1873, and on February 9, 1874, transmitted a long and interesting report covering the subject matter of his instructions.¹

Having won the confidence not only of the natives but of the foreign residents, Steinberger returned to Samoa in a man-of-war in 1874 as a special agent of our Government, to serve without pay. He was the bearer of certain presents from our Government to the king of Samoa; and his instructions, dated December 11, 1874, expressly limited his functions "to

English; and our own consul being also hostile to him, the king was induced to ask his deportation, which was accomplished by a British man-of-war.

Among his papers, which were seized, was found a secret agreement with the German firm at Apia, which was used as evidence that he was acting in its interest. The causes of his losing influence have been the subject of much discussion, which is now of less interest than the existing situation.

It was after Steinberger's term that the treaties of 1878 and 1879 were made, and the present chapter of Samoan history began when first the German and then the American flag was raised, both acts being disavowed by the respective governments.

The agreement between Great Britain, Germany, and the United States that each should send to Samoa a confidential agent to make an investigation and report grew out of a suggestion of our Government for a conference at Washington between representatives of the three treaty powers. The proposition was accepted, with a modification, previously suggested by Germany, that before the conference each power should send a representative to investigate the political condition of the islands and report thereupon, with suggestions

¹ Ex. Doc. No. 161, H. R. 44 Cong., 1st Sess.

KING MALIETOA AT HOME.

as to the best remedies for the troubles existing there. The essential basis of all negotiations, prior to that time and since, has been the preservation of Samoan autonomy; and the neutrality of the group was treated throughout as something which could not be interfered with without the violation of rights possessed by the Government of the United States and considered valuable enough to be maintained. After the German flag had been raised at Apia, under date of January 12, 1886, the Secretary of State telegraphed to our Minister at Berlin:

You will temperately but decidedly, in oral conference, notify the German Minister for Foreign Affairs that we expect nothing will be done to impair the rights of the United States under existing treaty with Samoa, and anticipated fulfillment of solemn assurances heretofore and recently given that Germany seeks no exclusive control in Samoa.

In reply to this Count Bismarck said to Mr. Pendleton, January 16, 1886:

Whatever may have occurred, we intend to maintain the *status* as it has heretofore existed. We have been satisfied with that; it has been satisfactory to the three governments; we have neither interest nor desire to change it; but if we had, we would take no step, make no movement, without frankly consulting in advance the United States and Great Britain. If any wrong has been done, it shall be

righted and reparation shall be made, and nothing shall be allowed to change the relative positions of these governments.

In the same interview Mr. Pendleton said "that the United States have a treaty with Samoa, antedating that of Germany or England, securing to their citizens great advantages in the way of trade and whatever further benefits might, at any time, be granted to the most favored nation, and would not look with composure on an attempt from any quarter whatsoever to interfere with the provisions of that treaty, or to acquire any exclusive rights or privileges of occupancy or trade." "To all of which," Mr. Pendleton writes, "Count Bismarck assented very appreciatively." The first suggestion of joint control by the three treaty powers was made by the Secretary of State in the dispatch to Mr. Pendleton, June 1, 1886, proposing the conference which contemplated absolute equality of action and control among the three powers. The proposition of a conference, and prior to it an investigation by the commissioners, was in the line of this purpose alone.

The instructions to the American commissioner, under date of July 22, 1886, after referring to the provisions and assurances of the

three powers, "of their positive abstention from schemes of annexation or sole protection of the islands," proceeded to recognize that "the temporary situation in the islands may prove to be such as to require the joint effort of the treaty powers to preserve order and insure stable government, in which native interests should be under autonomous control." It is asserted that

Each [power] has its treaty with the native Government, and their several rights run side by side, so that any predominance of one would clash with the interests of the others. This is admitted by the treaties themselves. Those of Germany and Great Britain each recognize the prior treaty with the United States, and both, by implication and in terms, bind those powers to respect it. This is especially true of the right to maintain coaling stations on the islands, which was first secured by the United States by their treaty of 1878, a portion of the harbor of Pago-Pago being set apart for the purpose. The British and German treaties followed with similar provisions, the former expressly recognizing the prior right of the United States in the premises by providing that their national stations should not encroach on that portion of the harbor already secured to the United States. We have here the principle of neutralization distinctly enunciated, and this circumstance has had an important influence on all that has since transpired. It is of special importance to the United States, for in no other part of Polynesia is a right of this nature possessed by them.

Under these circumstances and with these instructions I went to Samoa. Leaving San Francisco on the mail steamer July 31, 1886, I reached Tutuila on Sunday, August 15, having spent a night and a day at Honolulu. It was about noon when the island was reported, and very soon it rose out of the sea, lofty and precipitous and clad in a singularly beautiful garb of green, which was an agreeable surprise after having fed the imagination for a week upon the bare and blackened appearance of the Hawaiian group. It was not long before I and my belongings were put over the side of the steamer and transferred to a small German schooner which had taken the place of the German mail cutter. The voyage of sixty miles from the westerly end of Tutuila to Apia occupied the afternoon and night. By daybreak we were sailing around the eastern end of Upolu, and as the dawn progressed the beautifully wooded slopes of the island, rising from the sea by gradual ascent to the height of four or five thousand feet, came out in bold relief. Before 8 o'clock we rounded the point at the entrance to the harbor, and as we slowly approached our anchorage there was ample time to observe the beauty of Apia, nestling under the hills and stretched along the shore in a semicircle from Matautu Point to Mulinu'u, until recently the traditional seat of Samoan government.

The United States steamer *Mohican* had

VOL. XXXVIII.—5.

been ordered by cable to Auckland to meet me, and it was a disappointment not to find her at Tutuila. I learned later that she had been in Fiji, beyond the reach of the cable; and it was some time after my arrival before I had the satisfaction of seeing her steam into Apia. Meanwhile, in the absence of the consul, I found myself comfortably ensconced at the American consulate, taking my meals for a few days at the International Hotel, kept by an American. Afterwards, in view of its distance, I was fortunate enough to make an arrangement for meals nearer the consulate until the *Mohican* should arrive. The German officials have most excellent quarters, and Mr. Travers, the German special commissioner, was kind enough to invite me to take up my abode there, and the British consul and his wife also threw open their very attractive and comfortable house to me. Both these invitations, however, I was obliged to decline, as the acceptance of either would have given a false impression to the natives, who are easily affected by the most trifling circumstances.

On the morning of my arrival, after breakfasting at the hotel I started out in quest of the American consulate, and stopped to inquire the way at the store of an American merchant, to whom I had brought letters and messages from his friends in the United States. While talking with him, he suddenly turned and beckoned to a fine-looking native who was passing, saying to me at the same time, "Let me introduce you to the Secretary of State." It proved to be Mamea,¹ who came to Washington in 1878, and who was a cosignatory with Mr. Evarts of the treaty between the United States and Samoa. I had already become somewhat accustomed to seeing the natives walking along the street with only a breech-cloth, or lava-lava, except that many of the women wore some loose garment about the shoulders; but it required a readjustment of preconceived ideas to stand as I did, shaking hands with Mamea and observing a Secretary of State barefooted, bareheaded, with a loose doublet around his legs reaching to the knees, and a blouse or jacket, which, I afterwards observed, was rather characteristic of high officials, who usually wear either such a garment or a shirt hanging loose over the lava-lava. I found Mamea affable and intelligent and able to speak English moderately well. He walked with me to the consulate, near which I saw, flying from a flag-staff lashed to the top of a large tree in front of the Government building, the Samoan flag, and waving over it the little American flag which

¹ It turned out that he was really Secretary of the Interior; but it made little difference, as there was then practically an interregnum and the offices were merely nominal.

Consul Greenebaum had raised the May previous. Captain E. L. Hamilton, the American vice-consul, received me very courteously, as did also Mr. Travers, the German commissioner, on whom I called a little later. Captain Hamilton has resided in the islands over thirty years, has accumulated property there, and both personally and officially was a creditable representative of this country. His wife is a Samoan woman of high rank, very attractive in person and manners, whose hospitality is doubtless remembered by all Americans who have visited Apia within the last few years.

Soon after my arrival at Apia, the English commissioner, Mr. (now Sir John B.) Thurston, arrived, and he and Mr. Travers and I became absorbed in the investigation which was the object of our visit. Very soon after my arrival, though I had no official relation to the Government there, I made a call of courtesy upon the king and found him to be a man of fine personal appearance, with an intelligent and benignant countenance, and great dignity of bearing, which the extreme simplicity of his native dress did not lessen. Mr. Thurston also called upon the king, but Mr. Travers did not, giving as his reason the strained relations between the local German officials and Malietoa, which were afterwards made the pretext for a declaration of war by Germany against Malietoa personally. The king shortly afterwards made an appointment with Mr. Thurston and me to return our calls, and we received him together. I afterwards saw him frequently without any reason to change my opinion.

This king presents a figure humble but heroic. Monarchs of prouder name and more extended sway might emulate the singleness of heart with which he devoted himself to his one object in life — the good of his people. It was impossible to converse with him frequently without being deeply impressed by this as his leading characteristic. Conscious of his own limitations, but of extreme rectitude of purpose, he lent a willing ear to those who could unfold the better ways of higher civilization and adapt them to the growing needs of a people strong in native stock and promising in capability of development under stable government and enlightened contact; even his apparent vacillation at times, as he sought annexation or protection from one or other of the great powers, was due to a lofty preference for the welfare of his country at the expense of his own sovereignty. When at last confusion, disappointment, and treachery closed around him, Malietoa gave himself up, in the vain hope that the abnegation of all that made life dear, his personal hope of being the medium of reform and advancement to the Samoans, might spare them the cruelty

of further outrage and suffering. Calm, Christian, and in a certain sense statesmanlike, from his exile home in strange islands of the western Pacific, Malietoa Laupepa, the rightful and recognized king of Samoa, has a call upon our high consideration and active remembrance. Three other chiefs deserve special mention. Mataafa, since chosen king and surnamed Malietoa, was, during my visit, in the party of Tamasese, though the latter was his inferior both in lineage and capacity. Mataafa is a man of great force of character, as he has recently demonstrated to the world. He is, in common with many of his countrymen, a devout Roman Catholic, of which church there is a flourishing branch in Apia under the care of French missionaries. In my report, since published, I referred to Mataafa in connection with a prediction which I ventured to make that the recognition of Tamasese would result in immediate divisions among his followers as to future leadership. Seumana was the governor or head chief of the Tuamasaga district, in which Apia is situated. He seemed to me, taking in the whole range of physical, mental, and moral attributes, a man of as fine nature as can be produced anywhere. The highest civilization has not revealed a more attractive picture of domestic happiness than that of Seumana and his wife, Faatolia, and their baby. In the stirring time prior to Malietoa's deportation Faatolia was, probably with truth, suspected of being a medium of communication between Apia and her friends in the bush. Consequently she was taken to the German barracks and placed under a guard, who are said to have refused to permit her to go out of their sight, even under the most extreme necessity.

Asi was the great war chief on the side of Malietoa. Having a physical frame unsurpassed by any I have ever seen, he was at times as gentle in manner as a woman. He conversed with fluency and force and emphasized his words with the right forefinger extended, which often came down upon a table in front of him with a force which made one tremble to think what would be the power of his uplifted arm with club or ax in battle. Asi's daughter, Faapeia, was the most graceful and beautiful Samoan dancing girl, with a figure which might excite the envy of any woman. She never moved about without a train of attendants, and in this style frequently visited the American ships and danced for the amusement of the officers. At the time of greatest stress she was asked to dance on the German ship, and her father refused to allow it. Her dancing in the United States ship *Adams* immediately after made the German officers very angry, and soon afterwards Asi was deported. The other native chief whom I specially recall

was Selu, the Secretary of State. Slight in stature and frame, he was keenly intellectual and fertile in resources, with courtly bearing and mild, though persuasive, speech; it often seemed to me that a high degree of education would make him capable of winning great social triumphs anywhere.

Tamasese, the leader of the insurgents, I did not see, he being with his forces at a distance from Apia; but there was a general concurrence of opinion, except among those who were engaged actively in supporting him, that he was a man inferior in capacity to the chiefs just mentioned; and although entitled to be treated as a chosen head of the Tupua family, it is hardly likely that he could have maintained himself as a leader except under the tutelage and with the active support of a foreign power.

The climate of Apia is not at all trying. The temperature does not vary the year round two degrees from 80° F., and there is always the trade-wind blowing with such regularity that the residents speak of going to windward or leeward instead of to east or west. The atmosphere is moist, and out of the breeze one perspires freely; but it is always easy to find a breeze by going out of doors. An umbrella is a constant companion, for protection not only from the sun, but also from frequent and sudden showers, which come without any premonition and are often over before shelter can be reached. The natives always run under shelter from these showers, not because they have any clothes to be injured, but because they object to having their hair wet after it has been dressed; and they present a comical appearance walking along naked above the waist, bareheaded, and holding an umbrella over them. The ease with which foreigners become accustomed to seeing the natives in scanty costume makes it doubtful whether the efforts of the missionaries to induce them to wear clothing like foreigners have been entirely judicious. Their natural costume, besides its inexpensiveness, is well suited to the climate. In Tonga, where the natives are compelled by law to wear clothes, they utilize every available fabric from old coffee-bags up; and the result is not conducive to cleanliness, which is a marked characteristic of the Samoans. The latter are greatly favored by having, all around the coast at short distances, beautiful freshwater rivers, which find their way from the mountains of the interior to the sea over pebbly beds; and in these, at all hours of the day, the natives of both sexes disport themselves like ducks, whose equals they are in managing themselves in the water.

It is the presence in Samoa of a relatively large foreign population; with more or less of the greed and selfishness usually characteristic

of the relations of white people to aboriginal races, that has made difficult the problem of government, and that necessitates the well-considered assistance of the great powers whose citizens and subjects have acquired residence and property interests in the islands.

Having immediately after my arrival settled down to work, after a short sojourn on the shore I had the satisfaction early one morning of seeing the *Mohican* steam around the point and into the harbor; and thereafter I found myself in most comfortable quarters on board, where I enjoyed to the fullest extent the unwearying hospitality of Captain Day and the cordial coöperation, with respect to the objects of my mission, of himself and his officers.

With the exception of two weeks' absence on a trip to Tonga, on the *Mohican*, I was unremittingly engaged in the investigations which I was required to make, and in the course of them found all the foreign residents not only willing but eager to impart information and opinions, all of which had to be carefully weighed with due regard to their source. At last I was transferred from the *Mohican* to the San Francisco mail steamer, and reluctantly bade farewell to Samoa. The 17th of October, on which I left the kingdom, was Sunday in east longitude time. This is observed in Samoa, although it is in west longitude, because the early missionaries carried with them New Zealand time. Consequently as I stepped on board the mail steamer I found myself in the middle of Saturday, October 16, and the following day enjoyed the novelty of a second Sunday, October 17. This made me even again, as I left the out-going steamer on Sunday, August 15, and on the following day found myself in Tuesday, August 17. Monday, August 16, 1886, was a day entirely lost to me, and in place of it I had in that year a second edition of Sunday, October 17.

The commissioners had reported to their governments early in 1887, extracts from their reports were exchanged, and in June and July of that year the conference met at Washington, the Secretary of State representing the United States, and the German and British ministers their respective governments. The protocols of the conference, recently sent to Congress, have fully disclosed its internal history. Its failure of immediate practical result was due to the insistence by the American representative upon the principle of equality of control which had theretofore been uniformly admitted in every reference to the subject by representatives of the treaty powers, while the German representative for the first time set up a claim to mandatory control for Germany, in violation of the understanding upon which the negotiations had proceeded. This divergence

of opinion and the surprise occasioned by it were forcibly expressed by the American representative at the time.

It may therefore be regarded as fully recognized and established that the object of the United States in proposing the present conference, and of all three powers in sending commissioners to the Samoan Islands to report on the condition of affairs, was to maintain autonomy and independence of the islands under a native government. Such being the declared object of the conference, I have listened with regret to plans and suggestions that appear to me to depend upon the recognition of an inequality of interest of the three powers in the political, moral, and commercial welfare of the islands, and to look unequivocally to the prompt suppression of the native government.¹

They embarked upon the conference with a declaration of the absolute equality of the three powers, and that they were acting in an advisory capacity towards the Samoan people, and that they desired to preserve the independence and autonomy of the islands and absolute equality of treatment in respect of commerce, navigation, jurisdiction, etc., and it is further stated that it was intended that there was to be no inequality whatever in respect to the influence to be exerted by the three governments upon this community; that, whether their interest was little or large, the basis of their approach to this question was the equality of the three treaty powers in dealing with the subject of Samoan government. . . . They approached it with equal responsibility and equal right to deal with it. It was understood that they all had agreements in the form of treaties with this people and were disposed to stand by them. This is found in the united representation of the three powers that the existing treaties were to remain.²

The conference was adjourned, not concluded, on motion of Mr. Bayard, to permit the consultation of its members with their governments upon the subject of their differences; and in a dispatch, dated August 7, 1887, Prince von Bismarck, after restating the different views expressed in the conference, admitted that the position taken by the German minister could not be maintained except with the cordial concurrence of both of the other treaty powers, and he reiterated in the most unqualified terms the often expressed understanding as to equality of interest and control.

The Imperial Government does not see in the American counter-proposition any redress of the now existing evils; it does not aim, notwithstanding the preponderance of German interests over those of other nations in Samoa, at the exercise of a stronger influence with regard to the affairs of the islands than England and America, unless such influence would, in the common interest of the three nations, be willingly conceded to it, as has been done by Great Britain, and, as we were in hopes, would be done by the United States too. This hope having proved to be erroneous, we consider, as we have done hitherto, the now existing equality of rights of the three

nations as the acknowledged basis of their relations to Samoa.

The Imperial Government is, of course, far from intending to bring about any change in the political relations which the three powers represented there and connected by friendship entertain to Samoa; on the contrary, we maintain unaltered the existing treaties and stipulations between us and the Government of Great Britain and the United States with regard to that group of islands, as well as the equality of rights of the treaty powers. We shall also in the future continue our endeavors to arrive at an understanding about the necessary reforms in order to establish lasting peace on the Samoan Islands, in the interest of the foreign and native population.

A solemn recognition of the equality of the three treaty powers is found in the Municipal Convention of 1879, which was composed of the three consuls and an additional representative from each nationality; and so carefully were the rights of each power preserved that no business could be transacted at any meeting of the municipal board unless a representative of each power was present. Even after the deposition of Malietoa, and the setting up of a pretended native government by the Germans, the German Minister of Foreign Affairs, as reported by a dispatch from Mr. Pendleton, dated October 13, 1887, professed to recognize that equality between the powers which the action of his government's authorized local representatives had done all that was in their power to destroy. Mr. Pendleton quotes Count Bismarck as saying "that the German Government desired to maintain the good *entente* between the powers in regard to Samoa upon the principles so well known to them all." And while at this time the German officials had assumed practical control of the Government of Samoa, the minister suggested "that there seemed to be no reason for haste just now; and that with new light on the *status*, as it should then appear, all the governments would go forward in the same spirit which had actuated them heretofore."

And it would almost seem as if it was with the view of diverting the attention of our Government from the German operations in Samoa that Prince von Bismarck, on November 18, 1887, addressed to the German minister a dispatch to be communicated to the Department of State, commenting on the alleged "Anti-German attitude" of our consul-general and his predecessors. Even in this paper is reiterated the principle of equality, notwithstanding the asserted "mercantile preponderance" of Germany, when it says: "We have always maintained the principle of equality of rights of nations in Samoa, and never aspired to political advantages."

To this dispatch the Secretary of State, in a comprehensive view of the whole subject, on

¹ Protocol, sixth day. ² Protocol, fifth day.

the 17th of January, 1888, refuted the charges made against our consular officers, and concluded with this emphatic repetition of the American position:

But, for the very reason that the native Government of Samoa is weak, it has seemed all the more clear to the United States that the control of the islands by any strong foreign power, or its representatives, would defeat the great object of securing native independence and autonomy, and the practical neutralization of the group. Under such control a native government would necessarily cease to have more than a nominal existence; the native element in the islands, deprived of voice and influence in the management of their affairs, would quickly succumb to the aggressive and exclusive tendencies of the foreign residents; and, under these circumstances, the islands would inevitably become a colony of the foreign power by which, or by whose representatives, the Government was actually administered.

To this no direct reply appears to have been ever received.

Since the popular interest awakened in the subject in this country and in Congress, Prince Bismarck (January 13) reiterated his assurances of due regard to the treaty rights of America and England with respect to Samoa, and subsequently (February 1) informed our Government that the German consul had been instructed to withdraw his demand for temporary administration of the islands, such "demand not being in conformity to our [German] previous promises regarding the neutrality and independence of Samoa."

It was therefore upon the same basis of neutrality and autonomy for Samoa and equality of rights and influence for the treaty powers, which underlies the entire negotiation, that the renewal of the conference at Berlin was agreed to. The diplomatic assurances from Berlin have been fair from beginning to end. If doubts are entertained as to their fulfillment, they arise from the contrast between previous promises and the progress of events at Apia, as disclosed by the official papers sent to Congress. On August 23, less than a month after the adjournment of the conference, without notice to this Government, war was declared by Germany against Malietoa because of his inability, on twenty-four hours' notice, to pay a large indemnity for alleged thefts of fruit during four years, and for the injury to a German who had his nose broken in a brawl on the Emperor's birthday in March previous. At once, upon the declaration of war, Apia was filled with German sailors, who were ostentatious in their disregard of the most ordinary personal and property rights of Americans and Englishmen. The German flag was raised over the Government house of Samoa. Tamasese was brought

to Apia by a German ship, saluted, landed, and installed as king by the German forces. A so-called government was set up, under control of a clerk of the German trading house as Premier, who early in August had circulated reports anticipating what did occur. Malietoa, having surrendered himself to avoid bloodshed, was deported, and for months the local German officials and naval officers controlled affairs through the nominal government of Tamasese, disregarding the rights of all other foreigners and levying taxes to a point at which the Samoans could no longer pay them and live. The chiefs were summoned, under threats of war, and forced to sign an acknowledgment of Tamasese at a *fono*, held under the guns of the German fleet, at which all discussion was forbidden; and our Government was congratulated upon this result as carrying into effect its suggestion for the election of a king. The office of the Premier was in the German consulate, and thence all Tamasese's orders were issued. Finally the municipal government was broken up.

This condition of affairs grew worse and worse until it was ended by the revolt of the Samoans under Mataafa, the conquest of Tamasese's forces by him, and the awakening of interest in the United States, when the whole subject was brought by the President to the attention of Congress.

For the first time the German Government seemed to understand that there was a limit to the violation by local officials of its promises to us beyond which our Government would not remain quiescent, and a renewal of the conference was proposed with new assurances of good intentions for the future.

Such was the situation when the approaching end of the term of President Cleveland naturally suggested a pause until the new Administration could take up the question.

The position to which we should adhere has been laid down both in the long correspondence and in the attitude of Mr. Bayard in the conference of 1887. The justice of that position has been admitted by Germany and England. Recent events indicate that Prince Bismarck for the first time appreciates that the United States will submit to no less. He understands, as every one does, that Germany cannot go to war about Samoa, and that in such a war she would have an indefensible position upon the facts. Hence it is much to be desired that these two great nations, which ought to be not only at peace, but friendly, will now make a settlement of the vexed question which will conserve all the treaty rights of the United States and at the same time contain the fulfillment of our implied promises to Samoa.

George H. Bates.

THE "TUSCARORA'S" MISSION TO SAMOA.

DURING General Grant's Administration attention was called to the necessity of the United States having coaling stations or places of call for its cruisers in case of war. During the cruise of the Confederate steamer *Shenandoah* in the South Pacific, where she destroyed our whalers, our vessels sent in pursuit were unable to get coal or to go anywhere for repairs. The President, seeing that it was desirable that we should have some point in the South Pacific where our navy in time of need could find shelter and a depot for supplies, and our mercantile marine a place for trade with the surrounding groups of islands, sent Colonel A. B. Steinberger to the Samoan Islands in 1873.¹ Steinberger remained among them long enough to make a thorough investigation bearing upon the commercial value of the islands, their harbors, and the facilities for coaling stations for our cruisers. He made his report, which was sent to Congress by President Grant April 21, 1874. The Samoans addressed a letter to President Grant asking that we would aid them in forming a government, praying for our support, and offering annexation to the United States. The President sent Steinberger back to Samoa as American commissioner. He took passage from San Francisco in the flag-ship *Pensacola* to Honolulu, where he was transferred to the United States ship *Tuscarora*, Commander Henry Erben. A large quantity of freight in shape of arms, some of the very newest pattern, was also taken on board the *Tuscarora*. Commander Erben was ordered by the Navy Department under date of 11th January, 1875, to receive Colonel Steinberger, with his clerk, and convey him in the *Tuscarora* to Samoa, and "to extend to him any facility that you can for the execution of his mission." In March, 1875, the *Tuscarora* arrived at Apia. Commander Erben informed the chiefs of his arrival, also the object of the visit of Colonel Steinberger, also that he was the bearer of a letter from President Grant to the chiefs. The chiefs appointed April 1 for receiving the United States commissioner. They asked that time be given them to get the petty chiefs together and properly to receive President Grant's sealed letter. Twenty-two days were needed. Before the council adjourned a present was made to the *Tuscarora* of 450 chickens, 17 pigs, and about a ton of yams

and potatoes. The schooner *Peerless* arrived at Apia from San Francisco shortly after the *Tuscarora*. She had been purchased by Steinberger in San Francisco for his personal use, and a battery of one twenty-four pounder put aboard of her, with the usual number of small-arms. She was sent to the islands of the group to bring up the chiefs to be present at the *fono*, or reception, on the 22d of April; she also did surveying work about the other harbors of the group.

The days before the *fono* were spent in daily conventions explaining to the chiefs in council the Constitution; every article was gone over, and they thoroughly understood each. The Samoans are a superior race of aborigines, intelligent, all having been taught by the missionaries to read and write their own language. The Government was based upon the Taimua, seven chiefs chosen by the other chiefs to serve for one year each. A king was elected, Malietoa. This was not done hastily by any means, but mature deliberation was given, and each candidate's fitness fully considered. On the 22d of April Commander Erben with the officers of the *Tuscarora* attended the council. The sealed letter from President Grant was delivered to King Malietoa, who handed it to Commander Erben to read. A translation was also read by Dr. George A. Turner of the London Missionary Society medical mission. The greatest enthusiasm was manifested. Colonel Steinberger explained to the people the importance of the occasion and the meaning of the articles of the Constitution. The new flag brought out in the *Tuscarora* was shown, and he proposed that it be adopted as a national emblem. The flag consists of seven stripes, red and white, each representing an island, and a white star in a blue ground, representing the Government island of Upolu. It was adopted by the Government, hoisted in the square, and saluted with twenty-one guns by the ship, and the foreign officials were notified of the adoption of both Constitution and flag. The parade that day was a grand and picturesque affair. Fully eight thousand persons were in line, all dressed in fancy costumes, marching splendidly, each village by itself, preceded by beautiful village maidens dressed in their prettiest feather robes of all colors. The men performed athletic feats and feats of arms, showing their war ma-

¹ While President Grant was looking for a naval station in the South Pacific, he at the same time was having the harbor of Pearl River, near Honolulu, Sandwich Islands, in the North Pacific, examined or surveyed by a commission composed of Major-General J. M. Scho-

field, United States Army, Major Alexander, United States Engineers, and a naval officer, with the view of our obtaining possession of it and using it as a naval station, with dry dock, etc. [This is the harbor recently ceded to us for such use by treaty with Hawaii.]

nœuvres as they advanced. The Samoans are a fine-looking race, and different from any of the other Pacific islanders. This parade will never be forgotten by those who viewed it. As they passed by, presents to the *Tuscarora* were deposited before Commander Erben and officers; these, when received on board, amounted to 700 chickens, 70 hogs, and tons of yams and coconuts. The coconuts were necessary to feed the chickens and hogs, as the chickens would not eat corn. The coconut-fed hog furnished a delicate pork for the table. After the parade and ceremonies the foreign consuls and missionaries called on Commander Erben and promised their aid in giving strength to the newly formed Government. In this way the Government of Samoa was inaugurated. The great chiefs remained at Apia for some little time, until a code of laws was made. These were simple in their nature, relating to murder, assault, theft, perjury, revenue and trading, and trespass. The laws regarding liquor selling were well defined, the restrictions being regarded by the liquor sellers as very arbitrary. The *Tuscarora* remained at Samoa long enough to see everything working smoothly and then sailed for Honolulu. Before leaving, the Taimua of Samoa addressed a letter to Captain Erben and to Colonel Steinberger, and a letter was sent at the same time to President Grant.

In this connection I may state that Mr. William H. Webb, the eminent ship-builder of New York, in 1870 established a line of steamers from San Francisco, via Honolulu, to Australia. Looking about for a place in the South Pacific where his vessels could stop and take coal, he, after a personal inspection, selected the Samoan group as the one offering the best facilities and being nearer the route followed by his ships. He made arrangements with the petty chiefs for a spot to establish a depot and fly the American flag, Pago-Pago being the port selected. Our Government never appreciated the work of Mr. Webb, and that it failed to take advantage of the opportunity of opening up a trade with the South Pacific there is no doubt, but the names of the gentlemen engaged in the enterprise show that the company was formed of San Francisco's most respectable men. That their business would be carried on with greater security and their capital better protected under a settled and recognized Government was a fact well recognized by them.

The following letters are given here because they do not appear in the printed Government records.

TRANSLATION BY GEORGE A. TURNER, M. D.

HOUSE OF THE TAIMUA OF SAMOA,
MULINUU, May 12, 1875.

TO ULYSSES S. GRANT,
The President of the United States of America.

GREAT AND EXCELLENTLY GOOD SIR: We have received from Colonel A. B. Steinberger your very excellent letter, which was written on the 11th December, 1874.

Our joy is very great, and our thankfulness to your Excellency, in that you have been pleased to regard us, and accept our letter and our petition, which was sent to you.

That was indeed a red letter day for us, and all the people of Samoa, on which Colonel Steinberger first gave us your letter and we perused it; and we also again looked upon the person of Colonel Steinberger, who had returned to Samoa then. Thus was our thanks-

giving, "the will of God is good"; it is he who has enabled you to regard us, and to appoint him to Samoa to become a source of light in all matters which will give right and solidity to our Government and the laws which have been set up in Samoa. You are aware our weakness and ignorance is very great; our land has not been accustomed to these affairs; it is, as it were, a new thing to us.

Our anxiety was very great during the time that we had not received an answer whether you would accept our wish or not, as also from false stories of vagrants in Samoa. But now these stories are things of the past; we have no longer any doubts; our thoughts are only those of thanks and rejoicing because of your letter and Colonel Steinberger, who is the full pledge of your kindness towards us; on account of this we are now of good courage, and have confidence and also great strength.

All the encouraging words of your letter are very good, to our thinking; we will heed them.

We are very grateful indeed for the present from your Excellency and your Government, the weapons which were brought by Colonel Steinberger to us to strengthen our Government, because, since he reached us and gave us these weapons, our Government has not been hampered in any way; no one has attempted to originate quarrels, as was our foolish custom in days gone by.

Although we are well aware that we can be of no use to you and your Government, it is right for you thus to show friendship to us; but it is on account of your free will to us and our land that you have given us these handsome presents.

We have received from Colonel Steinberger the new flag, which was made for our Government; we deliberated whether we would receive it. We have resolved to accept it gratefully, because it is a very beautiful flag, and we have now adopted it as a sign that our country is one and desirous of establishing a new government.

We are also very desirous of keeping steadfast our present prosperity, and that by God's will it may not again be interrupted. We are about to commence this year fresh plans, which we hope will give unity to our Government; we are now, in fact, beginning this with Colonel Steinberger.

His zeal is very great in helping us and showing us things that are right and useful.

We shall esteem this gentleman very highly on account of his love and humility and great forbearance, inasmuch as great is our inexperience and slowness of comprehension at present. But he is not disheartened on that account; on the contrary, it is as though our darkness and slowness are the cause of his being more zealous and energetic, by night and by day, to make things plain to us, just as is the true love of a father to his children.

Our pleasure in Colonel Steinberger is still very great, and our prayer to God is that he may be pleased that nothing in his providence may happen to cause his speedy removal from among us, but that he may remain with us in Samoa till his death. Our reason for this is that we are well aware that this gentleman is very useful indeed to our land; through him our Government is for the first time strong and able, as it were, to stand and walk about, so also with all arrangements regarding our laws.

Captain Erben, the commander of the war-ship *Tuscarora*, has also been with us for some time, the zeal of that gentleman in encouraging us was indeed great; the behavior also of the officers and all his crew were excellent before us and all the Samoan people; all that they did in Samoa was very good indeed.

The words which we have written in this letter are not many, lest you should get weary in reading it; but your letter we shall preserve, that future generations of Samoans may peruse it.

We send our best respects to your Excellency. May the ever-living God be pleased to preserve your Government forever.

HOUSE OF THE TAIMUA OF SAMOA,
MULINUU, May 12, 1875.

TO HENRY ERBEN,

Captain of the American war-ship "Tuscarora" :

We write this letter in reply to your address, and your encouraging words to us which were written on the 9th April, 1875, and were read in our presence at our meeting at Mulinuu on the 22d of the same month.

We are very thankful that God has been pleased to permit your present mission to be carried out so that we have met, and we once more look upon the person of Colonel Steinberger, who has returned.

We are very grateful to the President and Government of the United States of America, in that they have been pleased to reappoint Colonel Steinberger to live in Samoa, because it is true he is a gentleman who has a great deal of true love, and is very useful to our Government, and in all matters regarding our laws. Our minds are quite made up that he will dwell with us in Samoa if God wills it; only if he were to die, that is the only thing that will separate us.

All the directions given to us by Colonel Steinberger are, to our thinking, very right and useful.

Your mission also is excellent, and the behavior of all the people in your vessel before all the people of Samoa is very good indeed. Nothing whatever unseemly has been done by any of your crew since you came to Samoa. But our fear is very great lest any Samoan behave badly, and cause your displeasure and your return with bad tales to the Representatives and the President of the American Government. You are aware that the Samoans are not accustomed to foreign manners; probably they will become acquainted with them, however, ere long.

All the words of encouragement which are written in your letter, and which you spoke to us on that day, we shall never forget; we shall preserve them, and make ourselves familiar with them, and put them past that future generations of Samoans may see them.

We also pray to God that he may hasten the time when Samoa shall carry out all the directions that you have given us, and that you may hear reports some other day regarding the Government of Samoa whether the good seed which you have sown on their account bears fruit or not. All this will take place if the Lord pleases.

We are very much pleased at the present time because we have got a good flag for our Government; we are glad, and admire it because the sign of enlightened nations has been set up in this our land.

We are very much pleased and thankful for the weapons given us by the great Government of America, to make our Government respected. We are indeed strong on account of them.

Our Government and our laws were very much hindered during these years which passed since we parted with Colonel Steinberger up till the time of his return now, but all these hinderances have now passed away; no sound of quarreling or proposals for war are any longer heard, such as were the foolish customs of this our land in former days.

Now we cultivate friendship with all foreigners living with us in Samoa, provided they do what is right in accordance with the laws of our Government.

Our friendship is still great towards the great Government of the United States of America, on account of the true friendship towards us who are ignorant and weak.

With these few words we desire to reply to your address and your encouragement to us. But your letter, with all that it contains, and this, our reply to it, will be, as it were, the means of our having intercourse together in the future when we look at them.

May you have health and strength from God, and may your voyage end happily.

HOUSE OF THE TAIMUA OF SAMOA,
MULINUU, May 13, 1875.

TO THE CHIEF COLONEL A. B. STEINBERGER,

Who is now living in Apia:

We have already written a few words in acknowledgment of the many encouraging and kind words addressed to us by Captain Erben, the commander of the war-ship *Tuscarora*, at our meeting at Mulinuu on the 22d day of April, 1875.

We have also written a letter of thanks in reply to the letter of his Excellency the President of the United States of America—thanks because he has been pleased to entertain our desires which we made known to him. We are going to preserve his letter as, in our sight, precious property, in order that we may constantly look at it, as also future generations of Samoans. We beg you to be kind enough to give our letter to Captain Erben, in order that he may take it to the President of the United States of America, if the Lord be pleased to permit his safe return.

Our joy and thankfulness is very great indeed because you have come back to Samoa, with your true love to us. On this account you have left the good and pleasant things of your own land and your family, in order to come and assist us.

Our fears were very great indeed during the time now gone by when we were far distant from one another; we thought you had forgotten Samoa. But now that we again look upon you, great are our thanks to God, and our thoughts are that our Government and our laws will now be thoroughly consolidated, because you have returned; for although the Samoans have been well trained by the missionaries in reading, and the word of God, and many other good things, with the modes of government and law-making we are not conversant.

We think that we and all the Samoan people at the present time are blessed, and are about to obtain permanent peace by legislation and through God's blessing, whereas former generations of Samoa have passed away in darkness and distress.

And now, with reference to the presents from your Government which you have given to us, our pleasure is very great indeed, and you have the thanks of all the people of Samoa, because what you said is true. Samoans can do many things for the Government, but it is impossible for any one in Samoa to manufacture guns. The Samoan Government has been greatly strengthened since you came and gave us these cannon, and the arms and clothes for the police, all which things Samoans are observing.

Samoa was on the point of again getting into trouble, if God had not been pleased to bring you quickly back to Samoa, but now there is no longer to be heard the sound of war or any other thing to cause trouble to the Government of Samoa.

A great many false stories were circulated by wanderers from other lands who are in Samoa, during the time that you were far away, and this gaverise to great concern, and some were disheartened. But notwithstanding, we waited with patience and courage, because we knew well the friendship and energy which you displayed during your first journey, and now the result is that your kind words and promises of former days have come to pass. We now therefore receive you with joy and friendship, as is your great friendship for us and all Samoans.

You spoke to us about some arrangement to allow people of your Government to bring their vessels into our harbors, and for us to respect and protect them when they come to Samoa. We are perfectly and heartily willing for this.

We also thank you for the new flag that you gave us to deliberate about; we are unanimously in favor of it; that flag is of great use as an emblem that the Government of Samoa is united and established.

On that day, the 22d of April, 1875, that we were all together at Mulinuu, and that you gave us the letter from his Excellency the President of the United States of America, and that we also listened to your encouraging words and those of Captain Erben, the commander of the war-ship *Tuscarora*, the hearts of all the people of Samoa were filled with great joy, because we thought that for the first time our Government was established holding sway over all the different lands of Samoa.

You have given us some account of the Sandwich Islands, referring to the happiness they possess, and

their Government being thoroughly established and respected by all the great nations; with this in view, it is right for us all to work hard at the present time, and pray that God may be pleased to hasten the time when Samoa also may have the same blessedness.

You have also told us of some gentlemen who came with you to assist us; we are very thankful and glad that there are other useful men to direct the Samoans. Our desire is very strong that they should still remain in Samoa, and not be soon disheartened on account of the ignorance and slowness to learn of the Samoans.

As to your many encouraging words and useful directions given to us on that day at Mulinuu, we think them very good indeed. We wish also to attend to all good advices which you may give us from day to day, because we know well it is your desire to do what is right and what will be best to consolidate and thoroughly establish our Government and laws.

With these words, we desire that God may be pleased to hasten the time when all these desires of ours shall come to pass.

We hope that for many days and years we may live together and labor together for the good of the Government of Samoa.

May the Lord give you life and health.

Henry Erben.

ROBY'S CHRISTIAN CHARITY.

LD Jonathan Roby had been a crusty, crotchety, close-fisted bachelor, who had, penny by penny and dollar by dollar, scraped together a small fortune in a long life of hard work and shrewd dealing, and who kept tight hold of all his gains. When he died, his will was a surprise to his neighbors. He bequeathed all his money to three trustees, who were to invest it until it increased to a certain sum, and it was then to be administered for the benefit of the deserving poor of the town.

The three trustees named in the will were to be replaced, one at a time, by an annual election by the legal voters of the village; and the Board of Control, as the trustees were styled, was to be perpetuated in this way. It was directed that the fund should be called "Roby's Christian Charity."

When the money became available the trustees began to use it by the easy and simple

method of distributing to nearly all applicants orders for fire-wood, clothing, food, and medicine, by the terms of the will their discretion in administering the trust being almost unlimited.

This simple management of the Charity was soon hotly attacked from two sides. Jonas Rand, editor of the local "Plaindealer," set up the socialistic argument that the greater part of the fund being interest, and largely accrued after Roby's death, it never rightfully belonged to him, but to the people at large; and it should be immediately returned to those needing it, in the form of loans without interest. Then Stanton Roby, a nephew of old Jonathan, took up the cudgels and made active warfare through another local paper, both upon Rand's theory and upon the actual management of the trustees. He criticized the existing plan as simply a premium upon idleness and incompetence, and advocated a scheme of enlightened philanthropy based upon experience and guided by economic principles.

Rand and Roby had been neighbors' children and companions all their young days, though they were singularly contrasted in character and appearance. Rand was a short, thick, shock-headed boy, of a stubborn and passionate disposition. Roby was taller, fair and slender, with a bright, handsome face and a pleasant, smiling look. They never had a serious quarrel until they became rivals for the same girl's favor. Then Rand's dogged attachment to Roby changed to a dogged hatred that showed no abatement after years had elapsed and both were married men with families growing up about them. Roby married the girl for whose favor they had been rivals.

In the contention over the Charity which now arose between them, Roby carefully and contemptuously avoided any allusion to Rand, but riddled and ridiculed his reasoning with merciless logic, sarcasm, and absurd illustrations. Rand, on his part, seemed eagerly glad of an occasion to pour out his wrath upon Roby, and attacked him with almost savage personality, which it may be supposed did not grow less bitter under Roby's laughing scorn. The warfare between them was waged long and sharply and revived whenever the Charity came into public notice. By degrees the community divided upon the question into two hostile parties that ranged themselves under the respective leadership of Roby and Rand.

This culminated at the fourth annual election after the maturing of the fund, before which the meetings had been a mere form. When Roby entered the place at that time he saw at a glance that the meeting had been silently packed by Rand, who sat with a face of grim determination in the midst of a solid body of his adherents.

Roby hastily sent out for reënforcements and set himself doggedly to delay action until help should arrive. He made use of every device that his wits could command, raised points of order, argued and made motions of every kind; and breathless men arrived more and more rapidly, singly, and by twos and threes.

Rand had the chairman on his side, and they overruled Roby point by point and forced on the business with all their might. Roby continued to fight for time and disputed every minute that elapsed, but at length a vote was called in spite of him and they made him a teller to keep him quiet.

Rand was named for trustee, and Roby nominated a man who was not present, but who was popular among all classes. The result of the first ballot was reported as a tie. On the second ballot Rand was defeated by one vote.

Neither Rand nor Roby took any further part in the proceedings that night. Roby ap-

peared to collapse as completely and instantly as Rand. He sat still in his place and did not say another word; but as the meeting broke up Rand confronted him, white with rage.

"Stan. Roby," he said close in his face, "I'll hunt you for this as long as you live."

Roby dropped his head and turned away.

That was the turning-point. The trustees consulted Roby and adopted some of his plans; finally they made him superintendent, and he was confirmed year after year. He corresponded, studied, planned, and made of the fund an embodied beneficence.

Rand pursued him relentlessly, condemned his action at every step, and accused him of taking this artful way of evading his uncle's will and absorbing the property. Roby never retorted, and heard Rand denounced with impatient distaste. People found him difficult to understand; he had grown stern and reserved. It was sometimes remarked as strange that the single person whom he treated with habitual gentleness, after his wife and only daughter, Lucia, was Jonas Rand. Then his wife died, some thought from exposure in carrying out his plans among the poor; and his bitter grief seemed to have a hardening effect. He was strict with his boys, and especially harsh towards the slightest untruth. The youngest and brightest of his children was restive and went astray.

This was partly due to a plausible fellow, whom Roby brought from town to teach in his "Artisan School," who corrupted his bright boy and ended by running away with a daughter of Jonas Rand. Rand met Roby at the time and fiercely accused him; and though Roby was of course not responsible, he took the matter to heart. And when the girl suffered the consequent misery and desertion and her father refused her shelter, Roby had her cared for through charitable city friends.

Years passed, and the enterprise became Roby's absorbing passion. As the Charity grew in favor, Roby became more distant and dark, and Rand more bitter, if possible, in his denunciation. Rand's violence and his revolutionary opinions alienated many, and his business suffered in consequence. By and by it was whispered that he was in difficulties; but still he worried along with a bold front, and his woman-kind dressed as showily. Finally, one year, it became known that things were thickening about him; and he showed care in his face. His creditors brought suits to recover their overdue claims.

One day in the fall of that year Roby learned that an execution against Rand was out and in the sheriff's hands. That night Roby sat up late alone; by turns he sat thinking, went over accounts, made calculations, and sat thinking long again. After midnight he put on his hat

and coat and went out. It was a wild night, he found, as he walked across the town to Rand's home. All the house was dark, except one room on the ground floor. It was Rand's working-room, and through a gap in the curtains Roby saw him sitting there, sunk together and utterly broken, with despair in every line of his haggard face.

Roby wandered on a little way, then came back. Rand still sat in the same place, and Roby stood by a tree at the fence, watching him. He could not leave the spot, though the wind went through him. After a while Rand got up and moved about awkwardly, then went to his desk and scrawled two or three lines on a scrap of paper. He left it lying there, and turned away.

He crossed the room and passed out of Roby's sight; and a minute afterward the hall-door opened and he came out and down the steps. He wore neither hat nor coat, and the wind blew his grizzled hair about, but he did not seem to feel it. Roby went forward to the gate and stood in his way. Rand stood confounded, then he spoke furiously:

"Get out of my way, or I'll kill you."

Roby did not move, but answered quietly:

"That would n't do you any good."

They stood so a minute, then Roby added:

"Come in; I've got something to say."

He passed Rand and went in; and Rand followed, dumb with passion. In the house they faced each other.

"What do you want?" Rand asked.

"If you are in need of money," Roby replied, "I can let you have some."

Rand sat down and stared speechlessly. After a little he asked:

"Do you come here to pry into my affairs?"

Roby flushed, but took out and handed Rand a check made payable to his order, dated and signed, with only the amount left blank. Roby mentioned a sum which he could spare. Rand sat holding the check, staring at it, till it began to flutter and his body to heave. He answered hoarsely:

"Half of that would save me and my family from ruin."

Roby took the check and went to the desk to write. The scrawl Rand had left still lay there, but he saw it and came quickly and covered it with his hand. He let his hand lie there a moment, then took it away.

"No: read it," he said roughly. "I don't care."

He sat down again, and Roby read the paper and stood still; he rested on the desk with both hands and did not move for a minute or two. Then he took up the paper, crumpled it in his hand, and thrust it into the stove, shutting the door. He went back and

filled up the blank, turned and handed the check to Rand without looking at him.

Rand looked at it awhile and turned it over, looked at it again, and let it slip through his fingers. It was for five thousand dollars. He began to gasp and choke, doubled up and coughed, and shook as if he would go to pieces.

The room was cold and the fire low; Roby threw on coal and set it going. He looked at Rand, who still shook as in a deadly ague.

"Where is your coat?" he asked.

His voice sounded harsh to himself.

Rand looked about and made an impotent gesture, and Roby pulled off his overcoat, threw it over him, and turned and came out of the house. The dawn found Rand sitting where Roby had left him, with the check lying on the floor beside him.

The coat was sent back the next day without a word. Two or three days later Rand stopped Roby in the street, looking as if he had been sick.

"What security do you want?" he asked.

"None," Roby answered.

"Is it to buy me off from criticizing?"

"I hope you will keep on. Some of your points are good."

"Well, I don't understand. What do you mean by it?"

"I can't tell you," Roby replied, and went on his way.

Roby was unusually quiet at home that night, though gentle with Lucia as always. The next day was Sunday; but he had dropped off going to church a good while back. As Lucia was going out she saw him looking sad, and offered to stay with him, but he answered:

"No; your mother would not like you to stay away from church."

Lucia looked at him, then said gently:

"Don't you think she would be sorry not to have you go too?"

"Yes, I suppose so," he answered, and turned away with a darkened face. So she went alone, sadly.

Again years passed. Rand's affairs took a turn for the better, and he moderately prospered and paid Roby off by degrees. Roby extended the Charity more and more, but he got little joy of it himself.

One year a vague fear crept over Lucia about her father. Finally she could not bear it any longer, and besought him to tell her his trouble; then he broke down and confessed it all. It crushed her at first, but her faith and truth prevailed.

"I would have told them before but for you," her father said.

"Then do it now for my sake," the brave girl answered.

The annual meeting came on, and a vague

expectation packed the house. Lucia pleaded to go with her father, and she was the only woman present. They were a little late. Jonas Rand was there, and the trustees sat together with grave faces. One of them, named Robson, came and whispered to Roby; and he stood forth and wheeled round slowly once or twice before the expectant throng. Lucia stood looking up at her father while he spoke.

"I had better begin at the beginning," he said. "My whole management of this trust, my life all these years, has been based on a fraud. Jonas Rand secretly packed the fourth annual meeting, and I was determined he should not get control; I believed he would wreck the Charity. I was proud and scorned deceit, but I was greatly excited, and in a moment, before I knew, I fell. I was fighting for time and just fell short. I was one of the tellers, and saw how the vote would result. Rand had one majority on the first ballot, and I counted him out. I made it a tie by swallowing one of his ballots.

"That was the foundation. I vowed I would bring good out of it, but I could not. Evil would only beget evil. It has caused misery and death, made orphans, and ruined more than one life besides mine; and now it has had its natural end. I became reckless and risked the money of the Charity for a greater income, and most of it is lost."

He sat down, and Jonas Rand rose up slowly and stormed:

"Aha! aha! now I understand."

He moved to ballot for trustee, and in excitement Rand and another were named. A slip was handed to Roby, and he voted "Jonas Rand." Rand was elected by one majority. Then Trustee Robson resigned, and Rand named and elected his successor. Robson stood on a chair and finally obtained a hearing.

"Mr. Roby has not told all," he said. "He assigns all his property to the trust; and though something is lost, the Charity is richer than when he took charge of it."

Roby and Lucia started to leave, and Rand sat petrified. His jaw worked and his head went back. Then he called loudly:

"Wait, there!"

He came forward noisily and waved them back. His strong, harsh voice made all quake who heard him.

"Now it's my turn. It is true I packed the meeting and Roby beat me; he has told you how. I have hated and hunted him for it ever since. But he has no right to say he has wrought only evil; you all know it is false. You know this whole community is better for his work. I know it, I have known it for years. I know it better than any one, and I want to own it. He has paid me only with good; he

saved me from suicide, and my children from ruin more than once. If any one thinks I am going to wreck his work now, he is mistaken."

The following Sunday morning Lucia came and looked earnestly into her father's face, as he sat in troubled thought.

"Won't you come with me?" she asked. "I want you to come."

He went with her, and on the street they met Jonas Rand. The two men shook hands soberly, the first time since boyhood, but found nothing to say. Lucia spoke gently:

"We are going to church. Won't you come with us?"

"I never go to church," Rand replied.

And Roby said, "I have n't been in nine years."

Lucia urged, modestly: "Please come, Mr. Rand; my father has been telling me how you used to play together."

Rand hesitated, then went with them unsteadily, going from side to side. People turned to look, and stared after them as they went along.

The old minister had intended to preach about the house built upon the sand, to show that truth is the only solid foundation, and whatever is without it comes to naught. But seeing beside the gentle girl those two gray heads bowed together before him, that he remembered when they were tow-heads, a tremor came over him, and he could not keep his voice quite steady as he rose and gave out for his text:

"I say unto you, that likewise joy shall be in heaven over one sinner that repenteth, more than over ninety and nine just persons, which need no repentance."

As the congregation slowly dispersed, the three went away together without speaking to any one. Roby was grave and still; Lucia clung tightly to his arm, and Rand wandered along moodily on the other side. Nothing was said between them; but though Rand was a large man, there was something in the dogged way he plodded on that brought sharply to Roby's mind the shock-headed stump who had trudged so many a mile of country at his side when they were boys.

They went on so in silence till they came to Roby's gate. Then there was a moment of hesitation. Lucia looked from one to the other. Rand turned to speak, but either found nothing to say or did not know how to express himself. He made a movement as if to go on, but Roby stopped him and asked him to come in, saying he was afraid they did not have much for dinner, but they would be glad to have him share what they had. He went in with Lucia, and Rand followed doubtfully.

In the house Rand stood staring about him. Roby asked him to sit down, but he did not seem to hear. Both men were thinking of the

same thing: this was the house Roby had built for his bride, to which he had brought her home when they were married. Rand had never crossed the threshold before. After a pause, Roby spoke, without being able to hide the pang it gave him:

"It's a pretty good house. I suppose this is the last Sunday we shall be here. I understand the trustees are going to sell."

"Yes," Rand answered, without looking at him. "Yes; Colonel Joyce has made us an offer, and I expect he'll get it."

Lucia put her hands to her face suddenly, and sat down and sobbed sharply once or twice. Rand turned towards her and dropped his head; he came near awkwardly and stood staring down at her, helpless, and dark in the face. In a moment Lucia got up and went out of the room.

Rand fell heavily into a chair and sat bent forward, gloomy and stern, with his hands hanging over his knees. After a silence Roby spoke in a low voice:

"It brings things back to us sharply. In her memory the house is closely associated with her mother; and she's tender-hearted, like her."

"She's the perfect image of her," Rand broke out harshly.

Nothing more was said till they were called out to dinner. Rand took no notice, and Roby stood waiting, then spoke to him again. Rand got up and followed him unsteadily as far as the door. There he stopped, took hold of both doorposts and stood with his head down a minute, then burst out:

"No, I can't!"

He turned and blundered out of the house, stumbling over a chair and trying a wrong door on the way, and went staving down the street as if afraid to look behind him.

It was a sad Sunday for them, and that night Roby told Lucia he should go to the city in the morning and consult with friends about their unknown future home and maintenance. And it was a lonely and sore-hearted Monday which followed for Lucia, as may be supposed.

Early in the afternoon, as she sat alone in forlorn meditation, a boy brought to the door a letter addressed to her in a large, sprawling hand. Inside she found a dollar bill and the words, written in the same hand as the address:

Inclose one dollar and return it to me by the bearer. Ask no questions.

JONAS RAND.

Lucia did not know what else to do; so, after some surprised hesitation, she simply did as the letter directed.

About dusk she was in her own room, thinking it would soon be time for her father to return, when she heard the click of the gate and

a man's sharp tread on the walk. She ran down and went to the door; but when she opened it she drew back, startled. It was not her father.

Jonas Rand stood there, his face flushed, and breathing hard. He had a large envelope in his hand, which he held out to her; he tried to speak, but only muttered some husky and incoherent phrases; he pressed the envelope into her hand and closed her uncertain fingers upon it with a grasp that shook and hurt them. Then he turned and hurried away, out of the gate and down the street.

Roby found beginning the world over again a cold and sorry business, and came home downcast and discouraged. Lucia did not meet him at the door, as he had hoped; and when he went in he found her sitting by the lamp with an unfolded paper in her lap and a helpless look in her face. She took up the paper and reached it out to him.

"I don't quite understand," she said tremulously.

Her father took it and looked it over.

"Where did you get this?" he asked.

She told him, and he sat down and read the paper through. What he made out of it was that Rand had bought the place and made it over to Lucia in due form. They found out afterward that he had mortgaged his own house to raise the money.

Roby sat still a little while, then turned slowly towards Lucia and began to tell her:

"We won't have to leave: Jonas Rand—"

But he stopped there, and turned his face away with a catch in his throat. His head bowed forward, and Lucia came to him quickly and clung about his neck. The world-worn man and the innocent girl wept together tears in which regret and rejoicing were keenly mingled.

That was some years ago. Strangers in the town who stay for any time are very likely to ask who are the two grave, gray-haired men so often seen together and seeming so strangely assorted. They are partners in business, and as constant companions as when they were boys. They often differ in opinion and express themselves freely; but behind and above all matters of opinion remains their life-long attachment, too fiercely tried and strongly cemented for any difference to shake again.

Rand still serves as trustee of the Charity, and is the leading spirit in its management; but it continues to be administered on the general lines which Roby laid down.

Lucia is almost as often seen with one as with the other, and people have been known to say that Rand seems fonder of her than of his own more showy daughters.

James T. McKay.

ROUND ABOUT JERUSALEM.

IN one of the narrow streets of Bethany are the walls of an old stone building the single opening of which is closed by a wooden door painted green. Every visitor is halted at this humble portal, and it opens in answer to the creak of a long, heavy, rusty key manipulated by both hands of the custodian. It is called the house where Lazarus and Martha and Mary lived. The encircling walls seem to be less antique than the old Roman arch which stands within, and their architectural style evidently dates from periods different and widely separated. Upon the walls are trailing vines and scattered flowers. The inclosure is only about twelve feet by fourteen feet in extent, and has no roof. If this is really the place where Jesus was wont to come day by day after his work had been finished in the city, then it was the scene of great excitement on the last Saturday he spent upon the earth. The time for the feast of the Passover was at hand. Every road and byway was swarming with people journeying towards Jerusalem. The number was greater than usual because it was expected that Jesus would attend the feast. No fear of death debarred the faithful son of Israel and true Messiah from undertaking the journey with the rest; so the start was made. From every wall of the roofless apartment the deep-cut, narrow road up which he climbed may be seen dividing the hill which protects Bethany on the west. It is one of the loveliest spots in all Palestine. Fresh and well attended is everything, and free from the pestering people one meets in so many localities. The olive trees are healthier, shapelier, and more fruitful than those down Hebron way; the wheatfields appear more thrifty, and the flowers are surely more abundant. It seems as though nothing had changed since Jesus went by, except that then, perhaps, a village capped the now bare hill, as was the case with almost every hilltop in Palestine when he was a dweller there.

His associates on his journey came from the masses—a motley assemblage, part of whom had followed him from Decapolis and Jericho, their number augmented by friends and followers from the region round about Bethany. Undoubtedly the Galilean disciples, who had joined him during his ministry there, led the enthusiastic procession. When the brow of the hill was reached a second living stream was seen winding down the pathways on the oppo-

site hill and along the deep valley intervening. Palm branches were uplifted in the hands of some, and others broke boughs from the fig and olive trees and bore them aloft. Long before the two assemblages met, the crowds from Jerusalem began to carpet the rough mountain road with the verdant boughs, and those from Bethany divested themselves of their garments and spread them in the way before their divine companion. The high, rocky inclines of both Olivet and Mount Moriah echoed and reëchoed the loud hosannas which went forth from that joint multitude. The distance between the two towns is barely two miles. As the advance was made, one section turned back and led the other. Soon a slight descent and turn in the road was reached. As though crystallized from the clouds, suddenly, in the twinkling of an eye, the city of Jerusalem appeared in its entire extent, no object whatever intervening to break the glorious view. Mount Moriah stood forth with the Herodian Temple rising far above the supporting and protecting walls; Mount Zion, covered with the glory and glitter of its magnificent palaces, appeared next; the great wall girdling all with its solid towers and outreaching gates, which appeared like strong knots to strengthen it—all presented a phantasmagoria of beauty unsurpassed. The tree-clad hills and the surrounding fertile valleys combined to make a glorious setting and brought out the grandeur of the rich city. Even now this view is most imposing. This preliminary glimpse is soon hidden by the shoulder of Olivet. The terraced sides of the sacred mountain then, as now, were dotted by vineyards with hedges set about them, with places dug for the wine-vats, and with towers built for the watchmen of the vineyards.

As the enthusiastic multitude moved on, the crowds of persons who had been pouring out from the Holy City ever since the gates were opened fell in and swelled the procession. These people were of every kind and condition—old and young, rich and poor, women and their little ones. Some came to welcome a friend who had been kind to them, or whose friends had shared his healing power, and some came to honor the king who was to redeem them from the cruel grasp of the foreign invader. There were some who served as spies, and only joined in the loud talk and violent gesticulations in order to bring out the real feelings of the earnest followers of Jesus. Hope and Passion trudged along side by side; Desire and Fear

followed them. Every looker-on, infected by the contagion, joined the living mass and increased the exulting shout which came up from the rear. The everlasting hills caught the anthems of praise and sent the sound rolling up the valley until those who thronged the walls and towers of Jerusalem caught the news that Jesus was indeed coming to the feast and was even then close at hand. At last the little bridge which crosses the Kidron valley was reached, and the narrowing procession crossed over to the Golden Gate of Jerusalem. The expressions of fealty and devotion then increased, and the waiting multitude prostrated themselves upon the ground in testimony of their reverence and gratitude. It was the desire of every one to greet Jesus, and it was a marvel to see the apprehensiveness lest he should not come change place with the delight which attended his actual presence. Such complete possession did the thoughts, hopes, and fears concerning this mysterious man take of the people that even the preparation for the great impending feast was forgotten. The excited populace was uncertain how or what to think of him, much less what to expect. Some were violent, and declared that any such disturber of the peace was liable to bring down the imprecations of Rome and thereby destroy even what little prosperity there was among the Jews. Others, who had been wearied and harassed almost to insanity by the tumults and indecision of years, stood with open arms, ready and glad to welcome any instructor who could wrestle with the reigning sect and restore the law of Moses to its wonted place. For one faction had so perverted the religion of their fathers as to drive from it all the spirit and all the hope for a happy future state; while another, even more offensive, by their dead forms and dreadful practices of vice and lust so poisoned the ancient faith as to sicken every sincere heart. As Jesus proceeded to the Temple his enemies were preaching there, trying by every form of statement and argument to turn away the minds of the people from him. He was branded as a disturber of the peace of the city and of the nation. Oftentimes these services were broken up in confusion. Then Jesus himself took the place of the exhorters and overwhelmed the excited assemblages by the recital of his parables, by his questionings, by his utterances of the great commandments, by his gentle admonitions, by his terrible denunciations and calm predictions. And thus the public pulse went up and down under the governing sway of hope and passion until that last night, when, while friends were away, the populace at rest, and suspicion asleep, Jesus was seized, tried, and condemned, and before the news could be spread was hurried outside the walls and crucified.

The topography of Jerusalem is an interesting study. "What were the true limits of ancient Jerusalem?" is a query that has not yet been answered as fully and satisfactorily as has "Where was the place called Calvary?" For our present purpose it will not be necessary to go into the depths of the discussion, because the points which now interest us all lie on the east side of the city. Concerning two points there need be no dispute—in fact, there is none. I refer to the locality of the two great valleys of Hinnom and Kidron. Had their rise at the north and west been a little closer to each other, and their wide, deep courses been filled with water, they would have made Jerusalem an island. As it is, it appears between them like a noble, mountainous promontory. Approach it as you will, it rises sublimely above its environments, with its embattled towers, its always picturesque minarets, and its shapely domes standing out against the azure background of the sky. No clear-headed general of the time when ballistæ, battering-rams, and catapults were used in besieging a city could have coveted a more advantageous site than this. There seems to be nothing about Jerusalem to welcome the stranger. On the contrary its high walls and its guarded gates seem to say, "Halt! you are not welcome here." And yet its history draws us on, and this same wall of two and a half miles in circumference—a mere apology for a wall compared with its predecessor, and only about half its girth—attracts our attention at once. The materials of which it is constructed represent every age of the city from the time when "Solomon in all his glory" contracted for the Temple building to the day when Baldwin and Richard Cœur de Lion constructed the splendid Muristan. These quarried fragments of the ages, some beveled, some of porphyry from Arabia, some of the granite of Sinai, are placed with as little idea of unity and conformity as are the postage stamps in a young collector's album. Here and there a broad arch, closed up, is seen, with quantities of indentations and projections, with prominent angles, square towers, loopholes, and threatening battlements. As in Christ's day, so now, a broad pathway, protected by a breastwork, runs around the top of the wall and often serves as the fashionable, and indeed only, promenade of the curious old city. From the eastern wall, near the Golden Gate, close to the top, a fragment of a round porphyry column projects several feet. The makers of Moslem legends have fixed this for the accommodation of their prophet Mohammed, who is to sit astride it and judge the world when the people assemble in the Valley of Jehoshaphat at the last day.

The general conformation of the walls is

that of a quadrangle. The Mosque of Omar and the adjacent grounds occupy the south-east angle. A fair map of this most interesting of all of the corners of Jerusalem, as it appears to-day, is found in the engraving on page 48. This is the summit of Mount Moriah. This one view includes more points of interest, from right to left, than any other in Jerusalem, and takes in more than one-eighth of the modern city. Outside of the platform the area is covered with a grassy lawn, and here and there olive, cypress, and other trees vary the scene. The south-west corner embraces all that part of Mount Zion which is inclosed by the modern wall, and is occupied largely by the Armenian convent with the accessory buildings. Another immense establishment is located in the north-west quarter of the city and belongs to the Latin convent. The Church of the Holy Sepulcher lies between the two and serves as the general fighting-ground of the two creeds, the battles going on under the surveillance of a Turkish guard and Remington rifles.

The quarter of Jerusalem to which the exasperated visitor may retire when sickened by the turbulence and uncleanness of the others is the north-east. It is not largely built up, like the others, but it is beautified by gardens and olive groves. It is only a question of a little time, however, before these vacant spots will be covered with buildings. Once possession of the land is had by Latin or Greek, occupation will rapidly follow. Within a few years the buildings outside the walls have so increased as to form a new city almost as large as the ancient one within. Superb churches are going up all about Jerusalem, even on the stony incline of the Mount of Olives—many more churches than the whole populace can fill; but their purpose it is not hard to conjecture.

Tradition says that the route from Bethany, on the occasion of the triumphal entry, followed the narrow pathway winding along the side of the Mount of Olives from south-east to north-west, back of the village of Siloam, until the neighborhood of the Garden of Gethsemane was reached, then westward across the valley of the Kidron to the city gate. It is not purposed to dispute tradition now, or even to disturb any one's peace by arguing the case; but for the better understanding of all or any of the routes from Bethany to Jerusalem, our present journey will lead us down the hills west of the common road of to-day into the valley of the Kidron where it is joined by the Vale of Hinnom. Thus we come at once upon the most sublime and impressive view round about Jerusalem, or indeed in all Palestine. This region is shown in the engraving on the opposite page and is known

as the "King's Dale." Through it the brook Kidron flowed once upon a time. No water follows the course now except in the rainy season of the winter-time, when the torrents from the adjacent hills unite here and follow down to the Dead Sea. The terraces of the eastern shoulder of Mount Zion are detailed here on the left; over the city wall the dome of the Mosque of Omar, situated on Mount Moriah, is visible. Stone stairways are there leading up to Jerusalem. "The Hill of Evil Counsel" is on the extreme left, and the narrow, stony road leading to Siloam beyond, located on the south-western incline of the Mount of Olives, is plainly observable. Although the inhabitants of Siloam are as unfriendly a band of robbers as there is in the Orient, they are good husbandmen and have made the neighboring vale a little paradise. The stones have been industriously removed and the soil has been rendered most productive. The waters of the Pool of Siloam (located on the left) are used for irrigating this garden spot. Plantations of fig and olive trees are here; vineyards and fields of waving grain make a fine color contrast; and the plats devoted to the cultivation of vegetables for the Jerusalem market would excite the envy of the ingenious farmers of our own New Jersey, Florida, and California. No fence of stone or of wood breaks the expanse. The people are a community and do not quarrel with each other, though they scowl at the approach of the stranger. A person can stand on the pathway in the foreground of our camera-map and see, besides the sites named, the "Potter's Field," "Job's Well," or En-Rogel, the Frank Mountain, the Pool of Gihon, the whole length of the Vale of Hinnom on the left, and the entire eastern and southern walls of Jerusalem.

Following the Siloam road, after the gardens are left behind, the valley is found to be systematically and extensively terraced, in order that every foot of the precious soil may be utilized. After the village of Siloam is passed, the valley narrows until it amounts to little more than a ravine. A grand perspective view of the eastern wall of Jerusalem is obtained from this point. The entire surface of this portion of Olivete seems to be crowded with the white stone memorials of the dead. On right and left every rock seems to have been excavated, every cave "improved," for sepulchral use. This is largely the case all around Jerusalem. Certainly it is true all the way from Mount Moriah to St. Stephen's Gate and from Siloam to the Garden of Gethsemane. The humbler Jewish tombs are marked by a slab of rough limestone without emblem or symbol, though many of them bear Hebrew inscriptions. The Mohammedan gravestone is usually upright, set in a base, and the grave is often inclosed on each side and

at the top by slabs. There is frequently a footstone as well as a headstone. The study of the excavated tombs is very interesting. There is almost every variety in the neighborhood of Jerusalem. Some of them contain only *loculi*, or troughs, cut laterally in the rock, with an arch or canopy above; and into these troughs the bodies were laid. A second class consists of a central chamber from which rows of *koka*, or rectangular, sloping spaces, run inwards, like tunnels, sufficiently high and wide to permit the admission of a corpse. Other tombs have both *loculi* and *koka*, together with numerous stone benches

around the sides of the chamber, upon which sarcophagi were arranged. The entrance to such a tomb as this is shown in *THE CENTURY MAGAZINE* for April, 1888, page 832. In some cases there is only one chamber, while in others there are a dozen or more, opening into one another. Occasionally there are two or more stories in one excavation. Masonry tombs are very rare. Stairways lead to some of these chambers of the dead which are found along the Valley of Jehoshaphat, and the façades of some of the noted ones have been carved and cut in pretentious styles. Others are isolated,—cut from the solid rock,—and stand out prominent features in the gloomy prospect. Most prominent among the last named are the alleged sepulchers of Zechariah, St. James, Absalom, and Jehoshaphat. That of Absalom is the most elaborate of all. It is doubtful whether Absalom's remains ever rested anywhere near it, but it always forms a picturesque feature in the landscape, standing as it does upon a well-chosen site. It is quite 50 feet high and 22 feet square at the base. All these surrounding sepulchers are in harmony with the deadness which pervades the Holy City. Alas! how the poor pilgrims would have writhed during their last years if they had known that the jackals might be toying with their poor shriveled remains before the rough limestone placed over them by faithful friends had settled to a comfortable

THE KING'S DALE.

level. But so it is frequently. With reference to the tomb of Absalom and its

pretentious neighbors Dr. Edward Robinson says, "It is unnecessary to waste words to show that they never had anything to do with the persons whose names they bear." He says further:

The intermingling of the Greek orders, and a spice of the massive Egyptian taste, which are visible in these monuments, serve also to show that they belong to a late period of the Greek and Roman art, and especially to that style of mingled Greek and Egyptian which prevails in the Oriental provinces of the Roman Empire. The chief seat of this style was perhaps at Petra, where it still appears in much of its pristine character in the very remarkable excavations of Wady Mûsa. When we visited that place some weeks afterwards we were much struck at finding there several isolated monuments, the counterparts of the monolithic tombs in the Valley of Jehoshaphat. The architectural remains of Petra are not held, I believe, to be in general older than the Christian era; nor is there any reason to suppose that the Jewish monuments in question are of an earlier date. Indeed, if they existed prior

THE HOUSE OF MARY AND MARTHA.

to the destruction of Jerusalem they are probably to be referred to the times of the Herods, who themselves were of Idumæan descent, and maintained an intercourse between Petra and Jerusalem. In that age too, as we know, other foreigners of rank repaired to Jerusalem and erected for themselves mansions and sepulchers. It would not, therefore, be difficult to account in this way for the resemblance between these monuments and those of Petra.

Or, if the entire silence of Josephus and other contemporary writers as to these tombs be regarded as an objection to this hypothesis, why may they not perhaps be referred to the tombs of Adrian? This emperor appears to have been a patron of Petra;¹ he also built up Jerusalem; and both these cities were called after his name. It would therefore not be unnatural that this period should be marked in both places by monuments possessing a similar architectural character.

The view from the east side of Absalom's Tomb northward is an interesting one. It includes the northern section of the Kidron with the hill of Scopus on the far distant right. A portion of the wall surrounding the Garden of Gethsemane is also seen at the right, with the whole roadway reaching therefrom across the valley up to St. Stephen's Gate. Again, we see the entire eastern wall of Jerusalem detailed on the left, with the Golden Gate rising prominently just beyond the sky-line of the flower-like apex of the Tomb of Absalom. In the immediate foreground we again see quantities of flat, white, time-worn stones.

¹ See the author's paper on Petra in *THE CENTURY MAGAZINE*, November, 1885.

Every one of them marks the last resting-place of some Hebrew who came to Jerusalem from a distant land that he might die in the country of his forefathers and be buried beneath the soil set apart for them by the divine fiat.

Now if the valley is crossed and the highest point of the Golden Gate is allowed to serve as his Nebo, the explorer, in fact or in imagination, may see almost all that has been described lying outspread at his feet. From that point, too, the best impression may be had of the historical valley lying between the sacred mountains which have held the interest of the world for thousands of years. A few points concerning this valley may not be without interest to the student. Help may be had in the beginning by referring to the excellent map on page 101 of *THE CENTURY MAGAZINE* for November, 1888. The Vale of Kidron is the best-known name of this natural depression, yet it is often called the Valley

of Jehoshaphat (Jehovah judgeth). Jews, Catholics, and Mohammedans alike believe that the last judgment will take place here. The valley rises, in fact, north-west of the city, a few minutes' walk beyond the true site of Calvary. It varies in width and stretches along north of Jerusalem eastward until a turn is made to the south not far from St. Stephen's Gate. Here the depression is about one hundred feet deep, and a bridge crosses it on the road from the city to the Garden of Gethsemane. The entire roadway between the two places may be seen in the view on page 51. The valley at this point is nearly four hundred and fifty feet wide. After the bridge is passed, the way narrows somewhat and descends. Then its conformation changes continually until sometimes, as we have already seen, it becomes very narrow and winding in its course. Another bridge is located near the Tomb of Absalom, crossing to a point not far from the Golden Gate. As one descends, the points of interest on each side succeed one another so rapidly as to command constant attention. The enthusiasm increases as the exploration progresses. Once the topography of things is fixed in the mind, it is not readily forgotten. The engraved details which follow will serve to make it all quite familiar to those who are not privileged to go farther than our imaginary Nebo. After passing the gardens of Siloam the valley widens, and then continues its course, south and east, until the Dead Sea is reached.

One more outward view of the east side of the valley from the Golden Gate will complete the series necessary for the localization of the points involved in the lessons of the second quarter of this year. It reaches from the Garden of Gethsemane, on the right, northward to a point beyond St. Stephen's Gate, and includes the main summit of the Mount of Olives, with all of its western incline. Three paths are seen,

The following of the International Lessons demands the consideration of the Temple next. Alas! that only the area which it occupied, with the buildings which succeeded, are there for us to consider. All these may be seen from the Golden Gate. The camera and the engraver have done what they can towards presenting a view of what there is. The space included is known to Christians as the Haram, or Temple

THE GOLDEN GATE — INSIDE.

all starting at the garden, and all leading up to the summit. The central one is very narrow, is lined with stone walls, and is used mainly by travelers on foot. The one on the left is the chief highway to the top of the mountain, and is in some parts very steep. The third, on the south, is the longest way up. The road to Bethany diverges from it. Some portions of the side of the mountain are dotted with olive-trees, and here and there grainfields are found, often inclosed by stone walls. Almost everything hereabouts is of stone. One seldom sees enough of wood to make a cupboard. Not only are there three pathways, but there are in fact three summits. The center height holds the most interest. Our itinerary will lead us to it presently.

area. It is called the "Court of Omar" by the Mohammedans, because of the splendid mosque which graces it near the center. Far in the distance is the dome and long-pointed roof of another mosque—the Mosque of El Aksa. A long line of cloisters is on the right. Between them and the Temple, scattered here and there about the area, are stone platforms and minor buildings. All these are occupied by the dervishes as praying-places, colleges, and public schools. Our photographic map, though showing only the north and the west sides of the mosque, gives the relative positions of the various buildings on Mount Moriah, south. The Golden Gate is on the left and the shoulder of Olivet is seen in the far distance. The portion of the area which lies in the immediate

SUMMIT OF MOUNT MORIAH—THE TEMPLE AREA.

foreground separates the Mosque of Omar from the site of the Tower of Antonia. The whole platform is four hundred and fifty feet east to west, and five hundred and fifty feet from north to south, and is paved with marble. It is supported by walls on every side. Its crowning beauty is the Mosque of Omar. The structure undoubtedly stands upon the highest point of Mount Moriah, for the "Holy Rock," sixty-five feet long and forty-five feet broad, is inside. A few details concerning this magnificent structure may be helpful. It stands in the center of the area and upon the supposed site of Solomon's Temple. It was three years in building, and its cost was the result of seven years' taxation of the Egyptians. Its eight sides are sixty-seven feet long. The magnificent dome is a masterpiece of Byzantine architecture, and was originally covered with gold. It is built of

marble and alabaster, decorated richly with terra-cotta of brilliant colors. Around it are three wide belts of color: the upper one green and white; the center blue, made of quotations in Arabic from the Koran; the lower dark green, picked out with white—all glistening terra-cotta. The barrel of the dome is striped alternately with green, white, and blue, dotted with yellow. As the mosque is some twenty feet higher than the area proper, it is reached on all sides by marble stairways, some of which we see on the west side, headed by rows of lofty pointed arches. The solemn, quiet interior is like a place of enchantment, so richly decorated is it. The columns are green and yellow porphyry, and the capitals burnished gold. The arches are black and white, and its fifty-six slender windows are decorated with stained glass of great splendor. The octagonal

THE MOUNT OF OLIVES — GARDEN OF GETHSEMANE.

divisions of the ceiling are green, with golden center, and the borders thereof are gold and green and red. The arches over the golden line are blue and gold. On all sides and in every available space there is a glory and a harmony of color not surpassed in the East.

In the extreme distance at the right of the picture on the preceding page is the graceful minaret of a mosque. It is located on the southern brow of Mount Zion. It is one of the landmarks of Jerusalem. The call of the muezzin sent forth from it goes sounding over the hills and tombs southward, until, when the atmosphere is clear, it can be heard at the Tomb of Rachel. A little group of buildings close to this old minaret is erected over the vault said to contain the tomb of David. An "upper room" over the tomb of the renowned psalmist and king is called the "Cœnaculum," because, tradition holds, the Passover Supper was eaten there by Jesus with his disciples. It is a large chamber, thirty feet wide by fifty feet long.

Although one must follow an Armenian monk some distance, and climb multitudinous steps, still, after passing the door, there is a descent of several steps before the well-paved floor is reached. The apartment is so clean and so well lighted that one doubts its Oriental character and questions its antiquity. Yet its appearance indicates great age, and its massive construction seems to guarantee its standing firm for many centuries to come. Underneath the first window on the right is a small niche where, it is said, Christ sat at the Passover Feast. The steps on the right lead to the Tomb of David. If all this is true, then this inclosure witnessed the assemblage of the apostles on the day of Pentecost, the miracle of the cloven tongues "like as of fire," the washing of the feet of his disciples by Jesus, the giving of the sop to Judas, and it is the place whence the sad company went down across the Vale of Kidron to Gethsemane on the night of the betrayal. The path which leads to and fro

NORTH END OF THE TEMPLE AREA — THE CITADEL.

between the city and the Garden of Gethsemane is one of the most authentic localities about Jerusalem, and cannot have changed materially since the first Easter morn. Along its way the brutal band went, led by the betrayer, startling the quiet of the night with the clash of their swords and the clanking of their staves. After the arrest the return was made by the same pathway to the palace of Caiaphas.

But a short walk from the Tomb of David and the Coenaculum, and between them and Zion's Gate, is the Church of St. James, with a chapel attached, commemorating the martyrdom, and covering the tomb of the beloved apostle. A lovely garden, the pride of the Armenian monks who have it in charge, sur-

rounds the chapel. It is one of the prettiest spots in the Holy City. About two hundred and fifty feet from the iron gate of the garden, which opens towards Mount Zion, the reputed house of Caiaphas is shown. The massive masonry of the building is in strange contrast to the irregular and gaudy decorations. Scales of pearl and bits of porcelain seem to have been covered on one side with some adhesive material and then thrown at random against the walls by hands guided more by a taste for tinsel than by artistic principles, judging from the rude arrangement on the walls. On one side of the apartment is a little cell in which Christ is said to have been confined during the last night of his life. In a niche is an altar with a statue of Christ bound to "the stake of

flagellation." The pavement is covered with inscriptions. Close to the altar is the so-called "stone which closed the mouth of the Lord's sepulcher," named by some the "angel stone," because the angel who addressed the Marys after Christ had risen sat upon it during their conversation. The palace of Herod the Great, called by him the Castle or Tower of Antonia in order to flatter Mark Antony, was looked upon as the pride of Jerusalem. It stood at the north-west corner of the Temple area, and its connecting buildings are supposed to have run along the whole northern limit of the area. Of it Josephus has written as follows:

The kinds of stone used in its construction were countless. Whatever was rare abounded in it. The roofs astonished every one by the length of their beams and the beauty of their adornment. Vessels of gold and silver, rich in chasing, shone on every side. The great dining-hall had been constructed to supply table-couches for three hundred guests; others opened in all directions, each with a different style of pillar. The open space before the palace was laid out in broad walks, planted with long avenues of different trees, and bordered by broad, deep canals and great ponds flowing with clear cool water, set off along the banks with innumerable works of art.

A sorry substitute for so much splendor now occupies the site in the long line of decayed structures used by the Turkish garrison as their headquarters and barracks. By the courtesy of the commandant the view on the opposite page was photographed from his quarters. A mosque, of course, is included in the group of government buildings. Its tall minaret rises high above everything else in the neighborhood. Seen through one of the shapely Saracenic arches, facing the north-east approach to the mosque platform, in combination with the little dome of Solomon, erected to mark the spot where the kingly architect stood for prayer after he had completed the Temple, it presents a picturesque combination. But it is in fact dilapidated enough—belonging to a government which never gives any attention to repairs. Some measure of respect is felt for it, nevertheless, by the person whose backsheesh persuades the muezzin crier to permit him to enjoy a view of the surrounding country from the gallery of the shaky structure. On a clear day this view is absolutely overpowering and indescribable. It makes one feel like joining the earnest Moslem in the cry to everybody to praise God. Of course there is the dead and alive city, and the Church of the Holy Sepulcher, and the Temple area, with all their attractions, but they are eclipsed by the natural beauties surrounding. From Bethel on the north to Bethlehem on the south the undulations of the country are presented, as rough

and as rugged as the pages of history represented by every foot of the prospect. On the west one can see almost to Joppa; while on the east, after the delighted eyes dwell upon the Mount of Olives a moment and then sink down into the Jordan valley, they are lifted again to the mountains of Moab and are tempted southward once more by the glittering surface of the ever fascinating city of the dead and its gaudy borders.

What changes have been wrought by time since all this country was full of life and energy! It is true that Jerusalem still lives by the attractions of her great building and its accessories, as she did by her Temple when Christ Jesus preached here. But the crafty tetrarch, the subtle Sadducees, and the "please everybody" king are gone. In their places dervishes

FROM JERUSALEM TO GETHSEMANE.

strut and the students bow in groups upon the pavement for prayer at each muezzin call. Instead of the countless kinds of stone described by Josephus as forming parts of the palace, only rattling limestone is seen. The richly chased vessels of gold and silver which served the Roman household have been displaced by the canteen and the mess-kettle of the garrison of the Crescent. The great dining-hall which supplied table-couches for three hundred guests has been covered with the armory, which is occupied by the soldiers of the garrison, who shoulder American rifles instead of supporting broad Damascus blades with bejeweled hilts. The open space before the palace, as we have seen, is no longer made attractive by broad, winding walks underneath groves of spices; there are only ablution fountains in place of the broad canals and miniature lakes which

WAILING-PLACE OF THE JEWS. (FROM A PHOTOGRAPH BY W. KURTZ OF THE PAINTING BY VERESTCHAGIN.)

were kept fresh from the great reservoirs of Solomon located down near Hebron.

On the right or east side of the group of government buildings is a solidly built tower with an arched doorway. It is the present fortress of the city. It is supposed to stand upon the site of the palace mentioned by Nehemiah, and where Pilate held forth when he adjudged the accused Jesus. Here Paul made his courageous stand for the Christian faith. Many a time has

the old structure faced the brunt of battle for Jew, Mohammedan, and Christian. Immediately on its other side is the Via Dolorosa with the "Arch of Ecce Homo." If the Western visitor comes here during Easter week he will fully understand the blight which has been caused by Moslem fanaticism. A good hour for such a visit is in the afternoon, after the sun has gone down behind the great dome of the Church of the Holy Sepulcher and

nearly all the daylight has crept out of the historical area. In one sense it is a rest. There are no sleepy priests, nor gossiping train-bearers, nor censer-swingers, nor beadles begrimed with snuff; neither dripping tapers, though there are beads in plenty. More than likely the broad court is entirely empty of devotees when you enter, and there is time to look up at the minaret and compare it with the old home spire. A turbaned officer makes his appearance upon the gallery and assumes the attitude of prayer; his tenor voice is heard sending forth the muezzin call. The soft winds come from the Jordan over the Mount of Olives; they sweep across the Kidron, leap the ancient wall, and swirl into the area; as they come they catch the cry and bear it by gusts and by impulses into all parts of the city to those who are waiting the call to prayer with eager expectancy. Faithful listeners miles away may receive the summons too; then, wherever they are, their faces grow serious, they turn their eyes towards the east and obey that summons. The cry is not, "Joy to the world, the Lord is come," but the same as that which our turbaned friend repeats five times a day, "Hy Ilas Sula! Hy Ilas Sula! Hy ilal felah! La Ila Illulah! Wa Mohammed Rasoul Ullah!" "There is no God but God, and Mohammed is his prophet. Come thou to prayer, for prayer is better than eating or drinking." The innumerable gates in the wall and in the kiosks open suddenly and simultaneously as though moved by magic, then those privileged to pray in the mosque inclosure come slowly in. They have their favorite places. A large number usually gather near the western side of the dome. They are careless of all observers, and are alike indifferent to the architectural splendor about them. First, passages from the Koran are read, standing; then they fall upon their knees, with their hands placed at the sides of their heads, their eyes directed to heaven; next, their bodies are lowered upon their heels and their hands are placed upon their knees with their heads bowed humbly; next, the devotees rise, and, placing their hands at their faces, "move them to and fro to gather in the blessings"; finally, they prostrate themselves with their faces to the ground, crying out fervently with a heart-moving "Ullah Akbah! Ullah Akbah!" The process is repeated several times, each time with increased fervor, for the devotees believe that the oftener they pray the more blessings they receive.

I saw a different picture after I went out from that court on that Good Friday evening. Passing out through the arched doorway of the palace of Antonia into the Arch of Ecce Homo,—underneath which, as tradition has it, Pilate scourged Jesus, and handing him over to the

infuriated mob said, "Behold the man,"—the Via Dolorosa was followed until the Church of the Holy Sepulcher was reached. The kavass of Colonel Wilson of Iowa, the then American consul, with baton in hand, awaited at the door. He was accoutered in all the glories of the costume of the Albanians and Syrians. But his apparel was in keeping with the glitter of the silver image of the American eagle which fluttered upon the top of his baton, and they seemed to have their effect, for upon their joint appearance the motley crowd which thronged the broad court of the church gave way and permitted us to reach the entrance unharmed. Through dark passages and up lofty stairs the glistening Arab led, until at last an upper room was reached, where, to use the words of our consul, "a part of the Crucifixion scene was to be enacted, and sermons preached in the Greek, French, Italian, German, Arabic, and English languages." The chapel was lighted by a hundred gold and silver jeweled lamps, fed with American kerosene, and that was about the only part our great nation took in the service. The exercise was announced to begin at half-past six, but it was eight o'clock before the Coptic monks who opened it made their appearance. The greater part of their share in the performance was sung in the dreary, drony cadence of the Greek Church. Then, by the appearance of the German representatives, the audience was aroused from the semi-comatose state into which it had lapsed. One of these stood by a velvet rug spread upon the floor and delivered a short discourse in a sing-song tone. Before he began, a three-quarter size crucifix was brought in by an assistant and laid upon the rug, the head towards the speaker, and remained there during his sermon. The French deputation followed, consisting of monks, choir-boys singing a funeral dirge, and a fine responding chorus of men. Others followed, some swinging censers, some bearing silver torches, and two carried broad silver platters. On one of the platters was a gaudily trimmed regalia, and on the other an antique hammer and a pair of pincers. The crucifix was now lifted from the velvet rug on the floor and placed upon the altar. The nails were then drawn from the hands and feet of the figure by a monk, who tenderly kissed each bit of iron. It was then laid upon the altar and covered—*a mimicry of the "descent from the cross."* The empty cross was allowed to remain standing erect. A sermon in the French language followed this ceremony; then the choral exercises were repeated, while the "body" was placed upon a bier, and amid the strains of another dirge was carried down to the vestibule and laid upon the "stone of unction." This marble slab had been kissed smooth and

out of true by the myriads of pilgrims who had visited it, although the "realstone" upon which the Lord's body lay when anointed for his burial was underneath and out of sight. The ceremony of anointing was performed in Arabic, then the show was ended by carrying the image to the tomb. While all this went on the hooting and shouting and carousing which took place in the body of the church, where thousands of pilgrims had come from all parts of the earth to attend the Easter service, was as shameful as it was dreadful. It continued all night, for next day the "miracle of the holy fire" was promised to occur without fail, and this seething mass of humanity had come thus early in order to secure places for that occasion. To prevent a disturbance a detachment of soldiers was sent from the Turkish garrison, and the men were stationed here and there among the "Christians." Every year is made this collection of friars, monks, priests, nuns, consuls, military officers, soldiers, pilgrims and strangers from all nations—encircled by the Moslem crowd, which gathers to mutter and imprecate so far as it dares without breaking the peace. It was near midnight when the strange procession returned to "Calvary." Then all the lights were turned down, and those who wished to depart found their way the best they could.

Following on now from the scenes of the Temple and the palace, out of the city gate, across the dry valley, up through the green and gray by any one of the three paths we may choose, we come to the little village of Jebel et Tûr, situated upon the flat central summit of the Mount of Olives. Near the center of the town is the Church of the Ascension, erected to mark the spot of earth last touched by the feet of Jesus before he ascended to heaven. The church which first stood here was one of the enterprises of the Empress Helena, the mother of Constantine. It was followed by the present structure and the little mosque which accompanies it. Indeed, the church or dome of the Ascension is located within the court of the mosque. A Christian edifice is tolerated in this land only when a Moslem structure is placed near at hand. "The last foot-print of the Saviour," distorted by the wear of ages and by the kisses of the devout of centuries, is shown upon the rock which forms part of the gloomy interior. Singularly enough the chapel is entirely empty. Driven from our tents—located a few rods away—by a sudden shower one morning, my companions and I were permitted to seek shelter here. A small fire of charcoal was kindled in a brazier. The fumes, with the smell of lime coming from the damp plastered wall, almost stifled us. When the sun came back the obliging custodian, who also

cries the hour of prayer, took his place in the minaret and permitted the camera to include him in the view made of the buildings. The prospect from the minaret on every side is not only grand, but embraces some of the most interesting of biblical sites.

A wearisome, hard seven-hours' donkey ride is required to reach the Dead Sea, and no little danger accompanies the route through sunless ravines and over bare and desolate heights, where the merry song of the cascade is heard only when the spring torrents come. The hills are of a singular greenish gray color until within a mile or so of the Jordan, when they change to a mingling of pink, yellow, and white, and merge off into the yellows and greens which cover the nearer flat approach to the verdure-clad river. The pink-topped mountains of Moab rise on the other side quite as high as the Mount of Olives, but they do not look so. They reach south and east as far as the eye can see, their bare peaks numbering and unnumbered like those seen from the Fûrka, but as different in their nature as the whitest snow can be from the most sun-scorched of all the earth's surface. To the north the mountains of Gilead rise where Jacob separated his flocks into droves lest his unhappy brother Esau run them off into the wilds beyond. In whatever light one sees them, at daytime or by moonlight, these views are grand.

We turn now to the western prospect. In full front and first of all there is "Jerusalem the Golden," with every detail we have just studied clearly and sharply defined, with hundreds of other points of interest, including the encircling walls. A rough-looking country intervenes, but it is full of sacred interest. There is the path upon which David fled from his rebellious son Absalom, weeping as he went up, with his head uncovered and his feet bare—where the kingly fugitive held council of war with his faithful adherents; where good Ziba brought refreshments which saved the royal life; where the ark was rested; where Hushai came affrighted, "with his coat rent, and earth upon his head," to tell of the intrigue of Absalom: pigeons were sold under the trees for temple-offering of purification, close by the pool where the unclean performed their ablutions before presenting themselves to the Lord. The long incline was submerged by the smoke which came from the burning of the red heifer, the ashes of which were preserved for the purification of the people; the glory of the Lord crowned the summit; upon the bare rocks the watchmen stood eager to catch the first glimmer of the torch-light signal from their fellows stationed upon the mountains of Moab, and quickly repeated the sign to the priests at the Temple that they might know when the new

moon made its appearance above the eastern horizon.

There are perhaps three places where one may see "stones" that were here when Jesus was crucified. One of these is near the south-west corner of the Temple area, and is known as the "Jews' Wailing-Place." There are five courses of stones, one above the other, with the beveled joints of Solomon's day forming part of the wall. Here every Friday the resident Hebrews come to mourn the destruction of the Temple and the fall of the city of their fathers. Earthquake has slightly displaced the stones, and the kisses of the pilgrims of many centuries have worn away the quarrymen's chisel-marks, yet they look as though they might serve for many ages to come. At the extreme south-west angle of the Haram wall is a stone measuring thirty-one feet in length, seven feet in width, and five feet in height. It is the chief corner-stone, and is undoubtedly the one placed there by the order of Solomon to help inclose his Temple. Scant forty feet north of this, half hidden by bushes, which had to be partly cut away to make room for the camera, is another place where we may believe the handiwork of Solomon's masons is to be seen. There are three courses of huge stones in such curious position that they seem to have been fired out from the inside through a breach in the wall, and there caught and wedged fast, instead of falling to the ground. A careful view leaves no doubt that they formed the segment of an arch, for their outer surfaces are hewn to a true curve. Each one measures from twenty to twenty-four feet in length and from five to six feet in height. They must indeed have formed part of one of the arches of the great bridge, more than three hundred and fifty feet in length, over which Solomon, attended by his splendid retinue, must have often passed. Centuries later Jesus too passed over this public way. This strangely interesting relic of the past is known as "Robinson's Arch," so called after Dr. Edward Robinson, who discovered it. In his own account the distinguished traveler says:

The existence of these remains of the ancient bridge seems to remove all doubt as to the identity of this part of the inclosure of the mosque with that of the ancient Temple. How they can have remained for so many ages unseen or unnoticed by any writer or traveler is a problem which I would not undertake fully to solve. . . . Here we have indisputable remains of Jewish antiquity, consisting of an important portion of the western wall of the Temple area. They are probably to be referred to

a period long antecedent to the days of Herod; for the labors of this splendor-loving tyrant appear to have been confined to the body of the Temple and the porticos around the court. The magnitude of the stones also and the workmanship as compared with other remaining monuments of Herod seem to point to an earlier origin. . . . Proceeding to the south-east corner, we find its character to be precisely similar to that of the south-west; the same immense stones as already described, both towards the east and the south, on the brink of the Valley of Jehoshaphat, and the line of the southern wall at this point corresponding with that at the south-west corner. We have, then, the two extremities of the ancient southern wall, which, as Josephus informs us, extended from the eastern to the western valley, and could not be prolonged further. Thus we are led irresistibly to the conclusion that the area of the Jewish Temple was identical on its western, eastern, and southern sides with the present inclosure of the Haram.

The fourth and last point to be considered as supplying a construction which must have been familiar to our Saviour is the Tower of Hippicus, or the Tower of David, so called. When Herod built his great wall about Jerusalem, he built these strong towers towards the north-west. One of these was Hippicus; the second was Phasælus, named after his friend; and the third was called Mariamne, after his favorite wife. These strongholds were connected with one another and with the royal palace. The first named seems to have been spared at every siege, and may be looked upon now as a splendid example of the masonry of antiquity. It is located a little south of the Joppa gate and still serves — or its adjacent buildings serve — as the citadel of Jerusalem. The sturdy, sloping bulwark is said to be solid. No entrance has ever been discovered.

Returning to the summit of the Golden Gate on Good Friday, a last review was had of the country round about. The sun had just sunk behind the domes of the old church. The crimson glow left the heights and the broad shadows fell. The moon arose beyond Olivet as red as blood. Soon its gentle influence was felt in the wild gorges and rocky glens which run down Olivet to the Vale of Kidron; the olive-trees glistened more than they do in the sunshine. The languid air was made fresher by the breeze which blew from the Sea of Galilee. How the wind wailed among the tombs below! What a strange unison between this placid hour and the sacred associations on every side! It must have been just such a night when the three wise men sat watching for "his star in the east."

Edward L. Wilson.

SALOME MÜLLER.

STRANGE TRUE STORIES OF LOUISIANA.

EDITED BY GEORGE W. CABLE,

Author of "The Grandissimes," "Bonaventure," etc.

SALOME AND HER KINDRED.

SHE may be living yet, in 1889. For when she came to Louisiana, in 1818, she was too young for the voyage to fix itself in her memory. She could not, to-day, be more than seventy-five.

In Alsace, France, on the frontier of the Department of Lower Rhine, about twenty English miles from Strasburg, there was in those days, as I suppose there still is, a village called Langensoultz. The region was one of hills and valleys and of broad, flat meadows yearly overflowed by the Rhine. It was noted for its fertility; a land of wheat and wine, hop-fields, flax-fields, hay-stacks, and orchards.

It had been three hundred and seventy years under French rule, yet the people were still, in speech and traditions, German. Those were not the times to make them French. The land swept by Napoleon's wars, their firesides robbed of fathers and sons by the conscription, the awful mortality of the Russian campaign, the emperor's waning star, Waterloo—these were not the things or conditions to give them comfort in French domination. There was a widespread longing among them to seek another land where men and women and children were not doomed to feed the ambition of European princes.

In the summer of 1817 there lay at the Dutch port of Helder—for the great ship-canal that now lets the largest vessels out from Amsterdam was not yet constructed—a big, foul, old Russian ship which a certain man had bought purposing to crowd it full of emigrants to America.

These he had expected to find up the Rhine, and he was not disappointed. Hundreds responded from Alsace; some in Strasburg itself, and many from the surrounding villages, grain-fields, and vineyards. They presently numbered nine hundred, husbands, wives, and children. There was one family named Thomas, with a survivor of which I conversed in 1884. And there was Eva Kropp, *née* Hillsler, and her husband, with their daughter of fifteen, named for her mother. Also Eva Kropp's sister Margaret and her husband, whose name does not appear. And there were Koelhoffer and his

wife, and Frau Schultzheimer. There is no need to remember exact relationships. All these except the Thomases were of Langensoultz.

As they passed through another village some three miles away they were joined by a family of name not given, but the mother of which we shall know by and by, under a second husband's name, as Madame Fleikener. And there too was one Wagner, two generations of whose descendants were to furnish each a noted journalist to New Orleans. I knew the younger of these in my boyhood as a man of, say, fifty. And there was young Frank Schuber, a good, strong-hearted, merry fellow who two years after became the husband of the younger Eva Kropp; he hailed from Strasburg; I have talked with his grandson. And lastly there were among the Langensoultz group two families named Müller.

The young brothers Henry and Daniel Müller were by birth Bavarians. They had married, in the Hillsler family, two sisters of Eva and Margaret. They had been known in the village as lockmaker Müller and shoemaker Müller. The wife of Daniel, the shoemaker, was Dorothea. Henry, the locksmith, and his wife had two sons, the elder ten years of age and named for his uncle Daniel, the shoemaker. Daniel and Dorothea had four children. The eldest was a little boy of eight years, the youngest was an infant, and between these were two little daughters, Dorothea and Salome.

And so the villagers were all bound closely together, as villagers are apt to be. Eva Kropp's young daughter Eva was godmother to Salome. Frau Koelhoffer had lived on a farm about an hour's walk from the Müllers and had not known them; but Frau Schultzheimer was a close friend, and had been a schoolmate and neighbor of Salome's mother. The husband of her who was afterward Madame Fleikener was a nephew of the Müller brothers, Frank Schuber was her cousin, and so on.

SIX MONTHS AT ANCHOR.

SETTING out thus by whole families and with brothers' and sisters' families on the right and on the left, we may safely say that, once the last kisses were given to those left behind and the last look taken of childhood's scenes, they pressed forward brightly, filled with courage and hope. They were poor, but they were bound

for a land where no soldier was going to snatch the beads and cross from the neck of a little child, as one of Napoleon's had attempted to do to one of the Thomas children. They were on their way to golden America; through Philadelphia to the virgin lands of the great West. Early in August they reached Amsterdam. There they paid their passage in advance, and were carried out to the Helder, where, having laid in their provisions, they embarked and were ready to set sail.

But no sail was set. Word came instead that the person who had sold the ship had not been paid its price and had seized the vessel; the delays of the law threatened, when time was a matter of fortune or of ruin.

And soon came far worse tidings. The emigrants refused to believe them as long as there was room for doubt. Henry and Daniel Müller—for locksmith Müller, said Wagner twenty-seven years afterwards on the witness-stand, "was a brave man and was foremost in doing everything necessary to be done for the passengers"—went back to Amsterdam to see if such news could be true, and returned only to confirm despair. The man to whom the passage money of the two hundred families—nine hundred souls—had been paid had absconded.

They could go neither forward nor back. Days, weeks, months passed, and there still lay the great hulk teeming with its population and swinging idly at anchor; fathers gazing wistfully over the high bulwarks, mothers nursing their babes, and the children, Eva, Daniel, Henry, Andrew, Dorothea, Salome, and all the rest, by hundreds.

Salome was a pretty child, dark, as both her parents were, and looking much like her mother; having especially her black hair and eyes and her chin. Playing around with her was one little cousin, a girl of her own age,—that is, somewhere between three and five,—whose face was strikingly like Salome's. It was she who in later life became Madame Karl Rouff, or, more familiarly, Madame Karl.

Provisions began to diminish, grew scanty, and at length were gone. The emigrants' summer was turned into winter; it was now December. So pitiful did their case become that it forced the attention of the Dutch Government. Under its direction they were brought back to Amsterdam, where many of them, without goods, money, or even shelter, and strangers to the place and to the language, were reduced to beg for bread.

But by and by there came a word of great relief. The Government offered a reward of thirty thousand guilders—about twelve thousand dollars—to any merchant or captain of a vessel who would take them to America, and a certain Grandsteiner accepted the task. For

a time he quartered them in Amsterdam, but by and by, with hearts revived, they began to go again on shipboard. This time there were three ships in place of the one; or two ships, and one of those old Dutch, flattish-bottomed, round-sided, two-masted crafts they called galiots. The number of ships was trebled—that was well; but the number of souls was doubled, and eighteen hundred wanderers from home were stowed in the three vessels.

FAMINE AT SEA.

THESE changes made new farewells and separations. Common aims, losses, and sufferings had knit together in friendship many who had never seen each other until they met on the deck of the big Russian ship, and now not a few of these must part.

The first vessel to sail was one of the two ships, the *Johanna Maria*. Her decks were black with people: there were over six hundred of them. Among the number, waving farewell to the Kropps, the Koelhöffers, the Schultzeimers, to Frank Schubert and to the Müllers, stood the Thomases, Madame Fleikener, as we have to call her, and one whom we have not yet named, the jungfrau Hemin, of Würtemberg, just turning nineteen, of whom the little Salome and her mother had made a new, fast friend on the old Russian ship.

A week later the *Captain Grone*—that is, the galiot—hoisted the Dutch flag as the *Johanna Maria* had done, and started after her with other hundreds on her own deck, I know not how many, but making eleven hundred in the two, and including, for one, young Wagner. Then after two weeks more the remaining ship, the *Johanna*, followed, with Grandsteiner as supercargo, and seven hundred emigrants. Here were the Müllers and most of their relatives and fellow-villagers. Frank Schubert was among them, and was chosen steward for the whole shipful.

At last they were all off. But instead of a summer's they were now to encounter a winter's sea, and to meet it weakened and wasted by sickness and destitution. The first company had been out but a week when, on New Year's night, a furious storm burst upon the crowded ship. With hatches battened down over their heads they heard and felt the great buffeting of the tempest, and by and by one great crash above all other noises as the mainmast went by the board. The ship survived; but when the storm was over and the people swarmed up once more into the pure ocean atmosphere and saw the western sun set clear, it set astern of the ship. Her captain had put her about and was steering for Amsterdam.

"She is too old," the travelers gave him credit for saying, when long afterwards they

testified in court ; " too old, too crowded, too short of provisions, and too crippled, to go on such a voyage ; I don't want to lose my soul that way." And he took them back.

They sailed again ; but whether in another ship, or in the same with another captain, I have not discovered. Their sufferings were terrible. The vessel was foul. Fevers broke out among them. Provisions became scarce. There was nothing fit for the sick, who daily grew more numerous. Storms tossed them hither and yon. Water became so scarce that the sick died for want of it.

One of the Thomas children, a little girl of eight years, whose father lay burning with fever and moaning for water, found down in the dark at the back of one of the water-casks a place where once in a long time a drop of water fell from it. She placed there a small vial, and twice a day bore it, filled with water-drops, to the sick man. It saved his life. Of the three ship-loads only two families reached America whole, and one of these was the Thomases. A younger sister told me in 1884 that though the child lived to old age on the banks of the Mississippi River, she could never see water wasted and hide her anger.

The vessels were not bound for Philadelphia, as the Russian ship had been. Either from choice or of necessity the destination had been changed before sailing, and they were on their way to New Orleans.

That city was just then — the war of 1812-15 being so lately over — coming boldly into notice as commercially a strategic point of boundless promise. Steam navigation had hardly two years before won its first victory against the powerful current of the Mississippi, but it was complete. The population was thirty-three thousand ; exports, thirteen million dollars. Capital and labor were crowding in, and legal, medical, and commercial talent were hurrying to the new field.

Scarcely at any time since has the New Orleans bar, in proportion to its numbers, had so many brilliant lights. Edward Livingston, of world-wide fame, was there in his prime. John R. Grymes, who died a few years before the opening of the late civil war, was the most successful man with juries who ever plead in Louisiana courts. We must meet him in the court-room by and by, and may as well make his acquaintance now. He was emphatically a man of the world. Many anecdotes of him remain, illustrative rather of intrepid shrewdness than of chivalry. He had been counsel for the pirate brothers Lafitte in their entanglements with the custom-house and courts, and was believed to have received a hundred thousand dollars from them as fees. Only old men remember him now. They say he never lifted his

voice, but in tones that grew softer and lower the more the thought behind them grew intense would hang a glamour of truth over the veriest sophistries that intellectual ingenuity could frame. It is well to remember that this is only tradition, which can sometimes be as unjust as daily gossip. It is sure that he could entertain most showily. The young Duke of Saxe-Weimar-Eisenach was his guest. In his book of travels in America (1825-26) he says :

My first excursion [in New Orleans] was to visit Mr. Grymes, who here inhabits a large, massive, and splendidly furnished house. . . . In the evening we paid our visit to the governor of the State. . . . After this we went to several coffee-houses where the lower classes amuse themselves. . . . Mr. Grymes took me to the masked ball, which is held every evening during the carnival at the French theatre. . . . The dress of the ladies I observed to be very elegant, but understood that most of those dancing did not belong to the better class of society. . . . At a dinner, which Mr. Grymes gave me with the greatest display of magnificence, . . . we withdrew from the first table, and seated ourselves at the second, in the same order in which we had partaken of the first. As the variety of wines began to set the tongues of the guests at liberty, the ladies rose, retired to another apartment, and resorted to music. Some of the gentlemen remained with the bottle, while others, among whom I was one, followed the ladies. . . . We had waltzing until 10 o'clock, when we went to the masquerade in the theatre in St. Philip street. . . . The female company at the theatre consisted of quadrooms, who, however, were masked.

Such is one aspect given us by history of the New Orleans towards which that company of emigrants, first of the three that had left the other side, were toiling across the waters.

SOLD INTO BONDAGE.

THEY were fever-struck and famine-wasted. But February was near its end, and they were in the Gulf of Mexico. At that time of year its storms have lulled and its airs are the perfection of spring ; March is a kind of May. And March came.

They saw other ships now every day ; many of them going their way. The sight cheered them ; the passage had been lonely as well as stormy. Their own vessels, of course, — the other two, — they had not expected to see, and had not seen. They did not know whether they were on the sea or under it.

At length pilot-boats began to appear. One came to them and put a pilot on board. Then the blue water turned green, and by and by yellow. A fringe of low land was almost right ahead. Other vessels were making for the same lighthouse towards which they were headed, and so drew constantly nearer to one another. The emigrants line the bulwarks, watching the

nearest sails. One ship is so close that some can see the play of waters about her bows. And now it is plain that her bulwarks, too, are lined with emigrants who gaze across at them. She glides nearer, and just as the cry of recognition bursts from this whole company the other one yonder suddenly waves caps and kerchiefs and sends up a cheer. Their ship is the *Johanna*.

Do we dare draw upon fancy? We must not. The companies did meet on the water, near the Mississippi's mouth, though whether first inside or outside the stream I do not certainly gather. But they met; not the two vessels only, but the three. They were towed up the river side by side, the *Johanna* here, the *Captain Grone* there, and the other ship between them. Wagner, who had sailed on the galiot, was still alive. Many years afterwards he testified:

"We all arrived at the Balize [the river's mouth] the same day. The ships were so close we could speak to each other from on board our respective ships. We inquired of one another of those who had died and of those who still remained."

Madame Fleikener said the same:

"We hailed each other from the ships and asked who lived and who had died. The father and mother of Madame Schuber [Kropp and his wife] told me Daniel Müller and family were on board."

But they had suffered loss. Of the *Johanna's* 700 souls only 430 were left alive. Henry Müller's wife was dead. Daniel Müller's wife, Dorothea, had been sick almost from the start; she was gone, with the babe at her bosom. Henry was left with his two boys, and Daniel with his one and his little Dorothea and Salome. Grandsteiner, the supercargo, had lived; but of 1800 homeless poor whom the Dutch king's gilders had paid him to bring to America, foul ships and lack of food and water had buried 1200 in the sea.

The vessels reached port and the passengers prepared to step ashore, when to their amazement and dismay Grandsteiner laid the hand of the law upon them and told them they were "redemptioners." A redemptioner was an emigrant whose services for a certain period were liable to be sold to the highest bidder for the payment of his passage to America. It seems that in fact a large number of those on board the *Johanna* had in some way really become so liable; but it is equally certain that of others, the Kropps, the Schultzhaimers, the Koelhoffers, the Müllers, and so on, the transportation had been paid for in advance, once by themselves and again by the Government of Holland. Yet Daniel Müller and his children were among those held for their passage money.

Some influential German residents heard of

these troubles and came to the rescue. Suits were brought against Grandsteiner, the emigrants remaining meanwhile on the ships. Mr. Grymes was secured as counsel in their cause; but on some account not now remembered by survivors scarce a week had passed before they were being sold as redemptioners. At least many were, including Daniel Müller and his children.

Then the dispersion began. The people were bound out before notaries and justices of the peace, singly and in groups, some to one, some to two years' service, according to age. "They were scattered,"—so testified Frank Schuber twenty-five years afterwards,—"scattered about like young birds leaving a nest, without knowing anything of each other." They were "taken from the ships," says the jungfrau Hemin, "and went here and there so that one scarcely knew where the other went."

Many went no farther than New Orleans or its suburbs, but settled, some in and about the old rue Chartres—the Thomas family, for example; others in the then new faubourg Marigny, where Eva Kropp's daughter, Salome's young cousin Eva, for one, seems to have gone into domestic service. Others, again, were taken out to plantations near the city; Madame Fleikener to the well-known estate of Maunsell White, Madame Schultzheimer to the locally famous Hopkins plantation, and so on.

But others were carried far away; some, it is said, even to Alabama. Madame Hemin was taken a hundred miles up the river, to Baton Rouge, and Henry Müller and his two little boys went on to Bayou Sara, and so up beyond the State's border and a short way into Mississippi.

When all his relatives were gone Daniel Müller was still in the ship with his little son and daughters. Certainly he was not a very salable redemptioner with his three little motherless children about his knees. But at length, some fifteen days after the arrival of the ships, Frank Schuber met him on the old custom-house wharf with his little ones and was told by him that he, Müller, was going to Attakapas. About the same time, or a little later, Müller came to the house where young Eva Kropp, afterwards Schuber's wife, dwelt, to tell her good-bye. She begged to be allowed to keep Salome. During the sickness of the little one's mother and after the mother's death she had taken constant maternal care of the pretty, black-eyed, olive-skinned godchild. But Müller would not leave her behind.

THE LOST ORPHANS.

THE prospective journey was the same that we saw Suzanne and Françoise, Joseph and

Alix, take with toil and danger, yet with so much pleasure, in 1795. The early company went in a flatboat; these went in a round-bottom boat. The journey of the latter was probably the shorter. Its adventures have never been told, save one line. When several weeks afterwards the boat returned, it brought word that Daniel Müller had one day dropped dead on the deck and that his little son had fallen overboard and was drowned. The little girls had presumably been taken on to their destination by whoever had been showing the way; but that person's name and residence, if any of those left in New Orleans had known them, were forgotten. Only the wide and almost trackless region of Attakapas was remembered, and by people to whom every day brought a struggle for their own existence. Besides, the children's kindred were bound as redemptioners.

Those were days of rapid change in New Orleans. The redemptioners worked their way out of bondage into liberty. At the end of a year or two those who had been taken to plantations near by returned to the city. It was growing, but the upper part of the river front in faubourg Ste. Marie, now in the heart of the city, was still lined with brickyards, and thitherward cheap houses and opportunities for market gardening drew the emigrants. They did not colonize, however, but merged into the community about them, and only now and then, casually, met one another. Young Schuber was an exception; he thrived as a butcher in the old French market, and courted and married the young Eva Kropp. When the fellow-emigrants occasionally met, their talk was often of poor shoemaker Müller and his lost children.

No clear tidings of them came. Once the children of some Germans who had driven cattle from Attakapas to sell them in the shambles at New Orleans corroborated to Frank Schuber the death of the father; but where Salome and Dorothea were they could not say, except that they were in Attakapas.

Frank and Eva were specially diligent inquirers after Eva's lost godchild; as also was Henry Müller up in or near Woodville, Mississippi. He and his boys were, in their small German way, prospering. He made such effort as he could to find the lost children. One day in the winter of 1820-21 he somehow heard that there were two orphan children named Miller—the Müllers were commonly called Miller—in the town of Natchez, some thirty-five miles away on the Mississippi. He bought a horse and wagon, and, leaving his own children, set out to rescue those of his dead brother. About midway on the road from Woodville to Natchez the Homochitto Creek runs through a swamp which in winter it overflows. In here Müller lost his horse. But, nothing daunted, he pressed

on, only to find in Natchez the trail totally disappear.

Again, in the early spring of 1824, a man driving cattle from Attakapas to Bayou Sara told him of two little girls named Miller living in Attakapas. He was planning another and bolder journey in search of them, when he fell ill; and at length, without telling his sons, if he knew, where to find their lost cousins, he too died.

Years passed away. Once at least in nearly every year young Daniel Miller—the "ü" was dropped—of Woodville came down to New Orleans. At such times he would seek out his relatives and his father's and uncle's old friends and inquire for tidings of the lost children. But all in vain. Frank and Eva Schuber too kept up the inquiry in his absence, but no breath of tidings came. On the city's south side sprung up the new city of Lafayette, now the Fourth District of New Orleans, and many of the aforetime redemptioners moved thither. Its streets near the river became almost a German quarter. Other German immigrants, hundreds and hundreds, landed among them, and in the earlier years many of these were redemptioners. Among them one whose name will always be inseparable from the history of New Orleans has a permanent place in this story.

CHRISTIAN ROSELIUS.

ONE morning many years ago, when some business had brought me into a corridor of one of the old court buildings facing the Place d'Armes, a loud voice from within one of the court-rooms arrested my own and the general ear. At once from all directions men came with decorum, but with haste as well, towards the spot whence it proceeded. I pushed in through a green door into a closely crowded room and found the Supreme Court of the State in session. A short, broad, big-browed man of an iron sort, with silver hair close shorn from a Roman head, had just begun his argument in the final trial of a great case that had been before the court for many years, and the privileged seats were filled with the highest legal talent, sitting to hear him. It was a famous will case,¹ and I remember that he was quoting from "King Lear" as I entered.

"Who is that?" I asked of a man packed against me in the press.

"Roselius," he whispered; and the name confirmed my conjecture: the speaker looked like all I had once heard about him. Christian Roselius came from Brunswick, Germany, a youth of seventeen, something more than two years later than Salome Müller and her friends. Like them he came an emigrant under the

¹ The will of R. D. Shepherd.

Dutch flag, and like them his passage was paid in New Orleans by his sale as a redemptioner. A printer bought his services for two years and a half. His story is the good old one of courage, self-imposed privations, and rapid development of talents. From printing he rose to journalism, and from journalism passed to the bar. By 1836, at thirty-three years of age, he stood in the front rank of that brilliant group where Grymes was still at his best. Before he was forty he had been made attorney-general of the State. Punctuality, application, energy, temperance, probity, bounty, were the strong features of his character. It was a common thing for him to give his best services free in the cause of the weak against the strong. As an adversary he was decorous and amiable, but thunderous, heavy-handed, derisive if need be, and inexorable. A time came for these weapons to be drawn in defense of Salome Müller.

MILLER *versus* BELMONTI.

IN 1843 Frank and Eva Schuber had moved to a house on the corner of Jackson and Annunciation streets.¹ They had brought up sons, two at least, who were now old enough to be their father's mainstay in his enlarged business of "farming" (leasing and subletting) the Poydras market. The father and mother and their kindred and companions in long past misfortunes and sorrows had grown to wealth and standing among the German-Americans of New Orleans and Lafayette. The little girl cousin of Salome Müller, who as a child of the same age had been her playmate on shipboard at the Helder and in crossing the Atlantic, and who looked so much like Salome, was a woman of thirty, the wife of Karl Rouff.

One summer day she was on some account down near the lower limits of New Orleans on or near the river front, where the population was almost wholly a lower class of Spanish people. Passing an open door her eye was suddenly arrested by a woman of about her own age engaged in some humble service within with her face towards the door.

Madame Karl paused in astonishment. The place was a small drinking-house, a mere *cabaret*; but the woman! It was as if her aunt Dorothea, who had died on the ship twenty-five years before, stood face to face with her alive and well. There were her black hair and eyes, her olive skin, and the old, familiar expression of countenance that belonged so distinctly to all the Hillsler family. Madame Karl went in.

"My name," the woman replied to her question, "is Mary." And to another question, "No; I am a yellow girl. I belong to Mr. Louis Belmonti, who keeps this 'coffee-house.'

He has owned me for four or five years. Before that? Before that, I belonged to Mr. John Fitz Miller, who has the saw-mill down here by the convent. I always belonged to him." Her accent was the one common to English-speaking slaves.

But Madame Karl was not satisfied. "You are not rightly a slave. Your name is Müller. You are of pure German blood. I knew your mother. I know you. We came to this country together on the same ship, twenty-five years ago."

"No," said the other; "you must be mistaking me for some one else that I look like."

But Madame Karl: "Come with me. Come up into Lafayette and see if I do not show you to others who will know you the moment they look at you."

The woman enjoyed much liberty in her place and was able to accept this invitation. Madame Karl took her to the home of Frank and Eva Schuber.

Their front door steps were on the street. As Madame Karl came up to them Eva stood in the open door much occupied with her approach, for she had not seen her for two years. Another woman, a stranger, was with Madame Karl. As they reached the threshold and the two old-time friends exchanged greetings, Eva said:

"Why, it is two years since I last saw you. Is that a German woman? — I know her!"

"Well," said Madame Karl, "if you know her, who is she?"

"My God!" cried Eva — "the long-lost Salome Müller!"

"I needed nothing more to convince me," she afterwards testified in court. "I could recognize her among a hundred thousand persons."

Frank Schuber came in, having heard nothing. He glanced at the stranger, and turning to his wife asked:

"Is not that one of the girls who was lost?"

"It is," replied Eva; "it is. It is Salome Müller!"

On that same day, as it seems, for the news had not reached them, Madame Fleikener and her daughter — they had all become madams in creole America — had occasion to go to see her kinswoman, Eva Schuber. She saw the stranger and instantly recognized her, "because of her resemblance to her mother."

They were all overjoyed. Though here was a woman who for twenty-five years had been dragged in the mire of African slavery and was the mother of quadroon children and ignorant of her own identity, they welcomed her back to their embrace, not fearing but hoping she was their long-lost Salome.

But another confirmation was possible, far

¹ Long since burned down.

more conclusive than mere recognition of the countenance. Eva knew this. For weeks together she had bathed and dressed the little Salome every day. She and her mother and all Henry Müller's family had known, and had made it their common saying, that it might be difficult to identify the lost Dorothea were she found; but if ever Salome were found they could prove she was Salome beyond the shadow of a doubt. It was the remembrance of this that moved Eva Schubert to say to the woman:

"Come with me into this other room." They went, leaving Madame Karl, Madame Fleikener, her daughter, and Frank Schubert behind. And when they returned the slave was convinced, with them all, that she was the younger daughter of Daniel and Dorothea Müller. We shall presently see what fixed this conviction.

The next step was to claim her freedom. She appears to have gone back to Belmonti, but within a very few days, if not immediately, Madame Schubert and a certain Mrs. White—who does not become prominent—followed down to the cabaret. Mrs. White went out somewhere on the premises, found Salome at work, and remained with her, while Madame Schubert confronted Belmonti, and, revealing Salome's identity and its proofs, demanded her instant release.

Belmonti refused to let her go. But while doing so he admitted his belief that she might be of pure white blood and of right entitled to freedom. He confessed having gone back to John F. Miller¹ soon after buying her and proposing to set her free; but Miller, he said, had replied that in such a case the law required her to leave the country. Thereupon Belmonti had demanded that the sale be rescinded, saying: "I have paid you my money for her."

"But," said Miller, "I did not sell her to you as a slave. She is as white as you or I, and neither of us can hold her if she choose to go away."

Such at least was Belmonti's confession, yet he was as far from consenting to let his captive go after this confession was made as he had been before. He seems actually to have kept her for a while; but at length she went boldly to Schubert's house, became one of his household, and with his advice and aid asserted her intention to establish her freedom by an appeal to law. Belmonti replied with threats of public imprisonment, the chain-gang, and the auctioneer's block.

Salome, or Sally, for that seems to be the nickname by which her kindred remembered her, was never to be sold again; but not many months were to pass before she was to find

herself a prisoner, by the only choice the laws allowed her, in the famous calaboose. Says her petition: "Your petitioner has good reason to believe that the said Belmonti intends to remove her out of the jurisdiction of the court during the pendency of the suit"; wherefore not *he* but *she* went to jail. Here she remained for six days and was then allowed to go at large, but only upon *giving bond and security to Belmonti*, and in a much larger sum than she had ever been sold for. The original writ of sequestration lies before me as I write, indorsed as follows:

No. 23,041.

SALLY MILLER	}	Sequestration.
vs.		Sigur, Caperton
LOUIS BELMONTI.		and Bonford.

Received 24th January, 1844, and on the 26th of the same month sequestered the body of the plaintiff and committed her to prison for safe keeping; but on the 1st February, 1844, she was released from custody, having entered bond in the sum of one thousand dollars with Francis Schubert as the security conditioned according to law, and which bond is herewith returned this 3d February, 1844.

B. F. LEWIS, d'y sh'ff.

Inside is the bond with the signatures, Frantz Schubert in German script, and above in her

English, Sally X Miller. Also the writ, end-mark

in words of strange and solemn irony: "In the year of our Lord one thousand eight hundred and forty-four and in the sixty-eighth year of the Independence of the United States."

We need not follow the history at the slow gait of court proceedings. At Belmonti's petition John F. Miller was called in warranty; that is, made the responsible party in Belmonti's stead. There were "prayers" and rules, writs and answers, as the cause slowly gathered shape for final contest. Here are papers of date February 24 and 29—it was leap year—and April 1, 2, 8, and 27. On the 7th of May Frank Schubert asked leave, and on the 14th was allowed, to substitute another bondsman in his place in order that he himself might qualify as a witness; and on the 23d of May the case came to trial.

THE TRIAL.

It had already become famous. Early in April the press of the city, though in those days unused to giving local affairs more than the feeblest attention, had spoken of this suit as destined, if well founded, to develop a case

¹ The similarity in the surnames of Salome and her master is odd, but is accidental and without significance.

of "unparalleled hardship, cruelty, and oppression." The German people especially were aroused and incensed. A certain newspaper spoke of the matter as the case "that had for several days created so much excitement throughout the city." The public sympathy was with Salome.

But by how slender a tenure was it held ! It rested not on the "hardship, cruelty, and oppression" she had suffered for twenty years, but only on the fact, which she might yet fail to prove, that she had suffered these things without having that tincture of African race which, be it ever so faint, would entirely justify, alike in the law and in the popular mind, treatment otherwise counted hard, cruel, oppressive, and worthy of the public indignation.

And now to prove the fact. In a newspaper of that date appears the following :

HON. A. M. BUCHANAN, *Judge.*

SALLY MILLER vs. BELMONTI.	}	No. 23,041.
--	---	-------------

This cause came on to-day for trial before the court, Roselius and Upton for plaintiff, Canon for defendant, Grymes and Micon for warrantor ; when after hearing evidence the same is continued until to-morrow morning at 11 o'clock.

Salome's battle had begun. Besides the counsel already named, there were on the slave's side a second Upton and a Bonford, and on the master's side a Sigur, a Caperton, and a Lockett. The redemptioners had made the cause their own and prepared to sustain it with a common purse.

Neither party had asked for a trial by jury ; the decision was to come from the bench.

The soldier, in the tableaux of Judge Buchanan's life, had not dissolved perfectly into the justice, and old lawyers of New Orleans remember him rather for unimpeachable integrity than for fine discrimination, a man of almost austere dignity, somewhat quick in temper.

Before him now gathered the numerous counsel, most of whose portraits have long since been veiled and need not now be uncovered. At the head of one group stood Roselius, at the head of the other, Grymes. And for this there were good reasons. Roselius, who had just ceased to be the State's attorney-general, was already looked upon as one of the readiest of all champions of the unfortunate. He was in his early prime, the first full spread of his powers, but he had not forgotten the little Dutch brig *Jupiter*, or the days when he was himself a redemptioner.

Grymes, on the other side, had had to do — as we have seen — with these same redemptioners before. The uncle and the father of this same Sally Miller, so called, had been chief witnesses in the suit for their liberty and hers, which he had — blamelessly, we need not doubt — lost some twenty-five years before. Directly in consequence of that loss Salome had gone into slavery and disappeared. And now the loser of that suit was here to maintain that slavery over a woman who, even if she should turn out not to be the lost child, was enough like to be mistaken for her. True, causes must have attorneys, and such things may happen to any lawyer ; but here was a cause which in our lights, to-day at least, had on the defendant's side no moral right to come into court.

One other person, and only one, need we mention. Many a New York City lawyer will recall in his reminiscences of thirty years ago a small, handsome, gold-spectacled man with brown hair and eyes, noted for scholarship and literary culture ; a brilliant pleader at the bar, and author of two books that became authorities, one on trade-marks, the other on prize law. Even some who do not recollect him by this description may recall how the gifted Frank Upton — for it is of him I write — was one day in 1863 or 1864 struck down by apoplexy while pleading in the well-known Peterhoff case. Or they may remember subsequently his constant, pathetic effort to maintain his old courtly mien against his resultant paralysis. This was the young man of about thirty, of uncommon masculine beauty and refinement, who sat beside Christian Roselius as an associate in the cause of Sally Miller *versus* Louis Belmonti.

THE EVIDENCE.

WE need not linger over the details of the trial. The witnesses for the prosecution were called. First came a creole woman, so old that she did not know her own age, but was a grown-up girl in the days of the Spanish governor-general Galvez, sixty-five years before. She recognized in the plaintiff the same person whom she had known as a child in John F. Miller's domestic service with the mien, eyes, and color of a white person and with a German accent. Next came Madame Hemin, who had not known the Müllers till she met them on the Russian ship and had not seen Salome since parting from them at Amsterdam, yet who instantly identified her "when she herself came into the court-room just now." "Witness says," continues the record, "she perceived the family likeness in plaintiff's face when she came in the door."

The next day came Eva and told her story ;

and others followed, whose testimony, like hers, we have anticipated. Again and again was the plaintiff recognized, both as Salome and as the girl Mary, or Mary Bridget, who for twenty years and upward had been owned in slavery, first by John F. Miller, then by his mother, Mrs. Canby, and at length by the cabaret keeper Louis Belmonti. If the two persons were but one, then for twenty years at least she had lived a slave within five miles, and part of the time within two, of her kindred and of freedom.

That the two persons were one it seemed scarcely possible to doubt. Not only did every one who remembered Salome on shipboard recognize the plaintiff as she, but others, who had quite forgotten her appearance then, recognized in her the strong family likeness of the Müllers. This likeness even witnesses for the defense had to admit. So, on Salome's side, testified Madame Koelhoffer, Madame Schultzheimer, and young Daniel Müller (Miller) from Mississippi. She was easily pointed out in the throng of the crowded court-room.

And then, as we have already said, there was another means of identification which it seemed ought alone to have carried with it overwhelming conviction. But this we still hold in reserve until we have heard the explanation offered by John F. Miller both in court and at the same time in the daily press in reply to its utterances which were voicing the public sympathy for Salome.

It seems that John Fitz Miller was a citizen of New Orleans in high standing, a man of property, money, enterprises, and slaves. John Lawson Lewis, commanding-general of the State militia, testified in the case to Mr. Miller's generous and social disposition, his easy circumstances, his kindness to his eighty slaves, his habit of entertaining, and the exceptional fineness of his equipage. Another witness testified that complaints were sometimes made by Miller's neighbors of his too great indulgence of his slaves. Others, ladies as well as gentlemen, corroborated these good reports, and had even kinder and higher praises for his mother, Mrs. Canby. They stated with alacrity, not intending the slightest imputation against the gentleman's character, that he had other slaves even fairer of skin than this Mary Bridget, who nevertheless, "when she was young," they said, "looked like a white girl." One thing they certainly made plain—that Mr. Miller had never taken the Müller family or any part of them to Attakapas or knowingly bought a redemptioner.

He accounted for his possession of the plaintiff thus: In August, 1822, one Anthony Williams, being or pretending to be a negro-trader and from Mobile, somehow came into contact with Mr. John Fitz Miller in New

Orleans. He represented that he had sold all his stock of slaves except one girl, Mary Bridget, ostensibly twelve years old, and must return at once to Mobile. He left this girl with Mr. Miller to be sold for him for his (Williams's) account under a formal power of attorney so to do, Mr. Miller handing him one hundred dollars as an advance on her prospective sale. In January, 1823, Williams had not yet been heard from, nor had the girl been sold; and on the 1st of February Mr. Miller sold her to his own mother, with whom he lived—in other words, *to himself*, as we shall see. In this sale her price was three hundred and fifty dollars and her age was still represented as about twelve. "From that time she remained in the house of my mother," wrote Miller to the newspapers, "as a domestic servant" until 1838, when "she was sold to Belmonti."

Mr. Miller's public statement was not as full and candid as it looked. How, if the girl was sold to Mrs. Canby, his mother—how is it that Belmonti bought her of Miller himself? The answer is that while Williams never reappeared, the girl, in February, 1835, "the girl Bridget," now the mother of three children, was with these children bought back again by that same Mr. Miller from the entirely passive Mrs. Canby, for the same three hundred and fifty dollars; the same price for the four which he had got, or had seemed to get, for the mother alone when she was but a child of twelve years. Thus had Mr. Miller become the owner of the woman, her two sons, and her daughter, had had her service for the keeping, and had never paid but one hundred dollars. This point he prudently overlooked in his public statement. Nor did he count it necessary to emphasize the further fact that when this slave-mother was about twenty-eight years old and her little daughter had died, he sold her alone, away from her two half-grown sons, for ten times what he had paid for her, to be the bond-woman of the wifeless keeper of a dram-shop.

But these were not the only omissions. Why had Williams never come back either for the slave or for the proceeds of her sale? Mr. Miller omitted to state, what he knew well enough, that the girl was so evidently white that Williams could not get rid of her, even to him, by an open sale. When months and years passed without a word from Williams, the presumption was strong that Williams knew the girl was not of African tincture, at least within the definition of the law, and was content to count the provisional transfer to Miller equivalent to a sale.

Miller, then, was—heedless enough, let us call it—to hold in African bondage for twenty years a woman who, his own witnesses testi-

fied, had every appearance of being a white person, without ever having seen the shadow of a title for any one to own her, and with everything to indicate that there was none. Whether he had any better right to own the several other slaves whiter than this one whom those same witnesses of his were forward to state he owned and had owned, no one seems to have inquired. To such a state of moral torpor could slaveholding reduce the public mind. And indeed when we reflect that the whole business of slaveholding and slave buying and selling rested on a foundation of original kidnapping, it ought not to seem remarkable that this particular case should involve a lady noted for her good works and a gentleman who drove "the finest equipage in New Orleans." Few people anywhere in America looked upon such things forty-five years ago with the horror they deserved, and the few who did were despised alike by the godless and the godly.

One point, in view of current beliefs of to-day, compels attention. One of Miller's witnesses was being cross-examined. Being asked if, should he see the slave woman among white ladies, he would not think her white, he replied:

"I cannot say. There are in New Orleans many white persons of dark complexion and many colored persons of light complexion." The question followed:

"What is there in the features of a colored person that designates them to be such?"

"I cannot say. Persons who live in countries where there are many colored persons acquire an instinctive means of judging that cannot be well explained."

And yet neither this man's "instinct" nor that of any one else, either during the whole trial or during twenty years' previous knowledge of the plaintiff, was of the least value to determine whether this poor slave was entirely white or of mixed blood. It was more utterly worthless than her memory. For as to that she had, according to one of Miller's own witnesses, in her childhood confessed a remembrance of having been brought "across the lake"; but whether that had been from Germany, or only from Mobile, must be shown in another way. That way was very simple, and we hold it no longer in suspense.

THE CROWNING PROOF.

"If ever our little Salome is found," Eva Kropp had been accustomed to say, "we shall know her by two hair moles about the size of a coffee-bean, one on the inside of each thigh, about midway up from the knee. Nobody can make those, or take them away without leaving the tell-tale scars." And lo! when Madame

Karl brought Mary Bridget to Frank Schuber's house, and Eva Schuber, who every day for weeks had bathed and dressed her godchild on the ship, took this stranger into another room apart and alone, there were the birth-marks of the lost Salome.

What incontestible evidence the friends of Salome were able to furnish that, as so many testified, these birth-marks were expected to be found before they were found, I do not see. It may have been in the one paper of the court that alone I failed to secure. Madame Karl died before the trial came on. But at any rate the point must have been made plain, for the defense never once called it in question; but, instead, called in question the genuineness of the marks found at last upon the white slave.

The verdict of science was demanded, and an order of the court issued to two noted physicians, one chosen by each side, to examine these marks and report "the nature, appearance, and cause of the same." The kindred of Salome chose Warren Stone, probably the greatest physician and surgeon in one that New Orleans has ever known. Mr. Grymes's client chose a creole gentleman almost equally famed, Dr. Armand Mercier.

Dr. Stone died many years ago; Dr. Mercier, if I remember aright, in 1885. When I called upon Dr. Mercier in his office in Girod street in the summer of 1883, to appeal to his remembrance of this long-forgotten matter, I found a very noble-looking, fair old gentleman whose abundant waving hair had gone all to a white silken floss with age. He sat at his desk in persistent silence with his strong blue eyes fixed steadfastly upon me while I slowly and carefully recounted the story. Two or three times I paused inquiringly; but he faintly shook his head in the negative, a slight frown of mental effort gathering for a moment between the eyes that never left mine. But suddenly he leaned forward and drew his breath as if to speak. I ceased, and he said:

"My sister, the wife of Pierre Soulé, refused to become the owner of that woman and her three children because they were so white!" He pressed me eagerly with an enlargement of his statement, and when he paused I said nothing or very little; for, sad to say, he had only made it perfectly plain that it was not the girl Mary Bridget whom he was recollecting, but *another case*.

He did finally, though dimly, call to mind having served with Dr. Stone in such a matter as I had described. But later I was made independent of his powers of recollection, when the original documents of the court were laid before me. There was the certificate of the two physicians. And there, over their signatures, "Mercier d.m.p." standing first, in a bold heavy hand

underscored by a single broad quill-stroke, was this "Conclusion."

"1. These marks ought to be considered as *nævi materni*.

"2. They are congenital; or, in other words, the person was born with them.

"3. There is no process by means of which artificial spots bearing all the character of the marks can be produced."

JUDGMENT.

ON the 11th of June the case of Sally Miller *versus* Louis Belmonti was called up again and the report of the medical experts received. Could anything be offered by Mr. Grymes and his associates to offset that? Yes; they had one last strong card, and now they played it.

It was, first, a certificate of baptism of a certain Mary's child John, offered in evidence to prove that this child was born at a time when Salome Müller, according to the testimony of her own kindred, was a year or two too young to become a mother; and secondly, the testimony of a free woman of color, that to her knowledge that Mary was this Bridget or Sally, and the child John this woman's eldest son Lafayette. And hereupon the court announced that on the morrow it would hear the argument of counsel.

Salome's counsel besought the court for a temporary postponement on two accounts: first, that her age might be known beyond a peradventure by procuring a copy of her own birth record from the official register of her native Langensoultz, and also to procure in New Orleans the testimony of one who was professionally present at the birth of her son, and who would swear that it occurred some years later than the date of the baptismal record just accepted as evidence.

"We are taken by surprise," exclaimed in effect Roselius and his coadjutors, "in the production of testimony by the opposing counsel openly at variance with earlier evidence accepted from them and on record. The act of the sale of this woman and her children from Sarah Canby to John Fitz Miller in 1835, her son Lafayette being therein described as but five years of age, fixes his birth by irresistible inference in 1830, in which year by the recorded testimony of her kindred Salome Müller was fifteen years old."

But the combined efforts of Roselius, Upton, and others were unavailing, and the newspapers of the following day reported: "This cause, continued from yesterday, came on again today, when, after hearing arguments of counsel, the court took the same under consideration."

It must be a dull fancy that will not draw for itself the picture, when a fortnight later the

court-room is filled again to hear the word of judgment. It is near the end of the hot far-southern June. The judge begins to read aloud. His hearers wait languidly through the prolonged recital of the history of the case. It is as we have given it here: no use has been made here of any testimony discredited in the judge's reasons for his decision. At length the evidence is summed up and every one attends to catch the next word, while every eye is on the white slave. The judge reads:

"The supposed identity is based upon two circumstances: first, a striking resemblance of plaintiff to the child above mentioned and to the family of that child. Second, two certain marks or moles on the inside of the thighs [one on each thigh], which marks are similar in the child and in the woman. This resemblance and these marks are proved by several witnesses. Are they sufficient to justify me in declaring the plaintiff to be identical with the German child in question? I answer this question in the negative."

What stir there was in the room when these words were heard the silent records lying before me do not tell, or whether all was silent while the judge read on; but by and by his words were these:

"I must admit that the relatives of the said family of redemptioners seem to be very firmly convinced of the identity which the plaintiff claims. . . . As, however, it is quite out of the question to take away a man's property upon grounds of this sort, I would suggest that the friends of the plaintiff, if honestly convinced of the justice of her pretensions, should make some effort to settle a *l'aimable* with the defendant, who has honestly and fairly paid his money for her. They would doubtless find him well disposed to part on reasonable terms with a slave from whom he can scarcely expect any service after what has passed. Judgment dismissing the suit with costs."

The white slave was still a slave. We are left to imagine the quiet air of dispatch with which as many of the counsel as were present gathered up any papers they may have had, exchanged a few murmurous words with their clients, and, hats in hand, hurried off and out to other business. Also the silent, slow dejection of Salome, Eva, Frank, and their neighbors and kin as they rose and left the hall where a man's property was more sacred than a woman's freedom. But the attorney had given them ground of hope. Application would be made for a new trial; and if this was refused, as it probably would be, then appeal would be made to the Supreme Court of the State.

So it happened. Only two days later the plaintiff, through one of her counsel, the brother of Frank Upton, applied for a new trial. She

stated that important evidence not earlier obtainable had come to light; that she could produce a witness to prove that John F. Miller had repeatedly said she was white; and that one of Miller's own late witnesses, his own brother-in-law, would make deposition of the fact, recollected only since he gave testimony, that the girl Bridget brought into Miller's household in 1822 was much darker than the plaintiff and died a few years afterwards. And this witness did actually make such deposition. In the six months through which the suit had dragged since Salome had made her first petition to the court and signed it with her mark she had learned to write. The application for a new trial is signed "Sally Müller."

The new trial was refused. Roselius took an appeal. The judge allowed it, but required the amount of Salome's bond to be doubled — this in face of his own characterization of her as "a slave from whom her master could scarcely expect any service." However, Frank Schuber doubled the bond and the case went up to the Supreme Court.

In that court no witnesses were likely to be examined. New testimony was not admissible; all testimony taken in the inferior courts "went up" by the request of either party as part of the record, and to it no addition could ordinarily be made. The case would be ready for argument almost at once.

BEFORE THE SUPERIOR JUDGES.

ONCE more it was May, when in the populous but silent court-room the clerk announced the case of Miller *versus* Louis Belmonti, and John F. Miller, warrantor. Well-nigh a year had gone by since the appeal was taken. Two full years had passed since Madame Karl had found Salome in Belmonti's cabaret. It was now 1845; Grymes was still at the head of one group of counsel, and Roselius of the other. There again were Eva and Salome, looking like an elder and a younger sister. On the bench sat at the right two and at the left two superior judges, and between them in the middle the learned and aged historian of the State, Chief-Justice Martin.

The attorneys had known from the first that the final contest would be here, and had saved their forces for this; and when on the 19th of May the deep, rugged voice of Roselius resounded through the old Cabildo, a nine-days' contest of learning, eloquence, and legal tactics had begun. Roselius may have filed a brief, but I have sought it in vain, and his words in Salome's behalf are lost. Yet we know one part in the defense which he must have retained to himself; for Francis Upton was waiting in reserve to close the argument on the

last day of the trial, and so important a matter as this that we shall mention would hardly have been trusted in any but the strongest hands. It was this: Roselius, in the middle of his argument upon the evidence, proposed to read a certain certified copy of a registry of birth. Grymes and his colleagues instantly objected. It was their own best gun captured and turned upon them. They could not tolerate it. It was no part of the record, they stoutly maintained, and must not be introduced nor read nor commented upon. The point was vigorously argued on both sides; but when Roselius appealed to an earlier decision of the same court the bench decided that, as then, so now, "in suits for freedom, and *in favorem libertatis*, they would notice facts which come credibly before them, even though they be *dehors* the record." And so Roselius thundered it out. The consul for Baden at New Orleans had gone to Europe some time before, and was now newly returned. He had brought an official copy, from the records of the prefect of Salome's native village, of the registered date of her birth. This is what was now heard, and by it Salome and her friends knew to their joy, and Belmonti to his chagrin, that she was two years older than her kinsfolk had thought her to be.

Who followed Roselius is not known, but by and by men were bending the ear to the soft persuasive tones and finished subtleties of the polished and courted Grymes. He left, we are told, no point unguarded, no weapon unused, no vantage-ground unoccupied. The high social standing and reputation of his client were set forth at their best. Every slenderest discrepancy of statement between Salome's witnesses was ingeniously expanded. By learned citation and adroit appliance of the old Spanish laws concerning slaves, he sought to ward off as with a Toledo blade the heavy blows by which Roselius and his colleagues endeavored to lay upon the defendants the burden of proof which the lower court had laid upon Salome. He admitted generously the entire sincerity of Salome's kinspeople in believing plaintiff to be the lost child; but reminded the court of the credulity of ill-trained minds, the contagiousness of fanciful delusions, and especially of what he somehow found room to call the inflammable imagination of the German temperament. He appealed to history; to the scholarship of the bench; citing the stories of Martin Guerre, the Russian Demetrius, Perkin Warbeck, and all the other wonderful cases of mistaken or counterfeited identity. Thus he and his associates plead for the continuance in bondage of a woman whom their own fellow-citizens were willing to take into their houses after twenty years of degradation and infamy, make their

oath to her identity, and pledge their fortunes to her protection as their kinswoman.

Day after day the argument continued. At length the Sabbath broke its continuity, but on Monday it was resumed, and on Tuesday Francis Upton rose to make the closing argument for the plaintiff. His daughter, Miss Upton, now of Washington, once did me the honor to lend me a miniature of him made about the time of Salome's suit for freedom. It is a pleasing evidence of his modesty in the domestic circle—where masculine modesty is so rare—that his daughter had never heard him tell the story of this case, in which, it is said, he put the first strong luster on his fame. In the picture he is a very David—"ruddy and of a fair countenance"; a countenance at once gentle and valiant, vigorous and pure. Lifting this face upon the wrinkled chief-justice and associate judges, he began to set forth the points of law, in an argument which, we are told, "was regarded by those who heard it as one of the happiest forensic efforts ever made before the court."

He set his reliance mainly upon two points: one, that, it being obvious and admitted that plaintiff was not entirely of African race, the presumption of law was in favor of liberty and with the plaintiff, and therefore that the whole burden of proof was upon the defendants, Belmonti and Miller; and the other point, that the presumption of freedom in such a case could be rebutted only by proof that she was descended from a slave mother. These points the young attorney had to maintain as best he could without precedents fortifying them beyond attack; but "Adele *versus* Beauregard" he insisted firmly established the first point and implied the court's assent to the second, while as legal doctrines "Wheeler on Slavery" upheld them both. When he was done Salome's fate was in the hands of her judges.

Almost a month goes by before their judgment is rendered. But at length, on the 21st of June, the gathering with which our imagination has become familiar appears for the last time. The chief-justice is to read the decision from which there can be no appeal. As the judges take their places one seat is left void; it is by reason of sickness. Order is called, silence falls, and all eyes are on the chief-justice.

He reads. To one holding the court's official copy of judgment in hand, as I do at this moment, following down the lines as the justice's eyes once followed them, passing from paragraph to paragraph, and turning the leaves as his hand that day turned them, the scene lifts itself before the mind's eye despite every effort to hold it to the cold letter of the time-stained files of the court. In a single clear, well-compacted paragraph the court states Salome's

claim and Belmonti's denial; in another, the warrantor Miller's denial and defense; and in two lines more, the decision of the lower court. And now mark the strange utterance that follows—esteemed right enough then and there, but already in our day repudiated by law and the best conscience of our nation, and destined yet to be abhorred by every right mind:

"The first inquiry," so reads the chief-justice—"the first inquiry that engages our attention is, What is the color of the plaintiff?"

But this is far from bringing dismay to Salome and her friends. For hear what follows:

"Persons of color"—meaning of mixed blood, not pure negro—"are presumed to be free. . . . The burden of proof is upon him who claims the colored person as a slave. . . . In the highest courts of the State of Virginia . . . a person of the complexion of the plaintiff, without evidence of descent from a slave mother, would be released even on *habeas corpus*. . . . Not only is there no evidence of her [plaintiff] being descended from a slave mother, or even a mother of the African race, but no witness has ventured a positive opinion that she is of that race."

Glad words for Salome and her kindred. The reading goes on: "The presumption is clearly in favor of the plaintiff." But suspense returns, for—"It is next proper," the reading still goes on, "to inquire how far that presumption has been weakened or justified or repelled by the testimony of numerous witnesses in the record. . . . If a number of witnesses had sworn"—here the justice turns the fourth page; now he is in the middle of it, yet all goes well; he is making a comparison of testimony for and against, unfavorable to that which is against. And now—"But the proof does not stop at mere family resemblance." He is coming to the matter of the birth-marks. He calls them "evidence which is not impeached."

He turns the page again, and begins at the top to meet the argument of Grymes from the old Spanish Partidas. But as his utterance follows his eye down the page he sets that argument aside as not good to establish such a title as that by which Miller received the plaintiff. He *exonerates* Miller, but accuses the absent Williams of imposture and fraud. One may well fear the verdict after that. But now he turns a page which every one can see is the last:

It has been said that the German witnesses are imaginative and enthusiastic, and their confidence ought to be distrusted. That kind of enthusiasm is at least of a quiet sort, evidently the result of profound conviction and certainly free from any taint of worldly interest, and is by no means incompatible with the most perfect conscientiousness.

If they are mistaken as to the identity of the plaintiff; if there be in truth two persons about the same age bearing a strong resemblance to the family of Miller [Müller] and having the same identical marks from their birth, and the plaintiff is not the real lost child who arrived here with hundreds of others in 1818, it is certainly one of the most extraordinary things in history. If she be not, then nobody has told who she is. After the most mature consideration of the case, we are of opinion the plaintiff is free, and it is our duty to declare her so.

It is therefore ordered, adjudged, and decreed, that the judgment of the District Court be reversed; and ours is that the plaintiff be released from the bonds of slavery, that the defendants pay the costs of the appeal, and that the case be remanded for further proceedings as between the defendant and his warrantor.

So ends the record of the court. "The question of damage," says the *Law Reporter*, "is the

subject-matter of another suit now pending against Jno. F. Miller and Mrs. Canby." But I have it verbally from Salome's relatives that the claim was lightly and early dismissed. Salome being free, her sons were, by law, free also. But they came, and could come, only into a negro's freedom, went to Tennessee and Kentucky, were heard of once or twice as stable-boys to famous horses, and disappeared. A Mississippi River pilot, John Given by name, met Salome among her relatives, and courted and married her. As might readily be supposed, this alliance was only another misfortune to Salome, and the pair separated. Salome went to California. Her cousin, Henry Schuber, tells me he saw her in 1855 in Sacramento City, living at last a respected and comfortable life.

G. W. Cable.

A RIDE THROUGH THE TRANS-BAIKAL.

A BURIAT SHRINE.

ABOUT nine o'clock Tuesday evening we returned from the visit to the Buddhist lamasery described in THE CENTURY MAGAZINE for March, and at

eleven o'clock on the same night we ordered post horses at Selenginsk and set out for the Russo-Mongolian frontier town of Kiakhtha (Kee-akh'-ta), distant about sixty miles. We ought to have arrived there early on the following morning; but in Siberia, and particularly in the Trans-Baikal (Trans-By-kal'), the traveler is always detained more or less by petty unforeseen accidents and misadventures. We were stopped at midnight about six versts from Selenginsk by an unbridged river. Communication between the two shores was supposed to be maintained by means of a "karbass," or rude ferryboat; but as this boat happened to be on the other side of the stream, it was of no use to us unless we could awaken the ferryman by calling to him. Singly and in chorus we shouted "Kar-ba-a-ss!" at short intervals for an hour, without getting any response except a faint mocking echo from the opposite cliffs. Cold, sleepy, and discouraged, we were about to give it up for the night and return to Selenginsk, when we saw the dark outlines of a low, raft-like boat moving slowly up-stream in the shadow of the cliffs on the other side. It was the long-looked-for karbass. In half an hour we were again under way on the southern side of the river, and at three o'clock in the morning we reached the poststation of Povorotnaya (Po-vo-róte-na-

ya). Here, of course, there were no horses. The station house was already full of travelers asleep on the floor, and there was nothing for us to do except to lie down in an unoccupied corner near the oven, between two Chinese and a pile of medicinal deer-horns, and to get through the remainder of the night as best we could.

All day Wednesday we rode southward through a rather dreary and desolate region of sandy pine barrens or wide stretches of short dead grass, broken here and there by low hills covered with birches, larches, and evergreens. Now and then we met a train of small one-horse wagons loaded with tea that had come overland across Mongolia from Pekin, or two or three mounted Buriats (Boor-yáts) in dishpan-shaped hats and long brown kaftans (kaf-táns), upon the breasts of which had been sewn zigzags of red cloth that suggested a rude Mongolian imitation of the Puritan "scarlet letter." As a rule, however, the road seemed to be little traveled and scantily settled, and in a ride of nearly fifty miles we saw nothing of interest except here and there on the summits of hills small sacred piles of stones which Mr. Frost called "Buriat shrines." All over Siberia it is the custom of the natives when they cross the top of a high hill or mountain to make a propitiatory offering to the spirits of storm and tempest. In the extreme north-eastern part of Siberia these offerings consist generally of tobacco, and are thrown out on the ground in front of some prominent and noticeable rock; but in the Trans-Baikal the Buriats and Mongols are accustomed to pile a heap of stones beside the

road, erect thereon half a dozen rods or poles, and suspend from the latter small pieces of their clothing. Every pious traveler who passes a shrine of this sort on the summit of a mountain is expected to alight from his vehicle or dismount from his horse, tear off a little piece of his kaftan or his shirt, hang it up on one of these poles, and say a prayer. As a result of this ceremonial, every shrine presents to the traveler a sort of tailor's collection of scraps and remnants of cloth of every conceivable kind, quality, and color, fluttering to the wind from slender poles that look like hastily improvised fishing-rods. Theoretically this custom would seem to be not wholly without its advantages. If a native was familiar with the clothing of his friends he could always tell by a simple inspection of one of these shrines who had lately passed that way, and, if necessary, he could trace any particular person from hilltop to hilltop by the strips of his shirt or the frayed edges of his trousers left hanging on the stone-ballasted fishing-rods as an offering to the mighty gods of the Siberian tempests. In practice, however, this might not be feasible unless one could remember all the old clothes of the person whom one wished to trace and all the ancestral rags and tatters of that person's family. From a careful examination that we made of a number of shrines we became convinced that every pious Buriat keeps a religious ragbag, which he carries with him when he travels and to which he has recourse whenever it becomes necessary to decorate the sacred fishing-poles of the storm-gods. I am sure that such miserable, decayed scraps and tatters of raiment as we saw fluttering in the wind over the shrines between Selen-ginsk and Kiakhta never could have been cut or torn from any garments that were actually in wear.

The weather all day Wednesday was raw and cold, with occasional squalls of rain or snow. We could get little to eat at the post stations, and long before it grew dark we were faint, hungry, and chilled to the bone. Nothing could have been more pleasant under such circumstances than to see at last the cheerful glow of the fire-lighted windows in the little log houses of Troitskosavsk (Troy-its-ko-sávsk), two miles and a half north of the Mongolian frontier.

The three towns of Troitskosavsk, Kiakhta, and Maimachin (My-match'-in) are so situated as to form one almost continuous settlement extending across the Russo-Mongolian frontier about a hundred miles south and east of Lake Baikal. Troitskosavsk and Kiakhta are on the northern side of the boundary line, while Maimachin is on the southern or Mongolian side and is separated from Kiakhta by a hundred

and fifty or two hundred yards of unoccupied neutral ground. Of the three towns Troitskosavsk is the largest, and from an administrative point of view the most important; but Kiakhta is nearest to the border and is best known by name to the world.

Acting upon the advice of a merchant's clerk whose acquaintance we had made on the Lake Baikal steamer, we drove through Troitskosavsk to Kiakhta and sought shelter in a house called "Sokoloff's" (Só-ko-loff's), which the merchant's clerk had given us to understand was a good and comfortable hotel. When after much search we finally found it, we were surprised to discover that there was not a sign of a hotel about it. The house stood in the middle of a large, wall-inclosed yard, its windows were dark, and although the hour was not a very late one the court-yard gate was shut and closely barred. After shouting, knocking, and kicking at the gate for five or ten minutes we succeeded in arousing a sharp-tongued maid-servant, who seemed disposed at first to regard us as burglars or brigands. Upon becoming assured, however, that we were only peaceable travelers in search of lodgings, she informed us with some asperity that this was not a hotel, but a private house. Mr. Sokoloff, she said, sometimes received travelers who came to him with letters of introduction; but he did not open his doors to people whom nobody knew anything about, and the best thing we could do, in her opinion, was to go back to Troitskosavsk. As we had no letters of introduction, and as the young woman refused to open the gate or hold any further parley with us, there was obviously nothing for us to do but to recognize the soundness of her judgment and take her advice. We therefore climbed into our telega, drove back to Troitskosavsk, and finally succeeded in finding there a Polish exile named Klembotiski (Klem-bót-skee), who kept a bakery and who had a few rooms that he was willing to rent, even to travelers who were not provided with letters of introduction. As it was after ten o'clock, and as we despaired of finding a better place, we ordered our baggage taken to one of Mr. Klembotiski's rooms. It did not prove to be a very cheerful apartment. The floor was made of rough-hewn planks, the walls were of squared logs chinked with hemp-fibers, there was no furniture except a pine table, three stained pine chairs, and a narrow wooden couch or bedstead, and all guests were expected to furnish their own bedding. After a meager supper of tea and rolls we lay down on the hard plank floor and tried to get to sleep, but were forced, as usual, to devote a large part of the night to researches and investigations in a narrowly restricted and uninteresting department of entomology. Thursday forenoon

we hired a peculiar Russian variety of Irish jaunting-car, known in Siberia as a "dolgushka" (dol-goosh-ka), and set out for Kiakhta, where we intended to call upon a wealthy Russian tea merchant named Lushnikoff (Loósh-nee-koff), who had been recommended to us by friends in Irkutsk.

Troitskosavsk, Kiakhta, and Maimachin are situated in a shallow and rather desolate valley, beside a small stream that falls into the Selenga (Sel-en-ga') River. The nearly parallel and generally bare ridges that form this valley limit the vision in every direction except to the southward, where, over the housetops and gray wooden walls of Maimachin, one may catch a glimpse of blue, hazy mountains far away in Mongolia. Kiakhta, which stands on the border line between Mongolia and Siberia, does not appear at first sight to be anything more than a large, prosperous village. It contains a greater number of comfortable-looking two-story log dwelling-houses than are to be found in most East Siberian villages, and it has one or two noticeable churches of the Russo-Greek type with white walls and bell-towers surmounted by colored or gilded domes; but one would never suppose it to be the most important commercial point in Eastern Siberia. Through Kiakhta, nevertheless, pass into or out of Mongolia every year Russian and Chinese products to the value of from twenty to thirty million rubles (\$10,000,000 to \$15,000,000). Nearly all of the famous "overland" tea consumed in Russia is brought across Mongolia in caravans from northern China, enters the Empire through Kiakhta, and after being carefully repacked and sewn up in raw hides is transported across Siberia a distance of nearly four thousand miles to St. Petersburg, Moscow, or the great annual fair of Nizhni Novgorod (Neezh'-nee Nóv-gó-rod). Through

Kiakhta are also imported into Russia silks, crapes, and other distinctively Chinese products, together with great quantities of compressed, or "brick," tea for the poorer classes of the Russian people and for the Kirghis (Keér-gees), Buriats, and other native tribes. The chief exports to the Chinese Empire are Russian manufactures, medicinal deer-horns, ginseng, furs, and precious metals in the shape of Russian, English, and American coins. Even the silver dollars of the United States find their way into the Flowery Kingdom through Siberia. Among the Russian merchants living in Kiakhta are men of great wealth, some of whom derive from their commercial transactions in general, and from the tea trade in particular, incomes varying from \$75,000 to \$150,000 per annum.

We found Mr. Lushnikoff living in a comfortably furnished two-story house near the center of the town, and upon introducing ourselves as American travelers were received with the sincere and cordial hospitality that seems to be characteristic of Russians everywhere, from Behring Strait to the Baltic Sea. In the course of lunch, which was served soon after our arrival, we discussed the "sights" of Kiakhta and Maimachin, and were informed by Mr. Lushnikoff that in his opinion there was very little in either town worthy of a foreign traveler's attention. Maimachin might perhaps interest us if we had never seen a Chinese or Mongolian city, but Kiakhta did not differ essentially from other Siberian settlements of its class.

After a moment's pause he asked suddenly, as if struck by a new thought, "Have you ever eaten a Chinese dinner?"

"Never," I replied.

"Well," he said, "then there is one new experience that I can give you. I'll get up a

Chinese dinner for you in Maimachin day after to-morrow. I know a Chinese merchant there who has a good cook, and although I cannot promise you upon such short notice a dinner of more than forty courses, perhaps it will be enough to give you an idea of the thing."

We thanked him and said that although we had had little to eat since entering the Trans-Baikal except bread and tea, we thought that a dinner of forty courses would be fully adequate to satisfy both our appetites and our curiosity.

From the house of Mr. Lushnikoff we went to call upon the Russian boundary commissioner, Mr. Sulkofski (Sool-k6f-skee), who lived near at hand and who greeted us with as much informal good-fellowship as if we had been old friends. We were very often surprised in these far-away parts of the globe to find ourselves linked by so many persons and associations to the civilized world and to our homes. In the house of Mr. Lushnikoff, for example, we had the wholly unexpected pleasure of talking in English with Mrs. Hamilton, a cultivated Scotch lady, who had come to Kiakhia across China and Mongolia and had been for several years a member of Mr. Lushnikoff's family. In the person of the Russian boundary commissioner we were almost as much surprised to find a gentleman who had met many officers of the *Jeannette* arctic exploring expedition—including Messrs. Melville and Danenhower; who had seen the relief steamer *Rodgers* in her winter quarters near Behring Strait; and who was acquainted with Captain Berry of that vessel and with the "Herald" correspondent, Mr. Gilder.

After another lunch and a pleasant chat of an hour or more with Mr. Sulkofski, Frost and I returned to Troitskosavsk and spent the remainder of the afternoon in exploring the bazar, or town market, and the queer Chinese and Mongolian shops shown in the illustration on page 78. In one of these shops we were astonished to find an old second-hand copy of Dickens's "All the Year Round." How it came there I could hardly imagine, but it seemed to me that if the periodical literature of Great

Britain was represented in one of the shops of the Troitskosavsk bazar we ought to find there also a copy of some American magazine left by a "globe-trotter" from the United States. My professional and patriotic pride would not allow me to admit for a moment that "All the Year Round" might have a larger circulation in outer Mongolia than THE CENTURY MAGAZINE. After long and diligent search in a queer dark second-hand booth kept by a swarthy Mongol, I was rewarded by the discovery of a product of American genius that partly satisfied my patriotism and served as a tangible proof that New England marks the time to which all humanity keeps step. It was an old second-hand clock, made in Providence, Rhode Island, the battered and somewhat grimy face of which still bore in capital letters the characteristic American legend, "Thirty Hour Joker." Mongolia might know nothing of American literature or of American magazines, but it had made the acquaintance of the American clock; and although this particular piece of mechanism had lost its hands, its "Thirty Hour Joker" was a sufficiently pointed allusion to the national characteristic to satisfy the most ardent patriotism. An American joker does not need hands to point out the merits of his jokes, and this mutilated New England clock, with its empty key-hole eyes and its battered but still humorous visage, seemed to leer at me out of the darkness of that queer old second-hand shop as if to say, "You may come to Siberia, you may explore Mongolia, but you can't get away from the American joker." I was a little disappointed not to find in this bazar some representative masterpiece of American literature, but I was more than satisfied a short time afterward when I discovered in a still wilder and more remote part of the Trans-Baikal a copy of Mark Twain's "Life on the Mississippi" and a Russian translation of Bret Harte's "Luck of Roaring Camp."

On Friday, October 2, Mr. Frost and I again visited Kiakhia and went with the boundary commissioner, Mr. Sulkofski, to call upon the Chinese governor of Maimachin. The Mongolian town of Maimachin is separated

from Kiakhia by a hundred and fifty or two hundred yards of neutral ground, through the middle of which is supposed to run the boundary line between the two great empires. Maimachin is further separated from Kiakhia by a high plank wall and by screens, or pagoda shaped buildings, that mask the entrances to the streets so that the outside barbarian cannot look into the place without actually entering it, and cannot see anything beyond its

wooden walls after he has entered it. It would be hard to imagine a more sudden and startling change than that brought about by a walk of two hundred yards from Kiakhta to Maimachin. One moment you are in a Russian provincial village with its characteristic shops, log houses, golden-domed churches, droshkies (drósh-kees), soldiers, and familiar peasant faces; the next moment you pass behind the high screen that conceals the entrance to the Mongolian town and find yourself apparently in the middle of the Chinese Empire. You can hardly believe that you have not been suddenly transported on the magical carpet of the "Arabian Nights" over a distance of a thousand miles. The town in which you find yourself is no more like the town that you have just left than a Zuni pueblo is like a village in New England, and for all that appears to the contrary you might suppose yourself to be separated from the Russian Empire by the width of a whole continent. The narrow, unpaved streets are shut in by gray, one-story houses, whose windowless walls are made of clay mixed with chopped straw, and whose roofs, ornamented with elaborate carving, show a tendency to turn up at the corners; clumsy two-wheel ox-carts, loaded with boxes of tea and guided by swarthy Mongol drivers, have taken the place of the Russian horses and telegas; Chinese traders in skull-caps, loose flapping gowns, and white-soled shoes appear at the doors of the court-yards instead of the Russian merchants in top-boots, loose waistcoats, and shirts worn outside their trousers whom you have long been accustomed to see; and wild-looking sunburned horsemen in deep orange gowns and dishpan-shaped hats ride in now and then from some remote encampment in the great desert of Gobi, followed, perhaps, by a poor Mongol from the immediate neighborhood, mounted upon a slow-pacing ox. Wherever you go, and in whatever direction you look, China has taken the place of Russia, and the scenes that confront you are full of strange, unfamiliar details.

We drove with a Russo-Chinese interpreter to the residence of the "surguche" (soor-goo-chay'), or Chinese governor,—which was distinguished from all other houses by having two high poles tipped with gilded balls erected in front of it,—and after being introduced to his Excellency by Mr. Sulkowski were invited to partake of tea, sweetmeats, and "maigalo" (mýga-lo), or Chinese rice-brandy. We exchanged with the governor a number of ceremonious and not at all exciting inquiries and replies relative to his and our health, affairs, and general well-being, drank three or four saki-cups of maigalo, nibbled at some candied fruits, and then, as the hour for his devotions had arrived, went with him by invitation to the temple and

saw him say his prayers before a large wooden idol to an accompaniment made by the slow tolling of a big, deep-toned bell. The object of the bell-ringing seemed to be to notify the whole population of the town that his Excellency the governor was communing with his Joss. When we returned to his house Mr. Frost drew a portrait of him as with an amusing air of conscious majesty he sat upon a tiger skin in his chair of state, and then, as we had no excuse for lingering longer, we took our leave, each of us receiving a neatly tied package in which were the nuts, sweetmeats, and candied fruits that had been set before us but had not been eaten.

We wasted the rest of the afternoon in trying to get photographs of some of the strange types and groups that were to be seen in the Maimachin streets. Again and again we were surrounded by forty or fifty Mongols, Buriats, and nondescript natives from the great southern steppes, and again and again we set up the camera and trained it upon a part of the picturesque throng. Every time Mr. Frost covered his head with the black cloth and took off the brass cap that concealed the instrument's Cyclopean eye, the apprehensive Celestials vanished with as much celerity as if the artist were manipulating a Gatling gun. We could clear a whole street from one end to the other by merely setting up the camera on its tripod and getting out the black cloth, and I seriously thought of advising the Chinese governor to send to America for a photographic outfit to be used in quelling riots. He could disperse a mob with it more quickly and certainly than with a battery of mountain howitzers. If I remember rightly, Mr. Frost did not succeed in getting pictures of any animated objects that day except a few Mongol ox-teams and two or three blind or crippled beggars who could not move rapidly enough to make their escape. At a later hour that same afternoon, in the bazar of Troitskosavsk, he came near being mobbed while trying to make a pencil drawing of a fierce-looking Mongol trader, and was obliged to come home with his sketch unfinished. We both regretted, as we had regretted many times before, that we had neglected to provide ourselves with a small detective camera. It might have been used safely and successfully in many places where the larger instrument excited fear or suspicion.

Our Chinese dinner in Maimachin Saturday afternoon was a novel and interesting experience. It was given in the counting-house of a wealthy Chinese merchant, and the guests present and participating comprised six or eight ladies and gentlemen of Mr. Lushnikoff's acquaintance, as well as Mr. Frost and me. The table was covered with a white cloth, and

was furnished with plates, cups and saucers, knives and forks, etc., in the European fashion. Ivory chopsticks were provided for those who desired them, but they were used by the Russian and American guests only in a tentative and experimental way. When we had all taken seats at the table a glass flagon containing a peculiar kind of dark-colored Chinese vinegar was passed round, and every guest poured about half a gill of it into a small saucer beside his plate.

"What is the vinegar for?" I asked Mr. Lushnikoff.

"To dip your food in," he replied. "The Chinese in Maimachin eat almost everything with vinegar. It is n't bad."

As I had not the faintest idea what was coming in the shape of food, I reserved my judgment as to the expediency of using vinegar and maintained an attitude of expectancy. In a few moments the first course was brought in. I will not undertake to say positively what it was, but I find it described in my note-book as "a prickly sea-weed or sea plant of some kind, resembling stiff moss." It had presumably been boiled or cooked in some way, but I cannot venture to affirm anything whatever with regard to it except that it was cold and had a most disagreeable appearance. Each of the Russian guests took a small quantity of it, sopped a morsel in the dark-colored vinegar, and ate it, if not with relish, at least with heroic confidence and composure. There was nothing for Mr. Frost and me to do but to follow the example. The next nine courses, taking them in order, I find described in my note-book as follows:

1. Shreds of cold meat embedded in small diamond-shaped molds of amber-colored jelly.

2. Black mushrooms of a species to me unknown.

3. Salad of onions and finely shredded herbs.

4. Lichens from birch trees.

5. Thin slices of pale, unwholesome-looking sausage, component materials unknown.

6. Small diamonds, circles, and squares of boiled egg, dyed in some way so as to resemble scraps of morocco leather.

7. The tails of crawfish fried brown.

8. Long-fronded sea-weed of a peculiar grass-green color.

9. Curly fibers of some marine plant that looked like shredded cabbage.

I do not pretend to say that these brief entries in my note-book describe with scientific accuracy the articles of food to which they relate. I did not know, and could not find out, what many of the courses were, and all I could do was to note down the impression that they made upon me and call them by the names of the things that they seemed most to

resemble. All of these preparations, without exception, were served cold and were eaten with vinegar. Over a brazier of coals on a broad divan near the table stood a shallow pan of hot water, in which were half immersed three or four silver pots or pitchers containing the colorless rice-brandy known as *maigalo*. After every course of the dinner a servant went round the table with one of these pitchers and filled with the hot liquor a small porcelain cup like a Japanese *saki-cup* that had been placed beside every guest's plate.

I had heard a short time before this an anecdote of an ignorant East Siberian peasant, who in making an excavation for some purpose found what he supposed to be the almost perfectly preserved remains of a mammoth. With the hope of obtaining a reward he determined to report this extraordinary find to the *ispravnik*, and in order to make his story more impressive he tasted some of the flesh of the extinct beast so that he could say to the police officer that the animal was in such a state of preservation as to be actually eatable. An investigation was ordered, a scientist from the Irkutsk geographical society was sent to the spot, and the remains of the mammoth were found to be a large deposit of the peculiar Siberian mineral known as "*gorni kozha*" (*gór-nee kó-zhaa*), or "mineral leather." The irritated *ispravnik*, who felt that he had been made to appear like an ignorant fool in the eyes of the Irkutsk scientists, sent for the peasant and said to him angrily, "You stupid block-head! Did n't you tell me that you had actually eaten some of this stuff? It is n't a mammoth at all; it's a mineral—a thing that they take out of mines."

"I did eat it, Barin" (*Báh-rin*, meaning "Master"), maintained the peasant stoutly; "but," he added, with a sheepish self-excusatory air, "what can't you eat with butter?"

As the servants in Maimachin brought round and handed to us successively black mushrooms, crawfish tails, tree-lichens, and sea-weed I thought of the peasant's mammoth and said to myself, "What can't one eat with vinegar and Chinese brandy?"

After the last of the cold victuals had been served and disposed of the dishes were cleared away, the saucers were replenished with vinegar, and the hot courses came on as follows:

1. Meat dumplings, consisting of finely minced veal inclosed in a covering of dough and boiled.

Mr. Frost, by some occult process of divination, discovered, or thought he discovered, that the essential component of these dumplings was young dog, and he firmly refused to have anything whatever to do with them even in combination with vinegar. I reproached him

for this timidity, and assured him that such unfounded prejudices were unworthy the character of a man who professed to be a traveler and an investigator, and a man, moreover, who had already spent three years in the Russian Empire. Had I known, however, what was yet to come, I think I should have held my peace.

2. Finely minced meat pressed into small balls and fried.

3. Small meat pies, or *pâtés*.

4. Boiled fowl, served in a thick whitish gravy with large snails.

At this course I felt compelled to draw the line. The snails had turned black in the process of cooking and resembled nothing so much as large boiled tomato-vine worms; and although I drank two cupfuls of hot rice-brandy with the hope of stimulating my resolution up to the point of tasting them, my imagination took the bit between its teeth and ran away with my reason.

5. Fat of some kind in soft, whitish, translucent lumps.

6. Roast sucking pig, served whole.

This was perhaps the most satisfactory course of the whole dinner, and as I ate it I thought of Charles Lamb's well-known essay describing the manner in which the Chinese discovered the great art of roasting young pig, and decided that I too would burn down a house if necessary in order to obtain it.

7. Small pieces of mutton spitted on long, slender iron needles and roasted over a hot fire.

8. Chicken in long, thin, shredded fibers, served with the broth.

9. Boiled rice.

10. Peculiar, hard, woody mushrooms, or lichens, boiled and served with brown gravy.

11. Thin, translucent, and very slippery macaroni, cooked in a Chinese samovar.

12. Cocks' heads with sections of the necks; and finally,

13 to 19. Different kinds of soup served simultaneously.

The soups virtually brought the dinner to an end. The table was again cleared, the vinegar-saucers and saki-cups were removed, and the servants brought in successively nuts and sweetmeats of various sorts, delicious "flower tea," and French champagne.

The dinner occupied about three hours, and within that time every guest partook of thirty or forty courses, consumed from one to three saucerfuls of Chinese vinegar, drank from fifteen to twenty-five saki-cupfuls of hot rice-brandy flavored with rose, and washed down the last mouthfuls of Chinese confectionery with bumpers of champagne to the health of our host.

That we were able to get to our droshkies without assistance, and did not all die of acute indigestion before the next morning, must be

regarded as a piece of good luck so extraordinary as to be almost miraculous. My curiosity with regard to a Chinese dinner was completely satisfied. If the Chinese dine in this way every day I wonder that the race has not long since become extinct. One such dinner, eaten late in the fall, would enable a man, I should think, if he survived it, to go into a cave like a bear and hibernate until the next spring.

I little thought when I drove away from the Chinese merchant's counting-house in Maimachin late that afternoon that I had enjoyed the last recreation I should know for months to come, and that I was looking at the old Mongolian town for the last time. Early Sunday morning I was taken sick with a violent chill, followed by high fever, severe headache, pain in the back, cough, languor, and great prostration. It was the beginning of a serious illness, which lasted nearly two weeks and from which I did not fully recover for three months. With that sickness began the really hard and trying part of my Siberian experience. Up to that time I had had at least strength to bear the inevitable hardships of life and travel in such a country; but after that time I was sustained chiefly by will power, quinine, and excitement. It is unnecessary to describe the miseries of sickness in such a place as that wretched room adjoining Klembotski's bakery in the frontier town of Troitskosavsk. There are no entries in my note-book to cover that unhappy period of my Siberian life; but in a letter that I managed to write home from there I find my circumstances briefly described in the words, "It is one thing to be sick at home in a good bed, in clean linen and with somebody to take care of you; but it is quite another thing to lie down sick like a dog on a hard plank floor, with all your clothes on, and in the paroxysms of fever be tormented to the verge of frenzy by bedbugs." I had no bedding except my sheepskin overcoat and a dirty blanket, and although I tried the hard bedstead, the floor, and the table by turns, I could not anywhere escape the fleas and the bedbugs. I tried at first to treat my illness myself with a small case of medicines that I had brought with me; but learning that there was a Russian physician in the town, I finally sent for him. He began giving me ten-grain doses of quinine, which ultimately broke the fever, and at the end of twelve days, although still very weak, I was able to be up and to walk about.

I fully realized for the first time while lying sick in Klembotski's bakery what a political exile must suffer when taken sick in a roadside étape. In addition, however, to all that I had to endure the exile must live upon coarse food, breathe air that is more or less foul or infected,

and perhaps lie in leg-fetters upon a hard plank sleeping-bench. Mr. Charushin (Char-oó-shin), a political convict whose acquaintance I made in Nerchinsk (Nér-chinsk), was not released from his leg-fetters even when prostrated by typhus fever.

On the 15th of October Mr. Frost and I left Troitskosavsk for Selenginsk. I felt very weak and dizzy that morning and feared that I was about to have a relapse; but I thought that even a jolting telega in the open air could hardly be a worse place in which to be sick than the vermin-infested room that I had so long occupied, and I determined that if I had strength enough to walk out to a vehicle I would make a start. We rode about sixty miles that day, spent the night in the post station of Povorotnaya (Po-vo-róte-na-ya), and reached Selenginsk early the next forenoon. In this wretched little Buriat village there were three interesting political exiles whom I desired to see, and we stopped there for one day for the purpose of making their acquaintance. Their names were Constantine Shamarin (Shah-máh-rin), a young student from Ekaterineburg; Mr. Kardashoff (Kar-da-shóff), a Georgian from the Caucasus; and Madame Breshkofskaya (Bresh-kóff-ska-ya), a highly educated young married lady from the city of Kiev (approximately Keév). Mr. Kardashoff and Madame Breshkofskaya had both served out penal terms at the mines of Kara (Kah-ráh), and I thought that I could perhaps obtain from them some useful information with regard to the best way of getting to those mines, and the character of the officials with whom I should there have to deal.

Mr. Shamarin, upon whom I called first, was a pleasant-faced young fellow twenty-four or twenty-five years of age, of middle height and quiet, gentlemanly bearing, with honest, trustworthy, friendly eyes that inspired confidence as soon as one looked at him. His history seemed to me to furnish a very instructive illustration of the complete disregard of personal rights that characterizes the Russian Government in its dealings with citizens who happen to be suspected, with or without reason, of political untrustworthiness. While still a university student he was arrested upon a political charge, and after being held for three years in one of the bomb-proof casemates of the Trubetskoi (Troo-bet-skóy) bastion in the fortress of Petropavlovsk (Pet-ro-páv-lovsk) was finally tried by a court. The evidence against him was so insignificant that the court contented itself with sentencing him to two months' imprisonment.

Holding a man in solitary confinement for three years in a bomb-proof casemate before trial, and then sentencing him to so trivial a punishment as two months' imprisonment, is in itself a remarkable proceeding, but I will let that pass without comment. Mr. Shamarin certainly had the right, at the expiration of the two months, to be set at liberty, inasmuch as he had borne the penalty inflicted upon him by virtue of a judicial sentence pronounced after due investigation and trial.

The Government, however, instead of liberating him, banished him by administrative process to a village called Barguzin (Bar-goo-zín), in the territory of the Trans-Baikal, more than four thousand miles east of St. Petersburg. In the summer of 1881 he, with three other politicals, including Madame Breshkofskaya, made an unsuccessful attempt to escape across the Trans-Baikal to the Pacific Ocean with the hope of there getting on board an American vessel. For this he was sent to a native ooloot in the sub-arctic province of Yakutsk (Yah-koótsk), where he was seen by some or all of the members of the American expedition sent to the relief of the survivors of the arctic exploring steamer *Jeannette*. In 1882 or 1883 he was transferred to Selenginsk, and in the autumn of 1884 his term of exile expired, leaving him in an East Siberian village three thousand miles from his home without any means of getting back. The Government does not return to their homes the political exiles whom it has sent to Siberia unless such exiles are willing to travel by étape with a returning criminal party. Owing to the fact that parties going towards Russia do not make as close connections with the armed convoys at the étapes as do parties coming away from Russia, their progress is very slow. Colonel Zagarin, the Inspector of Exile Transportation for Eastern Siberia, told me that returning parties are about three hundred days in making the thousand-mile stretch between Irkutsk (Eer-koótsk) and Tomsk. Very few political exiles are willing to live a year in fever-infested and vermin-infested étapes even for the sake of getting back to European Russia; and unless they can earn money enough to defray the expenses of such a journey, or have relatives who are able to send them the necessary money, they remain in Siberia. I helped one such political to get home by buying, for a hundred rubles, a collection of Siberian flowers that he had made, and I should have been glad to help Mr. Shamarin; but he had been at work for more than a year upon an index to the public documents in the archives of the old town of Selenginsk, extend-

A GENERAL VIEW OF KIAKHTA, SHOWING THE "NEUTRAL GROUND."

ing over a period of a hundred and thirty years, and he hoped that the governor would pay him enough for this labor to enable him to return to European Russia at his own expense. The correspondence of the political exiles in Selenginsk is under police control; that is, all their letters are read and subjected to censorship by the *ispravnik*. When Mr. Shamarin's term of exile expired he was, of course, *de jure* and *de facto* a free man. He sent a petition to the governor of the province asking that the restrictions upon his correspondence be removed. The governor referred the matter to the *ispravnik* and the *ispravnik* declined to remove them. Therefore, for more than a year after Mr. Shamarin's term of banishment had expired, and after he had legally re-acquired all the rights of a free citizen, he could receive and send letters only after they had been read and approved by the police. How exasperating this cool, cynical, almost contemptuous disregard of personal rights must be to a high-spirited man the reader can perhaps imagine if he will suppose the case to be his own.

While Mr. Shamarin and I were talking, Madame Breshkofskaya came into the room and I was introduced to her. She was a lady perhaps thirty-five years of age, with a strong, intelligent, but not handsome face, a frank, unreserved manner, and sympathies that seemed to be warm, impulsive, and generous. Her face bore traces of much suffering, and her thick, dark wavy hair, which had been cut

short in prison at the mines, was streaked here and there with gray; but neither hardship, nor exile, nor penal servitude had been able to break her brave, finely tempered spirit, or to shake her convictions of honor and duty. She was, as I soon discovered, a woman of much cultivation, having been educated first in the women's schools of her own country, and then at Zurich in Switzerland. She spoke French, German, and English, was a fine musician, and impressed me as being in every way an attractive and interesting woman. She had twice been sent to the mines of Kara,—the second time for an attempt to escape from forced colonization in the Trans-Baikal village of Barguzin,—and after serving out her second penal term had again been sent as a forced colonist to this wretched, God-forsaken Buriat settlement of Selenginsk, where she was under the direct supervision and control of the interesting chief of police who on the occasion of our first visit had accompanied us to the Buddhist lamasery of Goose Lake. There was not another educated woman, so far as I know, within a hundred miles in any direction; she received from the Government an allowance of a dollar and a quarter a week for her support; her correspondence was under police control; she was separated for life from her family and friends; and she had, it seemed to me, absolutely nothing to look forward to except a few years, more or less, of hardship and privation, and at last burial in a lonely graveyard beside the Selenga

River, where no sympathetic eye might ever rest upon the unpainted wooden cross that would briefly chronicle her life and death. The unshaken courage with which this unfortunate

that we were having a hard life, but such examples of suffering nobly borne for the sake of a principle and for an oppressed people would have put a soul under the ribs of death.

BAZAR AND CHINESE SHOPS IN TROITSKOSAVSK.

woman contemplated her dreary future, and the faith that she manifested in the ultimate triumph of liberty in her native country, were as touching as they were heroic. Almost the last words that she said to me were: "Mr. Kennan, we may die in exile, and our children may die in exile, and our children's children may die in exile, but something will come of it at last." I have never seen nor heard of Madame Breshkofskaya since that day. She has passed as completely out of my life as if she had died when I bade her good-bye; but I cannot recall her last words to me without feeling conscious that all my standards of courage, of fortitude, and of heroic self-sacrifice have been raised for all time, and raised by the hand of a woman. Interviews with such political exiles — and I met many in the Trans-Baikal — were to me a more bracing tonic than medicine. I might be sick and weak, I might feel

We left Selenginsk at four o'clock on the afternoon of Friday, October 16, and after a ride of a hundred and eight miles, which we made in less than twenty-four hours, reached the district town of Verkhni Udinsk (Vérkh-nee Oó-dinsk). The weather, particularly at night, was cold and raw, and the jolting of the springless post vehicles was rather trying to one who had not yet rallied from the weakness and prostration of fever; but the fresh open air was full of invigoration, and I felt no worse, at least, than at the time of our departure from Troitskosavsk, although we had made in two days and nights a distance of a hundred and seventy miles. There were two prisons in Verkhni Udinsk that I desired to in-

A STREET IN MAIMACHIN.

spect; and as early as possible Sunday morning I called upon the *ispravnik*, introduced myself as an American traveler, exhibited my open letters, and succeeded in making an engagement with that official to meet him at the old prison about noon.

The *ostrog* of Verkhni Udinsk, which serves at the same time as a local prison, a forwarding prison, and a place of temporary detention for persons awaiting trial, is an old weather-beaten, decaying log-building situated on the high right bank of the Selenga River, about a mile below the town. It does not differ essentially from a log *étape* of the old Siberian type except in being a little higher from foundation to roof, and in having a sort of gallery in every *kamera*, or cell, so arranged as to serve the purpose of a second story. This gallery, which was reached by a steep flight of steps, seemed to me to have been put in as an afterthought in order to increase the amount of floor space available for nares, or sleeping-platforms. The prison had evidently been put in as good order

as possible for our inspection: half the prisoners were out in the court-yard, the doors and windows of nearly all the *kameras* had been thrown open to admit the fresh air, and the floors of the corridors and cells did not seem to me to be disgracefully dirty. The prison was originally built to accommodate 170 prisoners. At the time of our visit it contained 250, and the *ispravnik* admitted, in reply to my questions, that in the late fall and winter it frequently held 700. The prisoners were then compelled to lie huddled together on the floors, under the low sleeping-platforms, in the corridors, and even out in the court-yard. What the condition of things would be when 700 poor wretches were locked up for the night in an air space intended for 170, and in winter, when the windows could not be opened without freezing to death all who were forced to lie near them, I could partly imagine. The prison at such times must be a perfect hell of misery.

Mr. M. I. Orfanoff (*Or-fán-off*), a well-known Russian officer who inspected this

ostrog at intervals for a number of years previous to our visit, has described it as follows in a book published at Moscow under all the limitations of the censorship:

The first ostrog in the Trans-Baikal is that of Verkhni Udinsk. It stands on the outskirts of the town, on the steep, high bank of the Selenga River. Over the edge of this bank, distant only five or six fathoms from the ostrog, are thrown all the prison filth and refuse, so that the first thing that you no-

He was simply astounded. "How can people sleep," he exclaimed, "on this wet, foul floor and under such insupportable conditions?" He shouted indignantly at the warden and the other prison authorities, but he could change nothing.

It has been argued by some of my critics that I exaggerate the bad condition of Siberian prisons and étapes; but I think I have said nothing worse than the words that I have above quoted from a book written by an officer in

1, 2. THE NEW PRISON IN VERKHNI UDINSK. 3. TYPE OF NEW TRANS-BAIKAL ÉTAPES.

tice as you approach it at any time except in winter is an intolerable stench. The prison itself is an extremely old two-story log-building intended to accommodate 140 prisoners.¹ During my stay in Siberia I had occasion to visit it frequently. I never saw it when it held *less than 500*, and at times there were packed into it *more than 800*.² I remember very well a visit that I once made to it with the governor of the Trans-Baikal. He arrived in winter and went to the prison early in the morning, so that the outer door of the corridor was opened [for the first time that day] in his presence. The stench that met him was so great that, in spite of his desire to conceal from the prisoners his recognition of the fact that their accommodations were worse than those provided for dogs, he could not at once enter the building. He ordered the opposite door to be thrown open, and did not himself enter until a strong wind had been blowing for some time through the prison. The first thing that he saw in one corner of the corridor was an overflowing "parasha,"³ and through the ceiling was dripping filth from a similar parasha in the story above. In that corner of the corridor he found six men lying on the floor asleep.

the service of the Russian Government and published at Moscow in 1883 under all the limitations and restrictions of the censorship.⁴

Through this prison of Verkhni Udinsk pass every year educated and refined men and women sent to the Trans-Baikal for political offenses, and through it Madame Breshkovskaya passed four times on her way to and from the mines of Kara. I am glad, however, to be able to say that the old ostrog at Verkhni Udinsk will soon become, if it has not already become, a thing of the past. A large new forwarding prison had just been finished at the time of our arrival, and it was to be opened, the ispravnik said, as soon as the necessary ar-

¹ The ispravnik told me 170. The lesser number is probably nearer the truth.

² The italics are Mr. Orfanoff's own.

³ This is the name given by Russian prisoners to the excrement tub.

A PART OF CHITA FROM THE "HOTEL PETERBURG."

rangements could be made for the larger guard that it would require.

As soon as we had finished our inspection of the old ostrog, we went with the *ispravnik* to see the new prison that was intended to take its place. It was a large four-story structure of brick, stuccoed and painted white, with two spacious wings, a large court-yard, and a separate building for the accommodation of political prisoners and the prison guard. The *kameras* were all large, well lighted, and well ventilated, and every one of them above the basement story had an extensive outlook over the surrounding country through at least three large windows. The corridors were twelve or fifteen feet wide; the stairways were of stone with iron balustrades; the solitary-confinement cells were as spacious as an ordinary American hall-bedroom; the arrangements for heating, ventilation, and cleanliness seemed to me to be as nearly perfect as they could be made; and as

a whole the prison impressed me as being the very best I had seen in Russia, and one of the best I had ever seen in any country. Its cost was about 200,000 rubles (\$100,000), and it was intended to accommodate 440 prisoners. I expressed my satisfaction to the *ispravnik*, and said that I had not seen so good a prison in the Empire.

"Yes," he replied; "if they do not overcrowd it, it will be very comfortable. But if we have to shut up 700 prisoners in the old prison we shall probably be expected to put 3000 into this one, and then the state of things will be almost as bad as ever." Whether the *ispravnik's* fears have been justified by events, I do not know; but the fact remains that the new prison at Verkhni Udinsk is far and away the best building of its kind that we saw in the Empire except at St. Petersburg, and we were more than gratified to see at last some tangible evidence that the Russian Government does not regard the sufferings of its exiled criminals with absolute indifference.

We left Verkhni Udinsk on Monday, October 19, for a ride of about three hundred miles to the town of Chita, which is the capital of the Trans-Baikal. The weather was more wintry than any that we had yet experienced; but no snow had fallen, the sky was generally clear, and we did not suffer much from cold except at night. At first the road ran up the shallow, barren, uninteresting valley of the Uda (Oó-da) River, between nearly parallel ranges of low mountains, and presented, so far as we could see, little that was interesting. The leaves had all fallen from the trees; the flowers, with the exception of here and there a frost-bitten dandelion, had entirely disappeared; and winter was evidently close at hand. We traveled night and day without rest, stopping only now and then to visit a Buddhist lamasery by the roadside or to inspect an *étape*. The Government

has recently expended three or four hundred thousand rubles (\$150,000 to \$200,000) in the erection of a line of new étapes through the Trans-Baikal. These buildings, the general appearance of which is shown in one of the three combined illustrations on page 80, are rather small and are not well spoken of by the officers of the exile administration; but they seemed to us to be a great improvement upon the étapes between Tomsk and Irkutsk.

On Thursday, October 22, about fifty miles

(Cheé-tah), and took up our quarters in a hotel kept by a Polish exile and known as the "Hotel Peterburg." Chita, which is the capital of the Trans-Baikal and the residence of the governor, is a large, straggling, provincial town of about four thousand inhabitants, and, as will be seen from the illustration on page 81, does not differ essentially from other Siberian towns of its class. It has a public library, a large building used occasionally as a theater, and fairly good schools; politically and socially

it is perhaps the most important place in the territory of which it is the capital. Its chief interest for us, however, lay in the fact that it is a famous town in the history of the exile system. To Chita were banished, between 1825 and 1828, most of the gallant young noblemen who vainly endeavored to overthrow the Russian autocracy and to establish a constitutional form of

from Chita we crossed a high, mountainous ridge near the post station of Domnokluchefskaya (Dom-no-kloo-chéf-ska-ya) and rode down its eastern slope to one of the tributaries of the great river Amur (Am-moór). We had crossed the watershed that divides the river systems of the Arctic Ocean from the river systems of the Pacific, and from that time America began to seem nearer to us across the Pacific than across Siberia. American goods of all kinds, brought from California, suddenly made their appearance in the village shops; and as I saw the American tin-ware, lanterns, and "Yankee notions," and read the English labels on the cans of preserved peaches and tomatoes, it seemed to me as if in the immediate future we ought from some high hill to catch sight of San Francisco and the Golden Gate. A few kerosene lamps and a shelf full of canned fruits and vegetables brought us in imagination five thousand miles nearer home.

About noon we arrived cold, tired, and hungry at the Trans-Baikal town of Chita

THE HOUSES OF THE DECEMBRIST EXILES IN CHITA.

government at the accession to the throne of the Emperor Nicholas in December, 1825. Two of the log houses in which these so-called Decembrist exiles lived are still standing, and one of them is now occupied as a carpenter's shop, and is a general rendezvous by later politicals who followed the example set by the Decembrists and met the same fate.

The colony of exiles in Chita at the time of our visit comprised some of the most interesting men and women whom we met in the Trans-Baikal. We brought letters of introduction to them from many of their comrades in other parts of Siberia, were received by them with warm-hearted hospitality and perfect trust,

A MEETING OF POLITICAL EXILES IN CHITA.

and spent with them many long winter evenings in the upper room of the old Decembrist house, talking of the Russian revolutionary movement, of the fortress of Petropavlovsk, of the Kharkoff Central Prison, and of the mines of Kara. Such meetings as that pictured above were of almost daily or nightly occurrence, and are among the pleasantest recollections of our East Siberian life. I shall not undertake, at the end of an article, to make the reader acquainted with these political exiles, but shall reserve an account of their lives and characters for a future paper, descriptive of our second visit to Chita, on our way back from the mines, when we spent in the upper room of the little carpenter-shop the greater part of every night for two weeks.

Owing to the absence of the governor of the province, we could not obtain in Chita permission to visit and inspect the Kara prisons and mines; but the governor's chief of staff, upon whom I called, did not seem to have any objection to our going there and making the attempt. He said he would telegraph the commanding officer about us, and gave me one of his visiting-cards as a substitute for a letter of introduction. It did not seem to me likely that a simple visiting-card, without even so much as a penciled line, would unlock the doors of the dread Kara prisons; but it was all that we could get, and on the 24th of October we set out for our remaining ride of three hundred miles to the mines.

George Kennan.

TOM'S STRATEGY.

By the author of "Two Runaways," "De Valley an' de Shadder," etc.

“ HA' yer gwine do wi' dat gun ?” It was Tempy Taylor who propounded the question, and she did it in a tone of voice that would have attracted anybody's attention. She was a tall, heavy, masculine woman of some two hundred odd pounds, and as she straightened up over the washtub under the chinaberry tree at the end of her cabin, she was indeed a formidable-looking figure. Her great black, muscular arms drooped towards the scrubbing-board that reclined in the tub, and her hands grasped a wet garment upon which she had been expending some of her prodigious strength. The person addressed was a small old man whose face was pretty well covered with a gray, kinky beard. He nervously shifted the weapon he bore, an ancient muzzle-loading fowling-piece with a wire-wrapped stock and reed ramrod, and affected an easy, conciliatory manner.

“Des gwine down yander on de crik. Ole buck rabbit down dere ev'y day 'bout dis time. 'Spec' he oughter be en de pan time Mammy Jo' git heah en de morndin'.” The voice was drawl-

ing and childlike in its modulations. He struck the right chord and very skillfully. Mammy Jo' was the mother of the Amazon at the tub, and had sent word of her intended visit. The little old man moved off slowly with a peculiar shuffling motion. “Dat 'possum mighty fine back yander,” he ventured, with a motion of his head towards the cabin, “but 't ain't gwine ter las' all day.” As he passed on his ear waited for a harsh summons, but heard only the mutterings of his spouse when she plunged a little more vigorously into her work. The little strip of pine woods towards which his face was turned seemed to approach at a snail's pace only, but he was afraid to change the gait he had chosen. As he stepped at last into the friendly cover of the trees he stole a backward glance over his shoulder, and then abruptly quickened his motions. At the same instant his whole manner changed, and when presently he heard his name echo through the wood, borne upon the imperative tones of a pair of prodigious female lungs, he laughed aloud and held on his way. The woman at the tub talked to herself.

"Mighty takin' on 'bout Mammy Jo' all er sudd'n. Mammy Jo'! Mammy Jo'! Heap he kyar 'bout Mammy Jo'," she laughed scornfully. "Better be out en dat patch pick'n' cott'n or en dem pease. Ef hit wuz lef' ter *him*, dat steer go 'long ter town ter be sold, 'stidder de cott'n-bag. I know him; he can't fool me. Gi' 'im time an' he go skipp'n' 'bout over yonner at de Stillson place, de lyin' little debbil." She gave the shirt of her absent lord a vicious wring as if she felt him in it, and lifted up her voice, obeying a sudden impulse:

"You Torm!!!" There was no reply except a few echoes that mocked her. "He heah me," she continued, resuming her labors; and then she resumed too the thread of her reverie. "'Morndin', Sis' 'Lizer; how yo' he'th ter-day, ma'am? Morndin', Sis' Chloey; I hope yer feelin' berry well, ma'am.'" She imitated the insinuating, childlike tones of her absent spouse and repeated her scornful laugh. "Nex' time I heah 'bout 'im gwine over deir, I 'll bre'k ev'y bone en 'is triflin' hide."

But Tom was thinking no longer of his industrious and indignant spouse. He was rapidly moving along the new line of departure from home and the haunts of the buck rabbit in the creek bottom. He had a slight limp, caused by a bale of cotton rolling against his leg when he was young, and as he trotted along, his funny little figure bobbing up and down caused the powder-horn under his arm and the shot-gourd to swing out and collide fiercely.

A couple of miles glided away thus, when suddenly out from under his feet a rabbit scurried a few yards away, and pricking up his ears looked back at the rude disturber of his afternoon ramble. Tom brought the gun down across his knee, cocked it successfully, the hammer going back half a circle with three distinct clicks, rested it for a moment against a tree, aimed long and carefully, and pulled the trigger. There was a deafening explosion; the little old man staggered back six feet, the muzzle of his gun dropped to the ground, and the rabbit sprang high in the air, turned a somersault, and fell dead. Had there been a witness present, he would have observed that the ground about the unfortunate animal was more or less torn up for a space of twenty feet square. Tom rushed in and secured his prize, then carefully reloaded his weapon and resumed his journey. He had not gone far before a rooster, leading his family among the dead leaves of some scrub oaks, straightened up and uttered an inquiring cackle. At the same instant a hound near at hand gave vent to a prolonged howl, and barking fiercely galloped out towards the newcomer. Tom entered a small clearing, where stood a log cabin with a garden at the rear,

guarded from a couple of cadaverous-looking pigs and the chickens by a split-picket fence reinforced with brush. In the doorway sat a young woman twisting her hair into the tight little rolls which all of the kinky-headed race affect under the idea that straight hair will finally result therefrom.

"How yer do, Sis' Chayney? How yo' he'th ter-day, ma'am?" Tom had reduced his gait, and his voice rose and fell melodiously. The woman laughed, showing a mouthful of dazzling teeth.

"I 'm toler'ble. Set down. How yer do, Unc' Torm?"

"Des so, so." He laid the rabbit on the single step beside her feet and continued facetiously:

"Spec' dat rabbit knowed wha' I wuz gwine, an' des git right en de way ter come erlong too." The woman laughed again. She stole a look at Tom as she sat up with both hands over her head, engaged upon a final knot.

"How 'e know?"

Tom raised his eyebrows and scratched his ear.

"He knowed I warn' gwine home," he said slowly; and meeting the comic look on his face with one of intelligence, she threw her head back and gave expression to her mood again. She did not thank him for the gift, but took it up as she rose and turned it over. "Rabbit fat," she said, and laid it on the water-bucket shelf, just inside. "How yer lef' Aunt Temy?"

"She putty well," said Tom, carelessly. He was studying the toe of his foot visible through a rift in his well-worn brogan. Again the laugh of the woman, this time from the inside of the house, reached him.

"Temy gwine ter be heah en dis worl' w'en you an' me done gone," she called out. Tom passed his hand over his face and looked as if the idea was not a pleasant one. "Better bring yo' cher enside," added the woman after a few moments, and he complied. Then she began to busy herself straightening things in the simple room, and as she worked the conversation went on.

"Unc' Josh Sims gwine ter preach ter-morrow," she said. "He come erlong heah des now an' he 'low dat he wuz gwine ter turn all de niggers over 'bout heah, 'count er dey debblement."

"Dey es er-needin' hit," said Tom. "Ef I had er seen 'im I 'd er got squar' wid some, sho' 's *you* born."

"Oom-hoo! An' I reck'n some seen 'im 'fo' now an' ten' ter dat 'head er you. Maybe some done got squar' wid ole man Torm." She was passing him as she spoke, and gave him a sharp slap on the jaw.

CHAPTER II.

WHEN Tom, warned by the sinking sun, set his face homeward, he took a course that would carry him in or about the creek bottom to which he had ostensibly set out. His way led him by the log church in which a neighborhood preacher or elder held forth every Sunday, except when the famous and eccentric Rev. Joshua Sims visited it, which was three or four times a year. As he approached the edifice, which stood in a pine thicket and boasted of a bush-arbor awning in front, he heard the voice of a preacher breaking loudly upon the afternoon calm. Never before had Tom known of a church meeting on Saturday afternoon. It was the time universally claimed by the negroes for town shopping or loafing. He knew of no one recently dead; and, besides, had any one died that late in the week the body would have been saved until Sunday. In open-mouth astonishment, therefore, Tom approached at the side. Sure enough "preaching" was going on. His first impulse was to enter; but, still suspicious, he placed his eye at a crevice and looked through. There was only one person within the church, and that was the Rev. Joshua Sims. Standing in the pulpit, he was preaching to an imaginary audience the sermon evidently prepared for the next day. Tom squatted down on his haunches, and a broad, comprehensive grin lighted his face as he realized the situation. The speaker thundered over the book lying upon the pulpit, slapping it vigorously from time to time, and walking from side to side. Half of the Rev. Joshua Sims's success lay in his figure, tempestuous delivery, and thrilling tones, and he knew it. The sermon was delivered in a shout, and wherever in a sentence the speaker sought for a word he would prolong the preceding tone with "er-rer." Sometimes saliva from his mouth flew over the pulpit into the vacant auditorium, as foam is tossed from a horse's mouth.

Tom had missed the text and indeed most of the sermon, but this much reached him through the crevice:

"Shake off yo' weights! Shake 'em off! Dey es good ter put on er race-horse w'en dey es er-trainin' 'im; but w'en de time come ter race dey must be shook off. Ef yer gwine ter run er race wid de debble shake off dem weights, an' go et fum de drop er de hat.

"Shake off yo' weights! Shake 'em off! Sister, ef hit 's fine clo'es, shake 'em off! Shake 'em off! Dey ain' no fine clo'es in hebben; de angels don't wear nuthin' but de plaines' kine. Yer can't run no race wid er long gown hangin' ter yer an' er bustle an' er hoop er-floppin' roun'. Yer can't run no race wid dem sacks an' high hats an' fedders ter ketch de win', an'

dem high-heel shoes er-ketchin' en de grass. Shake 'em off! Shake off yo' weights!

"Shake off yo' weights! Shake 'em off, bruders! Yer can't run er race wid de debble an' yer full er whisky. Er wise man 'ill take er gourd er spring water at de start an' go bare-footed, like Moses roun' de bush, an' trus' de Lord, when 'e want mo', ter run er branch 'cross de road, like 'e does fur de mule gwine ter town. Shake off de weights; shake 'em off!

"Shake off yo' weights! How does po' sinner run? He runs wid de weights on, an' debble keep right 'long at 'is heels, so close sinner heah him laugh. Dey trabble 'long tergedder, an' bimeby, 'fo' dey gits ter de las' mile-pos', debble trip up po' sinner an' win de race. Shake off yo' weights! Oh, shake 'em off!

"How do de righteous run? He strips off de weights an' cuts out. Mos' 'fo' yer know 'e gwine run, 'e done gone; an' debble come erlong an' find trail so cole 'e don't know wha' good man gone, an' 'e win de race. Shake off yo' weights! Yer all got weights, an' I 'm gwine tell yer 'bout 'em. Deir 's sump'n enside already tell yer, but I 'm gwine ter tell out loud so ev'ybody know yer been tole." He descended from the pulpit and marched up to the amen corner, still talking. "Here 's Bre'r Dan! Here 's Bre'r Dan! Bre'r Dan got weights, an' 'e ain' shake 'em off. What es dem weights's name? Too much corn en 'is crib fur de size er 'is crop! Too much cott'n en 'is crib fur de size er 'is patch! Too many chickens en de pan fur two hens an' er rooster! Too many shotes erbout Christmas fur er no-sow man. Shake off yo' weights, Bre'r Dan; shake 'em off! Oh, w'at es sech er sinner like? He like er one-legged grasshopper, w'a' think 'e es er-jumpin' somewhar, w'en ev'ybody know 'e jes tu'nin' roun' en de road, p'intin' er new way ev'y time."

Tom rolled over on the ground outside and kicked his heels in the air, convulsed with laughter. "Somebody done got squar' wid Unc' Dan," he gasped. Then he quickly rose up an' glued his eye to the crack again. The preacher was standing with uplifted hands over another imaginary sinner.

"An' heah ole Black Aleck! Bre'r Aleck got weights. No chutch on Sunday fur Aleck. Mus' fish tro'tline an' hunt squ'r'l. Mus' hoe de gyardin an' hunt guinea-nes' en de jimsun weeds. Mus' do anythin' but heah de Lord's word, 'cept'n' ole Unc' Josh come ter preach. Dem de weights Bre'r Aleck got. Shake 'em off, er-rer! Shake 'em off! Oh, w'at es sech er sinner like? He like er las'-ye'r wasp en er spider web — holler an' dry, an' 'is wings won't flop no mo'.

"An' heah es Bre'r Clay. Heah es my dear Bre'r Clay. Bre'r Clay got weights. W'at

kind er weights 'e tryin' ter run wid? Lazy weights. Won't work cott'n-patch, won't work tater-patch, won't work collurd-patch, won't worknowhar. O Lord! did anybody ever see er lazy man win er race? 'T ain't gwine ter he'p yer, Bre'r Clay, ter put on dem good clo'es heah an' say 'Amen,' an' 'Bless de King,' an' 'He'p, Lord!' loud 'n anybody ef yer lef' de ole 'ooman an' de chillun ter work all de week. Shake off de weights, Bre'r Clay. Shake 'em off! Oh, w'at es sech er sinner like? He like er tadpole en er mud-puddl', w'at done dry up 'fo' time come fur 'im ter drop 'is tail an' be er frog."

Tom went over on the ground while Black Aleck was being dealt with, and he was too weak with laughter to sit up during the time devoted to Clay. Presently he heard:

"An' heah Sis' Tilly. Heah es dear Sis' Tilly. W'at es Sis' Tilly's weights? She got weights ter shake off. She run roun' tellin' tales on oth'r 'oomen's husbun's —"

"Ooom-hoo!"

Tom cocked his head up as he uttered this assenting exclamation and listened.

"An' she scole —"

"Dat 's right!"

"An' mek troubl' ev'ywhar she go."

"Somebody done got squar' wid Aun' Tilly!" Tom ducked his head down and rolled over again.

"Shake 'em off, deah sister! Shake 'em off! Oh, what es sech er sinner like? She like er cockleburrr en de tail uv er dry cowhide an' gone ter markit; no good heah an' no good deir.

"An' heah Bre'r Torm." The preacher was right over the crevice, and his voice sounded like thunder in the ears of the startled eaves-dropper outside. "Little Bre'r Torm. He tryin' ter run wid big weights. W'at es Bre'r Torm's weights? He heah ter see dis 'ooman, an' yonner ter see dat 'ooman; fus' one way an' den ernudder, an' er wife down yonner home t'ink 'e gone huntin' ev'y time 'e take 'is gun." A horrible groan broke from the lips of the trembling man without, and a cold sweat started forth all over him. In a frenzy of terror he raised himself to his knees and brought the old gun to full cock. Then, realizing what he was doing, he returned the hammer to a safer place with feverish anxiety. The Rev. Joshua Sims heard nothing but his own voice. "Shake 'em off, Bre'r Torm! Shake 'em off! Yer can't run no race wid dem weights er-hangin' on yer. Oh, w'at es sech er sinner like? He like er snake en de grass, an' fus' t'ing 'e know 'e gwine ter lan' en de fire wid 'is back broke."

Tom's hilarity was all gone. If that sermon was preached on the morrow he might not literally land in the fire with his back broke, but

his back would suffer until the sensations would make it appear so. He left almost as suddenly as his mirth. Gliding into the woods he made his way to the bend in the road, then, as if struck with a new idea, stopped short and took a seat on a stump. In an attitude of profound reflection he waited until, having finished his sermon, the preacher came down the road with great dignity. When he reached the vicinity of the little man the latter started suddenly, looked over his shoulder, and an affable and delighted expression dawned upon his face.

"How do yer do, Bre'r Sims? Lord, I wuz des er-sayin' how I u'd like ter see Bre'r Sims, an' heah 'e come er-walkin' right erlong." By this time he was up and shaking the new-comer's hand. "Wha' yer gwine dis time er day?" The Rev. Joshua returned the greeting, but with less demonstration.

"Well, I wuz er-gwine down ter Sis' Thomson's."

"Wha' dat!" Tom threw up both hands in well-affected astonishment. "Man, night ketch yer 'fo' yer git half way deir! No, sah; yer come erlong wid me. Tempy 'll be proud ter see Bre'r Sims, an' I 'spect by now dat 'possum w'at wuz er-cookin' while back done got done." Tom laughed, and slapped his companion on the back. The Rev. Joshua Sims was a large, heavy man, with a round, full jaw and a well-fed look. It really mattered little to him where he spent the night, and the 'possum decided the point. He suffered himself to be led off. Tom, having gotten himself well under way, continued gayly:

"I knowed dat 'possum up ter sump'n. Las' night de rooster call me ter run deir quick. Bre'r 'Possum wuz squattin' en de hen-hous' des like 'e been sont fur an' come; an' heah 't is." Tom wagged his head sagaciously. "Oomp! Ef I c'u'd des jump Bre'r Rabbit now, 'spect he 'd he'p bre'kfus' mightily." And he began to peer around with a great show of eagerness.

"Did n't yer shoot erwhile back? Heah somebody over yonner 'bout Sis' Chayne's."

Tom shook his head. "'Spect dat wuz one dem Gillus boys. Dey all time bangin' way over deir. When Tom shoot, sump'n gwine hang 'bout 'is clo'es." He lifted the gun quickly and sighted it towards a clump of bushes, then took it down.

"Dat mullein leaf down deir fool me. Look mighty like er molly-cott'n."¹ But Brother Sims plodded along behind the loquacious little man, his mind on other things again.

CHAPTER III.

TEMPY received the pair graciously. She was a devout church woman on Sundays. Like

¹ Rabbit.

most negro women, she had infinite respect for preachers; and this respect in the case of the Rev. Joshua Sims was mixed with something of fear, for his methods in the pulpit were exceedingly pointed and personal, as has perhaps been gathered, and ridicule has a disastrous effect upon ignorant people. She vied with Tom in attentions to the shepherd. One placed a chair near the door; the other brought a gourd of water. One took his hat and Bible; the other got him a fan. Presently there came a lull in their ministrations, for the reason that there was nothing left to be done for the guest. Then Tom plucked the sleeve of his life partner at an opportune moment and glided out the back door behind the chicken-house. Puzzled by this demonstration, Tempy looked out after him. Presently she saw his head thrust out and his features working mysteriously. She took a pan in her hand as if on some domestic mission and went behind the chicken-house also. Tom straightened up his little body and looked her full in the face. Her mountain of flesh loomed above him, but his assumption of a common danger had made him bold.

"Put dat 'possum on de table, Tempy," he said in a tragic whisper.

"W'at I gwine ter put Mammy Jo's 'possum on table fur?" In her surprise and indignation she did not trouble herself to subdue her voice. Tom grasped her with both hands.

"Sh-h-h-h!" he said. "Don't let 'im heah, Tempy"; and his voice was just audible, while his features shifted themselves as under the pressure of some great emotion. "I wuz er-comin' 'long by de chutch des now an' Bre'r Sims wuz en deir er-preachin' by hisse'f, er-gittin' ready fur ter-morrer. He des gi' de niggers de wuss raspin' y' ever heah—Dan, an' Clay, an' Aleck, an' Sis' Tilly—" A low chuckle escaped from Tempy's lips.

"Need n' laugh; he tech on you too."

"W'at 'e say 'bout me?"

Tempy bristled up, but instantly looked around as if afraid of being heard.

"Sh-h-h-h! He gi' yer fits. Can't tell w'at 'e did say. Somebody been tellin' lies 'bout yer, sho'. He ain't say nuthin' 'bout *me*, but 'e gi' yer de wuss sort er name fur lyin' an' er-tarkin' 'roun'—"

"Be deir in one minute!" Tom elevated his voice as if he heard the Rev. Joshua Sims calling. "Put dat 'possum on table, Tempy." Snatching up an armful of wood he went in, tossed it down noisily on the fireplace, and joined his guest in the broad passage-way between the two rooms of the little home.

Half an hour later the three sat down to eat. There was a scarcity of crockery, and there were only two forks, and all had to drink

water from a single gourd that hung by the bucket; but this did not lessen their enjoyment of the meal. There was plenty of hot, "crackling" bread, great generous pones that crumbled under the eager fingers of the men; and there was the 'possum warmed over, with its halo of baked sweet potatoes, and all as brown as a partridge's back. The eyes of the Rev. Joshua Sims danced at the sight of this dish; and when, having quartered the animal, Tom gave him a ham, and poured the rich brown gravy lavishly over all, a happier man could not have been found. Between his attacks upon the tempting dish he began to tell of his adventure some weeks before at a baptizing. He had undertaken to put Sis' Tilly Hunter under the water, when she caught him around the legs and over they both went. The elders pulled Tilly out by the heels, and Tilly pulled him. Tom laughed loudly and slapped himself on the legs, and ever and anon he would lay down his knife and, overcome with the recollection of the scene, repeat the performance.

"Bre'r Sims," he exclaimed to Tempy between his paroxysms, "es mighty hard ter beat." Tempy, too, simulated a great laugh, but with poor success.

What raconteur is not moved by the success of his stories? Stimulated by the unstinted applause, the Rev. Joshua Sims was stirred to further endeavors.

"Bre'r Torm," he said, after a long pull at the pitcher of persimmon beer that Tempy had remembered to fetch, "sump'n happ'n' las' ye'r en de drouth dat beat dat. I wuz er-baptizin' Bre'r Dick Simins, an' de crik wuz mighty low, lemme tell yer, 'cause hit had n' rain fur nigh onter eighty days; an' Bre'r Dick said de worl' wuz er-gittin' ready ter burn up, an' so 'e wanter come inter de chutch. De water wuz dat low we had ter dam up de crik, an' den we tuk Bre'r Dick en, an' Bre'r Jerry Toler an' me try ter put 'im unner. Bre'r Dick wuz er might' big man, an' de water did n' 'zactly git up over 'is stumick. Now yer know er man got ter go clean unner 'fo' 'is sins wash erway, an' Bre'r Jerry 'lowed dat ef 'is stumick staid out all de sins gwine ter stick right deir—des like fleas come up on er dog's head w'en *he* go in de water. Well, sah, w'en Bre'r Jerry see dat stickin' up deir, 'e put bof han's on hit an' bear down hard. Bre'r Dick wuz hol'in' 'is bref deir, an' w'en 'e git Bre'r Jerry's weight 'e blow water way up yonner an' say 'Poo-oo-oo!' an' 'is foots an' head pop out. Bre'r Jerry put 'is foots back an' I shove 'is head unner; den 'is stumick come out ergin. Den Bre'r Jerry mash down, an' Bre'r Dick say 'Pooh!' and pop up 'is head an' 'is foots des like 'e did fus' time. Somebody on de bank yell out, 'Tu'n him over,'

an' we gi' 'im er roll; but bless yo' soul, 'is back rose up like er fiddle, an' by dis time Bre'r Dick wuz mighty nigh full er water an' de dam done broke."

Tom was ducking his head about under the table and screaming with laughter, and the Rev. Joshua Sims stopped to join in. Tempy was waving back and forth in her chair, clapping her hands every time her head came down. Then Tom gasped for breath, and clutched his guest by the shoulder, turning an appealing glance upon him.

"Hush, Bre'r Sims; hush!"

"Now, wuz Bre'r Dick baptize 'cordin' ter de doctrun, er wuz 'e not? Some sez yes, an' some sez no, 'cause deir nebber wuz er time w'en some er 'm was n' showin'; but Bre'r Dick say —"

"W'at 'e say?" Tom gasped out the question.

"He cussed and say he ain' gwine ter try hit any mo'; an' dat settle hit wid me. Ef Bre'r Dick had er had 'is sins wash' erway he 'u'd er been full er de speret er righteousness an' not cussin' mad."

The last vestige of opossum, the last sop of gravy, and the last swallow of persimmon beer had disappeared down the throat of the distinguished guest when the party went forth under the china tree and found seats. The moonlight lay soft upon the cotton-field — a silvered silence under which only the crickets and a single mocking-bird tried to give a concert. Tom brought out a corncob pipe for the preacher and shaved him tobacco from a plug, and Tempy brought a coal of fire in the hollow of her hand from the kitchen. The itinerant

held forth for an hour upon many subjects, but never to a more attentive and appreciative audience. When at last they lay down to sleep, Tom's sides really ached, and a ready-made smile clung to his face until far into the night. Even after it vanished it returned dream-summoned and occupied from time to time its old familiar place.

Next day the personal rebuke of the preacher burst like a thunder-storm upon his hearers. Dan was crushed. Aleck let his head go down upon his hands. Clay slipped out of the door, as soon as public attention was drawn from him, and went home. Tilly crouched behind the bench and hid herself. Few of all the adults there escaped the lash. But Tom leaned back against the wall with his eyes half closed and Tempy by his side. A peaceful smile was upon his face — the same smile that went to bed with him the night before. When Dan was scored he said softly, "Come back ter de fold, Bre'r Dan; come back." To Aleck he murmured dreamily, "Face de light! Face de light!" And when Clay received punishment, from the lips of the serene little fellow floated, "Sinner, tu'n; why will yer die? — why will yer die?"

When the Rev. Joshua Sims came in front of his former host a close observer might have noticed that the latter's half-shut eyes fell a little closer and his thin sides swelled out with a prolonged breath; but as the preacher passed on, the eyelids slowly lifted again, the sides sank gently, and something like the restful sigh of a cow when she lies down floated out from the half-parted lips of the devout little man.

Harry Stillwell Edwards.

AT BREAK OF DAY.

AS pallid morning gleamed across the sky
 I saw your figure on the windy crest;
 Between the low dawn and the shadowy west
 Your flitting foot and dusky cloak went by:
 Some errand sweet of blessed charity
 Had led you forth while others took their rest,
 To start the ground-bird from her drowsy nest,
 Where, blanched with dews, the sloping meadows lie.
 Then first a red ray pierced the curtained pole;
 Then flashed a broad beam up the glimmering height;
 Then rose the sun, as never yet rose he!
 So love, all glorious, shook my tardy soul,—
 The veil of doubt dissolved in blissful light,
 And jealous heaven gave you up to me!

Dora Read Goodale.

RECOLLECTIONS OF JEAN FRANÇOIS MILLET.

WITH SOME ACCOUNT OF HIS DRAWINGS FOR HIS CHILDREN
AND GRANDCHILDREN.

I.

WAS at work under Gérôme at the École des Beaux-Arts in the winter of 1872-73. On the Rue Buonaparte, near the school, was an old print-shop, and in the windows were engravings ancient and modern. Among them I noted most frequently some woodcuts after Millet's drawings—one series, "Morning," "Noon," "Evening," and "Night"; the other, eight or ten drawings of figures at work, "Reaping," "Mowing," "Chopping," "Spinning," etc. I was never tired looking at these, and never got by the shop without stopping to see at least the man mowing—the naturalness of the swing of his body, his foot so firmly planted upon the earth. This was my first acquaintance with Millet, although in America I had seen a lithograph of his "Women Sewing," which seemed like Frère to me, but larger and more robust. Some Americans of the Latin Quarter went down to Barbizon in the winter for a few days of recreation. When they came back they told me that Barbizon was on the edge of the Forest of Fontainebleau, that Millet lived there near the hotel, and that his studio window looked out on to the street.

On hearing this I was very sorry that I had not gone down with the party, but resolved that in the spring I would see Barbizon, the forest, and at least the outside of Millet's house.

I saw one or two landscapes by Millet at Durand-Rouel's, which did not impress me strongly at the time; but I became familiar with the works of Delacroix, Corot, Rousseau, Diaz, and Jules Dupré, and my sympathies at once became concentrated upon these masters. Later in the spring, at an exhibition at the Hôtel Drouot, where all of these men and other strong ones were represented in force (I remember how thin and pale a Meissonier looked), I saw a painting by Millet—a mother sewing by an oil lamp, her baby asleep beside her. The reality of this scene, the naturalness of movement, the perfection of expression, the charm, separated it from all other pictures, and from that moment Millet was to me the greatest of modern painters.

I went down to Barbizon in the early summer. I found the hotel jolly, the forest grand, and Millet's large studio window always in view.

The village was so small, with but one narrow street, that I felt the chances strongly in favor of my meeting Millet, and possibly of making his acquaintance. So, with one or two sketches in the forest, I went back to Paris to make one more study in the class, and to pack my traps and lay in a stock of material for the summer.

I worked hard and saw a great deal of Millet's house and studio from the street and the field behind, where a road ran through going into the forest. There was never an evening that I did not go out for a walk, and whichever direction I took I always found that my road was by Millet's house in going and that I came back by the same way. Millet's studio was a detached building, separated from the house by a yard; the house, like the studio, was built on the line of the wall on the side of the road. The dining-room window opened into the street, and I sometimes got a glimpse of the family as they sat at their evening meal—a cheerful, noisy lot of young people; and at the table, later in the evening, I once saw Millet's face distinctly in profile: the nose seemed very long, and I thought he looked like the portrait of Titian. No one at that time could have persuaded me that I should ever sit in that cheerful home and talk with Millet. I found that very little was seen of him in the village. I met a number of artists who had lived for a long time at Barbizon, but none of them seemed to know him. "Siron's," the inn, was the general resort for the artist inhabitants of the place, and they, together with the boarders, made a noisy crowd in the billiard and dining rooms in the evening or on a rainy afternoon; but Millet never came round to drink a glass of beer or to play a game of billiards. So the artists called him a bear, and had doubts of his ability to paint; but the peasant people found in him a good neighbor nevertheless, and if any one was in trouble Madame Millet was the first person thought of in the way of aid.

By good fortune I became acquainted with Mr. William Babcock of Boston, who had lived abroad for many years, and at that time had become fixed at Barbizon. His house was filled with engravings, photographs, or casts of nearly all the finest things that had been produced in art, and in him I found a man responding in every thought to the beauties of the treasures of art and nature about him. He

had taken some lessons from Millet many years before in Paris, and always had seen a good deal of him, and his enthusiasm for Millet and Millet's work was without bounds. He had bought from Millet at different times a number of drawings and sketches, some of them of great beauty and rare finish. He also had hanging about his studio several studies in oil and some finished paintings by Millet, also several by Delacroix and Diaz. All these he had bought for small sums, saved from a limited income, while studying in the schools of Paris. Thus while in the country painting from nature I was able to increase my knowledge of ancient art and of the best modern masters. Babcock had carefully preserved photographs of everything of Millet's that had been reproduced. With these, the drawings, and Babcock's descriptions I became acquainted more fully with Millet's art and its history. I found to be true what I had felt from the first, that Millet was one man in a century; that his love and sympathy for nature were unbounded. I had suffered much pain in finding — I imagined it so at least — that but few artists really loved nature. They seemed to care only for that which it suited them to paint; but in Millet I had found a man who adored the stars, the moon, and the sun, the earth, the air, and everything that the sun shone upon. And through this love everything that he touched, frequently the least things of the earth, became monuments. I felt it a privilege to live so near this man.

Thus I passed the summer with much hard and pleasant work and with many plans and schemes for a visit to Millet, but always abandoning them as soon as made. Finally the nearness for the time of my return for the re-opening of the schools in Paris gave me a new courage. So one Sunday, judging carefully the probable hour that the Millet family would have finished their noonday meal, I tapped at the door and asked for François, the eldest son, with whom I had made a bowing acquaintance through occasional meetings in the fields or the woods. I asked him for his father's permission to visit his studio; also the privilege of calling upon him at his own studio. The last request he at once granted, and going to his father brought word that he would see me in half an hour. This time I spent in trembling and happy expectancy, returning at the time fixed. Millet gave me a friendly shake of the hand and showed me through the door of his sacred workroom.

Everything was plain and gray. An old green curtain hung across the lower part of the window, which is not unusual in a studio, but two features seemed to me to belong distinctively to this. The window was at the left on entering the room; at the farther end, beyond

the easel, was a large mirror, which I imagined was used by Millet to study a movement which he would give himself, or a detail of folds from his own clothing. I am warranted in this from his having used this mirror in calling my attention to certain facts of form and detail upon his own body while criticizing, upon another day, some drawings that I had brought him.

The other object which struck me was a curtain suspended from the nearer side of the window and hanging at right angles with it. Behind this Millet would retire to look at his work or to show it to visitors, the curtain intercepting the light, and making the picture seen with greater ease.

The walls were of plaster, darkened by time; heavy rafters crossed the ceiling; a few plaster casts hung about the walls — reliefs from the Trojan Column, heads by Donatello and Luca della Robbia, the arm of Michael Angelo's "Slave," some small Gothic figures and antique torsos, besides some Gothic figures carved in wood, of which Millet was very fond. All the studio accessories or decorations were so unobtrusive that I did not see any of them on my first visit. No pictures were in sight. A large frame hanging over the already mentioned mirror, which I afterwards found to contain a rather highly colored seventeenth-century master, was covered with a quiet drapery, but the end and right-hand side walls were closely stacked with canvases and with frames for temporary use containing canvases, all standing on the floor, their faces turned to the wall. Immediately upon entering the studio Millet took one of these, and, placing it upon the easel in the middle of the room, signaled me to stand with him behind the curtain, which placed us at a considerable distance from the picture. He put before me in this way ten or a dozen pictures, generally in frames, and in an advanced state of completion, always returning the picture to its place in its stack against the wall. As I have said, up to this time I had seen but few of Millet's completed paintings: therefore the full force of his power and greatness was revealed to me then, and in his presence words were certainly of little value in expressing my feelings. But the master was evidently satisfied and pleased with my rapt wonder and admiration, and seemed to approve of my difficultly worded comments. He insisted that the pictures should be seen at a considerable distance, say at four or five times their greatest width or height, but called me near sometimes that I might see the simplicity of execution or the few touches required in producing multiplicity and infinity in effect.

A comment by Millet which impressed me strongly was this: he wished in a landscape to give the feeling that you are looking at a piece

of nature—that the mind shall be carried on and outside its limits to that which is lying to the right and left of the picture, beyond the horizon, and to bring the foreground still nearer, surrounding the spectator with the vegetation or growth belonging to that place. He showed me a canvas with the “Two Spaders” in heavy ink outline. In reply to some remarks, I think, he showed me the large reed pen with which he had drawn it. Several of the pictures showed this same ink outline underneath, notably “The Cowherd,” which, although complete in its effectiveness as a picture, was painted very thinly in transparent colors—opaque tones being used only in the sky and in one or two of the cows in the foreground. This was undoubtedly the work of a single day, or of a few hours, after the picture had been drawn in outline.

Another picture in an early stage was the “Women returning with Fagots.” This was more simply painted, the whole picture having been put in with three or four tones; the effect was nevertheless very complete and impressive—much more so than the pastel of the same subject. The climax of Millet’s power which was revealed to me that day was a still-life study—three pears lying on a plate or table. I felt that I was looking at a picture of no less interest than his larger and more complicated compositions. In the pears I found all the tones of a landscape, in the twisted stems I seemed to see the weather-worn tree, and the modeling of the fruit was studied and rendered with the same interest that he would have given to a hill or a mountain or to the human body. At the same time it was none the less a most faithful presentation of three pears. Millet seemed well pleased in my declaring this to be equal in interest to his other pictures. I now more fully understood his aims in art, and this little still-life was certainly one of his triumphs. Did he not write, “One must be able to make use of the trivial for the expression of the sublime”? And on his death-bed, while looking out into his garden and at his closed studio door, longing like a young man for more opportunities for work, he described to his son, not colossal canvases and multitudes of figures, but a quiet nook in his native Normandy—the side of a hill, a road, and a few trees. Could he but live he had so much that he would still say; he would show what could be done with this simple material.

Millet testified a rare friendliness in talking to me without reserve of himself, of his loneliness and isolation. This conversation was interrupted by the entrance of a friend who was spending the day at the house. I then asked Millet some questions relating to my studies of art—was anatomy necessary or worth while?

Yes, all study was useful; but the larger constructions, the planes and surfaces, must ever be kept in mind. I questioned him about “values,” and of thin and solid painting. He treated the subject of values in a way so much larger and more general than we, students of the school of the day, understood, that he was soon beyond my reach. In regard to heavy painting I told him of a picture of his which I had recently seen in Paris, “*Œdipus* being taken from the Tree,” in which the child’s face was actually modeled in relief with the pigments. He laughed heartily, and replied that he was “very young when he painted it.” Millet was always impatient of detail or particularity in methods. He once said that much must be learned and forgotten before the painter could really be at the command of his own powers.

I had been discussing the question of the beautiful in nature, and before leaving Millet I asked him, although I knew well his answer, if anything in nature was not beautiful; but his reply came with a directness and force that satisfied me beyond my expectations: “The man who finds any phase or effect in nature not beautiful, the lack is in his own heart.” I had been so cordially entertained that in leaving I had no feeling of having staid too long or of having intruded upon the master’s precious time. Millet readily granted me permission to bring him my work for criticism. I then went across the field to the studio of the son, where I found upon his easel a harvest field—a mower sitting in the road and sharpening his scythe in a manner common to the laborers of that country. The painting was much in the method and spirit of the father’s art, having not a little of his opulence and charm of color. I then thought, and time has confirmed my belief, that when the same justice has been given the son that at so late an hour was accorded the father he will be hailed as the great pupil of and co-worker with Millet, and the question of whether the work was executed by father or by son will be of diminished importance.

History furnishes us with plenty of such instances. We no longer complain that Andrea had not the individuality and was not so original in his art creations as Luca della Robbia.

After a little time Millet came in, looked at the picture, and gave a few words of criticism and approval. This unexpected visit gave me a new opportunity to ply fresh questions,—Millet talked much of nature and of art,—but my mind was already filled to overflowing, and I never could recall this hour or two of invaluable words from the master.

I remember well the effect produced upon me by this rare afternoon. I needed air and motion to quiet my nerves; I seemed not to

WILLIAM EATON 1883

JEAN FRANÇOIS MILLET.

touch the ground as I walked. I could almost affirm at this distant day that the air was buoyant, and that it carried me along without effort on my part. I was in a new atmosphere, a new world; never before had I felt the plain to stretch off into such distances, such vividness and mellowness of color, such depth in the sky.

I saw Millet again before my return to Paris, and showed him a few studies and pictures. He found in my work a lack of simplicity, too much of unnecessary detail, the "planes" not well felt, and a smallness in the attachments of the limbs to the body. He made some outlines to explain his remarks that had the simplicity of the early Egyptian or Assyrian carvings. His criticisms upon the more technical points

were much the same as those of Gérôme and Munkacsy given me upon some of the same things. This served to convince me, even at this early day, that in technicality there were larger principles which govern all good art.

I returned to Barbizon again in the winter, and remained several weeks to finish a picture begun in the autumn. François Millet and I were much together, and I sometimes took coffee with the family in the evening. At these times Millet sat at the table like a patriarch, as he has so often been described, surrounded by his large and handsome family, his manner always cordial and full of hospitality.

In the spring I saw him in Paris; he had come with Madame Millet and François for

MILLET ABOUT FORTY YEARS OF AGE. (FROM A PHOTOGRAPH TAKEN IN HIS GARDEN.)

further information in regard to an order he had received from M. de Chennevières, the Minister of Fine Arts, for the decoration of one of the chapels of the Pantheon, and to see the chapel in which the paintings were to be placed. I went with François and found him with Madame Millet eating their lunch at the Duval restaurant in the Rue Montesquieu. Millet was cutting his bread with his knife like a peasant, and good-humoredly complained of having to come to Paris. He showed me the written order from the minister and granted my request to be permitted to find his address. He seemed much pleased in having been chosen for this work, and with the subject assigned him. His mood was more light and gay than I had known him to possess. We then went to the Palais Royal and took coffee out-of-doors. Millet was full of reminiscences of his early life in Paris. He told me how a dealer would come to him for a picture. Having nothing painted, he would offer the dealer a book and ask him to wait for a little while that he might add a few touches to a picture. He would then go into his studio and take a fresh canvas or a panel and in two hours bring out a little nude figure, which he had painted during that time, and for which he would receive twenty or twenty-five francs. We have in later days seen these pictures sold for as many thousands. Millet did not live to know anything of the large prices which are now familiar to us. It was only a few

years before his death that the "Angelus" exchanged hands for \$10,000. This seemed to him enormous, and he spoke of it to a friend in an apologetic tone, assuring him that he had nothing to do with the transaction.

If my memory serves me rightly, he was getting about five thousand francs for the larger and more important pictures upon which he was working during the last years of his life, and at that time he was dependent upon advances upon incompleted work. This was probably owing to the fact that as he was able to command larger prices he lingered more over his work, always striving for greater simplicity, force of expression, depth of color, for greater perfection in finish, which the small prices of earlier days would not permit.

I knew Millet to have had very flattering offers from dealers, who wished to place unlimited sums at his disposal provided he would work for them. He refused all offers, preferring to continue his more independent existence.

I returned again to Barbizon for the summer of 1874. This was Millet's last. How far I was from knowing that I was spending with him his last well evenings! I knew that his health was not good and that he did not go for long walks as in former years, but I thought his illness some chronic disease that would not shorten his life. I never heard his illness referred to further than that he would sometimes complain of indigestion and ask for orange-flower water. Once, late in the summer, he lightly spoke of his lack of energy, and said that he would sit and dig with his brush at the dry paint on his palette rather than go to his table for fresh colors.

At this time I found Millet deeply occupied with the compositions for the "History of Saint Geneviève." In all his leisure moments he was preoccupied with this work. I would call after dinner to take coffee with François or to go with him for a walk and would find the father sitting alone at the table, first staring at the cloth, then passing his finger over the surface before him as if drawing, holding his open hands on either side of the place where he had been making indications, and looking as at a completed sketch; then perhaps he would make the

movement of obliterating it with his hand, and seeming to dismiss it from his mind he would then recommence his invisible markings. Millet explained his preoccupation, and would always ask me to excuse his silence.

This was generally in the yard or garden, between the house and the studio, where the family dined during the pleasant summer evenings. In talking of the decorations, Millet referred to the difficulties of the composition. The lighting of the chapel was so dim that he wished to make the figures tell in silhouette either in light against dark, or in dark against light. He thought it the work of the historical painter to make the story so plain and complete that it would be told by the paintings without previous knowledge or the aid of books.

The sketches for this series that Millet left were very slight. I saw several of them, only a few outlines in charcoal on small canvases, the movement of the figures indicated with long sweeping strokes. Thus was the master taken away while making preparations for that which, in a certain sense, would have been the most important work of his life.

During this summer and autumn I spent many evenings with Millet in playing dominoes. He was very fond of the game, and as his eyes would not permit him to draw or read by lamplight, this was his only means of diversion. Although I did my best, Millet was generally the winner, and he would indulge in much hilarity over my misfortunes. I have always regretted

my excessive delicacy in not asking for a sketch which he made on the tallying sheet on which I had been marked the loser in every game. It was a figure stretched upon a tomb, and labeled my effigy.

Frequently some of the family were in Paris and would be expected home by the late omnibus; on these evenings we generally kept at the game until its arrival at half-past twelve or one o'clock. I would rarely talk of art matters, unless the subject was started by Millet, and this was not often. Had I been less youthful and inexperienced how many valuable opinions might I have obtained from this great mind. On the other hand, without this youth and inexperience, Millet might have been more reserved with me.

I once ventured to ask him his opinion of Japanese pictures. He did not express that absolute admiration which I expected. I then asked him if he did not think them superior to the work of the fashionable Parisian painter. He replied, "Most decidedly; but their work is far from the beauty of Fra Angelico."

I more frequently talked to Millet of himself, and he always answered my questions very freely: in conversation, as in painting, he had practiced the art, you might say, of formulating his ideas in the most concise language,—waiting to arrange his sentences before speaking. This peculiarity was probably accentuated in conversation with me, as my knowledge of French was imperfect, and Millet was always anxious

LYELL CARR

MILLET'S STUDIO. (FROM A PHOTOGRAPH BY KARL BODMER MADE SEVERAL YEARS AFTER MILLET'S DEATH, GIVING A PARTIAL ASPECT OF THE STUDIO AS IT WAS WHEN OCCUPIED BY MILLET.)

THE SOWER.¹ ENGRAVED BY T. COLE, AFTER AN AUTOTYPE BY AD. BRAUN, FROM THE PAINTING NOW IN POSSESSION OF WILLIAM C. WHITNEY.

lest he should use a term that I would not understand. But his French always seemed as clear to me as my native tongue.

I once said to him that he must have a remarkable memory to be able to work, as was his wont, without nature before him. He replied that in that sense he had not, but that which touched his heart he retained.

In regard to working from nature Millet once said to me, "I can say I have never painted (or worked) from nature"; and gave

¹ Reprinted from the issue of this magazine for November, 1880.

as his reason, "*nature does not pose.*" I would like this to be clearly understood; Millet had well weighed his words in stating that he had never worked from nature. This was without reference to his student days, when he drew and painted like others from the model; but from the beginning of his production of pictures he seems to have recognized the fact that "*nature does not pose.*" Always looking upon her as animate,—moving, and living,—he recorded by the most simple means the stable facts observed during nature's transitions. With the exception of several painted studies

of his parental home, and of other places dear to his childhood memories, which were in fact pictures in every sense, well composed and effective in light and shade, drawn probably from nature, but painted more from memory, I have never seen any work from nature of Millet's that was not memorandum-like in character, indicating by outline and shadow the principal contour; accenting here and there a prominent or important muscle, or some particular form which he would find to be the key to the expression of the form or action which he sought. Almost all other painters have left us studies elaborately wrought out either in color or in chalk, surpassing even in detail and research the parts in the picture for which these studies were used.

Upon my first visit to Millet he took from his pocket a sketch-book about two and a half

The other qualities of the landscape were too fleeting. He had copied all that would pose for him, as with the ricks; his memory and knowledge supplied the rest. Again I have authority for stating that Millet was not indifferent to or incapable of working from nature, or of applying it to his pictures in progress. His son has frequently told me of his desire to make more studies from the living model, and his regret at not being able to do so. It seemed to be difficult for Millet to approach people that he wanted to have pose for him, and this office of asking a peasant man or woman to sit for him always fell upon his wife. But these sittings were never long nor tiresome; he wanted only the few facts of form or color which that particular model could give him. For a detail or a special quality he would at times take the greatest pains. Madame Millet has told me

WOOD-CUTTER AND HIS WIFE.

by three and a half inches in size, and showed me upon one of these little pages his study for the wheat-ricks which were the principal objects in his picture called "Winter." This sketch, like many others of the same character, was a masterpiece; every line was vital, the sinking and bulging of the ricks showing the effect of storm and weather. But the absolute modeling in light and shade, the texture of the straw, etc., was not attempted. This the artist supplied in his painting — not by more elaborate drawings or studies in color, but by his knowledge and memory, and by the observation of other wheat-ricks under similar effects as those represented in his picture.

Some of his landscape studies in outline with pen and ink were the exact record of proportion and construction, resembling rather the work of a topographical engineer.

of having worn the roughest of peasant dresses about the house and garden for weeks, that when it pleased him her husband might call upon her to pose for some part of a picture upon which he would be at work, and of Millet compelling her to wear the same shirt for an uncomfortably long time; not to paint the dirt, as the early critics of Millet would have us believe, but that the rough linen should simplify its folds and take the form of the body, that he might give a fresher and stronger accent to those qualities he so loved — the garment becoming, as it were, a part of the body, and expressing, as he has said, even more than the nude, the larger and more simple forms of nature.

A memorable evening was one spent in the discussion of the beautiful in art. Before Millet had left the dining-table, I think, I asked him to decide a point which was giving me much

THE OGRE.

village. An artist friend had advised me to take this out, as it destroyed the "beauty" of the picture. My friend's criticism was probably a good one; his meaning was that the chief attraction in the picture lay in the simplicity and expanse of the plain. The wall in the foreground, not being an object of interest, detracted from the real interest of the picture, the fields and the wide horizon. But I clung to my desire to express with the wall the entrance to a village. I began telling this to Millet, but got no further than my friend's opinion, that the wall destroyed the beauty of the picture. This worked Millet up to an extreme degree; I might say it put him into a towering rage.

The criticism he took as an expression of the prevalent idea of the beautiful, which he could not listen to with calmness. To him beauty was the fit, the appropriate, the serviceable, the character well rendered, an idea well wrought out, "with largeness and simplicity." This last Millet would put in at times, as if in parenthesis. I often thought of it as the weak point in his argument. This was his bias; he could not separate beauty from *grandeur*: but I listened and did not argue; in fact, there was no chance. Millet went from one illustration to another. Of my picture he said that if I had not composed it in a way that would express my thought, it was a failure. "The artist's first task is to find an arrangement (or composition) that will give a full and striking expression to his idea." Seeming to find words inadequate, he took the lamp and went over to his studio, bringing back photographs from the frescos of Giotto. As he showed me these treasures, each one was a fresh triumph. "Had he not told me so," his manner seemed to say; "was not character beauty? Was not that which fitted its place beautiful? Was not the naturalness of that action beautiful, although it was only one man washing the feet of another?" He then took me into his bedroom and showed me, hanging on the wall, an engraving of a "Nativity" by Titian. He criticised in this the accessories as

PULLING OFF THE OGRE'S BOOTS.

lacking the character of a stable; the figures wanting the ruggedness of the peasant type; and, above all, the unnaturalness of having the child naked. "Why was it not warmly wrapped in woolen clothes?" His answer to all this was, "This is the beginning of *la belle peinture*." Millet then turned to another engraving, after Poussin—a man upon his death-bed. "How simple and austere the interior; only that which is necessary, no more; the grief of the family, how abject; the calm movement of the physician as he lays the back of his hand upon the dying man's heart; and the dying man, the care and sorrow in his face, and his hands—perhaps your friend would not call them beautiful, but they show age, toil, and suffering: ah! these are infinitely more beautiful to me than the delicate hands of Titian's peasants."

I have often been told of the magnificent appearance of Millet as a young man—tall,

ally a dark brown, the beard strong and heavy; in his last years they were of an iron gray. His voice was clear and firm, rather low in pitch, and not of that deep bass or sonorous quality one might have expected from so massive a physique.

Aside from sabots, which he always wore in the country, he in no way affected the peasant dress, as has been stated by the English, but wore a soft felt hat, and easy fitting clothes such as you might see anywhere among the farmers or country people of America. It was only on going to Paris that he would put on leather shoes, a black coat, and silk hat—his apparel on these occasions causing much discomfort. To his family he never seemed like himself when dressed for Paris.

I rarely saw Millet out-of-doors,—that is, away from his yard,—but I have vividly impressed upon my memory an evening, the fields,

A DRINK OF FRESH MILK.

proud, square, and muscular, of enormous strength. As I knew him he was broad and deep-chested, large and rather portly, always quite erect, his chest well out. Two Americans have reminded me of Millet—George Fuller in the general appearance of his figure, and Walt Whitman in his large and easy manner. His face always impressed me as long, but it was large in every way. All the features were large except the eyes, which at the same time were not small; they must have been very blue when young. The nose was finely cut, with large, dilating nostrils; the mouth firm; the forehead remarkable for its strength—not massive, but in the three-quarters view of the head, where usually the line commences to recede near the middle of the forehead, with him it continued straight to an unusual height. A daguerreotype, now unfortunately effaced, made when he was about thirty-five years of age, without a beard, showed him to have a large chin and strong lower face, expressive of great will and energy. The hair and the beard were origin-

ally a dark brown, the beard strong and heavy; in his last years they were of an iron gray. His voice was clear and firm, rather low in pitch, and not of that deep bass or sonorous quality one might have expected from so massive a physique. His dress and general appearance, although not really that of a peasant,—but perhaps more his manner, his heavy tread, and his apparent absorption in all that surrounded him,—gave me the feeling that he was a part of nature, as he so well conceived the peasant as a part of the soil which he worked. I was on my way to François's studio, a little farther on at the edge of the forest. It was too dark for work, and we often walked together until the hour for dinner. Pierre, a younger brother of Millet, was spending a few weeks at Barbizon, and to give him employment for his hands Millet made a drawing on a block for him to engrave. Pierre worked on this industriously until it was finished, cutting

a very small piece each day, but that with great care. He put away his work — which he was doing in a small room adjoining François's studio — as I came in and started out for a walk. Soon after Millet himself entered, and examined with interest the engraved portion of the work. The drawing was made with the sharp point of a crayon, directly upon the block; every touch seemed intentional and full of expression. It represented a middle-aged man resting both hands and partly leaning upon the handle of his spade, his bare foot resting upon his sabot. I said to Millet that I admired the drawing exceedingly, and thought it as a picture complete. He replied that he was pleased with it himself, and that he would like to paint the composition,

was more significant of work than one in the act of spading: showing that he had worked and was fatigued, he was resting and would work again. In the same way he preferred to paint the middle-aged man rather than a young or an old one — the middle-aged man showing the effect of toil, his limbs crooked and his body bent, and years of labor still before him. And in type the laborer must show that he was born to labor, that labor is his fit occupation, that his father and father's father were tillers of the soil, and that his children and children's children shall continue the work their fathers have done before them. Millet was always severe on this point—that the artist should paint the typical, and not the exceptional.

LITTLE RED RIDING-HOOD — STARTING OUT.

making the figure the size of life; and if I remember rightly he said that he intended to do so. He sat down, and, although he at first seemed but little inclined to talk, we no longer thought of our walk. François was always as eager as myself when his father talked of nature or of art. (I always heard him speak more of the former than of the latter.) It was late in September or early in October. Millet spoke of the great beauty of the season, but of its melancholy, and, as I thought, in a tone of depression. He brightened again, however, in returning to the subject of the drawing; he seemed to feel that it possessed the qualities which he insisted upon in art—repose, expressing more than action. The man leaning upon his spade

If Millet's life and work were not a refutation of the charge of his being a revolutionist, the remarks he made that evening in speaking of this picture showed his attitude in regard to the question of labor and the laborer most conclusively.

He spoke of the touching or sympathetic in biblical history, and of subjects he would like to or intended to paint. The theme which most appealed to him in the New Testament was where Joseph and Mary are turned away from the door of the inn before the birth of the Child, and in his description of the scene, as he had conceived it, I saw the picture painted with all the tenderness and pathos of his art.

This I think was my last talk with Millet

LITTLE RED RIDING-HOOD — THE ARRIVAL AND SURPRISE.

on subjects of art. My last evenings before returning to Paris in October were spent with Millet at his favorite game of dominoes. He seemed full of contentment and in his usual spirits, and I left him without thought or knowledge of his failing health. With his work for the Pantheon and other projects on hand, his thoughts more than ever seemed to me to be for the future. Later in the autumn or the beginning of winter—I do not now remember

what errand took me to Barbizon—I was told of Millet's illness. I hastened to the house and found the family and Mr. Babcock in the dining-room, sitting silently as in the house of death. I took my place among them, asking no questions. Millet's room was adjoining. There also was silence. I took François by the hand and together we went out. His only words were, "All is over." We left each other, too much overcome for more.

LITTLE RED RIDING-HOOD — DEVoured BY THE WOLF.

THE CRUEL MAN.

It was thought then that the end could only be stayed a few days, but he lingered until the 20th of January. His relatives and friends in Paris even revived their hopes of his recovery. Babcock wrote me the morning of his death, and I hastened to François. It was a bright wintry day. We went out through the garden gate to a seat against the wall where Millet so often had sat, watching the glowing or waning light upon the forest trees, the rolling plain, and the distant hills. François told me of his father's wishes to be buried as a farmer—that no printed announcements should be sent out, but that a neighbor should go from house to house through the village telling of his death and time of burial, according to the custom of the people of the country.

The day of the interment was dark and cold, with a dreary rain. Many uncovered and bowed heads followed him to where he was laid by the side of his well-loved friend Rousseau, in the little cemetery near the church whose roofs and tower have appeared in so many of his works.

II.

DURING Millet's lifetime I saw and became much interested in drawings made at different times for his children and grandchildren. Upon my return to France and Barbizon some years after, I obtained photographs of some of them, which are now reproduced, together with some account of their history and the circumstances under which they were made. Others, obtained by M. Gaston Feuardent from his brother, M. Felix Feuardent, Millet's son-in-law, give completeness to the illustration of this phase of Millet's work. François once told

me of a drawing by his father, the wood-cutter and his wife in the story of "Le Petit Poucet." The point of the composition was to express that there was nothing in the house to eat. That rare faculty, unique I may say with Millet, of finding the expression of thought by the most simple means, served him in this instance—the man and woman are sitting dejectedly before the cold hearth, and conspicuous upon it is the *upturned* soup-pot. François recognized in the wood-cutter and his wife his own father and mother. Millet had transcribed the sad experience, that had more than once befallen them, of having no bread for the children. I did not have an opportunity to see the drawing until my return to France.

The history of its production is this: François was studying art, drawing from casts and from nature. Millet in talking with his son one evening told him that he should have more practice in composition, and asked whether, in reading, the images of things and scenes presented themselves to his imagination. François replying that they often did, the father asked him if he recalled anything that had impressed him. This was too sudden for the boy, and he could think of nothing, but asked his father if he had something to propose. Millet replied, "No; but wait, here is something quite simple. You know well 'Le Petit Poucet'; choose a subject in that. Do you want the passage, *Nous ne pouvons plus nourrir nos enfants, il faut les perdre dans la forêt?*" This subject was decided upon, Millet proposing that they should make it a *concour*. François began his drawing at once, but Millet sat thoughtfully, his head resting upon his hand, only beginning as his son was finishing. François waited impatiently, until Millet finally took up his sketch and examined it, remarking as he did so, "*Pis mal*, but it is too much everybody's interpretation of the theme; there is something more forcible [*poignant*] to be made of it. There," showing his drawing, "is my idea"; and François, seeing this, admitted that he was beaten.

How characteristic this drawing is of Millet. In this story, generally thought of as made to amuse and frighten little children, he found the most melancholy and tragic experience in

THE HORSE'S REVENGE.

THE FRACTIOUS COW.

human life. The drawings of the ogre from the same story were made much earlier, in 1856 or 1857, when François was but six or seven years of age. François teased his father unceasingly for a "portrait" of the ogre, until he finally made it for him one evening in his little copy-book, in which François, in learning to write, had drawn straight lines, "pot-hooks," etc. François has carefully preserved this book, which is nearly filled with Millet's sketches and drawings. Some of the pages are covered with sketches, ideas for pictures, or figures in movement. "The grafting" is sketched several times on one of the leaves, the whole picture covering no more than a square inch; likewise other pictures which have since become famous. The first drawing of the ogre's head was made with lead-pencil. Millet evidently began with the idea only of amusing the child; but becoming interested himself in what this suggested to him, he recommenced another head, then made a separate study of the mouth and teeth, and finally took up his crayon and drew the final "portrait." While drawing the head he did not cease to talk of the ogre, imitating his voice and expression, growling like an angry beast, showing how he would open his mouth and how he would bite and tear the flesh of little boys, keeping François in a state of intense wonder and alarm.

What has been told of the saints experiencing in their own bodies the suffering of Christ was true with Millet in his art. Working as he did almost without models, he was his own model for everything, feeling deeply, and giving the action with intensity and reality.

At this same time he made other drawings of the ogre—one standing, in full costume, another asleep, with "Le Petit Poucet" pulling off his boots. The family preserve other sketches

THE STUMBLING HORSE.

—quite slight, but showing a careful seeking after arrangement—of the wood-chopper and his wife taking the children into the forest, with compositions of the children left alone, and in one the parents stealing away leaving their little ones behind them to perish. Nothing could be sadder than the expression of the father and mother leading the children into the woods. Millet in his whole art has depended rather upon the attitude or movement of the figure for expression than upon the face. In this subject, in which so much is expressed, the figures are going away from the observer, and only a few lines indicating the backs are given.

The Red Riding-hood sketches were made between the years 1872 and 1874 for the youngest daughter, who was about the age of little Red Riding-hood at that time, and Millet evidently had his little girl in mind while making the drawings. Like the drawings of the ogre, these also were made one evening at the children's request. François was by this time a man and an artist, and as he too was looking over his father's shoulder, this perhaps will account for some of the drawings being made with less

A FALL FROM A HORSE.

direct reference to the child's understanding. Not that they are less simple, but they are not so clearly defined. The first drawing was slightly indicated with a lead-pencil and then firmly drawn with pen and ink. He wished to express, as he certainly has done, the wondering, stupid little child who had never before been so far away from home. After this drawing Millet went on more-hastily with a crayon, telling the story and talking about the little girl's conversation with the wolf, etc., making the sketches to illustrate his verbal story, rather than telling the story to explain the drawings.

The more simple drawings, like the horses and the child feeding the goat, were also the last of the drawings for children. Millet made them in great numbers for his first grandchild, little Antoine. He would take a match that had been lighted, rub off the burned part, and dip in ink the point that was thus formed, using this rather than pen or pencil, because of the

FEEDING THE GOAT.

large and decided mark it would make. Antoine was still a baby not yet able to talk, but the great Millet was great enough to reach the child, to delight and please him, and the baby would find a way without words to show that he understood.

Antoine's aunt, the little Red Riding-hood, had a goat of which Antoine was very fond (Millet, by the way, did not have to depart from his type in drawing Antoine a strong, lusty baby), and he recognized the goat at once when his grandfather showed him the drawing, and reached out his arms like the child in the drawing, imitating the cry of the goat. It was a great gratification and pleasure for Millet to be able in this way to reach the child's understanding.

One evening Millet said, "I will make one now which I don't think he will understand, but we will see"; so he drew the little Antoine, with his cheeks puffed out, blowing an enormous candle with an equally enormous flame. The baby looked intently at this for a while, and

then turned with satisfaction and blew at the candle or lamp on the table. This was a real triumph, and Millet remarked to his son the importance of this as a principle in art; that as he had exaggerated the size of the candle in order that the child could see it easily and

BLOWING OUT THE CANDLE.

would notice it, so in painting, certain forms, effects, and expressions should be accented, exaggerated, or brought into stronger relief.

Wyatt Eaton.

UNHINDERED.

FAR westward is a snow-bound train;
Eastward, a soul is saying,
"Though I have looked so long in vain
This is not love's delaying;
For I have such a certain sense
Of answer: it is prescience."

The letter, from its barriers free,
Hastes to the love that waited.
Lo! its first words: "So close are we,
That, if by snow belated,
This message you are sure to feel
The day before you break the seal."

O ye, that never dwell apart,
Though half a globe may sever,
Thus will it be, when heart to heart
Can show no sign forever!
Though death-snows loom like Himalāy,
Yet soul to soul, unbarred, will fly.

Charlotte Fiske Bates.

THE LAST ASSEMBLY BALL:¹

A PSEUDO-ROMANCE OF THE FAR WEST.

BY MARY HALLOCK FOOTE,

Author of "The Led-Horse Claim," "John Bodewin's Testimony," etc.

PART III. THE CATASTROPHE.

I.

AT 10 o'clock on Thursday morning Mrs. Dansken answered a knock at her front door and found a man, whom she recognized as one of the waiters from the Clarendon, with a box addressed to Miss M. Robinson. It was a large, flat, white box such as tailors and dressmakers send home their wares in. There were no wrappings or bills of expressage on it; evidently it had not traveled far. Mrs. Dansken asked the man if there was no message with the box. He said he did not know of any, and Mrs. Dansken refrained from the question who had sent him.

Now if Milly Robinson had been like any other girl, Mrs. Dansken meditated, she would have been in a flutter over that box; would have wondered who had sent it and what was in it, and have opened it at once, for all to admire. Instead, she had packed it off, without any excitement at all, to her bedroom in the attic, and no more had been heard of it.

Ann had made tea-cake and there was no need for Milly to go for rolls that afternoon. At her usual time of coming down, after changing her dress, to lay out the tea-things in the parlor and set the table for dinner, she did not appear. Instead of calling her from the stairs, Mrs. Dansken took the trouble to go up to her room. The girl did not open to her knock at once; she held the door ajar, a very little way, to answer her mistress's demand when she would be down.

"I'm coming, right away, ma'am." Mrs. Dansken fancied the voice from within the room had not quite a natural sound. An excuse for entering occurred to her simultaneously with the resolve that she would get on the inside of that guarded door.

"Let me come in, Milly. I want to meas-

ure the sash of your window. Ann says one of the panes is cracked."

"Ann told her that two months ago," Milly said to herself. "I'll give you the size of it, ma'am," she said aloud.

"You have n't time; it's 5 o'clock now. Let me come in, Milly."

Mrs. Dansken's voice was peremptory, but again there was a pause before the door was yielded. Milly had her dress on, but the waist was still unbuttoned, though she had been in her room, Mrs. Dansken knew, three-quarters of an hour. The quick eye of the mistress, roving the room, perceived that the covers of the bed had been turned back, but that the pillows were smooth.

"Were you going to lie down, Milly? Don't you feel well?" As she spoke, insincerely, for she believed that Milly was perfectly well, she saw protruding from the bed-covers a white sleeve, an evening sleeve, shortened to the elbow and delicately finished with lace. So there was something beneath, which the covers had been hastily thrown back to hide. With one of her quick movements she flung them into place again, exposing the guilty box upon the bed, its contents crammed into it, hurriedly and unsuccessfully, as the white sleeve bore witness.

"What is this, I should like to know?" Mrs. Dansken demanded in a high, exasperating voice. Forgetting her own intrusion on a false pretense, she gave way to the thrill of anger and disgust which possessed her. She felt that she could almost have struck the girl for her stupid, coarse concealments. "What have you got here that you are ashamed to show me?" She tilted off the box-lid with the tips of her fingers and looked contemptuously at the pile of soft wool and lace and ribbon that represented Frank's first essay in the part of King Cophetua.

"That's a very handsome dress to be tumbled about like that. Were you going to put it on to wait on table in?"

Milly had been silent because her shame and rage had simply taken away her power to speak.

¹ Copyright, 1889, by Mary Hallock Foote.

Mrs. Dansken herself was trembling from head to foot; she was losing control of herself, and felt that she could not be accountable for what she might say next if that girl continued to stand there, smiling faintly, in a fixed way, and as speechless as a stone.

"I will see you by and by. You and I must have a little talk." She went down to her room and threw herself upon the bed; all the strength had gone out of her.

"Ann," she whispered, when the old woman came in to ask her what had become of Milly, "that girl will kill me yet!" But there was no time to get comfort from Ann. Dinner was served, and the hostess must be in her place at the head of the table. "Ann, go upstairs, will you, and tell Milly to come down." The farce must go on, and mistress and maid must take their parts. Mrs. Dansken sickened at her own, but she was eminently a woman of business.

There was a long pause after the soup, which Ann herself had brought in and removed. "Where is Milly?" Mrs. Dansken asked, as Ann reappeared with the chicken patties.

"She's packin' her things!" said Ann.

Mrs. Dansken whirled round in her chair. "You will ask her to please come down and attend to her work at once. She can pack her things to-morrow."

"Mem?" said Ann.

"Excuse me,"—Mrs. Dansken put down her napkin and looked at the tableful of boarders: her voice was unsteady,—“Ann will wait upon you,” she managed to say. Blashfield sprung and opened the door for her, and every man at the table rose as she left the room.

She had meant to get to her own room as quickly as possible for an outburst of tears, but she felt so upheld by this unexpected return of the old loyalty that she was ready to encounter even Milly. She was sure that she could be calm, perhaps she could be just to the girl; for what had she discovered, after all, that was so heinous, considering the way she had discovered it? Sympathy, delicacy, dignity, Mrs. Dansken had not; but honesty, even with herself, lay at the bottom of her soul. She ran up the cold attic stairs in a better mood for a talk with Milly than she could have hoped for; but Milly was not there. Her trunk stood in the middle of the bedroom; her hat and shawl and the box from off the bed were gone.

II.

MRS. DANSKEN had lain long in the darkness of her own room. Faint sounds from the dining-room told that dinner was quietly progressing. "If they had just carried me out a corpse they would go back to their chicken patties," she reflected, and laughed feebly to

herself, not in the least resenting this conspicuous masculine trait. "It would be a tribute to the patties, anyhow," she added in her musings. The darkness was peaceful, and she was glad, after all, that she had not been able to see Milly. "She must have gone out into the street for a moment to get some one to come for her trunk. She will want her wages, and it is better she should go without any more words between us. We were never meant to live together. We bring out all that is worst in each other. Even Ann sees that."

At this moment Ann came stumbling in with a clinking tray, which she placed upon a chair by the bed while she lighted the lamp.

"Are ye sick?" she asked, turning to look at her mistress.

Mrs. Dansken could have kissed her grim old face, for the sense of nearness and confidence it gave her. After all, was there any one in the world she cared for more than for this old bit of wreck saved from the home that had gone to pieces so long ago? She fell to weeping weakly on her pillow, while Ann felt of her hands, and pulled up the down quilt over her shoulders.

"Oh, I'm roasted!" said Mrs. Dansken, throwing it off. Then she nestled down again, murmuring, "Thank you, you dear old thing; I knew you would n't forget about me."

"Ye better take a drink o' this tea. Are ye worryin' about Milly Robi'son? Sure it's better she's goin'. I knew ye'd never do with the likes av her. She's nayther one thing nor another. I've not got a ha'porth agin her, myself. I c'u'd do with her well enough. Where's yer shawl?" Ann looked about and found it, and attempted to put it about her mistress's shoulders as she raised herself in bed. "Are ye layin' here widout any fire?"

"I don't want any fire. This tea tastes so good. Ugh! I'm as hot as fire and as cold as ice! I've had such a scene with that girl, Ann. I hate a row, except with you."

"'Deed an' ye're not much afraid o' me, that's a fact. Was it along o' the frock she had sent her?"

Mrs. Dansken nodded.

"She's not so much to blame for that, as I can find out. 'What's in it?' says I, whin I see the box layin' on the bed. An' whin she opened it she went red in the face, an' says she, 'I know who sent it, an' I'm goin' to send it back.'"

"That's a likely story!" Mrs. Dansken cried out. "She'd been trying it on. She had just crammed it back into the box when I went upstairs to call her."

Ann looked at her mistress shrewdly. "Was ye in the room?"

"Of course I was in the room. How did I see the dress if I was n't in the room?"

"Well, ye'd better have kept out, an' let her have her things to herself. I'd niver want the missus thrackin' me about. A gurl's got a right to some place av her own."

"Don't scold me, Ann. I own I was stupid about that — but I tell you, she is a girl who needs watching."

"Ye had me to watch her, an old woman that knows what gurls is. I niver see nothin' wrong wid her, barrin' she's a bit close about herself; an' it's what they have to be when they've got themselves to look out for."

"I thought you hated her."

Ann laughed shortly. "I was none so fond av her at the first off, but whin I see — who's that goin' out?"

The street door had closed, somewhat early for the young men to be taking their departure.

"It's Milly coming back, I should n't wonder," said Mrs. Dansken, listening for a step on the stairs.

"Comin' back?" Ann repeated.

"Yes; did n't you know she was gone?"

"Wheriver has she gone to, for the good Lord's sake?" said Ann, rising up. "She tould me she'd not sleep in this house another night. 'Very well,' says I; 'wait till I get my kitchen red up an' I'll go wid ye to the Sisters.' An' how long is she gone?"

"Why, ever so long. I thought she was coming back. Her trunk is here."

"I'll jist out, thin, an' afther her. Will ye be gettin' up now?" Ann hesitated, looking at her mistress. Mrs. Dansken saw that she was uneasy.

"Go along, you best old creature! Ann, wait a minute! Do you know who sent her the dress?"

"Sure, w'u'd I ask a gurl a thing like that? An' she'd niver have tould me, anyway."

"I'm jealous," said Mrs. Dansken, throwing herself back in the bed. "Here you've been making me believe you despised that girl, and thought about her just the same as I did, and all the while you were on her side."

"No'm, I'm none so fond av her," Ann maintained. But she did not wait to "red up" the kitchen. Mrs. Dansken heard the street door again a very few moments after Ann had left her. The young men were laughing over their cigars in the parlor. She put on an apron, entered the dining-room by the hall door, and began to clear the table, keeping the curtain closed, for she did not wish to be questioned. Ann should not find her work waiting for her when she returned from her walk in the dark, snowy streets. If Williams had been at home — or if Frank had not gone, how quickly she would trust him now to go in search of Milly.

Ann walked slowly up and down Harrison

avenue, passing and repassing the windows of the Clarendon, looking down all the side streets; finally she ventured to ask one or two respectable wayfarers if they had seen a young woman in a dark cloth jacket and a turban, and carrying a big white box. Ann was sure the box was in some way responsible for Milly's giving her the slip. She meant to cast about in their own neighborhood before taking that long walk across the town to the Sisters'. She stopped one of the waiters in the door of the Clarendon as she passed down on that side of the street. It was the one whom, without knowing his nationality, she called the Sweedener, who occasionally brought Mrs. Dansken's orders for her little festivities. Had he seen Milly Robinson that evening?

"Yes," the man replied. "She coom mit a pox; an' she say, leef it in t'e offis for Mist' Embury. Mist' Embury he coom shust t'en; unt he say, send t'e pox up to his room. Unt t'ey walk town street togadder."

Ann gave a grunt. "N-n!" she objected, in that indescribable form of dissent which the West has imported from the South. "That's not Milly Robinson."

"She vas Milly."

"N-n!" Ann persisted.

"It vas t'e pox, anyhow," the man declared. "I see t'e man vat pack dat pox over to Mis' Dansken, unt he say it vas for Milly."

"Sure I hope it *was* Milly," said Ann, changing her ground of defense. "That's all I wan' to know. Is she along av our Misther Embury?"

"She vas mit him. Dey vent town t'e street togadder."

Ann did not go to the Sisters', but she told her mistress that Milly was there; and Mrs. Dansken was too glad of the assurance to reflect that it was a mile or more to the Sisters' hospital, and that Ann could hardly have gone and returned in the time she had been absent.

"Ye're to pay her money to me, an' she'll send for her thrunk in the mornin'."

In her toilsome walk in life Ann had seen many cases of folly and sin end as the case of Milly seemed likely to end, but never one of knightly championship. She had never met with a case of this kind, and out of her experience she drew her conclusions. It hurt her that the girl should have taken herself off without even saying good-bye to her old comrade, who had sincerely conquered a prejudice for kindness' sake.

"I doubt but the missus was in the right: she'd a bad heart, or she'd niver have give me the slip like that." But, in spite of her own belief, nothing could have induced Ann to destroy the girl's last chance of retreat should the heart prove not so bad after all.

FRANK and Milly were by the bridge again, and this time there was no brown veil between them. Milly's cheeks were not pink like the sunset color on the eastern peaks; they were pale as the snow which starkly outlined them against the night sky. She was awake at last. Frank thought he had never seen a face so beautiful as hers while she told him the story of her wrongs and her insults. Not a word accused him, but he felt that he was responsible for all that had cost her an honorable refuge, a place of safety, if not a home. No doubt he supposed himself to be thinking while he listened to Milly's story and looked at her beautiful face, but he was merely tingling with a mixture of passionate promptings. He scarcely heard what she was saying as she urged that she must go back and reminded him for the third or fourth time that she had come out not expecting to see him, only to get rid of the dress, which she had never meant to take.

"And I made you. I have brought all this trouble upon you, Milly; but, dear, happiness shall come out of it. It was all for the best—to bring us together, my darling."

"I must go back—I must!" Milly pleaded.

"You shall never go back," said the dreamer. "Is it more insults you want?"

"I promised to go back. Ann is going with me to the Sisters'."

"The Sisters'! Milly, I am the one to take care of you now."

"No, sir. No, Mr. Embury. You must n't kiss me—I'm not—oh, you don't know, you don't know!"

"Milly," said Frank, "God knows how we have got where we are—but here we are. We are never going to part any more. Do you understand?"

"I did n't think you'd say such things to me," sobbed Milly.

"Who, in the name of Heaven, should say such things, if not I? Do you know what I mean?"

"Oh, let me go, sir, please! They'll be out after me."

"Stop sirring me, will you? Who will be out after you? Is there any one in that house who is likely to care what becomes of you?"

"There's Ann, sir—"

"Ann be hanged! Can Ann take care of you? Ah, Milly, listen to me!—For Heaven's sake, what is the matter?"

"Look at me!" sobbed the girl, with such wild deprecation in her face that Frank was forced to heed her. "Can't you see?"

"Can't I see? I see that you are a dear, good, helpless girl, who is going to be my wife. We are going to be married to-night. Hush, hush! not a word. I don't know anything about you? Do you know anything about

me? No, I won't hear a word. Can't I see, indeed! I see that you are my darling. There, there! What, more tears, Milly? Am I such a monster?"

"You are good," said Milly. "You are the best—I ever saw; but you don't know—you don't know! Let me go, to-night. Let me tell you—what I said I must."

"You shall tell me all to-morrow. There are things I might tell. We will take each other on trust, and I shall get the best of the bargain, my lovely one. Do you know what we are going to do? That poor, insulted little gown I made you take—you shall wear it to-morrow night. You will need no chap-erone as my wife."

"I can't, I can't!" Milly protested, but no longer with the same force of denial. She struggled in his arms, and he let her go, seeing that a man was approaching.

They were not in a nice part of the town, if any part of it could be called nice after nightfall, when the mountains withdrew their countenances and left it to the light of its flaring windows, its occasional smoky street-lamps and intervals of slippery darkness. They were out of the center of lamps and lighted windows, except the windows of a suburban groggery where a fiddle was tuning up in a crazy way, as if the ear and the hand went wild that were groping for the tune. The light of this squalid revelry was cast upon the foul snow at their feet; it shone upon the two young faces, pictured upon the darkness, close together, eye to eye in the struggle between two wills—one fiery and undisciplined, and one that was strong, but sluggish, and sick with fear.

The stranger stared hard, and looked back as he passed them. He looked back more than once, and then retraced his steps. He was a thin, cold-looking man, in a shabby suit of black, with a pair of dilapidated "arctics" exaggerating to enormities the size of his feet. He addressed them in a voice nasal but sweet.

"My young friends, have you found the Lord? Is he leading you by the hand to-night?"

He paused for an answer. "I do not know the face of this young sister," the exhorter continued as neither of the young people spoke; "but, if I am not mistaken, this young man is Mr. Embury, of the firm of Williams & Embury—yes?"

"That's my name," said Frank. "Are you a clergyman, sir?"

"The Rev. Mr. Black, of the Methodist Mission in Second street. And if you will excuse an old man's advice, Mr. Embury, I think, sir, if this young woman's parents reside in the city, you would better take her home. It is late, my dear young friends, except for

such as are out, like myself, upon errands of necessity or mercy."

"Mr. Black," said Frank, "you can do me a very great service, if you will."

Begging Milly to excuse him, he drew the minister aside and spoke with him earnestly, while Milly waited, helplessly sure what this service was likely to be.

"Is the young woman quite satisfied in her mind as to the step she is taking?"

Mr. Black came close to Milly and took her hand, smiling upon her with his intimate, pastoral smile. Milly drew away her hand.

"If she has the least doubt, before it is too late I would advise a talk with my wife—an excellent woman, though I say it, and a woman of great experience where young girls are concerned."

Milly looked repellent. "You don't wish to talk to anybody, do you, Milly?" Frank answered for her. She assented silently.

"Very well; then let us go to my home, and take counsel with our thoughts as we go. And if no objections arise, and you feel that you can trust the state of mind you are in—"

III.

FRANK had a few moments alone with Milly in the parlor of the parsonage after the ceremony, while Mr. Black consulted with his wife whether it would be possible for them to keep the bride over night.

"I must not take you to the Clarendon tonight, Milly. We cannot have it said around town that I brought you in out of the streets at 11 o'clock at night. I shall take rooms for my wife and come for her the first thing in the morning—my sweet! You won't be lonesome, will you? Does it seem a strange way to take care of you? I want to be so careful of you now, because it had to be so sudden. And this is quite the right sort of place for you to stay."

"I don't want to stay," whispered Milly; "I did n't want to do any of it."

"Oh, please, Milly! when I must leave you so soon. There was nothing else for us to do, my darling. If we had n't been meant for each other would we ever have got where we are? I will not believe you don't care for me—I will make you care!"

"It's no use my talking," said Milly, relenting. "You do just what you want with me. You always did."

"I always intend to—and it shall be just what my darling likes best."

Mrs. Black, it seemed, could keep Milly, by a little hospitable management. Milly made no further objection, and Frank had no scruples in accepting the obligation. It is not unlikely

that he felt he was honoring the parson's dwelling. While the daughter made the necessary changes for the night, a simple entertainment was set forth by the minister's wife for the young couple who were beginning their life together under the roof of strangers, without the blessing of kith or kin.

Little was eaten and little was said, except by the minister, whose words fell in the silence without meaning for those they were intended to encourage and to warn. Frank took his leave as soon as possible, kissing his wife quietly, and commending her, with a look that the minister's wife said was beautiful, to the good woman's care.

She was a woman whose goodness was the most apparent thing about her, except a large forehead and nose that gave a benignant look of authority to her countenance. It was plain that she was mistress of the parsonage, if not of the parson himself. If she had said that he must not marry the young people, he would probably have declined to do so. What she did say, in the brief matrimonial conference in the kitchen before the ceremony was performed, was much to the effect of St. Paul's words on the same question; also, that if "they," meaning her husband, refused to marry them, the young couple could easily find some one else who would.

When Milly had been half an hour alone in the room vacated by the minister's daughter, Mrs. Black went up to her door and knocked. Milly had been sitting on the side of the bed, with her clothes on but in her stocking feet, for her shoes were damp with snow. She had been going back over her poor past, trying to imagine herself opening that foolish, blotted page before the eyes of the delicate, imperative young gentleman who had just bound his fate to hers for better or for worse. And when she looked into the future the prospect was no surer; it was impossible to think of it as *their* future. She had told the simple truth when she had said that he could do what he pleased with her; but not he nor any other hero of a girl's fancy could have power to do away with certain facts which made this marriage a problem, even to the slow, unimaginative nature that was dumbly struggling with it. When she heard the heavy step on the stairs and the gentle but confident knock, Milly could have given a cry of welcome to this last chance of counsel, if not of escape.

"My dear," said Mrs. Black, coming promptly to her side, "I came up to see if you have bed-covers enough—but of course you can't go to sleep yet," she added, glancing at Milly's dress. "There's a little fire in my bedroom, right across the hall. Would you like to come in and sit awhile? Mr. Black he's down-

stairs doing some writing. He don't write out his sermons as a general thing, but this is a letter to a newspaper, one of our church papers at home, he's occasional correspondent for. They like to know what progress we're making here. It's a wonderful place for awakenings. It seems when we get right amongst all that's blackest and sinfullest in our poor human nature, we find the most helpfulness, one for another. You'd be surprised the rescuer and comforter my husband's been able to be, and all because the work is ready and waiting for any one who'll take hold and believe—Well, dear, what's *your* trouble? We've all got something. You don't suppose I can't see it is n't all quite clear before you. How could it be, poor child! But he's a lovely young man—and you're very pretty, my dear. You've got it all in your own hands."

"It's no use my being pretty," said Milly, despondently. She was sitting in a low chair by the stove in Mrs. Black's bedroom, forgetting to care that her feet, in their soiled stockings, were visible. Mrs. Black was in the big scroll-back rocking-chair opposite, rocking and talking, and looking at Milly, not at Milly's stockings, and snipping her darning threads, without the least confusion of impulses.

"No, not if pretty's all there is of it. But it's a good thing when the young man's so good-looking. It's best not to have the looks all on his side. Now it ain't because you're pretty you're worrying to-night." She examined Milly with her practiced motherly glance. "My dear, you better go lie down this minute. What have you been through to make you look like that!" She got Milly quickly into her bed and felt her over carefully. "Where do you feel sick?"

"I'm not sick," said Milly.

"Well, now, out with it, same as if I were your mother! There's trouble here somewhere."

Mrs. Black waited, holding the girl's hands in her own, looking at her steadily with mild, strong eyes.

Milly gave a little groan and turned away her face. "Mrs."—She hesitated.

"Mrs. Black," prompted that lady.

"Mrs. Black, I'm a married woman."

"Of course you are, my dear," said Mrs. Black, with an encouraging squeeze of Milly's hands. "I was your witness myself, and I'd uphold you in it, for I saw plain enough that young man was bound to have his way."

"I was married and had a child before I ever saw him."

"And does n't he know you're a widow?" Mrs. Black asked, after a silence.

"I'm not a widow, like any other widow."

"Is n't your husband dead?"

"Yes, but he left me, first. I never put on black for him, or saw him; I passed myself off for a girl."

"What did you say, my dear?"

"I don't know how to tell you what I did. I did n't do anything; it came of itself somehow, and I let it go on."

"Yes," said Mrs. Black. "It's the easiest way sometimes. I suspect we're all inclined that way." She waited for Milly's next words.

"He left me, and I had to come after him. Last spring I got here. I had to come. I was n't to my own home. My home's in Canada. He took me away from there and he never found me no other home. My father did n't like him, and we were married secret, and I went away with him when it had to be known. My father he's slow, but he's awful stubborn. When I got here I found he'd left me and no word where I was to find him, and then I knew he'd left me for good. And my baby was born at the Sisters' hospital. It died. And when I got strong enough I went to work at Daniel & Fisher's. I told them I was Mrs. Robinson. They did n't understand me, somehow; I suppose they thought I looked young. They called me Miss Robinson; and all of a sudden that seemed the easiest way. All those girls in the store were lookin' me over, and talkin' about each other, and I knew they'd talk that way about me. If I'd said I was Mrs., they'd have wanted to know where was my husband, and I did n't know then he was dead. I was weak and sick and I did n't want to answer questions, and I let it go on. And every day it got harder to get it back."

"My dear, that was a terrible risk you took, besides its being so wrong—though you're punished for that this minute, and I need n't remind you."

"I know it was wrong, Mrs. Black; but I did n't seem to care, if only I could be let alone. And nobody knew but the Sisters, and they're the same as dead to what's outside of their own work. But I did n't care, that's the truth. I did n't think I was going to live long, I felt so sick."

"Oh, my! That's because you never felt that way before. I don't doubt you felt miserable enough, my dear; but it ain't so easy for women to die. We're dreadful tough."

"Well, I got better, and I thought I'd tell the lady I went to work for after I left the store. I left partly for that, so I could make a fresh start. But I could n't tell her. Don't you know there's folks you can't tell things to and there's some you can? I could have told you."

"Well, I'm just an ordinary woman," said Mrs. Black, "and I've seen such a sight of trouble. Nothing could ever surprise me."

"I thought perhaps I could tell her, after

a while, when I got used to her; but when I came to hear her talking I knew I'd never tell her. She'd have had it all over the house; and when she told things they somehow sounded different to what they were. She could make things sound any way she liked. Ann, the cook she had, found out I'd had a child. The Sisters told her, and then I told her the rest. But I did n't mind Ann. I knew she'd never tell on me. And after she knew, she was awful good to me."

"When was it your husband died?"

"It was June when I heard from his partner that he'd been found. His horse slipped off the trail and fell on him."

"And you did mourn for him some, I know!"

"I had my own troubles," said Milly, after a pause. "It was he brought them on me, and he never took none of 'em on himself. He took me away from a good home and he never give me another."

"Well, you have got trouble now, that's a fact. But the first thing you've got to do is to straighten this all out with your husband. You ain't much acquainted, are you? How did you come to meet with him?"

"He boarded in the house where I was working."

"Well, surely that shows he ain't got prejudices. And if he loved you before he knew you had troubles, he won't love you a bit the less now."

"He knew I had troubles, but not—that kind. I know—I tried to tell him. I did try, Mrs. Black!"

"Ah, I'm afraid you put it off too long, my dear. If you'd only come to me before the ceremony and told me, I could have made him understand. You'd have known then how much he thought of you; but it ain't for me to remind you. And now you're afraid to out with it—ain't that so? Well, I guess he's human, same's the rest of us. I can see what he is—headstrong and proud and full of his fine notions, and wants to be loved, like any other man, but dreadful particular who *he* loves. I don't say it's the safest sort of marriage; but it's made and done with now, and you've got your pretty face, and if he ain't sorry for you when you tell him what you've been through—"

"He'd be sorry, but—oh, you don't know him!"

"I know we are prone to error, every one of us, as the sparks fly upward. I guess if you were to go back into the history of that young man, you'd find he's done things he's wished he had n't done. But it all depends on how much you care for each other. Do you love him, my dear?"

"I don't know," said Milly. "I ain't like

myself when I'm with him. He thinks I'm different to what I am, and that makes me different."

"Of course—I see how it is. But it's no use worrying about the future. You know what you've got to do now. You've got to tell him first thing to-morrow morning, and no bones about it! Don't you let him take you in his arms as his wedded wife without your soul is clear before him. If you do, you'll both repent it to the longest day you live."

"I can't ever be his wife, Mrs. Black. That's never going to be. Something will happen to stop it, I know."

"Don't you go to trusting to any such feelings as those. You've trusted and let things go on too much already, my dear; and that's your way, I see. What you need is more confidence. Now don't go to despairing of your marriage. It's begun badly, but that ain't all your fault. I can see what chance you had with a young fellow like him. He's got a good deal too *much* confidence. But don't you let his confidence be the ruin of you both, and when it comes to marriages—why, there's all sorts, and it's amazing how comfortable they turn out, spite of everything. There's always marriages just as risky as yours is, when a new country is being settled up— young men and women meeting together, with all sorts of families back of them, so pleased with all the new ways of seeing one another, and nothing plain and natural to show 'em their inside differences. Why, it's the greatest wonder in the world they ever make out as they do, the most of 'em. If you were to go back in his own family, I guess you'd find the mates were n't all matches. It gets evened up somehow, when they come to live together. There's a blessing, I tell you, on the relation."

Mrs. Black had indulged a strain of extreme leniency and hopefulness, to give Milly courage for her duty. What she said to her husband, before they slept, was nearer her true judgment of the case.

"I wish we had n't been the means of it, Samuel. It was mainly my doings, and I'm punished for thinking they were past reasoning with, both of 'em. I don't know as I ever saw two misguided young creatures in such a fix. I tried to encourage her all I could, but she's made a miserable piece of work of it so far; and I'm sorry for him, when he comes to write that letter home."

"And when I saw those two young people in the street," said Mr. Black, "he was the one I took to be the deceiver."

"He's the kind of deceiver that deceives nobody but himself—and I don't know but that's as bad as any kind."

"Not in the eyes of the Lord, Martha."

"The Lord can forgive more sins than they two'll ever commit," said Martha Black, who had a tenderness for the heart that had unbudged itself to her sympathy, and who knew that Milly's troubles had but just begun.

Frank's letter to his mother was to have been written before he went to fetch his wife. He rose early for the purpose after one of those nights of wakefulness we remember for years afterwards as a distinct experience. In his watchings he had composed a number of letters, but when it came to writing them out he got no farther than "Dear Mother." It was to the mother, who takes the brunt of unpleasant family news, he addressed himself. When he had got as far as this he could see his mother's face, he could hear her voice asking his father to step into the library a moment. He could see both their faces as they sat down and looked at each other with the letter between them. On the whole he concluded to wait until after the ball. He could then tell them of his wife's first appearance in the society of the town, and of her reception. He had no doubts on this score. It is the men, he theorized, who decide a girl's fate at a ball.

He had changed his small second-story room at the Clarendon for a large one on the first hall, opposite the ladies' parlor. When the arrangement had been concluded at the desk, the clerk remarked that the bridal chamber was coming it rather strong for a single man. Frank flushed, but gave the information with dignity that he had been married the evening before at the Rev. Mr. Black's, where his wife was now staying.

The clerk smiled the smile of the foolish, and inquired if the lady was any connection of Mr. Black's; and Frank was obliged to relinquish this straw of respectability which he had grasped at for the sake of Milly's antecedents.

Milly had lamented to Mrs. Black, as the chief of her excuses, that she had never had a chance to speak with Frank without fear of interruption, except in the open streets. But now they were alone for a lifetime, in the bridal chamber of the Clarendon, with window-blinds closed to shut out the staring daylight, with no idea between them of the time, or of how the

world was going outside. The world for them had centered in this their first day together.

Frank had bought a belated wedding-ring and was trying it on the finger of his bride.

"You have worn a ring on this finger before," he said, feeling the little depression that encircled Milly's third finger. "What sort of a ring was it? I like to know all about you, how you looked and what you used to wear, before I ever saw you."

This was Milly's opportunity, as if offered her by Heaven. But it had come too suddenly, almost threateningly; she shrunk from it, and the next moment it was gone.

Something within her, perhaps the habit of concealment, confirmed through months of perilous practice, seemed to answer for her, while her stunned conscience listened amazed.

"It was n't a ring I cared for; I took it off, because it was too small for me."

After that the day passed hopelessly for her. She was under the spell of her failure, and of Frank's awful unconscionness.

More and more she felt his standards oppress her — fine and intense and vindictively pure. The nameless little refinements of his manner were her despair; she could not meet them out of any social practice in the past, nor with the simplicity of innocence and faith. She longed to escape, back into the miserable muddle of her old life where she had felt at home — anywhere away from this horrible masquerading.

As for Frank, he was the husband now. He was studying his new possession, in the light of old, persistent standards — those standards which Milly instinctively feared. He studied her because he could not get near enough to her to lose himself in her attraction for him. Something clouded the attraction; something undefinable between them that embarrassed him, and balked him of all the allusions, the fond recapitulations, the exchange of ideals and purposes, which should have glorified the day.

She has all that the first woman had, — youth, beauty, purity, and helplessness, — Frank thought, while she dressed for the ball and he gazed at her shyly with beating heart. She is a girl without a family and without a history. Her husband shall give her both.

(To be concluded in the next number.)

THE MONASTERIES OF IRELAND.

LODGED like a knot of sea-gulls, on the southern slopes of the Maeldown hills, within walking distance of the Duke of Devonshire's great castle at Lis-

more, nestle the white buildings of a monastery for Cistercians called Mount Melleray. It is a recent creation, a mere thing of yesterday compared with places in every county of Ireland where a round tower, or a single lovely lancet window, or a squat oratory with walls many feet thick, surviving from the earliest Christian ages, tells the story of persecution, or of civil war, or of the rarer instances of neglect following changes in population or in fashion.

The brethren in their handsome yet coarsely woven robes the color of old ivory, the associate monks all of a dull brown, have somehow the air of an anachronism. They are far from anything one can by stretch of imagination call a thriving town. They live in peace on their communal farm as Trappists

among whom the rule of silence is not pushed to unwise lengths, and touch the world only by the stream of pious and of merely curious clergy and laity who are their guests without becoming their acquaintances. They belong to one of the most sensible and indeed enlightened orders, which prescribes manual labor in the fields and gives careful attention to the dangers of the mind that beset celibates on whom silence is enjoined. They are revered by the countryside and admired for their innocent, steadfast lives by Protestants not infected with the bigotry of the North.

In the little chapel for visitors, into which the chanting of the monks penetrates from the greater church beyond, a sermon is pronounced every now and then in Gaelic for the benefit of sturdy old people of the hills who have never learned English properly and are not anxious to perfect themselves therein. Nothing can be more reposeful than the lawn before the monastery and the high-walled garden near by, where Catholic clergymen and laymen, who are making "a retreat" on these uplands, walk solitary or in discreet twos, guests of the monks. The little colony of dead in the quadrangle discourages ambitious thoughts, so plain and unpretending are the headstones. The great barns, the bake-house where a delicious coarse bread is stacked in sweet-smelling piles, the blacksmith's shop where a brawny brother swings the hammer and will not be so discourteous as to refuse an answer to a curious questioner, the school buildings just without the circle of the monastery proper — give one a

GUEST-HOUSE AT MOUNT MELLERAY.

FATHER MAURUS, GUEST-MASTER AT MOUNT MELLERAY.

pleasant idea of life in the best kind of establishment for the religious.

And yet the feeling lurks everywhere about Mount Melleray that the needs for which such communities were once an answer no longer exist. Everything is sensible, grave, praiseworthy. The traditional courtesy of the Irish reigns on all sides. One sees among the monks rude faces, it is true, but the chances are that one is surprised at the refinement of so many. It is as if a hill had opened at the stroke of a magician's wand, and in a concealed valley beyond was found a community which holds all that was best of some forgotten age. It recalls traditions yet rare among the peasants of bygone civilizations, Fírbolg or Dé Danann, which vanished before the march of the conquerors who brought Christianity in their track, but support a charmed existence as a fairy race deep in the hills or far below the vast green billows of the Atlantic. The guest at Mount Melleray feels like one who has snatched the red cap or the green from a fairy on some

fateful night of the full moon and penetrated to the retreat, without losing memory of the great outer world and how it has rolled away, centuries away, from the ideals of a by-gone race.

The Cistercians of Mount Melleray are as truly a survival of a state of things which has disappeared from the greater part of Europe as are any of the hundred objects, customs, traditions that recall the heathen past. They were hunted out of France in this century; found England uncongenial; and by that inevitable pressure which amounts to a law, a law that I have pointed out as operating from primeval times while striving to account for the Irish, gravitated towards Ireland. Nay, they have obeyed the impulse farther yet, and are more numerous in the United States to-day than in Ireland. They look back through an illustrious ancestry—if that term be permitted—to one of the great benefactors of mankind, St. Benedict, who perhaps did more than any other one man to civilize Europe after the early floods of barbarians turned it into a pest-house and cemetery. They claim St. Bernard as one of their spiritual forefathers. If it be not profane to use with respect to religious men the expression "survival of the fittest," it is fair to say that if any monastic order was fit to survive it was theirs. Without being carried away by the fervor of the mendicant and preaching

friars of the thirteenth century, they suffered eclipse from these innovators rather than yield to a popular fashion. Was it not they, by virtue of their connection with the Benedictines, who kept literature from extinction during the blackest periods of the Dark Ages? Indeed they, rather than the peripatetic evangelizing friars, the Salvation Army of the thirteenth century, belong by right of resemblance in character and aim to the special form of Catholicism for which Ireland was famous down to the Reformation.

Whatever Montalembert may advance to the contrary, early Christian Ireland was full of Eastern heresy. St. Benedict drew from the East for introduction into Italy the models of convents composed of monks or nuns. St. Patrick, while doubtless ready enough to acknowledge the supremacy of the Pope, being a simple-hearted genius bent on one object,—the conversion of Ireland,—never found it convenient, or indeed necessary. Up to the thirteenth century the monks of Ireland were practically

followers of the rule of St. Benedict with certain Oriental traits in addition. But when St. Francis of Assisi caught up the idea of mendicant monks and showed how the Pope might become commander-in-chief of a mighty army of workers controlled by a general living near the Vatican, and when St. Dominic of Spain hastened to follow the example, then indeed arrived a new era for the Church in Ireland. That reserve, that indifference, that easy acceptance of commands from Rome without obedience, which had characterized the ancient and remote section of Ireland was about to be disturbed. The soldiers of the saintly Italian

outcasts as one finds now in Whitechapel and other slums of London. They took control of the universities and were hailed for their culture. These mendicant preachers made a stir in the British Isles about fifty years after the Welsh-Norman invasion, that still rings down the centuries. Praiseworthy as they were, their efforts only served to solidify the Church, fit the temporal sword into the hand of the Pope, tempt him to carry out in earnest the old ambition — and precipitated the Reformation.

Giraldus de Barry, the Norman-Welsh prelate, has much to say of the corruption of monks

REFECTORY AT MOUNT MELLERAY.

and the ferocious Spaniard burst like a thunder-clap on the ignorant curates, luxurious priests, fat and worldly prelates of Italy, France, Germany, England, and Ireland. The fanatics were not merely vowed to poverty and chastity,—those vows were obeyed by the monks often enough,—they preached. Village priest and curate and monk, for the most part, merely performed the services for parishioners — but the new-comers preached. They gave masses almost for nothing. They seemed to come direct from ecclesiastical headquarters. They roved about, impoverishing the secular clergy and monks by taking possession of the people; they formed lay brotherhoods and sisterhoods devoted to them only. But also they lived in the filthy towns and labored with aggregates of

through ambition, wealth and ease. He tells how Fulke, a French reformer, told Richard to put from him three abominable daughters, Pride, Luxury and Avarice, whereupon the king replied: "I have already given away those daughters in marriage—Pride to the Templars, Luxury to the Black Monks, and Avarice to the White" (the Cistercians). Holinshed has it otherwise: "I therefore bequeath my Pride to the high-minded Templars and Hospitalers, which are as proud as Lucifer himself; my covetousness I give unto the White Monks, otherwise called of the Cisteaux Order, for they covet the divell and all; my lecherie I commit to the prelates of the church, who have most pleasure and felicitie therein."

Franciscans and Dominicans learned ease

and worldliness soon enough, but nowhere was the first fervor of that wonderful army more damped than in Ireland. As with all previous invasions the conquest was easy, but not real. Ireland is sown with ruins which betray the pomp and luxury of these Little Brothers of

and affected the people but little, leaving many old things standing the like of which was destroyed elsewhere. Hence the modern Cistercians, belonging with those monks of the earlier epoch who hated and feared the mendicant orders, represent so well the old church

THE BLACKSMITH AT MOUNT MELLERAY.

St. Francis, these Preaching Brothers of St. Dominic. To them and their imitators we owe some of the most beautiful edifices of Ireland: not the most curious or peculiar, but the most elaborate; not famous for size, but for charming proportions and decorations just enough. As always, the wave reached Ireland weakened,

of Ireland, though their foundation of Mount Melleray is hardly half a century old.

But though the influence was less than elsewhere, the many convents of Franciscans established in Ireland in the thirteenth, fourteenth, and fifteenth centuries undoubtedly effected for the popes that subjection of Ireland to dis-

RUINS OF MELLIFONT ABBEY, NEAR DROGHEDA.

cipline which was only partly accomplished upon the hollow submission of the chiefs and barons to the English crown. From this time Peter's pence began to flow with some regularity from Ireland into the coffers of Italians. The wonderful success of the new orders made them worldly and luxurious, so that the thirteenth century was able to see the strangest inversion of things, as the Rev. Mr. Jessopp has pointed out in "The Coming of the Friars." The clergy and monks, whom the preaching friars denounced for sloth and riches, became the beggars; the begging fraternities became fat and puffed up with the offerings of the people. It were a bitter critic who should blame these zealots when the good end was so obvious and the bad so plainly unforeseen.

What is more surprising than the quieting down of the Franciscans in Ireland, their fall from the heights of self-sacrifice into the bog of prosperity, is the career of the Dominicans. The latter became elsewhere a pest of humanity. Their history is lurid with the fires of martyrs both red and white — for they pursued their devilish trade of making bonfires of persons they did not agree with in America also, as soon as the hapless Indian was delivered into their hand. Their innocuousness in Ireland is surprising, because one can trace in them ancestral traits of paganism which might have held on in Ireland as many others did. St. Dominic was a Spaniard who won bloody laurels in the crusade against the Waldenses, most innocent of men.

There he learned to respond to that old thirst for burning human beings which we know at its worst among the peoples of Europe when the Druids were the executioners. Analogies exist between all monks and the Druidic orders, but it was reserved for the Dominicans to revive the most hideous side of a religion which by no means lacked fine traits. The old Ugrian-Keltic passion for bonfires broke out through its chosen instruments, the Dominicans, and that madness did not cease until Protestants degraded themselves to the same pagan level, and even burned sectaries of their own camp. Yet the absence of many burnings from Ireland — for some there were — coincides with what we learn from the old literature and histories of the Irish, namely, that Druidism never reached in Ireland the height of infamy it attained in Britain and Gaul. Moreover it coincides with the peaceable conversion of Ireland by Patrick, during which there was almost a total dearth of martyrs. The horrors of the Inquisition and the flames of victims at the stake were comparatively rare occurrences there. Yet were we to believe those whose interests lie in thwarting

INTERIOR OF ST. DOULOUGH'S (THIRTEENTH CENTURY).

CROSS AT MONASTERBOICE, NEAR DROGHEDA, A MONASTERY
FOUNDED BY BUITHE IN THE FIFTH CENTURY.

Irish aspirations to-day, there is no place in the world where that sort of extravagance ought to have gained greater headway.

The fearful excesses in which the followers of St. Dominic had the major rôle are strangely foreshadowed by a legend concerning him before birth. As if she were a Druidess in the darkest years of paganism, the mother of Dominic is said to have had the following dream. She thought that she gave birth to a dog which held a flaming torch in its mouth. A story like this has every trait of an Irish legend from the antique pagan epoch — the dog, the fiery torch, the unnatural birth. What wonder that with these pagan survivals in Christendom it was easy under the Holy League to enroll monks in regiments, arm them

with musket and casque, and set them on their fellow-men. Did not the Druids fight on occasion? And, on the other hand, were not the friars enrolled like a scattered army, working at command of a prelate, rightly entitled a general, who lived at Rome? The monks of Ireland may not have gone to war with system, but their prelates were not backward in leading troops as lately as two centuries ago, while the zeal of individual priests during rebellions in this and the last century hardly needs recalling.

It is not so strange that the Cistercians should have marked themselves apart from other monks by encouraging learning as that the Franciscans of Ireland should have been distinguished in the same way. Less learned to start with than their brother mendicants of St. Dominic, and addressing as they did the lowest strata of population in the rudest language of the vernacular, sometimes with great coarseness of imagery and buffoonery, the Franciscans hardly tread the classic soil of Ireland before they become scholarly by contrast with some of the monkish orders. An Austrian satirist of monks in the last century calls the Irish Franciscans a spurious kind, which, unlike the continental varieties of that breed, "bestow some attention upon cultivating the faculties of the mind." If the Cistercians are remembered by the magnificent Abbey of Corcomroe, in County Clare, founded in the twelfth century by the O'Briens; by Hoar Abbey, near the Rock of Cashel; by beautiful remnants of their refectory at Mellifont, as well as by the ruins of the Abbey of Boyle, near Loch Key and Sligo, with its columns in the nave bearing warriors and ecclesiastics on the capitals, the Franciscans can still be recalled by ruins in the town of Kilkenny, to mention only a few; by the Abbey of Quin, near Ennis; and by the remains of a monastery at Carrickfergus, near Belfast. The British Museum has the bells of St. Augustine which hung in the Abbey of Corcomroe. The Dominicans, however, do not appear to have been so well received in Ireland as elsewhere. Sligo Abbey was presented to them in 1252; but while the Monastery of the Virgin Mary was founded for them at Cavan in 1300, they were expelled in 1393. Though the constant wars among the Irish princes prior to the Norman-Welsh and the further troubles precipitated by the latter had barbarized the people, yet the pride of the nation in the fame of Ireland as a nursery of saints and missionaries must have made it far from easy for the mendicant orders to make great headway. Moreover there were then no great cities such as Dublin and Cork now are; Belfast did not exist; Galway was hardly a town. The material for the preaching men-

dicants was not there. Hence we see them settling in monasteries and taking almost exactly the same tone as the other monks of Ireland.

Among the monasteries there has never been much of that humility which the founder of Christianity inculcated, and the Irish monks were the last in the world to show it. St. Patrick was humble as regards his learning, but he wasted little humility on the great ones of his time, if we can believe his own words and the reports we get of his conduct. Yet he was a long-suffering man compared with St. Columbkille, the genius who in the next century converted the pagan Irish and Picts in the north of Britain. At school he received favors because of his descent from Nial of the Nine Hostages, a famous monarch. When St. Kieran, his schoolmate, rebelled against such partiality, no less distinguished a messenger than an angel appeared to him, showed him a plane, ax, and auger, and bluntly informed him that he, son of a carpenter, had given up only these tools for the service of God, while Columba had perhaps resigned the crown! Owing to his blood Columba treated kings of Ireland and Caledonia as his equals, received almost slavish consideration from the people, and did what he wished. That great foundation on I (later corrupted into Iona), where he trained missionaries for the Picts, Scots, and Saxons in squalid huts of wattled work and worshiped in a rough church of boards, was so famous that it became a rival of Rome in more than one particular. Like a good son of the Church, the Comte de Montalembert has little to say of this aspect of the Celtic Church, but his monumental work must be read with this in mind. The haughty

spirit of the clansmen devoted to their royal saint did not brook interference from the see of St. Peter, though in time they had to yield.

The life of St. Columbkille is in many respects the most curious and interesting of any for those who would study the monks of Ireland. He was close enough to St. Patrick to reflect the Oriental spirit of the age; he was more exactly a monk; he belonged to the purest Celtic nobility, and wrought among tribes which retained the largest amount of pre-Celtic blood of the aboriginal Finno-Ugrians of Europe. St. Finnian, who may have got his name through descent from that people, is a still earlier figure. He founded at Clonard, in Meath, a monastic school to which Irish and foreign youth flocked by thousands, exactly as under heathendom a famous Druid would collect pupils from far and near. The oak forests where Druids taught were naturally favorite spots for Christian teachers; hence arose these establishments celebrated for church and monastery—Kildare, the church of the oaks; Durrow, the plain of oaks; Adare, the ford of the oaks; Derry, the oakwood, now Londonderry, where St.

Columba founded one of his innumerable churches. St. Finnian, *magister sanctorum Hibernie*, belonged by nature as well as by name to the sturdy, quiet-loving, phlegmatic aboriginals; he was

the schoolmaster who attracted pupils to him. St. Columbkille, the most famous of these, showed the more typical Kelt in his love of movement and need of action.

When he was not mortifying the flesh in his dismal retreat among the fogs and gales of Caledonia he was traveling about to establish churches, browbeat Caledonian kings, and astonish

SHRINE FOR THE OLD BELL OF ST. PATRICK.

the rude people of the two islands by the penances he inflicted on repentant sinners.

All this earlier epoch of Irish monastic life, from St. Patrick to the destruction of monasteries by the pagan exiles and annual marauders from the Baltic, is most curious in its differences from the later great epoch which lies between the Norman-Welsh invasion and the confiscation of church property, say between 1172 and 1537. The root of difference lies in the fact that the impulse of the earlier epoch was Oriental; that of the later, Italian of the popes.

We are far from knowing yet to what extreme points the Christian, animated by the spirit which drove Greek and Jewish ascetics into the deserts of the Thebaid on the Nile, was driven by his desire to find spiritual rest in the wilds. We know that the archaic bee-hive huts, of which the woodcut of the Fort of the Wolves gives an idea, were chosen as fit habitations by saintly men, just as in Palestine and on the Nile hermits scooped in the rock holes hardly large enough to lie in. We know that when the Norse exiles fled in wrath before the tyranny of their kings to Iceland, such men (Irishmen) had been before them. We can be sure that when the Icelanders settled Greenland, Irish monks accompanied or followed them. That Irishmen, acting under this powerful mental thrust, should have reached the American continent long before the Icelanders would be far from strange, and when we find in old Irish literature a distinct story of such an expedition, and in Welsh history at a later date another account in which a Welsh prince, Madoc, merely repeated the voyage of the Irish saint, there seems no reason why the earlier as well as the later legend should be called fictitious. Doubtless the particulars have been altered to suit the ideas

TOP OF BISHOP'S STAFF,
DUBLIN MUSEUM.

and ignorance of the men who repeated those stories through the centuries, but no one will care to say that they are impossible. In another paper I may bring some evidence to bear on this point and show that the Keltic monks of St. Columbkille's epoch did leave traces on this continent; though from the nature of their case, being men who disdained wealth and sought by preference the rudest habitations, little was left by them to show their former presence. As for any influence which they might have had on the native savages, that could have been only most superficial, vanishing with the term of their lives or their stay.

St. Columbkille, Columba of

the *kills* or cells, was the typical Keltic saint, and as such his memory is revered hardly less than that of Patrick. The Druid and bard in him crop out at every twist and turn of a long and brilliant career. His Latin poem on St. Bridget, Christianized goddess of the heathen, patroness of learning, eloquence, and science, female prototype or parallel of the god Braga among the Scandinavians, whose name has been degraded into our word

FORT OF THE WOLVES, WEST COAST, WITH ARCHAIC BEE-HIVE HUTS.

"brag," has plenty of Druidic touches. Thus he sang her pæan :

Brigit the good and the virgin,
Brigit our torch and our sun,
Brigit radiant and unseen,
May she lead us to the eternal kingdom !

The Culdees, or servants of God, who were regulars following the rule of an order of monks as well as seculars, or ordinary priests, kept alive some of the customs of the Druids whose enemies and detractors they were. We find them at Clonmicnois, Clondalkin, Devenish, Clones, Pubble, and Scattering, with colonies eastward in Caledonia, at York, and on the isle of Bardsey. St. Columbkille shows by his "Song of Trust" that in the sixth century the heathen magical philosophers were far from unknown, perhaps were still cherished by the people :

There is no *sneeze* that can tell our fate,
Nor bird upon the branch,
Nor trunk of gnarled oak.
Better is he in whom we trust,
The king who has made us all,
Who will not leave me to-night without refuge.
I adore not the voice of birds,
Nor chance, nor the love of a son or wife,
My Druid is Christ, the son of God !

In this passage note a few of the methods of divination practiced by the Druids which Columbkille rejected for the Christian faith though not able entirely to divest himself of similar but less obvious touches of paganism. Here is the divination from sneezing classic among the Greeks, from the roaring of the oak-wood, the song and flight of birds, casting sticks or arrows on the ground and observing their "chance" position. The missal copied by the hand of this intensely living "servant of God" is to be seen in Dublin at the museum, having been placed there by its owner. The Cathach, or book, in which it was preserved formed for centuries the talisman of the O'Donnells when they went to war. The crosier, or bishop's staff, on the opposite page may be earlier work than it seems, but in all probability is not older than the twelfth century, and thus belongs to the second grand epoch of monasteries in Ireland. Its design recalls the patron saint of England, but it is by no means certain that St. George is intended ; for the slaughter of a dragon is a subject common to the Middle Ages, and may often be understood as a general symbol of the subjugation of the sensual part of man by the spiritual, or, more historically, of the ruin of paganism by Christianity. Yet the pagan Kelts themselves did not lack the same idea. They in their turn overthrew a lower religion, as the sun overcomes the darkness, as spring gets the better of winter. A curious figure discovered in the Vosges district on the Continent shows

the Kelt on the animal sacred to the sun, the horse, beating the life out of one of the gods of the Finno-Ugrians, a monster with serpent feet, who is represented in archaic Irish legend by that Cichol Gri the "footless" out of whom legend afterwards fashioned the hero Cuchulinn.

The greater number of ruins of monasteries in Ireland belong to the second period. The turbulent barons were fond of erecting abbeys and placing convents in beautiful buildings, with one eye to politics, the other to their salvation ; and the chiefs of native tribes did the same to the best of their limited ability. Famous for early monasteries were Clonard, Glendalough, and Monasterboice, one of whose three crosses is figured herewith. St. Buithe, whose name has been softened into Boice, was the founder of this settlement, where the lamp of education, almost extinct on the mainland and in Britain, was kept alive. Giraldus de Barry preserved a quaint legend showing that the early monks had strange pets. St. Columba was furtively making a copy of a psalter belonging to Abbot Finnian, contrary to the latter's wish,—for copyrights were rigidly enforced at that time,—when an eavesdropper applied his eye to a crack in the door to see what the saint was doing. Whereupon a domesticated crane, a bird which is still an ornament of Irish rivers, plucked out the eye of this early detective. The story goes to prove that a love of learning will tempt even a saint to a shabby trick, and also that the very birds of Erin turn on an informer.

Hardly any part of Ireland lacks reminders of the two great monastic periods before the Reformation, but the lovely fertile districts where the Barrow, the Suir, and the Blackwater bring the south-east quarter of the island into easy connection with Wales and France were particularly favored with thriving convents who lived in monasteries that still are exquisite in their ruins—Jerpont, Cahir, Dunbrody, Selskar, and many others whose very existence must be sought for in the names of parishes and hamlets and the imperfect records of the religious of those periods. It is this favored quarter that the Cistercians have colonized once more in the present century. When they came, bringing back a reminder of the past glories of Catholic supremacy to a peasantry made conservative by the misrule of the upper classes and the inefficient government from Great Britain, an affecting movement was observed. For Trappists vowed to silence and the avoidance of the world it was necessary to fence the apparently sterile wastes on which the settlement was made. The wall round the great monastic domain had to be built. So the peasantry from the slopes of the Maeldown hills and beyond gathered in their villages if not their clans, and, headed by their priests, sought

the breezy uplands above Cappoquin and built that precinct wall within which no woman—and indeed no man—is expected to set foot except under condition of presenting good reasons to the warders of the gate. If at Armagh the Protestant church occupies the citadel where Patrick founded a sanctuary; if at Cashel the Catholic archbishop bearing that title can only set foot on the Rock as any other guest may; if at Cork the memory of St. Finbar

is preserved by the big Protestant church, erected by London architects who hoped to reproduce a medieval cathedral—these peasants and their pastors could at least delude themselves with the idea that the foundation of Mount Melleray was the beginning of a return of the Church to her greatness before the Reformation. Who would care to cast a shadow of doubt on so natural and so pious a hope?

Charles de Kay.

THE LAMENTABLE BALLAD OF THE BLOODY BROOK.

As read at Deerfield Centennial, October 17, 1888.

COME listen to the story of brave Lothrop and his men,
How they fought,— how they died,
When they marched against the redskins in the autumn days, and then
How they fell,— in their pride,
By Pocomtuck side.

“Who will go to Deerfield meadows and bring the ripened grain?”
Said old Mosely to his men in array.
“Take the wagons and the horses and bring it back again,
But be sure that no man stray
All the day,— on the way.”

Then the flower of Essex started, with Lothrop at their head,
Wise and brave,— bold and true.
He had fought the Pequots long ago, and now to Mosely said,
“Be there many, be there few,
I will bring the grain to you.”

They gathered all the harvest, and they marched on the way
Through the woods which blazed like fire.
No soldier left the line of march to wander or to stray,
Till the wagons were stalled in the mire,
And the men began to tire.

The wagons have all forded the brook as it flows,
And then the rear-guard stays
To pick the purple grapes that are hanging from the boughs,
When crack! — to their amaze —
A hundred firelocks blaze!

Brave Lothrop he lay dying, but as he fell he cried,
“Each man to his tree,” said he,
“Let no one yield an inch,” and so the soldier died; —
And not a man of all can see
Where the foe can be.

And Philip and his devils pour in their shot so fast,
From behind and before,
That man after man is shot down and breathes his last:
Every man lies dead in his gore
To fight no more,— no more!

Oh, weep, ye maids of Essex, for the lads who have died,—
The flower of Essex they!
The Bloody Brook still ripples by the black mountain-side,
But never shall they come to see the ocean-tide,
And never shall the bridegroom return to his bride
From that dark and cruel day,— cruel day!

Edward Everett Hale.

ABRAHAM LINCOLN: A HISTORY.¹

THE PRESIDENT AND THE DRAFT—VALLANDIGHAM—THE PEACE PARTY AT THE POLLS.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE PRESIDENT' AND THE DRAFT.

URING the entire summer and autumn of 1863, Governor Seymour and his friends made the proceedings of the Government in relation to the enrollment law the object of special and vehement attack.² On the 17th of October the President made a call for 300,000 volunteers, and at the same time ordered that the draft should be made for all deficiencies which might exist on the 5th of January following, on the quotas assigned to districts by the War Department.³ Shortly after this the Democratic State committee issued a circular making the military administration of the Government, and especially the law calling for troops, the object of violent attack, greatly exaggerating the demands of the Government, claiming that no credits would be allowed for those who had paid commutation, and basing these charges upon a pretended proclamation of the 27th of October which had never been issued. The President, with the painstaking care which distinguished him, prepared with his own hand the following contradiction of this misleading circular:⁴

The Provost-Marshall General has issued no proclamation at all. He has, in no form, announced anything recently in regard to troops in New York, except in his letter to Governor Seymour of October 21, which has been published in the newspapers of that State. It has not been announced nor decided in any form by the Provost-Marshall General, or any one else in authority of the Government, that every citizen who has paid his three hundred dollars' commutation is liable to be immediately drafted again, or that towns that have just raised the money to pay their quotas will have again to be subject to similar taxation or suffer the operation of the new conscription, nor is it probable that the like of this ever will be announced or decided.

The circular we have referred to went on to claim that the State had been thoroughly canvassed, and that the victory of the Demo-

cratic ticket was assured. But the result showed that the Democratic leaders were as far wrong in their prophecy as in their history. The Republican State ticket was elected by a majority of 30,000 over the Democratic, and the principal State of the Union decided in favor of the President the vehement controversy which had raged all the year between Seymour and Lincoln—a verdict which was repeated in the following year when Governor Seymour was a candidate for reëlection.

In the early part of December the President, anxious in every way to do justice and to satisfy, if possible, the claims of Governor Seymour, consented to the appointment of a commission to inquire into the whole subject of the enrollment in New York. The principal member of the commission, chosen by Governor Seymour, was William F. Allen, his intimate friend and an ardent Democrat in politics; of the other members, General Love of Indiana was also a Democrat; Chauncey Smith of Massachusetts was a lawyer, not prominently identified with either political party. Judge Allen clearly dominated the commission, and they agreed with him in condemning the principle on which the enrollment and the draft were conducted. They reported that, instead of numbering the men of a given district capable of bearing arms and making that number the basis of the draft,—which was the course the enrolling officers, in direct obedience to the law of Congress, had pursued,—the quotas should be adjusted upon the basis of proportion to the entire population. They did not indorse the injurious attacks made by the governor upon the enrolling officers and agents, but distinctly stated that their fidelity and integrity were unimpeached. The essential point of their report was simply that the quota should be in proportion to the total population of the district, and not according to the number of valid men to be found in it. When the President required from the Provost-Marshall General his opinion upon the report, General Fry made this reasonable criticism:

The commission has evidently been absorbed by the conviction that the raising of men is, and will necessarily continue to be, equivalent to levying special taxes and raising money, and they would therefore require the same proceeds, under the en-

² See also THE CENTURY MAGAZINE for last month.—EDITOR.

³ General J. B. Fry, "New York and the Conscription of 1863," p. 49.

⁴ Dated, Executive Mansion, Washington, Oct. 31, 1863. MS.

rollment act, from a district of rich women which they would from a district with the same number of men of equal means. I assume that we are looking for personal military service from those able to perform it, that we make no calls for volunteers in the sense in which the commission understand it, but that we assign to the districts under the enrollment act fair quotas of the men we have found them to contain.

The President entirely agreed with the Provost-Marshall General that it was manifestly unjust to require as many drafted men from a district that had been depleted of its young men by the patriotic impulse which filled the army at the beginning of the war as were justly called for from one that had contributed nothing to the field, a course which would have been the logical result of yielding to the demands of Governor Seymour and the recommendation of the commission. But, wishing to make all possible concessions to the State authorities, he resolved once more to reduce the quota of New York, and explained his action in a letter to the Secretary of War dated February 27, 1864.

So long as Governor Seymour remained in office he continued his warfare upon the enrollment act and the officers charged with its execution. On the 18th of July, 1864, the President made a third call for troops under the act, and the governor promptly renewed his charges and complaints. At this time, however, both he and Mr. Lincoln were candidates before the people — the one for the Presidency, and the other for the Governorship of New York; and it was probably for this reason that Mr. Seymour's correspondence was carried on at this time with the Secretary of War instead of Mr. Lincoln. But it afforded no new features; there were the same complaints of excessive quotas, of unfair, unequal, and oppressive action, as before. He said again that there had been no opportunity given to correct the enrollment, upon which the Provost-Marshall General reported that the governor had been duly informed of the opportunities to make corrections, and that an order had been issued from his own headquarters in reference to the matter. No efforts were spared by the Government to insure a rigid revision of the lists. The governor spoke with great vehemence of the disparity between the demand made upon New York and Boston, saying that in one of the cities 26 per cent. of the population was enrolled, and in the other only $12\frac{1}{2}$ per cent. General Fry replied to this that the proportion of enrollment to population in Boston was not $12\frac{1}{2}$ but 16.92 per cent.; that less than 17 per cent. in New York and Brooklyn were enrolled, and that, in fine, the enrollment was a mere question of fact — it was the ascertainment of the number of men of a certain de-

scription in defined areas; that the enrollments were continuously open to revision, and that any name erroneously on them would be stricken off as soon as the error was pointed out by anybody to the Board of Enrollment. He then showed that the quotas throughout New York were in fact smaller than in many other States where the proportion of men was large, and closed his report by saying that he "saw no reason why the law should not be applied to New York as well as to other States." This report Mr. Stanton¹ transmitted to the governor, expressing the somewhat sanguine trust that it would satisfy him that his objections against the quotas assigned to New York were not well founded. He recalled the fact that a commission had been appointed the year before with a view to ascertain whether any mistake or errors had been made by the enrolling officers, but that the commissioners bore their testimony to the fidelity with which the work was done; that with a view to harmony the President had directed a reduction in some districts, but without the increase of others recommended by the commissioners; and that a basis for the assignment being now absolutely fixed by act of Congress, the War Department had no power to change it.

The voters of New York in the autumn election decided to retire Governor Seymour to private life, and his successor, Governor Fenton, gave to the Government, during the rest of the war, a hearty and loyal support.

While the controversy between the Government and its opponents in regard to the enrollment and the draft was going on, the President, disappointed and grieved at the persistent misrepresentations of his views and his intentions by those of whom he had expected better things, and feeling that he was unable, by any power of logic or persuasion, to induce the leaders of the Democratic party to do him justice or to coöperate with him in the measures which he was convinced were for the public good, thought for a time of appealing directly to the people of the United States in defense of the conduct of the Government. He prepared a long and elaborate address, which he intended more especially for the consideration of the honest and patriotic Democrats of the North, setting forth, with his inimitable clearness of statement, the necessity for the draft, the substantial fairness of the provisions of the law, and the honesty and equity with which, as he claimed, the Government had attempted to carry it out. But, after he had finished it, doubts arose in his mind as to the propriety or the expediency of addressing the public directly in that manner, and it was never published. It is here, for the first time, printed, from Mr. Lincoln's own manuscript, and it is

¹ Aug. 11, 1864.

a question whether the reader will more admire the lucidity and the fairness with which the President sets forth his views, or the reserve and abnegation with which, after writing it, he resolved to suppress so admirable a paper :

"It is at all times proper that misunderstanding between the public and the public servant should be avoided ; and this is far more important now than in times of peace and tranquillity. I therefore address you without searching for a precedent upon which to do so. Some of you are sincerely devoted to the republican institutions and territorial integrity of our country, and yet are opposed to what is called the draft, or conscription.

"At the beginning of the war, and ever since, a variety of motives, pressing, some in one direction and some in the other, would be presented to the mind of each man physically fit for a soldier, upon the combined effect of which motives he would, or would not, voluntarily enter the service. Among these motives would be patriotism, political bias, ambition, personal courage, love of adventure, want of employment, and convenience, or the opposite of some of these. We already have, and have had in the service, as appears, substantially all that can be obtained upon this voluntary weighing of motives. And yet we must somehow obtain more, or relinquish the original object of the contest, together with all the blood and treasure already expended in the effort to secure it. To meet this necessity the law for the draft has been enacted. You who do not wish to be soldiers do not like this law. This is natural ; nor does it imply want of patriotism. Nothing can be so just and necessary as to make us like it if it is disagreeable to us. We are prone, too, to find false arguments with which to excuse ourselves for opposing such disagreeable things. In this case, those who desire the rebellion to succeed, and others who seek reward in a different way, are very active in accommodating us with this class of argument. They tell us the law is unconstitutional. It is the first instance, I believe, in which the power of Congress to do a thing has ever been questioned in a case when the power is given by the Constitution in express terms. Whether a power can be implied, when it is not expressed, has often been the subject of controversy ; but this is the first case in which the degree of effrontery has been ventured upon, of denying a power which is plainly and distinctly written down in the Constitution. The Constitution declares that 'the Congress shall have power . . . to raise and support armies ; but no appropriation of money to that use shall be for a longer term than two years.' The whole scope of the conscription act is 'to

raise and support armies.' There is nothing else in it. It makes no appropriation of money, and hence the money clause just quoted is not touched by it. The case simply is, the Constitution provides that the Congress shall have power to raise and support armies ; and by this act the Congress has exercised the power to raise and support armies. This is the whole of it. It is a law made in literal pursuance of this part of the United States Constitution ; and another part of the same Constitution declares that 'this Constitution, and the laws made in pursuance thereof, . . . shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding.' Do you admit that the power is given to raise and support armies, and yet insist that by this act Congress has not exercised the power in a constitutional mode ? — has not done the thing in the right way ? Who is to judge of this ? The Constitution gives Congress the power, but it does not prescribe the mode, or expressly declare who shall prescribe it. In such case Congress must prescribe the mode, or relinquish the power. There is no alternative. Congress could not exercise the power to do the thing if it had not the power of providing a way to do it, when no way is provided by the Constitution for doing it. In fact, Congress would not have the power to raise and support armies, if even by the Constitution it were left to the option of any other, or others, to give or withhold the only mode of doing it. If the Constitution has prescribed a mode, Congress could and must follow that mode ; but, as it is, the mode necessarily goes to Congress, with the power expressly given. The power is given fully, completely, unconditionally. It is not a power to raise armies if State authorities consent ; nor if the men to compose the armies are entirely willing ; but it is a power to raise and support armies given to Congress by the Constitution, without an if.

"It is clear that a constitutional law may not be expedient or proper. Such would be a law to raise armies when no armies were needed. But this is not such. The republican institutions and territorial integrity of our country cannot be maintained without the further raising and supporting of armies. There can be no army without men. Men can be had only voluntarily or involuntarily. We have ceased to obtain them voluntarily, and to obtain them involuntarily is the draft — the conscription. If you dispute the fact, and declare that men can still be had voluntarily in sufficient numbers, prove the assertion by yourselves volunteering in such numbers, and I shall gladly give up the draft. Or if not a sufficient number, but

any one of you will volunteer, he for his single self will escape all the horrors of the draft, and will thereby do only what each one of at least a million of his manly brethren have already done. Their toil and blood have been given as much for you as for themselves. Shall it all be lost rather than that you, too, will bear your part?

"I do not say that all who would avoid serving in the war are unpatriotic; but I do think every patriot should willingly take his chance under a law, made with great care, in order to secure entire fairness. This law was considered, discussed, modified, and amended by Congress at great length, and with much labor; and was finally passed, by both branches, with a near approach to unanimity. At last, it may not be exactly such as any one man out of Congress, or even in Congress, would have made it. It has been said, and I believe truly, that the Constitution itself is not altogether such as any one of its framers would have preferred. It was the joint work of all, and certainly the better that it was so.

"Much complaint is made of that provision of the conscription law which allows a drafted man to substitute three hundred dollars for himself; while, as I believe, none is made of that provision which allows him to substitute another man for himself. Nor is the three hundred dollar provision objected to for unconstitutionality; but for inequality, for favoring the rich against the poor. The substitution of men is the provision, if any, which favors the rich to the exclusion of the poor. But this being a provision in accordance with an old and well-known practice, in the raising of armies, is not objected to. There would have been great objection if that provision had been omitted. And yet being in, the money provision really modifies the inequality which the other introduces. It allows men to escape the service who are too poor to escape but for it. Without the money provision, competition among the more wealthy might, and probably would, raise the price of substitutes above three hundred dollars, thus leaving the man who could raise only three hundred dollars no escape from personal service. True, by the law as it is, the man who cannot raise so much as three hundred dollars, nor obtain a personal substitute for less, cannot escape; but he can come quite as near escaping as he could if the money provision were not in the law. To put it another way: is an unobjectionable law which allows only the man to escape who can pay a thousand dollars, made objectionable by adding a provision that any one may escape who can pay the smaller sum of three hundred dollars? This is the exact difference at this point between the present law and all former draft laws. It is true that by this law a somewhat larger

number will escape than could under the law allowing personal substitutes only; but each additional man thus escaping will be a poorer man than could have escaped by the law in the other form. The money provision enlarges the class of exempts from actual service simply by admitting poorer men into it. How then can the money provision be a wrong to the poor man? The inequality complained of pertains in greater degree to the substitution of men, and is really modified and lessened by the money provision. The inequality could only be perfectly cured by sweeping both provisions away. This, being a great innovation, would probably leave the law more distasteful than it now is.

"The principle of the draft, which simply is involuntary or enforced service, is not new. It has been practiced in all ages of the world. It was well known to the framers of our Constitution as one of the modes of raising armies, at the time they placed in that instrument the provision that 'the Congress shall have power to raise and support armies.' It had been used just before, in establishing our independence, and it was also used under the Constitution in 1812. Wherein is the peculiar hardship now? Shall we shrink from the necessary means to maintain our free government, which our grandfathers employed to establish it and our own fathers have already employed once to maintain it? Are we degenerated? Has the manhood of our race run out?

"Again, a law may be both constitutional and expedient, and yet may be administered in an unjust and unfair way. This law belongs to a class, which class is composed of those laws whose object is to distribute burthens or benefits on the principle of equality. No one of these laws can ever be practically administered with that exactness which can be conceived of in the mind. A tax law, the principle of which is that each owner shall pay in proportion to the value of his property, will be a dead letter, if no one can be compelled to pay until it can be shown that every other man will pay in precisely the same proportion, according to value; nay, even, it will be a dead letter, if no one can be compelled to pay until it is certain that every other one will pay at all—even in unequal proportion. Again, the United States House of Representatives is constituted on the principle that each member is sent by the same number of people that each other one is sent by; and yet, in practice, no two of the whole number, much less the whole number, are ever sent by precisely the same number of constituents. The districts cannot be made precisely equal in population at first, and if they could, they would become unequal in a single day, and much more so in

the ten years, which the districts, once made, are to continue. They cannot be remodeled every day; nor, without too much expense and labor, even every year.

"This sort of difficulty applies in full force to the practical administration of the draft law. In fact, the difficulty is greater in the case of the draft law. First, it starts with all the inequality of the congressional districts; but these are based on entire population, while the draft is based on those only who are fit for soldiers, and such may not bear the same proportion to the whole in one district that they do in another. Again, the facts must be ascertained, and credit given, for the unequal numbers of soldiers which have already gone from the several districts. In all these points errors will occur in spite of the utmost fidelity. The Government is bound to administer the law with such an approach to exactness as is usual in analogous cases, and as entire good faith and fidelity will reach. If so great departures as to be inconsistent with such good faith and fidelity, or great departures occurring in any way, be pointed out they shall be corrected; and any agent shown to have caused such departures intentionally shall be dismissed.

"With these views, and on these principles, I feel bound to tell you it is my purpose to see the draft law faithfully executed."

VALLANDIGHAM.

GENERAL BURNSIDE took command of the Department of the Ohio (March 26, 1863) with a zeal against the insurgents only heightened by his defeat at Fredericksburg. He found his department infested with a peculiarly bitter opposition to the Government and to the prosecution of the war, amounting, in his opinion, to positive aid and comfort to the enemy, and he determined to use all the powers confided to him to put an end to these manifestations, which he considered treason-

able; and in the execution of this purpose he gave great latitude to the exercise of his authority. He was of a zealous and impulsive character, and weighed too little the consequences of his acts where his feelings were strongly enlisted. He issued, on the 13th of April, an order which obtained wide celebrity under the name of General Order No. 38, announcing that "all persons found within our lines, who commit acts for the benefit of the enemies of our country, will be tried as spies and traitors, and, if convicted, will suffer death." He enumerated, as among the acts which came within the view of this order, the writing and carrying of secret letters; passing the lines for treasonable purposes; recruiting for the Confederate service; harboring, concealing, or feeding public enemies within our lines; and passing beyond this reasonable category of offenses, he declared that "the habit of declaring sympathies for the enemy will no longer be tolerated in this department, and persons committing such offenses will at once be arrested, with a view to being tried, as above stated, or sent beyond our lines into the lines of their friends." And in conclusion he added a clause which may be made to embrace, in its ample sweep, any demonstration not to the taste of the general in command: "It must be distinctly understood that treason, expressed or implied, will not be tolerated in this department."

This order at once excited a most furious denunciation on the part of those who, either on account of their acts, or their secret sympathies, felt themselves threatened by it, and many even of those opponents of the Administration who were entirely loyal to the Union¹ criticised the order as illegal in itself and liable to lead to dangerous abuses. The most energetic and eloquent of General Burnside's assailants was Clement L. Vallandigham, who had been for several years a member of Congress from Ohio, whose intemperate denunciation of the Government had caused him the loss of his seat,² and whose defeat had only heightened the acerb-

¹ One of Burnside's own staff-officers, Colonel J. M. Cutts, wrote to the President July 30: "Order 38 has kindled the fires of hatred and contention. Burnside is foolishly and unwisely excited, and if continued in command will disgrace himself, you, and the country, as he did at Fredericksburg."

² At the first threat of civil war Vallandigham made haste to declare himself opposed to any forcible execution of the laws. He declared the States of the Union the only judges of the sufficiency and justice of secession, and declared he would never vote one dollar of money whereby one drop of American blood should be shed in civil war; and in February preceding the inauguration of Mr. Lincoln he proposed to amend the Constitution by dividing the Union into four sections, giving each section a veto on the passage of any law or the election of Presidents or Vice-Presidents, and allowing to each State the right of secession on certain specified terms. Having thus early taken his stand, he

retained his position with more consistency than was shown by any other member of his party. After his defeat by General R. C. Schenck, in his canvass for reelection to Congress, he renewed his attacks upon the Government and its war policy with exaggerated vehemence.

In a speech delivered in the House of Representatives on the 14th of January, 1863, he boasted that he was of that number who had opposed abolitionism or the political development of the antislavery sentiment of the North and West from the beginning. He called it the development of the spirit of intermeddling, whose children are strife and murder. He said: "On the 14th of April I believed that coercion would bring on war, and war disunion. More than that, I believed, what you all in your hearts believe to-day, that the South could never be conquered—never. And not that only, but I was satisfied . . . that the secret but real purpose of the war was to abolish slavery in the States,

ity of his opposition to the war. General Order No. 38 furnished him a most inspiring text for assailing the Government, and he availed himself of it in Democratic meetings throughout the State. A rumor of his violent speeches came to the ears of the military authorities in Cincinnati, and an officer was sent, in citizen's clothes, to attend a meeting which was held at Mount Vernon, Ohio, where Mr. Vallandigham and other prominent Democrats were the orators of the day. The meeting was an enthusiastic one, full of zeal against the Government and of sympathy with the South. Mr. Vallandigham, feeling his audience thoroughly in harmony with him, spoke with unusual fluency and bitterness, greatly enjoying the applause of his hearers, and unconscious of the presence of the unsympathizing recorder, who leaned against the platform a few feet away and took down some of his most malignant periods. He said it was the design of those in power to usurp a despotism; that it was not their intention to effect a restoration of the Union; that the Government had rejected every overture of peace from the South and every proposition of mediation from Europe; that the war was for the liberation of the blacks and the enslavement of the whites; that General Order No. 38 was a base usurpation of arbitrary power; that he despised it and spat upon it and trampled it under his feet. Speaking of the conscription act, he said the people were not deserving to be free men who would submit to such encroachment on their liberties. He called the President "King Lincoln," and advised the people to come up together at the ballot box and hurl the tyrant from his throne. The audience and the speaker were evidently in entire agreement. The crowd wore in great numbers the distinctive badges of "Copperheads" and "Butternuts," and amid cheers which Vallandigham's speech elicited the witness heard a shout that "Jeff Davis was a gentleman, which was more than Lincoln was."

The officer returned to Cincinnati and made his report. Three days later, on the evening of the 4th of May, a special train went up to Dayton, with a company of the 115th Ohio, to arrest Mr. Vallandigham. Reaching Dayton they went at once to his house, where they arrived shortly before daylight, and demanded admittance. The orator appeared at an upper window and, being informed of their business,

refused to allow them to enter. He began shouting in a loud voice; pistols were fired from the house; the signals were taken up in the town, and, according to some preconcerted arrangement, the fire bells began to toll. There was evidently no time to be lost. The soldiers forced their way into the house; Vallandigham was compelled to make a hasty toilet, and was hurried to the cars, and the special train pulled out of the station before any considerable crowd could assemble. Arriving at Cincinnati, Vallandigham was consigned to the military prison and kept in close confinement. During the day he contrived, however, to issue an address to the Democracy of Ohio, saying:

I am here in a military bastille for no other offense than my political opinions, and the defense of them, and of the rights of the people, and of your constitutional liberties. . . . I am a Democrat — for the Constitution, for law, for the Union, for liberty — this is my only crime. . . . Meanwhile, Democrats of Ohio, of the North-west, of the United States, be firm, be true to your principles, to the Constitution, to the Union, and all will yet be well. . . . To you, to the whole people, to Time, I appeal.

While he was issuing these fervid words his friends in Dayton were making their demonstration in another fashion. The town was filled with excitement all day. Crowds gathered on the streets discussing and denouncing the arrest. Great numbers of wagons loaded with rural friends and adherents of the agitator came in from the country and, the excitement increasing as night came on, a crowd of several hundred men moved, hooting and yelling, to the office of the Republican newspaper. Some one threw a brick at the building, then a volley of pistol shots was fired, and the excitement of the crowd wreaked itself on the unoffending building, which was first sacked, and then destroyed by fire. Later in the night a company of troops arrived from Cincinnati, and before midnight the crowd was dispersed and order was restored.

Mr. Vallandigham was promptly tried by a military commission, convened May 6 by General Burnside, consisting of officers of his staff and of the Ohio and Kentucky volunteers. Mr. Vallandigham made no individual objection to the court, but protested that they had no authority to try him; that he was in neither the land nor naval forces of the United States, nor in the militia, and was therefore amenable only to the

. . . and with it . . . the change of our present democratical form of government into an imperial despotism. . . . I do not support the war; and to-day I bless God that not the smell of so much as one drop of its blood is upon my garments. . . . Our Southern brethren were to be whipped back into love and fellowship at the point of the bayonet. Oh, monstrous delusion! . . . Sir, history will record that after nearly six thousand years of folly and wickedness in every

form and administration of government, theocratic, democratic, monarchic, oligarchic, despotic, and mixed, it was reserved to American statesmanship, in the nineteenth century of the Christian era, to try the grand experiment, on a scale the most costly and gigantic in its proportions, of creating love by force and developing fraternal affection by war, and history will record, too, on the same page, the utter disastrous and most bloody failure of the experiment."

civil courts. This protest was, of course, disregarded, and his trial went on. It was proved that he made the speech of which we have already given an abstract. He called as witness in his defense Mr. S. S. Cox, who was also one of the orators of the occasion, and who testified that the speech of Mr. Vallandigham, though couched in strong language, was in no respect treasonable. When the evidence was all in, the accused entered a protest against the entire proceeding, repeating the terms of his original protest, and adding that his alleged offense itself was not known to the Constitution nor to any law thereof. "It is," he said, "words spoken to the people of Ohio, in an open and public political meeting, lawfully and peaceably assembled under the Constitution and upon full notice. It is words of criticism of the public policy of the public servants of the people, by which policy it was alleged that the welfare of the country was not promoted. It was an appeal to the people to change that policy, not by force, but by free elections and the ballot box. It is not pretended that I counseled disobedience to the Constitution or resistance to laws and lawful authority. I never have. Beyond this protest, I have nothing further to submit." There were no speeches either in prosecution or in defense. When the court was cleared it remained in deliberation for three hours and returned a decision that the accused was guilty of the charge of "publicly expressing, in violation of General Order No. 38, from Headquarters Department of the Ohio, his sympathy for those in arms against the Government of the United States, declaring disloyal sentiments and opinions, with the object and purpose of weakening the power of the Government in its efforts to suppress an unlawful rebellion." They therefore sentenced him to be placed in close confinement in some fortress of the United States, to be designated by the commanding officer of the department, there to be kept during the continuance of the war. General Burnside approved the finding and the sentence, and designated Fort Warren, Boston Harbor, as the place of confinement in accordance with the sentence.

But before the finding of the commission was made public, Mr. George E. Pugh, as counsel for Vallandigham, applied to Judge Leavitt of the United States Circuit Court, sitting in Cincinnati, for a writ of habeas corpus. On the 11th of May the case was heard, and extended arguments were made by Mr. Pugh in favor of the motion, and by Mr. Perry, who appeared on behalf of General Burnside, against it. But the most noticeable feature of the trial was a written address from General Burnside himself, presented to the district attorney, in which he explained and defended his

action. He began by saying that he was prohibited by law and by his duty from criticising the policy of the Government; that such abstention from injurious criticism was binding on every one in the service. He then went on to say:

If it is my duty and the duty of the troops to avoid saying anything that would weaken the army by preventing a single recruit from joining the ranks, by bringing the laws of Congress into disrepute, or by causing dissatisfaction in the ranks, it is equally the duty of every citizen in the department to avoid the same evil. . . . If I were to find a man from the enemy's country distributing in my camp speeches of their public men that tended to demoralize the troops, or to destroy their confidence in the constituted authorities of the Government, I would have him tried and hung, if found guilty, and all the rules of modern warfare would sustain me. Why should such speeches from our own public men be allowed?

He even went so far as to disapprove the use of party names and party epithets, saying, "The simple names of patriot and traitor are comprehensive enough."

If the people [he said] do not approve the policy of the Government they can change the constitutional authorities at the proper time and by the proper method. Let them freely discuss the policy in a proper tone; but my duty requires me to stop license and intemperate discussion, which tend to weaken the authority of the Government and army: whilst the latter is in the presence of the enemy it is cowardly so to weaken it. . . . There is no fear of the people losing their liberties; we all know that to be the cry of demagogues, and none but the ignorant will listen to it.

Judge Leavitt denied the motion for habeas corpus in a long decision, in which he thoroughly reviewed the legal points involved in the case. The essential point of his decision was this: General Burnside, by order of the President, had been appointed to the military supervision of the Department of the Ohio, including, among other States, the State of Ohio. The precise extent of his authority was not known to the court, but it might properly be assumed that the President had clothed him with all the powers necessary to the efficient discharge of his duties. It is not claimed that in time of war the President is above the Constitution. He derives his power, on the contrary, expressly from the provision of that instrument that he shall be commander-in-chief of the army and navy. The Constitution does not specify the powers he may rightfully exercise in this character, nor are they defined by legislation. No one denies, however, that the President, in this character, is invested with very high powers, which he has exercised, as commander-in-chief, from time to time during the present rebellion.

His acts in this capacity must be limited to such as are deemed essential to the protection and preservation of the Government and the Constitution. And in deciding what he may rightfully do under this power, where there is no express legislative declaration, the President is guided solely by his own judgment, and is amenable only for an abuse of his authority by impeachment. The occasion which calls for the exercise of this power exists only from the necessity of the case; and when the necessity exists there is a clear justification of the act. The judge concludes that if this view of the power of the President is correct, it implies the right to arrest persons who, by their mischievous acts of disloyalty, impede or endanger the military operations of the Government.

And if the necessity exists, I see no reason [he said] why the power does not attach to the officer in command of a military department. The President cannot discharge the duties in person; he, therefore, constitutes an agent to represent him, clothed with the necessary power for the efficient supervision of the military interests of the Government throughout the department. . . . In the exercise of his discretion General Burnside issued the order (No. 38) which has been brought to the notice of the court.

Judge Leavitt would not comment on that order, but only referred to it because General Burnside had stated his motives for issuing it, and also because it was for its supposed violation that he ordered the arrest of Mr. Vallandigham. He had done this under his responsibility as the commanding general of the department, and in accordance with what he supposed to be the power vested in him by the appointment of the President. It was virtually an act of the Executive Department under the power vested in the President by the Constitution, and the court therefore refused to annul or reverse it.

The arrest, trial, and sentence of Vallandigham took the President somewhat by surprise, and it was only after these proceedings were consummated that he had an opportunity seriously to consider the case. If he had been consulted before any proceedings were initiated there is reason to believe he would not have permitted them;¹ but finding himself in presence of an accomplished fact, the question

now given him to consider was, whether he should approve the sentence of the court, or, by annulling it, weaken the authority of the general commanding the district, and greatly encourage the active and dangerous secession element in the West. He concluded to accept the act of Burnside as within his discretion as military commander; but as the imprisonment of Vallandigham in the North would have been a constant source of irritation and political discussion, the President concluded to modify his sentence to one which could be immediately and finally executed, and the execution of which would excite far less sympathy with the prisoner, and, in fact, seriously damage his prestige and authority among his followers. The method of punishment which he chose was doubtless suggested by a paragraph in Burnside's Order No. 38, which had mentioned, as a form of punishment for the declaration of sympathies with the enemy, deportation "beyond our lines into those of their friends." He therefore commuted the sentence of Vallandigham, and directed that he be sent within the Confederate lines.² This was done about a fortnight after the court-martial. Mr. Vallandigham was sent to Tennessee, and, on the 25th of May, was escorted by a small cavalry force to the Confederate lines near Murfreesboro'. After a short parley with the rebel videttes, who made no objection to receiving the prisoner, he was delivered into the hands of a single private soldier of an Alabama regiment, Mr. Vallandigham making a formal protest to the effect that he was within the Confederate lines by force and against his will, and that he surrendered as a prisoner of war.

The arrest and sentence of this distinguished Democrat produced a profound sensation throughout the country. It occasioned general rejoicing in the South. The Government in Richmond saw in it a promise of counter-revolution in the North, and some of the Confederate generals built upon it the rosiest hopes for future campaigns. General Beauregard, writing to a friend in Mobile,³ said the Yankees, by sending Vallandigham into Bragg's lines, had indicated a point of attack. He suggested that, Hooker being disposed of for the next six months at least, Lee should act on the

¹ General Burnside, feeling, after the trial, that his act had subjected the Administration to violent attack, thought proper to signify to the President that his resignation was at his service if desired, to which the President answered: "When I shall wish to supersede you I will let you know. All the Cabinet regretted the necessity of arresting, for instance, Vallandigham, some perhaps doubting there was a real necessity for it; but, being done, all were for seeing you through with it." [Lincoln to Burnside, May 29, 1863. MS.]

² The order under which Vallandigham was sent South was dated the 19th of May and transmitted by telegraph from Washington to General Burnside: "The President directs that, without delay, you send C. L. Vallandigham, under secure guard, to the headquarters of General Rosecrans, to be put by him beyond our military lines, and in case of his return within our lines, he be arrested and kept in close custody for the term specified in his sentence." [McPherson, "History of the Rebellion," p. 162.]

³ May 26, 1863. War Records, Vol. XIV., p. 955.

defensive, and send Bragg 30,000 men to take the offensive at once. Let Bragg—or some better soldier who is sufficiently shadowed forth in parenthesis—"destroy or capture (as it is done in Europe) Rosecrans's army; then march into Kentucky; raise 30,000 more men there and in Tennessee; then get into Ohio and call upon the friends of Vallandigham to rise for his defense and support; then call upon Indiana, Illinois, and Missouri to throw off the yoke of the accursed Yankee nation; then"—his plan growing more and more magnificent as it took grandeur and color under his pen—"call upon the whole North-west to join in the movement, form a Confederacy of their own, and join us by a treaty of alliance, defensive and offensive. What would then become of the North-east?" demanded the doughty creole. "How long would it take us to bring it back to its senses?" The feeling in the North, if less exuberant in its expression, was equally serious. No act of the Government has been so strongly criticised, and none having relation to the rights of an individual created a feeling so deep and so widespread. No further legal steps were taken in the case, except an application which was made by Vallandigham's counsel for a writ of certiorari to bring up the proceedings of the military commission for review in the Supreme Court of the United States. This motion was denied, on the evident ground that no such writ could be issued by the Supreme Court to any such military commission, as the court had no jurisdiction over the proceedings of such a tribunal. But in the Democratic newspapers, in public meetings, in a multitude of leading articles and pamphlets, the question was discussed with the greatest earnestness and even violence, the orators and politicians of the Democratic party regarding the incident as the most valuable bit of political capital which had fallen to them during the year. Even some of the most loyal newspapers of the North joined in the general attack, saying that by the statutes Vallandigham was a prisoner of state, and that the Secretary of War was bound to report him as such to the circuit judge of the district in which his supposed offenses were committed, to be regularly tried by the civil tribunal. But the principal criticism was, of course, confined to the ranks of the opposition. Their newspapers and public men vied with one another in a chorus of condemnation. To a meeting, held in Albany on the 16th of May, Governor Seymour wrote:

It is an act which has brought dishonor upon our country; it is full of danger to our persons and our homes; it bears upon its front a conscious violation of law and justice. . . . The transaction involved a series of offenses against our most sacred rights. It interfered with the freedom of speech; it violated

our rights to be secure in our homes against unreasonable searches and seizures; it pronounced sentence without trial, save one which was a mockery—which insulted as well as wronged. . . . If this proceeding is approved by the Government, and sanctioned by the people, it is not merely a step towards revolution—it is revolution; it will not only lead to military despotism, it establishes military despotism. . . . If it is upheld, our liberties are overthrown. . . . The action of the Administration will determine, in the minds of more than one-half of the people of the loyal States, whether the war is waged to put down rebellion at the South, or destroy free institutions at the North. We look for its decision with most solemn solicitude.

The meeting to which Governor Seymour sent this passionate address passed a series of resolutions insisting upon their loyalty and the services they had rendered the country, but demanding that the "Administration shall be true to the Constitution, shall recognize and maintain the rights of the States and the liberties of the citizen, shall everywhere outside the lines of military occupation and the scenes of insurrection exert all its powers to maintain the supremacy of the civil over military law"; and in view of these principles they denounced "the recent assumption of a military commander to seize and try a citizen of Ohio, Clement L. Vallandigham, for no other reason than words addressed to a public meeting in criticism of the military orders of that general." The resolutions further set forth that such an assumption of military power strikes a fatal blow at the supremacy of law. They enumerated the provisions of the Constitution defining the crime of treason and the defenses to which those accused of that crime are entitled, and said "that these safeguards of the rights of the citizen against the pretensions of arbitrary power were intended more especially for his protection in times of civil commotion." They further resolved:

That in the election of Governor Seymour the people of this State, by an emphatic majority, declared their condemnation of the system of arbitrary arrests, and their determination to stand by the Constitution. And that, regarding the blow struck at a citizen of Ohio as aimed at the rights of every citizen of the North, they denounce it as against the spirit of our laws and Constitution, and most earnestly call upon the President of the United States to reverse the action of the military tribunal which has passed a cruel and unusual punishment upon the party arrested, prohibited in terms by the Constitution, and to restore him to the liberty of which he has been deprived.

A copy of these resolutions was sent to the President and received his most careful consideration. He answered on the 12th of June, in a letter which demands the close perusal of every student of our history. He accepted in

the beginning, and thanked the meeting for, the resolutions expressing the purpose of sustaining the cause of the Union despite the folly and wickedness of any administration. He referred to the safeguards of the Constitution for the defense of persons accused of treason, and contended that these provisions of the Constitution had no application to the case in hand. The arrests complained of were not made for the technical crime of treason. He then proceeded, in language so terse and vigorous that it is difficult to abridge a paragraph without positive mutilation, to describe the circumstances under which this rebellion began, and the hopes of the insurgents, which were founded upon the inveterate respect of the American people for the forms of law.

Prior to my installation here [he said] it had been inculcated that any State had a lawful right to secede from the National Union, and that it would be expedient to exercise the right whenever the devotees of the doctrine should fail to elect a President to their own liking. I was elected contrary to their liking; and, accordingly, so far as it was legally possible, they had taken seven States out of the Union, had seized many of the United States forts, and had fired upon the United States flag, all before I was inaugurated, and, of course, before I had done any official act whatever. The rebellion thus begun soon ran into the present civil war; and, in certain respects, it began on very unequal terms between the parties. The insurgents had been preparing for it for more than thirty years, while the Government had taken no steps to resist them. The former had carefully considered all the means which could be turned to their account. It undoubtedly was a well-pondered reliance with them that in their own unrestricted efforts to destroy Union, Constitution, and law all together the Government would, in a great degree, be restrained by the same Constitution and law from arresting their progress. Their sympathizers pervaded all departments of the Government and nearly all communities of the people. From this material, under cover of "liberty of speech," "liberty of the press," and "habeas corpus," they hoped to keep on foot amongst us a most efficient corps of spies, informers, suppliers, and aiders and abettors of their cause in a thousand ways. They knew that in times such as they were inaugurating, by the Constitution itself, the "habeas corpus" might be suspended; but they also knew they had friends who would make a question as to who was to suspend it; meanwhile their spies and others might remain at large to help on their cause. Or if, as has happened, the Executive should suspend the writ, without ruinous waste of time, instances of arresting innocent persons might occur, as are always likely to occur in such cases, and then a clamor could be raised in regard to this, which might be at least of some service to the insurgent cause. It needed no very keen perception to discover that part of the enemy's programme, so soon as, by open hostilities, their machinery was fairly put in motion. Yet, thoroughly imbued with a reverence for the guaranteed rights of individuals, I was slow to adopt the strong measures which by degrees I have been forced to regard

as being within the exceptions of the Constitution, and as indispensable to the public safety. Nothing is better known to history than that courts of justice are utterly incompetent to such cases. Civil courts are organized chiefly for trials of individuals, or, at most, a few individuals acting in concert, and this in quiet times and on charges of crimes well defined in the law. Even in times of peace bands of horse-thieves and robbers frequently grow too numerous and powerful for the ordinary courts of justice. But what comparison in numbers have such bands ever borne to the insurgent sympathizers, even in many of the loyal States? Again, a jury too frequently has at least one member more ready to hang the panel than to hang the traitor. And yet again, he who dissuades one man from volunteering, or induces one soldier to desert, weakens the Union cause as much as he who kills a Union soldier in battle. Yet this dissuasion or inducement may be so conducted as to be no defined crime of which any civil court would take cognizance.

He then applied to the case in hand the clear provision of the Constitution that "the privilege of the writ of habeas corpus shall not be suspended unless, when in case of rebellion or invasion, the public safety may require it," and went on to say:

This is precisely our present case — a case of rebellion wherein the public safety does require the suspension. Indeed, arrests by process of courts and arrests in cases of rebellion do not proceed altogether upon the same basis. The former is directed at the small percentage of ordinary and continuous perpetration of crime, while the latter is directed at sudden and extensive uprisings against the Government, which, at most, will succeed or fail in no great length of time. In the latter case arrests are made, not so much for what has been done as for what probably would be done. The latter is more for the preventive and less for the vindictive than the former. In such cases the purposes of men are much more easily understood than in cases of ordinary crime. The man who stands by and says nothing when the peril of his Government is discussed cannot be misunderstood. If not hindered, he is sure to help the enemy; much more if he talks ambiguously — talks for his country with "buts" and "ifs" and "ands." Of how little value the constitutional provisions I have quoted will be rendered, if arrests shall never be made until defined crimes shall have been committed, may be illustrated by a few notable examples. General John C. Breckinridge, General Robert E. Lee, General Joseph E. Johnston, General John B. Magruder, General William B. Preston, General Simon B. Buckner, and Commodore Franklin Buchanan, now occupying the very highest places in the rebel war service, were all within the power of the Government since the rebellion began, and were nearly as well known to be traitors then as now. Unquestionably, if we had seized and held them, the insurgent cause would be much weaker. But no one of them had then committed any crime defined in the law. Every one of them, if arrested, would have been discharged on habeas corpus were the writ allowed to operate. In view of these and similar cases, I think the time not

unlikely to come when I shall be blamed for having made too few arrests rather than too many.

Referring to the charge made in the resolutions that Mr. Vallandigham was arrested for no other reason than words addressed to public meetings in criticism of the course of the Administration, Mr. Lincoln said :

If this assertion is the truth and the whole truth,—if there was no other reason for the arrest,—then I concede that the arrest was wrong. But [he went on] Mr. Vallandigham was not arrested because he was damaging the political prospects of the Administration, or the personal interests of the commanding general, but because he was damaging the army, upon the existence and vigor of which the life of the nation depends. He was warring upon the military, and this gave the military constitutional jurisdiction to lay hands upon him.

If it could be shown that his arrest was made on mistake of fact, the President would be glad to correct it. But, he said :

Long experience has shown that armies cannot be maintained unless desertion shall be punished by the severe penalty of death. The case requires, and the law and the Constitution sanction, this punishment. Must I shoot a simple-minded soldier boy who deserts, while I must not touch a hair of a wily agitator who induces him to desert? This is none the less injurious when effected by getting a father, or brother, or friend into a public meeting, and there working upon his feelings until he is persuaded to write the soldier boy that he is fighting in a bad cause, for a wicked Administration of a contemptible Government, too weak to arrest and punish him if he shall desert. I think that in such a case to silence the agitator and to save the boy is not only constitutional, but, withal, a great mercy.

He then stated clearly his belief that certain proceedings are constitutional when, in case of rebellion or invasion, the public safety requires them, which would not be constitutional when, in absence of rebellion or invasion, the public safety does not require them.

The Constitution itself [he said] makes the distinction, and I can no more be persuaded that the Government can constitutionally take no strong measure in time of rebellion, because it can be shown that the same could not be lawfully taken in time of peace, than I can be persuaded that a particular drug is not good medicine for a sick man, because it can be shown to not be good food for a well one. Nor am I able to appreciate the danger apprehended by the meeting that the American people will, by means of military arrests during the Rebellion, lose the right of public discussion, the liberty of speech and the press, the law of evidence, trial by jury, and habeas corpus, throughout the indefinite peaceful future, which I trust lies before them, any more than I am able to believe that a man could contract so strong an appetite for emetics, during temporary illness, as to persist in feeding upon them during the remainder of his healthful life.

The President parried the political thrust in the resolutions by reminding the gentlemen of Albany that although they addressed him as "Democrats," not all Democrats were of their way of thinking.

He on whose discretionary judgment Mr. Vallandigham was arrested and tried is a Democrat, having no old party affinity with me; and the judge who rejected the constitutional view expressed in these resolutions by refusing to discharge Mr. Vallandigham on habeas corpus is a Democrat of better days than these, having received his judicial mantle at the hands of President Jackson. And still more, of all those Democrats who are nobly exposing their lives and shedding their blood on the battlefield, I have learned that many approve the course taken with Mr. Vallandigham, while I have not heard of a single one condemning it.

The President fortified his argument by an incident of pertinent history especially adapted to touch the sympathies of Democrats—the arbitrary arrests made by General Jackson at New Orleans; his defiance of the writ of habeas corpus, and his imprisonment of the judge who had issued it. Near the close of this strong and adroit defense of the action of Burnside the President made a remarkable admission in these words :

And yet let me say that in my own discretion I do not know whether I would have ordered the arrest of Mr. Vallandigham. While I cannot shift the responsibility from myself, I hold that, as a general rule, the commander in the field is the better judge of the necessity in any particular case. . . . It gave me pain when I learned that Mr. Vallandigham had been arrested,—that is, I was pained that there should have seemed to be a necessity for arresting him,—and it will afford me great pleasure to discharge him so soon as I can, by any means, believe the public safety will not suffer by it. I further say that as the war progresses it appears to me, opinion and action, which were in great confusion at first, take shape and fall into more regular channels, so that the necessity for strong dealing with them gradually decreases. I have every reason to desire that it should cease altogether, and far from the least is my regard for the opinions and wishes of those who, like the meeting at Albany, declare their purpose to sustain the Government in every constitutional and lawful measure to suppress the rebellion. Still I must continue to do so much as may seem to be required by the public safety.

There are few of the President's state papers which produced a stronger impression upon the public mind than this. Its tone of candor and courtesy, which did not conceal his stern and resolute purpose; his clear statement of the needs of the country; his terse argument of his authority under the Constitution to suspend the writ of habeas corpus when, in case of rebellion, the public safety required it; his contrast of the venial crime of the simple-minded soldier boy, which was punished by

death, with the deeper guilt of the wily agitator, who claimed immunity through the Constitution he was endeavoring to destroy; the strong, yet humorous, common sense of his doubt whether a permanent taste for emetics could be contracted during a fit of sickness—met with an immediate and eager appreciation among the citizens of the country, and rendered this letter remarkable in the long series of Mr Lincoln's political writings. It is needless to say that it did not meet with equal approbation in all quarters. It was received by the politicians of New York, to whom it was addressed, with the gravest displeasure. They answered in an angry yet forcible paper, claiming that the original act of tyranny by which Mr. Vallandigham was arrested had been aggravated by the claim of despotic power which they assumed to find in the President's letter. They wrote with so much heat and feeling that they hardly paused to measure their epithets; otherwise they would scarcely have been guilty of the impertinence of speaking to the President of his "pretensions to more than legal authority," and of criticising his crystal-clear statement as the "misty and cloudy forms of expression" in which these pretensions are set forth. But it is not worth while to rescue either of these letters from the oblivion which soon overtook them. In the words of Mr. Lincoln on another occasion, "the world little noted nor long remembered them." Their first letter had no function nor result but to call into being the President's admirable reply, and the second was little more than a cry under punishment.

In the State of Ohio the arrest of Mr. Vallandigham had precipitated an issue which was in its solution greatly to the advantage of the cause of the Union. When, on the 11th of June, the Democratic convention of the State met at Columbus, it was found to be completely under the control of those opposed to the war, and the excitement consequent upon Vallandigham's arrest and banishment designated him as the only serious candidate for the office of governor. Nominating him by acclamation was the readiest and most practical way of signifying their disapproval of the proceedings of the Government. They passed a series of resolutions affirming their devotion to the Union, denouncing the arrest and banishment of Vallandigham as a forcible violation of the Constitution and a direct insult offered to the sovereignty of the people of Ohio, saying that the Democratic party was fully competent to decide whether Mr. Vallandigham was a fit man to be nominated for governor, and that the attempt to deprive them of that right by his arrest and banishment was an unmerited imputation upon their intelligence and loyalty.

They therefore called upon the President to restore Mr. Vallandigham to his home in Ohio. The committee appointed to present these resolutions accompanied them with a long letter signed by the most prominent Democrats of Ohio, arguing, upon lines similar to those followed in the Albany letter, that the action of the Government towards Vallandigham was illegal and unconstitutional; that it had created widespread and alarming disaffection among the people of the State; that it was not an offense against any law to contend that the war could not be used as a means of restoring the Union, or that a war directed against slavery would inevitably result in the final destruction of both the Constitution and the Union. They took up the President's letter to the Albany committee and insisted that Mr. Vallandigham was not warring upon the military; they disagreed entirely with the President on the subject of the suspension of the writ of habeas corpus; they represented the President as claiming that the Constitution is different in time of insurrection or invasion from what it is in time of peace or public security, and that he had the right to engraft limitations or exceptions upon these constitutional guarantees whenever, in his judgment, the public safety required it. Having attributed to him these absurd pretensions, they proceeded solemnly to deny them, and ask:

If an indefinable kind of constructive treason is to be introduced and engrafted upon the Constitution unknown to the laws of the land and subject to the will of the President whenever an insurrection or invasion shall occur in any part of this vast country, what safety or security will be left for the liberties of the people?

The President sent a reply to this letter, briefer than the one he had devoted to Albany, and not so full in its discussion of the constitutional question at issue. For his views in this regard he referred the Ohio committee to his Albany letter. He simply repudiated the opinions and intentions which the Ohio committee had gratuitously imputed to him. But he assumed the full responsibility for the exercise of the enormous powers which he believed the Constitution, under the circumstances, conferred upon him.

You ask, in substance, whether I really claim that I may override all the guaranteed rights of individuals on the plea of conserving the public safety—when I may choose to say the public safety requires it. This question, divested of the phraseology calculated to represent me as struggling for an arbitrary personal prerogative, is either simply a question who shall decide, or an affirmation that nobody shall decide, what the public safety does require in cases of rebellion or invasion. The Constitution contemplates the question as likely to occur for decision,

but it does not expressly declare who is to decide it. By necessary implication, when rebellion or invasion comes, the decision is to be made, from time to time, and I think the man whom, for the time, the people have, under the Constitution, made the commander-in-chief of their army and navy, is the man who holds the power, and bears the responsibility of making it. If he uses the power justly, the same people will probably justify him; if he abuses it, he is in their hands to be dealt with by all the modes they have reserved to themselves in the Constitution.

He disclaimed, in courteous language, any purpose of insult to Ohio in Mr. Vallandigham's case; and referring to the peremptory request of the committee that Vallandigham should be released from his sentence, and to the further claim of the committee that the Democracy of Ohio are loyal to the Union, he proposed, on what he considered very easy conditions, to comply with their request. He offered them the following propositions:

1. That there is now a rebellion in the United States, the object and tendency of which is to destroy the National Union, and that, in your opinion, an army and navy are constitutional means for suppressing that rebellion.
2. That no one of you will do anything which, in his own judgment, will tend to hinder the increase or favor the decrease or lessen the efficiency of the army and navy, while engaged in the effort to suppress that rebellion; and
3. That each of you will, in his sphere, do all he can to have the officers, soldiers, and seamen of the army and navy, while engaged in the effort to suppress the rebellion, fed, clad, and otherwise well provided for and supported.

If the committee, or a majority of them, would write their names upon the back of the President's letter, thus committing themselves to these propositions and to nothing else, he would then publish the letter and the names, which publication would be, within itself, a revocation of Vallandigham's sentence. This would leave Mr. Vallandigham himself absolutely unpledged; the President's object being to gain for the cause of the Union so large a moral reinforcement from this clear definition of the attitude of the other gentlemen as to compensate for any damage that Mr. Vallandigham could possibly do on his return. The President concluded this letter with the same frankness

that he used in that to Albany. "Still," he said, "in regard to Mr. Vallandigham and all others, I must hereafter, as heretofore, do so much as the public service may seem to require." This overture of the President was promptly rejected by the committee. They treated it as an evasion on his part of the questions involved in the case, and as implying not only an imputation upon their own sincerity and fidelity as citizens of the United States, but also a concession of the legality of Mr. Vallandigham's arrest and banishment.

Evidently nothing could come from negotiations with parties whose points of view were so far apart as those of the President and the Democratic leaders in New York and Ohio. The case must be resolved by the people of the State whose sovereignty it was said had been violated, and the issue was made in the clearest possible manner by the nomination of Mr. Vallandigham for governor of Ohio. The convention which nominated him determined to leave no doubt of their position, not only denouncing the action of General Burnside and the President, but expressing their deep humiliation and regret at the failure of Governor Tod of Ohio to protect the citizens of the State in the enjoyment and exercise of their constitutional rights. The Union party, meeting at Columbus, nominated for governor John Brough, a war Democrat, and adopted a brief platform of unqualified devotion to the Union, in favor of a most vigorous prosecution of the war, and the laying aside of personal preferences and prejudices, and pledging hearty support to the President. Upon this issue the canvass proceeded to its close. Before it ended, Mr. Vallandigham himself intervened once more — not in person, indeed, but by letters from Canada. On entering the rebel lines he had gone at once to Richmond, where he was kindly and courteously received by the Confederate authorities, although both on his side and on theirs the forms appropriate to the fiction that he was a prisoner of war were carefully observed.¹ After a conference with the leading men of the Confederate Government, he went southward and arrived on the 22d of June at Bermuda in a vessel called the *Lady Davis*, which had run the blockade at Wilmington. He made only a brief stay in Bermuda and then took

¹ John B. Jones, a clerk in the rebel war office, made on the 22d of June, 1863, the following entry in his diary: "To-day I saw the memorandum of Mr. Ould, of the conversation held with Mr. Vallandigham, for file in the archives. He says if we can only hold out this year that the peace party of the North would sweep the Lincoln dynasty out of political existence. He seems to have thought that our cause was sinking, and feared we would submit, which would, of course, be ruinous to his party. But he advises strongly against any invasion of Pennsylvania, for that would unite all

parties at the North, and so strengthen Lincoln's hands that he would be able to crush all opposition and trample upon the constitutional rights of the people. Mr. V. said nothing to indicate that either he or the party had any other idea than that the Union would be reconstructed under Democratic rule. The President [Davis] indorsed with his own pen on this document that in regard to invasion of the North experience proved the contrary of what Mr. V. asserted." [Jones, "A Rebel War Clerk's Diary," Vol. I., pp. 357, 358.]

passage for Halifax, Nova Scotia, where he arrived on the 5th of July. From the Canadian side of Niagara Falls he issued an address to the people of Ohio,¹ which began with this clever and striking exordium:

Arrested and confined for three weeks in the United States a prisoner of state, banished thence to the Confederate States, and there held as an alien enemy and prisoner of war, though on parole, fairly and honorably dealt with, and given leave to depart, an act possible only by running the blockade at the hazard of being fired upon by ships flying the flag of my own country, I found myself first a free man when on British soil. And to-day, under protection of the British flag, I am here to enjoy and, in part, to exercise the privileges and rights which usurpers insolently deny me at home. . . . Six weeks ago, when just going into banishment because an audacious but most cowardly despotism caused it, I addressed you as a fellow-citizen. To-day, and from the very place then selected by me, but after wearisome and most perilous journeyings for more than four thousand miles by land and upon sea, still in exile, though almost within sight of my native State, I greet you as your representative.

He thanked and congratulated the Democrats of Ohio upon the nominations they had made. He indorsed their platform, which he called "elegant in style, admirable in sentiment." He claimed that his arrest was the issue before the country. "The President," he said, "accepts the issue. . . . In time of war there is but one will supreme—his will; but one law—military necessity, and he the sole judge." He was convinced that the war could never be prosecuted to a successful termination.

If this civil war [he said] is to terminate only by the subjugation or submission of the Southern force in arms, the infant of to-day will not see the end of it. . . . Traveling a thousand miles or more, through nearly one-half of the Confederate States, and sojourning for a time at widely different points, I met not one man, woman, or child who was not resolved to perish rather than to yield to the pressure of arms, even in the most desperate extremity.

He announced, therefore, that he returned with his opinion in favor of peace not only unchanged, but confirmed and strengthened.

1 "Rebellion Records," Vol. VII. Documents, pp. 438, 439.

2 While sojourning at Niagara Falls, Mr. Vallandigham had come into communication with a person who called himself William Cornell Jewett of Colorado, who passed his time writing letters to the newspapers and to public men in favor of putting an end to the war by foreign mediation. After the result of the Ohio election had convinced Vallandigham that little was to be expected in the way of peace from the efforts of the Democratic party, he wrote Jewett a letter strongly favoring an immediate acceptance of the mediation of France in the controversy between the States. He said: "The South and the North are both

But nothing availed. Mr. Vallandigham was defeated by the unprecedented majority of 101,000 votes, 62,000 of which were cast in the State and 39,000 by the soldiers in the field, to whom a State statute had given the privilege of voting.

In view of this overwhelming defeat, Mr. Vallandigham thought it prudent to remain during the winter beyond the jurisdiction of the United States. He was in constant correspondence, however, with his associates and adherents,² and demonstrations were made from time to time against the Government for its treatment of him. On the 29th of February, 1864, Mr. Pendleton of Ohio offered a resolution in the House of Representatives that the arrest and banishment of Mr. Vallandigham were "acts of mere arbitrary power in palpable violation of the Constitution and laws of the United States," which was rejected by a strict party vote, 47 Democrats voting in favor of it, and 77 Union members voting against it, only two Democrats voting with the majority. Vallandigham's course in opposition to the war had been so exasperating to the Union sentiment of the country, his speeches had been so full of vehement malice, that even those who thought his original arrest an unjustifiable stretch of military power felt no sympathy with the object of it and were inclined to acquiesce in the President's disposition of the case. The situation was not without a humorous element also, to which the American mind is always hospitable. The spectacle of this furious agitator, condemned by court-martial to a long imprisonment and then handed over by the contemptuous mercy of the President to the care and keeping of his friends beyond the Union lines; his frantic protests that the Confederates were not his friends, but that he was their most formidable and dreaded enemy; the friendly receptions and attentions he met with in the South and among the sympathizing British officials in the West Indies and the Northern provinces; his nomination by the Democratic convention of his State, which was forced immediately to apply to the President to give them back their candidate—affected the popular mind as an event rather ridiculous than

indebted to the great powers of Europe for having so long withheld recognition from the Confederate States. The South has proved her ability to maintain herself by her own strength and resources, without foreign aid, moral or material; and the North and West—the whole country, indeed—these great powers have served incalculably, by holding back a solemn proclamation to the world that the Union of these States was finally and formally dissolved. They have left to us every motive and every chance for reunion. . . . Foreign recognition now of the Confederate States could avail little to delay or prevent final reunion." (W. C. Jewett, Letter to "Liverpool Mercury," November 4.)

serious, and the constitutional question involved received probably less attention than it deserved. His letters from Canada aroused little or no sympathy, and when, in June, 1864, he returned to the United States, the President declined to take any notice of his presence.¹

Emboldened by impunity, Vallandigham began at political meetings a new series of speeches more violent in tone than those which had caused his arrest. But as the effect of them was clearly beneficial to the Union cause, no means were taken to silence him. He defied the Government and the army; he made vague threats that in case he was arrested the persons and property of those instigating such a proceeding should be held as hostages.² He was not molested, and in August was allowed to take a prominent part in the National Democratic Convention at Chicago, where he rendered valuable service to the Union party³ as chairman of the Committee on Resolutions, and offered the motion that the nomination of General McClellan should be made unanimous.

THE DEFEAT OF THE PEACE PARTY AT THE POLLS.

THE reverses sustained by the Union arms during the summer and autumn of 1862 had their direct effect in the field of politics. Every unsuccessful movement, and especially every defeat of the National forces, increased the strength and the audacity of the opposition to the Government and the war. There were, it is true, hundreds of thousands of Democratic soldiers in the ranks fighting to uphold the Union; and as a result of this—because men's sentiments are far more influenced by their actions than their actions are inspired by their sentiments—they were generally induced to take the Republican view of public affairs, and by degrees to unite themselves with the Republican party. But they seemed to exert no influence whatever upon their friends and re-

lations at home. The Democratic party remained as solid in its organization, as powerful in its resistance to the Government, as ever. The great liberating measure of the President, the proclamation of September, had its influence also in exasperating and consolidating the opposition. This act, which not only renders his name immortal, but glorifies the age in which he lived, contributed to the defeat of his party in some of the most important States of the Union. In the autumn of 1862 the Democrats carried New York, electing Horatio Seymour governor over that patriotic and accomplished gentleman, General James S. Wadsworth; the adjoining State of New Jersey was also carried by them. There were heavy losses of congressmen in the great States of Pennsylvania, Ohio, and Indiana; and even in the President's own State of Illinois the opposition inflicted upon him a peculiarly painful defeat, electing nine of his opponents and only four of his friends.

The Union sentiment was still sufficiently powerful throughout the North to elect an easy working majority in the House of Representatives, and the Republican predominance in the Senate was, of course, untouched; so that so far as legislation was concerned there was no danger that the Government would be embarrassed by an opposition majority. But the losses it met with in the elections were none the less serious and discouraging. A war disapproved by a free people cannot long be carried on by the will of the Government, and if the ratio of losses indicated by the elections of 1862 had continued another year the permanency of the Republic would have been gravely compromised. But the intelligence of the American people gradually acknowledged the wisdom and accepted the leadership of the President, and moved forward to the advanced platform upon which Mr. Lincoln had placed himself. The right of suffrage given by the State legislatures to the soldiers in the field reinforced the voting strength of the Republicans

¹ When Mr. Lincoln first heard of Vallandigham's return he wrote a joint letter to Governor Brough and General Heintzelman, who had succeeded Burnside in command of the department, directing them to "consult together freely; watch Vallandigham and others closely, and upon discovering any palpable injury or imminent danger to the military proceeding from him, them, or any of them, arrest all implicated; otherwise do not arrest without further order. Meanwhile report the signs to me from time to time." But, after writing the letter, he concluded not to send it. [Unpublished MS., June 20, 1864.]

He was, in fact, a little nonplused by Vallandigham's return. He had seriously thought of annulling the sentence of exile, but had been too much occupied with other matters to do it. After he had returned, the President said: "The only question to decide was whether he could afford to disregard the contempt of authority and breach of discipline displayed in Vallandigham's

action; otherwise, it could not but result in benefit to the Union cause to have so violent and indiscreet a man go to Chicago as a firebrand to his own party." Fernando Wood had told him that he could do nothing more politic than to bring Vallandigham back. "In that case," he said, "he could promise him two Democratic candidates for the Presidency this year. These war Democrats," said Mr. Wood, "are scoundrelly hypocrites; they want to oppose you and favor the war at once, which is nonsense. There are but two sides in this fight — yours and mine; war and peace. You will succeed while the war lasts, I expect, but we shall succeed when the war is over. I intend to keep my record clear for the future."

² McPherson, "History of the Rebellion," p. 176.

³ The Illinois Democrats were greatly troubled by Vallandigham's apparition. W. R. Morrison said to J. H., June 18, "How much did you fellows give Fernandy Wood for importing him?" [J. H., Diary.]

at home, and the ballot and the bullet worked harmoniously together. Nevertheless, in the autumn of 1862 Mr. Lincoln was exposed to the bitterest assaults and criticisms from every faction in the country. His conservative supporters reproached him with having yielded to the wishes of the radicals; the radicals denounced him for being hampered, if not corrupted, by the influence of the conservatives. On one side he was assailed by a clamor for peace, on the other by vehement and injurious demands for a more vigorous prosecution of the war. He stood unmoved by these attacks, converging upon him from every quarter, and rarely took the trouble to defend himself against them. Coming from every side, the pressure neutralized itself, like that of the atmosphere. To one friend who assailed him with peculiar candor, he made a reply which may answer as a sufficient defense to all the radical attacks which were so rife at the time.

I have just received and read your letter of the 20th. The purport of it is that we lost the late elections, and the Administration is failing because the war is unsuccessful, and that I must not flatter myself that I am not justly to blame for it. I certainly know that if the war fails, the Administration fails, and that I will be blamed for it, whether I deserve it or not. And I ought to be blamed, if I could do better. You think I could do better; therefore you blame me already. I think I could not do better; therefore I blame you for blaming me. I understand you now to be willing to accept the help of men who are not Republicans, provided they have "heart in it." — Agreed. I want no others. But who is to be the judge of hearts, or of "heart in it"? If I must discard my own judgment, and take yours, I must also take that of others; and by the time I should reject all I should be advised to reject, I should have none left, Republicans or others — not even yourself. For be assured, my dear sir, there are men who have "heart in it" that think you are performing your part as poorly as you think I am performing mine. I certainly have been dissatisfied with the slowness of Buell and McClellan; but before I relieved them I had great fears I should not find successors to them who would do better; and I am sorry to add, that I have seen little since to relieve those fears. I do not clearly see the prospect of any more rapid movements. I fear we shall at last find out the difficulty is in our case rather than in particular generals. I wish to disparage no one — certainly not those who sympathize with me; but I must say I need success more than I need sympathy, and that I have not seen the so much greater evidence of getting success from my sympathizers than from those who are denounced as the contrary. It does seem to me that in the field the two classes have been very much alike in what they have done and what they have failed to do. In sealing their faith with their blood, Baker, and Lyon, and Bohlen, and Richardson, Republicans, did all that men could do; but did they any more than Kearney, Stevens, and Reno, and Mansfield, none of whom were Republicans, and some at least

of whom have been bitterly and repeatedly denounced to me as secession sympathizers? I will not perform the ungrateful task of comparing cases of failure. In answer to your question, Has it not been publicly stated in the newspapers, and apparently proved as a fact, that from the commencement of the war the enemy was continually supplied with information by some of the confidential subordinates of as important an officer as Adjutant-General Thomas? I must say "No," as far as my knowledge extends. And I add that if you can give any tangible evidence upon the subject, I will thank you to come to this city and do so.¹

The movements for peace which were made at this period on both sides of the line were feeble and without result. Mr. Foote of Tennessee introduced a resolution in the Confederate House of Representatives to the effect "that the signal success with which Divine Providence has so continually blessed our arms for several months past would fully justify the Confederate Government in dispatching a commissioner or commissioners to the Government at Washington City, empowered to propose the terms of a just and honorable peace." Mr. Holt of Georgia offered as a substitute a resolution setting forth that the people of the Confederate States have been always anxious for peace, and that "whenever the Government of the United States shall manifest a like anxiety it should be the duty of the President of the Confederate States to appoint commissioners to treat upon the subject." But both resolution and substitute were laid on the table by a large majority. In the Senate of the United States Mr. Garrett Davis offered a resolution² recommending to the States to choose delegates to a convention to be held at Louisville, Kentucky, to take into consideration the condition of the United States and the proper means for a restoration of the Union; this was laid upon the table. Mr. Vallandigham also offered resolutions for peace in the House of Representatives; but neither in the North nor in the South was there at that time a party sufficiently powerful to bring any measures for peace to the point of legislation, though on both sides there was a strong current of agitation for the termination of the war, which, being regarded and treated as treasonable, was easily held in check.

From time to time there were unauthorized attempts of individuals, inspired by restlessness or a love of notoriety, to set on foot amateur negotiations for peace. One of the most active and persistent of the peace politicians of the North was Fernando Wood of New York. He held a unique position in his party. While strongly sympathizing with the secessionists, and openly affiliating with them in public, he

¹ Lincoln to Schurz, Nov. 24, 1862. MS.

² "Congressional Globe," third session Thirty-seventh Congress, Part I., p. 4, Dec. 2, 1862.

nevertheless tried to keep up a sort of furtive confidential relation with the leading members of the Government. He frequently visited the White House, the State Department, and the Treasury Department, but emulated the discretion of Nicodemus as to the hour of his visits. No rebuffs daunted him; he apparently cared nothing for the evident distrust with which his overtures were received. He kept them up as long as the war lasted, probably in the hope that the time might come for him to play a conspicuous and important part in the final negotiations for peace. He used every occasion to ingratiate himself with the President. He wrote, congratulating him on the change in the War Department in the beginning of 1862, as indicating the President's "ability to govern, and also his executive power and will."¹ Later in the same year he wrote complaining that the radical abolitionists of New York represented him as hostile to the Administration and as in sympathy with the States in rebellion against the Government. He denied these charges, and begged the President to "rely upon his support in his efforts to maintain the integrity of the Union."¹ In September, after making a speech furiously denouncing the Government for its arbitrary arrests, he wrote a confidential note to the President, making the usual explanation that he had been incorrectly reported: "All I said applied to those arrests that had been made through error or misrepresentation, and exclusively as to the truly loyal." In November, after a similar tirade, he wrote to Mr. Seward, with a striking lack of originality, making the same plea of an incorrect report. "I did not," he said, "utter the treasonable sentiments reported." Having in this way, as he thought, established himself in the confidence of the President, he wrote him a letter on the 8th of December, 1862, pretending that he had "reliable and truthful authority" to say that the Southern States would send representatives to the next Congress provided that a full and general amnesty should permit them to do so, no guaranty or terms being asked for other than the amnesty referred to.

As an humble but loyal citizen [he said], deeply impressed with the great necessity of restoring the Union of these States, I ask your immediate attention to this subject. The magnitude of the interests at stake warrant some executive action predicated upon this information, if it be only to ascertain if it be grounded upon even probable foundation. If it shall prove groundless no harm shall have been done, provided the inquiry be made, as it can be, without compromising the Government or injury to the cause in which it is now engaged. If, however, it shall prove well founded, there is no estimate too high to place upon its national value.

¹ MS.

² McPherson, "History of the Rebellion," p. 296.

The immediate object of his letter became evident in the following paragraph:

Now, therefore, Mr. President, I suggest that gentlemen whose former political and social relations with the leaders of the Southern revolt [*sic*] may be allowed to hold unofficial correspondence with them on this subject—the correspondence to be submitted to you. It may be thus ascertained what, if any, credence may be given to these statements, and also whether a peaceful solution of the present struggle may not be attainable.²

The President answered on the 12th of December. Referring to the first paragraph above quoted, he said:

I strongly suspect your information will prove to be groundless; nevertheless, I thank you for communicating it to me. Understanding the phrase in the paragraph above quoted, "the Southern States would send representatives to the next Congress," to be substantially the same as that the people of the Southern States would cease resistance, and would re-inaugurate, submit to, and maintain the national authority within the limits of such States, under the Constitution of the United States, I say that in such case the war would cease on the part of the United States, and that if, within a reasonable time, "a full and general amnesty" were necessary to such end, it would not be withheld. I do not think it would be proper now for me to communicate this formally or informally to the people of the Southern States. My belief is that they already know it; and when they choose, if ever, they can communicate with me unequivocally. Nor do I think it proper now to suspend military operations to try any experiment of negotiation. I should nevertheless receive with great pleasure the exact information you now have, and also such other as you may in any way obtain. Such information might be more valuable before the 1st of January than afterwards.

These last words refer, of course, to the impending proclamation of emancipation.

Between the date of Mr. Lincoln's letter and Mr. Wood's reply came the frightful carnage at Fredericksburg, which emboldened Mr. Wood to say that the President's reply had filled him with profound regret.

It declines [he said] what I had conceived to be an innocent effort to ascertain the foundation for information in my possession of a desire in the South to return to the Union. It thus appears to be an indication on your part [*sic*] to continue a policy which, in my judgment, is not only unwise, but, in the opinion of many, is in conflict with the constitutional authority vested in the Federal Government.

He protested earnestly against this policy, and felt encouraged to renew the suggestions of his letter of the 8th.

I feel [he said] that military operations so bloody and exhausting as ours must sooner or later be suspended. The day of suspension must come. The

only question is whether it shall be before the whole American people, North and South, shall be involved in general ruin, or whether it shall be whilst there is remaining sufficient of the recuperative element of life by which to restore our once happy, prosperous, and peaceful American Union.

To this letter the President made no reply.

Other volunteers from time to time tendered their services in the same field. Mr. Duff Green, a Virginia politician, wrote to the President from Richmond as early as the 20th of January, asking permission to visit Washington. He said that if he could see Mr. Lincoln and converse with him on the subject he could do much to pave the way for an early termination of the war. Receiving no encouragement from Washington, he asked the same permission from Richmond, but this request came to nothing. In the summer of 1863, however, an effort for peace negotiations was made, which came with such high sanction and involved personages of such individual and political importance that it requires particular mention.

About the middle of June, Mr. Alexander H. Stephens, Vice-President of the Southern Confederacy, became convinced that the time was auspicious for initiating negotiations for peace. He thought he saw reasons for great encouragement in the attitude of the North; the great gains of the Democratic party in the last autumnal elections, the pamphlet of Mr. George Ticknor Curtis attacking the measures of the Administration, a public meeting in favor of peace held without disturbance in the city of New York in which violent speeches were made by Mr. Fernando Wood and others, and the nomination for governor of Ohio of Vallandigham are all mentioned by him¹ as facts going to show that the people of the North were wearying of the war. On this insufficient evidence he wrote to Mr. Davis proposing that he should go to Washington, ostensibly to negotiate some questions involving the exchange of prisoners, but saying that he "was not without hopes that indirectly he could now turn attention to a general adjustment, upon such basis as might ultimately be acceptable to both parties, and stop the further effusion of blood in a contest so irrational, unchristian, and so inconsistent with all recognized American principles." He assured Mr. Davis that he entertained but one idea of the basis of final adjustment—the recognition of the sovereignty of the States, and the right of each in its sovereign capacity to determine its own destiny. He did not believe the Federal Government was yet ripe for such acknowledgment, but he did believe that the time had come for a

proper presentation of the question to the authorities at Washington. "While, therefore," he says, "a mission might be dispatched on a minor point, the greater one could possibly, with prudence, discretion, and skill, be opened to view and brought in discussion, in a way that would lead eventually to successful results. This would depend upon many circumstances," he adds complacently, "but no little upon the character and efficiency of the agent. . . . So feeling, I have been prompted to address you these lines." Upon the receipt of this letter Mr. Davis sent a telegram requesting his Vice-President to go immediately to Richmond. He arrived there on the 22d of June; but in the ten days which had elapsed since his letter was written he found that changes of the utmost importance had taken place in the military situation. On the one hand the Confederate authorities had despaired of the condition of Pemberton at Vicksburg, and expected that any day might bring them tidings of his surrender, but on the other hand they were anticipating with sanguine enthusiasm the most magnificent results from Lee's invasion of Pennsylvania. Mr. Stephens, in the work which he wrote at his leisure after the war was ended, represents that in these changed conditions he was inclined to give up his mission, thinking that no good could result from it, as the movement of Lee into Pennsylvania would greatly excite the war spirit and strengthen the war party—a view of the case in which Mr. Davis positively declined to agree. He thought Mr. Lincoln would be more likely to receive a commissioner for peace if General Lee's army was actually threatening Washington than if it was lying quietly south of the Rappahannock. The Confederate Cabinet being called together, they agreed with Mr. Davis; they thought the Federal Government might be best approached while under the threat of the guns of Lee, and before they should receive fresh hope and encouragement from the surrender of Pemberton, which was now considered inevitable. An arrangement was made for Stephens to proceed by land on the route taken by Lee's army, and to communicate with the Washington authorities from his headquarters;² but excessive rains and the badness of the roads caused a change of route, and the invalid Vice-President was therefore saved a most distressing journey, from which he would have come "bootless home and weather-beaten back." Mr. Mallory, the Secretary of the Confederate Navy, gave him a small steamer, and accompanied by Mr. Robert Ould as his secretary, he steamed away to Fort Monroe. In any case his mission

¹ Stephens, "War between the States," Vol. II., p. 558.

² Stephens, "War between the States," Vol. II., p. 566.

would probably have been fruitless, but he states only the truth when he claims that he arrived at an unlucky moment. He communicated with Admiral Lee in Hampton Roads on the Fourth of July, just after Lee's march to the North had ended in disastrous failure at Gettysburg. He sent the admiral a letter stating that he was "bearer of a communication in writing from Jefferson Davis, Commander-in-Chief of the Confederate land and naval forces, to Abraham Lincoln, Commander-in-Chief of the Army and Navy of the United States," and that he desired to proceed directly to Washington in his own steamer, the *Torpedo*. The titles by which Mr. Lincoln and Mr. Davis were designated in this note had been the subject of anxious consultation in Richmond. Stephens's commission from the Confederate President gave Mr. Lincoln the title above quoted to avoid the necessity of claiming the style of President for Mr. Davis; but in case Mr. Lincoln should stand upon his dignity and refuse the letter addressed to him as Commander-in-Chief of the Army and Navy, Mr. Davis had prepared for Mr. Stephens a duplicate letter addressed to Mr. Lincoln as President and signed by Mr. Davis in the same style; if to this letter objections were made, on the ground that Mr. Davis was not recognized to be President of the Confederacy, Mr. Stephens's mission was then to be at an end, "as such conference," Mr. Davis said, "is admissible only on a footing of perfect equality." But all this care, foresight, and punctilio went for nothing. As soon as Mr. Lincoln received the telegram in which Admiral Lee announced to the Secretary of the Navy the arrival of Mr. Stephens, he immediately wrote on the back of the dispatch a note to be sent by Mr. Welles to Admiral Lee, in which, without paying any attention whatever to the style of Mr. Stephens's application, he went directly to the heart of the matter. This draft of an order ran:

You will not permit Mr. Stephens to proceed to Washington or to pass the blockade. He does not make known the subjects to which the communication in writing from Mr. Davis relates, which he bears and seeks to deliver in person to the President, and upon which he desires to confer. Those subjects can only be military, or not military, or partly both. Whatever may be military will be readily received if offered through the well understood military channel. Of course nothing else will be received by the President when offered, as in this case, in terms assuming the independence of the so-called Confederate States, and anything will be received and carefully considered by him when offered by any influential person, or persons, in terms not assuming the independence of the so-called Confederate States.¹

This note he afterwards evidently considered as entering too much into detail, and he there-

fore caused the Secretary of the Navy to send this brief reply to Admiral Lee:

The request of A. H. Stephens is inadmissible. The customary agents and channels are adequate for all needful communication and conferences between the United States forces and the insurgents.

Mr. Stephens, when he came afterwards to relate the history of this abortive mission,² frankly admitted that his ulterior purpose was not so much to act upon Mr. Lincoln and the then ruling authorities at Washington as through them, when the correspondence should be published, upon the great mass of the people in the Northern States, who were becoming, he thought, so sensitively alive to the great danger of their own liberties. He wanted, he said, "to deeply impress the growing constitutional party at the North with a full realization of the true nature and ultimate tendencies of the war"; to show them "that the surest way to maintain their liberties was to allow us the separate enjoyment of ours."

Though this hope was baffled by the rebuff which Mr. Stephens received at Fort Monroe, which prevented him from laying before his sympathizing friends of the North his view of their endangered liberties and the best means of preserving them, it may be doubted whether the partisans of peace at the North lost anything by this incident. Certainly, throughout the whole summer of 1863, they fought their losing battle with a courage and a determination equal to that which their sympathizers were displaying in the South. But the very energy and malice with which they carried on the contest roused the loyal people of the North to still greater efforts and increased the dimensions of their ultimate triumph. The election in New Hampshire, the first which took place in the spring of 1863, while it brought victory to the Republicans, still gave painful evidence of the bitter hostility of the Democratic party to the prosecution of the war. Senator Daniel Clark, writing to Mr. Lincoln,³ said:

Scarcely a Democrat supported the Administration. Almost every one who had heretofore avowed himself for the Union and the country turned in for peace and party. Yet we have beaten them. They have retired from the field. The two houses in convention will choose a Republican governor, and Frank Pierce in retirement will not have beaten Abraham Lincoln in office.

There were after this, during the summer and early autumn, moments of depression and discouragement in which it seemed that the malignant energy displayed by the opposition

¹ Lincoln, autograph MS.

² Stephens, "War between the States," Vol. II., p. 561.

³ March 13. MS.

could not be without disastrous effect, and as the day of election drew near in the "October States" both sides felt justified in renewing their utmost efforts. In Pennsylvania the contest presented features of special interest. Andrew G. Curtin,¹ who, as governor of the State, had given not only efficient but enthusiastic support to the war, was opposed by Judge George W. Woodward, who, as one of the Democratic justices of the Supreme Court of the State, had just aimed a blow at the prosecution of the war which would have been fatal if followed up and sustained by other courts. He had declared the enrollment law unconstitutional, and upon the record thus made had been nominated for governor. The friends of Mr. Curtin relied on the war spirit to carry their candidate through, and towards the close of the campaign they claimed, most unjudiciously, that General McClellan, whose popularity was still great among the Democrats of Pennsylvania, was in favor of the election of Curtin, with whom he had always sustained friendly personal relations. Just on the eve of election this matter came to the attention of McClellan. Desiring to keep his political standing with his party intact, he sought an interview with Judge Woodward and published a letter declaring that, "having had a full conversation with the judge, he found that their views agreed, and that he regarded his election as governor of Pennsylvania called for by the interests of the nation."² But even this dilatory reënforcement of the peace party was not enough to save their canvass; the Republicans of the State were as thoroughly alive to the emergency as their opponents, and the vote polled was greater by many thousands than had ever been cast before. Governor Curtin was reëlected by a majority of over fifteen thousand, and Chief-Justice Lowrie, who with Woodward had aimed from the bench the most mischievous blow ever dealt at the enrollment bill, was defeated for reëlection by Daniel Agnew, and the court, thus reconstituted, reversed its previous judgment.

In Ohio the contest was marked with equal bitterness and enthusiasm. The Democrats, working against hope, but with undaunted persistency for their banished candidate, Vallandigham, were buried under the portentous

majority of one hundred thousand votes. This overwhelming triumph of the Union party in the October States made success certain in the general election of the next month. The tide had turned, and the current now swept steadily onward in one way. The great State of New York, which had been shaken to its center by the frightful crimes and excitement incident to the draft riots, now witnessed a great popular political reaction; and reversing the majority of ten thousand given to Seymour in 1862, the Republican State ticket was elected by thirty thousand, and the legislature also passed into the hands of the Unionists. The success of the year which was dearest to the heart of the President was that attained in Maryland. The second passage of rebel armies over her territory seemed at last to have purged the secession sentiment from that State, and four Unionists out of her five districts were elected to Congress, and an emancipation State ticket was carried by twenty thousand majority.

Throughout the West the Union sentiment asserted itself with irresistible strength. An attempt marked with singular boldness and energy had been made during the year by the leaders of the peace party to gain control of the great States of the North-west, which for a time seemed to them so promising that the rebel emissaries in Canada, being informed of it, gave encouragement to their principals in Richmond to hope for the formation of a North-western Confederacy in opposition to the National Government. Meetings were continually held, secret societies were everywhere active, and every effort was made in public and in private to form a basis of organized hostility against the Government. The culmination of this important and dangerous movement may be regarded as having taken place at Springfield, Illinois, on the 17th of June. A great mass meeting, enormous in numbers and wild with enthusiasm, under the presidency of Senator Richardson, listened during all a summer's day to the most furious and vehement oratory, and at last passed resolutions demanding nothing less than submission to the South. They resolved "that a further offensive prosecution of this war tends to subvert the Constitution and the Government, and entails upon this nation all the disastrous conse-

¹ To show how the political emergency overcame the most inveterate personal hostilities, we give a characteristic letter which Simon Cameron wrote to Lincoln September 18, 1863. He said that Curtin would be reëlected, and that all his friends would support him, but that "if the result were to operate simply on his own private fortunes, there are many good Republicans and pious Christians who would see him in — first. He will cheat us when it is over, and, if he can, sell us to our enemies. But he is now, by one of those accidents which sometimes control great events, the rep-

resentative of the loyalty of this State, and his defeat might be disastrous to the country. My heart is too much engaged in the struggle for ending the rebellion to allow me to hesitate at even the support of Mr. Curtin."

² This letter of McClellan was a severe disappointment to Curtin, who had regarded him as his friend. A friend (now Sir John Puleston, M. P.) who was with him when the newspaper containing McClellan's letter was received said, "*Et tu, Brute!*" was not a circumstance to it." [J. H., Diary.]

quences of misrule and anarchy"; that they were "in favor of peace upon a basis of restoration of the Union"; for the accomplishment of which they proposed "a national convention to settle upon terms of peace, which should have in view the restoration of the Union as it was, and the securing by constitutional amendment of such rights of the several States and people thereof as honor and justice demand."

This bold challenge was accepted by the Republicans with equal determination and superior means. The guns of Vicksburg and of Gettysburg might have been regarded as sufficient answer to the resolutions of the Springfield mass meeting, but the Copperheads¹ of that State only clamored the louder for peace after these great victories, and the political canvass went on with tenfold vehemence in the tacit truce of arms that followed the battles of July. The Republicans prepared for the beginning of September the greatest mass meeting of the campaign; and to give especial significance to the occasion, it was to take place at the home of Lincoln, on the very spot where defiant treason had trumpeted to the world its challenge in June.

It was the ardent wish of the Illinois Republicans that Mr. Lincoln might be with them on this important day. Mr. James C. Conkling, chairman of the committee of arrangements, wrote urging him to come in person.

There is a bad element [he said] in this State, as well as others, and every public demonstration in favor of law and order and constitutional government will have a favorable influence. The importance of our meeting, therefore, at the capital of a State which has sent so many soldiers into the army, and which exercises such a controlling power in the West, cannot be overestimated.²

For a moment the President cherished the hope of going to Springfield and once more in his life renewing the sensation, so dear to politicians, of personal contact with great and enthusiastic masses, and of making one more speech to shouting thousands of his fellow-citizens. The temptation, however, only lasted for a moment, and instead of going he wrote a letter which was read amid the hushed attention of an immense auditory, and passed in a moment into the small number of American political classics. The meeting was an enormous one in numbers and in hot, tumultuous feeling; it was addressed by the greatest orators of the Republican party; speaking went on

continuously at many stands from morning until twilight. The speeches were marked by the most advanced and unflinching Republican doctrine; the proclamation of emancipation, the arming of negroes, received universal adhesion, and of course every reference to Mr. Lincoln's name was received with thunders of applause; but with all these features of the highest interest and importance, the meeting can only live in the memories of men as the occasion of the letter which Mr. Lincoln wrote to its chairman:

Your letter, inviting me to attend a mass meeting of unconditional Union men, to be held at the capital of Illinois on the 3d day of September, has been received. It would be very agreeable to me to thus meet my old friends at my own home, but I cannot just now be absent from here so long as a visit there would require.

The meeting is to be of all those who maintain unconditional devotion to the Union, and I am sure my old political friends will thank me for tendering, as I do, the nation's gratitude to those other noble men whom no partisan malice or partisan hope can make false to the nation's life.

There are those who are dissatisfied with me. To such I would say: You desire peace, and you blame me that we do not have it. But how can we attain it? There are but three conceivable ways. First, to suppress the rebellion by force of arms. This I am trying to do. Are you for it? If you are, so far we are agreed. If you are not for it, a second way is to give up the Union. I am against this. Are you for it? If you are, you should say so plainly. If you are not for force, nor yet for dissolution, there only remains some imaginable compromise.

I do not believe any compromise embracing the maintenance of the Union is now possible. All I learn leads to a directly opposite belief. The strength of the rebellion is its military—its army. That army dominates all the country and all the people within its range. Any offer of terms made by any man or men within that range, in opposition to that army, is simply nothing for the present, because such man or men have no power whatever to enforce their side of a compromise if one were made with them.

To illustrate: Suppose refugees from the South and peace-men of the North get together in convention and frame and proclaim a compromise embracing a restoration of the Union; in what way can that compromise be used to keep Lee's army out of Pennsylvania? Meade's army can keep Lee's army out of Pennsylvania, and I think can ultimately drive it out of existence. But no paper compromise to which the controllers of Lee's army are not agreed can at all affect that army. In an effort at such compromise we should waste time which the enemy would improve to our disadvantage, and that would be all.

Democrats, who in some instances wore butternuts as breastpins, and in others, with a clever return upon their opponents, cut the copper head of the Goddess of Liberty from the old-fashioned red cent and bore it as their cognizance.

² Conkling to Lincoln, Aug. 21. MS.

¹ The "peace Democrats" of the North were variously nicknamed "Butternuts" and "Copperheads." The former name referred to the domestic dye which gave color to the uniforms of the Confederate soldiers, and the latter was the name of the most venomous snake in the West. In each case the nickname was assumed and borne with bravado by the younger

A compromise, to be effective, must be made either with those who control the rebel army, or with the people first liberated from the domination of that army by the successes of our own army. Now, allow me to assure you that no word or intimation from that rebel army, or from any of the men controlling it, in relation to any peace compromise, has ever come to my knowledge or belief. All charges and insinuations to the contrary are deceptive and groundless. And I promise you that if any such proposition shall hereafter come, it shall not be rejected and kept a secret from you. I freely acknowledge myself the servant of the people according to the bond of service,—the United States Constitution,—and that as such I am responsible to them.

But, to be plain, you are dissatisfied with me about the negro. Quite likely there is a difference of opinion between you and myself upon that subject. I certainly wish all men could be free, while I suppose you do not. Yet I have neither adopted nor proposed any measure which is not consistent with even your view, provided you are for the Union. I suggested compensated emancipation, to which you replied you wished not to be taxed to buy negroes. But I had not asked you to be taxed to buy negroes, except in such way as to save you from greater taxation to save the Union exclusively by other means.

You dislike the Emancipation Proclamation, and perhaps would have it retracted. You say it is unconstitutional. I think differently. I think the Constitution invests its commander-in-chief with the law of war in time of war. The most that can be said—if so much—is that slaves are property. Is there, has there ever been, any question that by the law of war, property, both of enemies and friends, may be taken when needed? And is it not needed whenever taking it helps us or hurts the enemy? Armies, the world over, destroy enemies' property when they cannot use it, and even destroy their own to keep it from the enemy. Civilized belligerents do all in their power to help themselves or hurt the enemy, except a few things regarded as barbarous or cruel. Among the exceptions are the massacre of vanquished foes and non-combatants, male and female.

But the proclamation, as law, either is valid or is not valid. If it is not valid it needs no retraction. If it is valid it cannot be retracted, any more than the dead can be brought to life. Some of you profess to think its retraction would operate favorably for the Union. Why better after the retraction than before the issue? There was more than a year and a half of trial to suppress the rebellion before the proclamation issued, the last one hundred days of which passed under an explicit notice that it was coming, unless averted by those in revolt returning to their allegiance. The war has certainly progressed as favorably for us since the issue of the proclamation as before.

I know, as fully as one can know the opinion of others, that some of the commanders of our armies in the field, who have given us our most important successes, believe the emancipation policy and the use of the colored troops constitute the heaviest blow yet dealt to the rebellion, and that at least one of these important successes could not have been achieved when it was but for the aid of black

soldiers. Among the commanders holding these views are some who have never had any affinity with what is called "Abolitionism" or with "Republican party politics," but who hold them purely as military opinions. I submit these opinions as being entitled to some weight against the objections often urged that emancipation and arming the blacks are unwise as military measures, and were not adopted as such in good faith.

You say you will not fight to free negroes. Some of them seem willing to fight for you—but no matter. Fight you, then, exclusively to save the Union. I issued the proclamation on purpose to aid you in saving the Union. Whenever you shall have conquered all resistance to the Union, if I shall urge you to continue fighting, it will be an apt time then for you to declare you will not fight to free negroes. I thought that in your struggle for the Union, to whatever extent the negroes should cease helping the enemy, to that extent it weakened the enemy in his resistance to you. Do you think differently? I thought that whatever negroes can be got to do as soldiers leaves just so much less for white soldiers to do in saving the Union. Does it appear otherwise to you? But negroes, like other people, act upon motives. Why should they do anything for us if we will do nothing for them? If they stake their lives for us, they must be prompted by the strongest motive, even the promise of freedom. And the promise, being made, must be kept.

The signs look better. The Father of Waters again goes unvexed to the sea. Thanks to the great North-west for it. Nor yet wholly to them. Three hundred miles up they met New England, Empire, Keystone, and Jersey, hewing their way right and left. The sunny South, too, in more colors than one, also lent a hand. On the spot, their part of the history was jotted down in black and white. The job was a great national one, and let none be banned who bore an honorable part in it. And while those who have cleared the great river may well be proud, even that is not all. It is hard to say that anything has been more bravely and well done than at Antietam, Murfreesboro', Gettysburg, and on many fields of lesser note. Nor must Uncle Sam's web-feet be forgotten. At all the watery margins they have been present. Not only on the deep sea, the broad bay, and the rapid river, but also up the narrow, muddy bayou; and wherever the ground was a little damp, they have been and made their tracks. Thanks to all. For the great Republic—for the principle it lives by and keeps alive—for man's vast future—thanks to all.

Peace does not appear so distant as it did. I hope it will come soon, and come to stay; and so come as to be worth the keeping in all future time. It will then have been proved that among free men there can be no successful appeal from the ballot to the bullet, and that they who take such appeal are sure to lose their case and pay the cost. And there will be some black men who can remember that with silent tongue, and clenched teeth, and steady eye, and well-poised bayonet they have helped mankind on to this great consummation; while I fear there will be some white ones unable to forget that with malignant heart and deceitful speech they strove to hinder it.

Still let us not be over sanguine of a speedy, final triumph. Let us be quite sober. Let us diligently

apply the means, never doubting that a just God, in His own good time, will give us the rightful result.¹

Among all the state papers of Mr. Lincoln from his nomination to his death this letter is unique. It may be called his last stump speech, the only one made during his Presidency. We find in it all the qualities that made him in Illinois the incomparable political leader of his party for a generation. There is the same close, unerring logic, the same innate perception of political conduct, the same wit and sarcasm, the same touch of picturesque eloquence, which abounded in his earlier and more careless oratory, but all wonderfully heightened, strengthened, and chastened by a sense of immense responsibility. In this letter, which the chairman took only ten minutes to read, he said more than all the orators at all the stands. It was, like most of his speeches, addressed principally to his opponents, and in this short space he appealed successively to their reason, to their sympathies, and to their fears. By a succession of unanswerable syllogisms he showed them how untenable was their position. He appealed to their generosity, to their sense of duty, to their patriotism, even to their love of glory, and in the end he held out to them with dignified austerity the prospect of shame and self-reproach which lay before them if they continued their hostility to the sacred cause of humanity and nationality. The style of this letter is as remarkable as its matter; each sentence, like a trained athlete, is divested of every superfluous word and syllable, yet nowhere is there a word lacking, any more than a word too much. Modest as he was, he knew the value of his own work, and when a friend called to ask him if he was going to Springfield he replied, "No, I shall send them a letter instead; and it will be a rather good letter."²

The Springfield convention, taking up the gauntlet thrown down by the disloyal mass-meeting of June, resolved "that we will lay aside all party questions and forget all party prejudices and devote ourselves unreservedly to the

support of our Government, until the rebellion shall be finally and forever crushed": they resolved that "whatever else may die, the Union shall live to perpetuate civil liberty; whatever else may perish, the Government shall survive in all its constitutional integrity; whatever else may be destroyed, the nation shall be preserved in its territorial unity; and to this end we pledge anew our lives, our fortunes, and our sacred honor."³

In this spirit the campaign was fought through to its victorious close, and on the night of the 3d of November the President, sitting in the War Department, had the pleasure of learning from all the clicking wires about him that the cause of nationality and freedom was triumphant from one end of the Union to the other; that the people had come up fully abreast of him on the question of emancipation, and that the nation was now substantially united in the resolute purpose to prosecute the war to its legitimate conclusion. These victories at the polls made sure the good results of this summer of battles; the Administration felt itself confirmed anew and strengthened for the work before it. To those members of the Administration who had formerly acted with the Democratic party there was a certain sense of humiliation and disappointment. Mr. Stanton said, "The disheartening thing in the affair was that there seemed to be no patriotic principle left in the Democratic party, the whole organization voting solidly against the country."⁴ Mr. Seward, on the contrary, came back from Auburn, where he had gone home to vote, in the highest spirits. He considered the political attitude of New York absolutely safe in the present and future. He thought "the crowd that follows power had come over to the Republicans; the Democrats had lost their leaders when Toombs and Davis and Breckinridge forsook them and went South; the inferior Northern Democrats who succeeded to the leadership had proved their incompetency; the best and most energetic portion of the rank and file of the party were now voting shoulder to shoulder with the Republicans."⁵

¹ Lincoln to James C. Conkling, Aug. 26, 1863.

² Nothing he ever uttered had a more instantaneous success. Mr. Sumner immediately wrote to him: "Thanks for your true and noble letter. It is a historical document. The case is admirably stated, so that all but the wicked must confess its force. It cannot be answered." Henry Wilson wrote him: "God Almighty bless you for your noble, patriotic, and Christian letter. It will be on the lips and in the hearts of hundreds of thousands this day." Among the letters which the President most appreciated was one from the venerable Josiah Quincy, then ninety-one years of age, who wrote: "Old age has its privileges, which I hope this letter will not exceed; but I cannot refrain from expressing to you my gratification and my gratitude for your letter to the Illinois convention — happy, timely, conclusive, and effective. What you say concerning emancipation, your proclamation, and your course of

proceeding in relation to it was due to truth and to your own character, shamefully assailed as it has been. The development is an imperishable monument of wisdom and virtue." After discussing the question of emancipation, he continued: "I write under the impression that the victory of the United States in this war is inevitable; compromise is impossible. Peace on any other basis would be the establishment of two nations, each hating the other, both military, both necessarily warlike, their territories interlocked with a tendency of never-ceasing hostility. Can we leave to posterity a more cruel inheritance, or one more hopeless of happiness and prosperity?" Mr. Lincoln answered this letter in a tone expressive of his reverence for the age and illustrious character of the writer.

⁵ Ibid., Nov. 8. MS.

No party," he said, "can survive an opposition to a war. The Revolutionary heroes were political oracles till 1812, and afterwards the 'soldiers of the late war' succeeded to their honors. But we are hereafter a nation of soldiers. These people will be trying to forget years hence that they ever opposed this war. I had to carry affidavits to prove I had nothing to do with the Hartford Convention. Now the party that gained eminence by the folly of the Federalists in opposing the war have the chalice commended to their own lips. I told the Democratic leaders," he said, with his habitual subacid good nature, "how they might have saved themselves and carried the next Presidential election, by being more loyal and earnest in support of the Administration than the Republican party. The Lord knows that would not have been hard."

Although in this memorable contest the Republicans presented a united front to the common enemy, within their own organization there were those bitter differences of opinion which always arise among men of strong convictions. The President's anteroom was thronged with earnest men who desired to warn him in person against the machinations of other men equally earnest, and his mail was encumbered by letters from every part of the country, and every shade of faction, filled with similar denunciations and warnings. The pure and able Senator Dixon of Connecticut wrote: "The heresies of Sumner are doing immense harm in a variety of ways. If his doctrine prevails, this country will be ruined. I do hope you and Mr. Seward will stand firm." From the other wing of the party came the most passionate denunciations of Seward and those who were associated with him in the popular mind; and after the election Senator Chandler of Michigan, one of the most powerful of the Republicans who had by this time assumed to themselves the title of Radicals, having seen in the newspapers a paragraph that Mr. Thurlow Weed and Governor Morgan had been in consultation with the President in regard to his message, wrote a vehement letter to the President, telling him there was a "patriotic organization in all the free and border States, containing over one million voters, every man of whom is your friend upon the Radical measures of your Administration; but there is not a Seward, Weed, or Blairman among them. How are these men," he asked, "to be of service to you in any way? They are a millstone about your neck. You drop them and they are politically ended forever. Conservatives and traitors are buried together. For God's sake do not exhume their remains in your message. They will smell

worse than Lazarus after he had been buried three days."¹ There was no man slower than Mr. Lincoln to take personal offense at even the most indiscreet advice or censure; but he answered this letter of Mr. Chandler in a tone of unusual dignity and severity. "I have seen," he said, "Governor Morgan and Thurlow Weed separately, but not together, within the last ten days; but neither of them mentioned the forthcoming message, or said anything, so far as I can remember, which brought the thought of the message to my mind. I am very glad the elections this autumn have gone favorably and that I have not by native depravity, or under evil influences, done anything bad enough to prevent the good result. I hope to 'stand firm' enough to not go backward, and yet not go forward fast enough to wreck the country's cause."²

In the month of October Mr. Hood, the postmaster at Chattanooga, wrote to the President a letter setting forth the particulars of a scheme which Emerson Etheridge, Clerk of the House of Representatives, had entered into to give control of the next House to the opposition. Etheridge was a member of Congress from Tennessee before the war, and his sincere attachment to the Union in the face of much obloquy and persecution at home had endeared him to the Republicans in Congress and caused him to be given the post of Clerk of the House; but in the course of two years of war he had become separated from his former political affiliations and now sympathized with the opposition. Mr. Hood, who wrote apparently with great regret as a personal friend of Etheridge, claimed to have become aware of Etheridge's intention to leave off the rolls of the House the names of all members whose certificates did not bear on their face the statement that they had been elected "according to the laws of the State or of the United States." He based this action upon the provisions of a law which had been hurriedly passed during the last day of the Thirty-seventh Congress. At the same time it was understood that he had intimated to the Democratic members what his action would be, so as to allow them to provide themselves with certificates in the form required. The President, on the receipt of this news, put himself confidentially in communication with leading Republicans in all the loyal States, requesting them, without publicity, to have prepared duplicate certificates meeting the objection which it was thought that Etheridge would raise to the ordinary ones. This was in most cases attended to, but not in all, so that when the members began to arrive in Washington a few days before the day fixed for the opening of Congress, a general impression of the contemplated action of Etheridge

¹ Chandler to Lincoln, Nov. 15, 1863. MS.

² Lincoln to Chandler, Nov. 20, 1863. MS.

had transpired and there was some uneasiness in regard to the issue. The President had done what he could to meet the legal requirements of the case; but, that having been done, he was not inclined to rely exclusively upon moral force. In view of the threatened outrage he sent for some of the leading members of Congress and told them the main thing was to be sure that all the Union members should be present. "Then," he said, "if Mr. Etheridge undertakes revolutionary proceedings, let him be carried out on a chip, and let our men organize the House."¹ This practical solution of the trouble had occurred to others, and the Rev. Owen Lovejoy, disregarding for a moment the etiquette of his sacred calling, announced that he was quite ready himself to take charge of Etheridge, and was confident of his muscular superiority to the Tennessean.

There was not so much uncertainty in regard to the issue as to prevent an animated contest among the Republicans for the caucus nomination for the speakership. The prominent candidates were Mr. Schuyler Colfax of Indiana and Mr. Elihu B. Washburne of Illinois. Mr. Cox of Ohio was the principal candidate for the barren honor of the caucus nomination among the Democrats; though for some time before the meeting of Congress there was a good deal of not very practical talk in regard to the nomination of General Frank P. Blair of Missouri as a compromise candidate to be supported by the Democrats and by a few of the so-called Conservative Republicans. General Blair, while one of the earliest and ablest Republicans of the border States, one who had distinguished himself equally in politics and in the field in the cause of freedom and of progress, had, through the vehemence of the factional fight which had so long been raging in Missouri, been gradually forced, partly by the denunciations of his enemies, and partly by his own combative instincts, into an attitude almost of hostility to the Republican party of the nation. Mr. Lincoln saw this with great regret. He had a high personal regard for Blair, and deplored the predicament into which his passionate temper and the assaults of his enemies were gradually crowding him. In the autumn of 1863 the Postmaster-General, in conversation with the President, said that his brother Frank would be guided by the President's wishes as to whether he should continue with his command in the field or take the seat in Congress to which he had been elected from Missouri. The President answered in a letter, dated 2d of November, saying:

Some days ago I understood you to say that your brother, General Frank Blair, desired to be guided by my wishes as to whether he will occupy his seat

in Congress or remain in the field. My wish, then, is compounded of what I believe will be best for the country and best for him; and it is that he will come here, put his military commission in my hands, take his seat, go into caucus with our friends, abide the nominations, help elect the nominees, and thus aid to organize a House of Representatives which will really support the Government in the war. If the result shall be the election of himself as Speaker, let him serve in that position. If not, let him retake his commission and return to the army. For the country this will heal a dangerous schism; for him it will relieve from a dangerous position. By a misunderstanding, as I think, he is in danger of being permanently separated from those with whom only he can ever have a real sympathy—the sincere opponents of slavery. It will be a mistake if he shall allow the provocations offered him by insincere time-servers to drive him from the house of his own building. He is young yet. He has abundant talent—quite enough to occupy all his time without devoting any to temper. He is rising in military skill and usefulness. His recent appointment to the command of a corps, by one so competent to judge as General Sherman, proves this. In that line he can serve both the country and himself more profitably than he could as a member of Congress upon the floor. The foregoing is what I would say if Frank Blair were my brother instead of yours.²

In pursuance of this letter Blair came to Washington, though before Congress assembled his candidacy for the speakership had passed out of sight. He took his seat, served for some months, and went back to the army in command of a corps, as the President had promised. This relinquishment of and restoration to a high command in the army occasioned much feeling and a violent attack upon the President on the part of the Radical Republicans, which continued even after he had submitted in a message to Congress the entire correspondence, which reflected nothing but credit upon all parties.

The canvass for Speaker closed on Saturday night, the 5th of December, Washburne withdrawing from the field, and Colfax being nominated by acclamation. All the next day there was great excitement at the hotels frequented by politicians in regard to Etheridge's proposed course of action, which was now no longer a secret to any one. The comments he everywhere heard upon his conduct had its effect upon his nerves, and he began to talk in a complaining and apologetic tone, saying he was simply obeying the law and there was no reason why Republicans should regard him vindictively. The next day, when the House opened, while he did not flinch from the position he had occupied, he did nothing arbitrary or revolutionary. He left off the roll the names of all those members whose certificates were not, in his opinion, in due form, but readily

¹ J. G. N., MS. Memoranda.

² MS.

entertained a motion to restore them. This met with a hot protest from some of the pro-slavery members, but a vote was taken showing a majority of twenty for the Government. Mr. Washburne nominated Mr. Colfax, and he was elected by the same majority in a total vote of 181, the Democratic vote being scattered among many members, Mr. Cox receiving more than any other.

As soon as Congress came together Mr. Fernando Wood renewed his furtive overtures with the Government for the appointment of peace commissioners from what he called his wing of the Democratic party, making no secret of his belief that he himself was the most appropriate choice which could be made for such a function. He urged the President to publish some sort of amnesty for the Northern sympathizers with the rebellion which would include Mr. Vallandigham and permit him to return to the country. He promised that in that case there should be two Democratic candidates in the field at the next Presidential election. The President declined his proposition, but he would not take no for an answer. He called again on the morning of the 14th of December and the President refused to see him, merely sending word by a servant that he had nothing further to say to him.¹ Later in the day Mr. Wood offered, in the House of Representatives, a resolution "that the President be requested to appoint three commissioners, who shall be empowered to open negotiations with the authorities at

¹ J. G. N.. MS. Memoranda.

Richmond to the end that this bloody, destructive, and inhuman war shall cease, and the Union be restored upon terms of equity, fraternity, and equality under the Constitution." This resolution was laid upon the table by a party vote, and Mr. Green Clay Smith of Kentucky offered resolutions opposing "any armistice, or intervention, or mediation, or proposition for peace from any quarter so long as there shall be found a rebel in arms against the Government; and we ignore," the resolutions continued, "all party names, lines, and issues, and recognize but two parties in this war—patriots and traitors." Second: "That we hold it to be the duty of Congress to pass all necessary bills to supply men and money, and the duty of the people to render every aid in their power to the constituted authorities of the Government in the crushing out of the rebellion and in bringing the leaders thereof to condign punishment." The third resolution tendered the thanks of Congress to the soldiers in the field. The first resolution was passed by a party vote of ninety-three to sixty-five; the second and third were passed unanimously, with the exception of Mr. B. G. Harris of Maryland. Several times during the session this battle of resolutions was renewed, but always with the same result; the Democratic party constantly favoring negotiations for peace while as constantly declaring their devotion to the Union, and the Republicans repudiating every suggestion of negotiation or compromise so long as the enemies of the Republic bore arms against it.

THE WESTERN SOLDIER.

WHEN General Sherman said to General Grant, "Your belief in victory I can compare to nothing but the faith of the Christian in the Saviour," he specified

one of the leading characteristics of the typical Western soldier. At no time, from Sumter to Appomattox, did that devoted servant of the demands of courage and fortitude doubt the success of the Union cause. It was a part of his temperament, of his philosophy, to look for triumph. Not that he was simply a good-humored optimist, unregardful of adverse conditions, nor yet a victim of blind superstition, political or theological, but that heredity and experience had equipped him with a sense of confidence in himself, in his country, and in the force called fortune that was alike heroic

and logical. He came of a stock that had conquered the frontier wilderness through a long and hard discipline of toil, vigilance, and sacrifice, and in so doing had exalted self-reliance as the first of virtues. His idea of duty had its root in a deep growth of previous endurance, which was also a present possession of honor and practical advantage. The past appealed to him at a short distance and in voices that were personally familiar; the Union meant to him a tangible daily blessing, purchased for him by the direct efforts of his father and grandfather in the founding of new States; and he scorned to think for a moment that he could not repeat such service with similar results upon the field of battle.

In the beginning, to be sure, he misjudged the proportions of the undertaking; but when the whole truth was made plain to him it only served to emphasize his loyalty and confirm

his purpose of success. He reënlisted for three years as readily as he had enlisted for three months. It did not occur to him that he could do otherwise. The only thing that caused him thought was the question of adjusting his home affairs to a longer absence. He had kissed his mother, or wife, or sweetheart good-bye expecting to return in time to cultivate his corn-crop and exchange work with his neighbors as usual during the wheat harvest. Now he must send back word that unforeseen circumstances delayed him, and that they would have to get along somehow without him. If the farm could be rented on shares, or managed with hired labor, and if his creditors would wait for their money until the next pay-day, he would be content. The war might last the whole three years, though he hardly thought it could; but it would end all right — that he knew; and he must see it through, of course. Thus he talked and wrote — not in a lofty and star-spangled style, but calmly, simply, manfully. And in that mood he went forward, prepared for any test, equal to every emergency. It was his way. He wore a blue uniform that never fitted him, and followed a flag instead of a plow; but he did not stop to consider what the change implied from a sentimental point of view. Perhaps it was because he did not care.

In short, the qualities of faith, of resolution, and of self-control which distinguished General Grant were peculiar also to the potential battalions of the West that he commanded. His calculations and their capabilities were in perfect accord. That was first conclusively demonstrated at Fort Donelson, where the first substantial Union victory was achieved, and where the South first began to rectify its disparaging notions of Northern pluck and steadfastness. It is from Fort Donelson, in reality, that the story of the war properly dates. The prior fighting had all been desultory, experimental, and ineffective; but there a blow was struck that had vital significance. It was no longer to be fancied that the military instinct was a sectional monopoly, and that the Union could be saved only by sending five men against one. The big-fisted, hairy-breasted Westerners had not yet learned to keep step with tactical precision, nor to handle their weapons in an entirely graceful fashion; but they went where they were ordered, and they knew how to "get the bulge," as they called it. On the other hand, it was evident that the boasted knight-hood of the enemy was not merely "dubbed with unhacked rapier and on carpet consideration," but had a solid basis of determination and intrepidity. These were the thoughts of the soldiers of the two armies as they fraternized, after the surrender, in the cabins on that bleak and memorable hilltop.

They had not known each other before; henceforth they would meet with a better understanding. "You-all 'll git licked next time," the Confederates insisted; and the Federals smiled, and said, "Not much, Mary Ann."

When they came together again at Shiloh, where there were no fortifications to divide them, and where Thermopylæ was repeated a dozen times over, they learned a like lesson of mutual respect for bravery that never flinched, and enterprise that never wearied. The same is to be said as to Corinth, Perryville, and Stone's River. It was through these severe experiences that the soldiers of the West, contending with foemen worthy of their steel, became thoroughly inured to the hardship and peril of their new vocation. At the opening of the third year of the war they were veterans. They moved invincibly upon Vicksburg, and made its capture their celebration of the Fourth of July. Then ensued the startling tragedy of Chickamauga, relieved from utter mortification only by the tenacious and splendid valor of George H. Thomas. After Chickamauga — what? That was the query that the soldiers discussed with eager interest around the camp-fires in Tennessee and Mississippi. The general belief among them was that Grant would be selected to retrieve the disaster, and so they were not surprised when he was sent to Chattanooga. They wondered, however, why such a step was not sooner taken, and why Rosecrans was left beleagured for a whole month when there were so many troops doing indifferent service elsewhere. Some of them contended, moreover, that if Grant had been ordered to join and supersede Rosecrans immediately after the fall of Vicksburg the Chickamauga calamity would have been prevented.

The men in the ranks were much given to speculations of this kind. They could not know what unseen complications their commanders had to deal with, nor what sinister influences sometimes frustrated the best-laid plans; and so they were privileged to esteem their personal opinions as highly as they pleased. That was one of the advantages of being a private. Curiously enough, they often anticipated important events as accurately as if they had been advised of the carefully concealed moving causes, which goes to show — does it not? — that there is a certain degree of reciprocity between military science and unscientific common sense. They had views concerning the relative merits of the different generals too, derived from close observation, and not always incorrect, by any means. Their prime favorite at all times was Grant. Their feeling towards him was not exactly one of affection, but rather one of implicit trust, which was better than

affection, in the sense that reason is preferable to emotion. He never made speeches to them, and never solicited their admiration in any form of parade; but the humblest of them could always reach him with their petitions, and he had a quiet way of simplifying things that was very pleasing. Sherman had their approbation, with a difference. He was "bully," they would say, but over-demonstrative. Thomas they honored profoundly. Halleck impressed them as a man who thought the war was being prosecuted for the sole purpose of giving lessons in strategy. McPherson delighted them; and so did Logan, after they found him out; and Blair and Dodge. They would have liked Sheridan more if he had been less severe.

They assumed a right of criticism towards their regimental and company officers that was almost as free as that exercised by the average voter with regard to political officials. In some instances they did injustice, no doubt; but, generally speaking, their estimates were sagacious and proper. They had no patience with pretense of any description, and they were quick to detect it. Thus, if a colonel invested his headquarters with unnecessary pomp and formality, as a colonel was occasionally known to do, they would nudge one another in passing and exchange looks and comments that rarely failed to produce a change. On one occasion a lieutenant-colonel, riding out to battle, forfeited the esteem of his regiment by holding a picture of his wife in his hand and gazing fixedly upon it; but he afterwards restored himself to favor by a daring act that cost him two ugly wounds. Another officer of the same rank, on a toilsome march, gained a cheer by alighting from his horse and giving his place in the saddle to a limping soldier; but when the major at his side did the same thing there was no response. The first had performed a kindness without prompting, while the second was a mere imitator. It was by such distinctions that officers were notified of the sharp watch that was being kept upon them, and admonished that they were mortal as well as those who wore no shoulder-straps. Now and then the instruction took a more amusing turn, as when a captain, noted for his conceit, undertook to lecture his company upon the necessity of increased respect for officers, and was checked by a droll fellow who said, with a grin and an extravagant salute, "Cap., I used to know you when you made harness."

At first the idea prevailed that the best men for officers were those who had figured as marshals in civic processions, or as captains in wolf-hunts, or as leaders in the sham warfare of the militia; but, as a rule, such selections proved to be disappointing. The most satisfactory officers were those who had won esteem

in private life as intelligent and successful business men. It was ascertained early in the war that one might be very brave and adventurous and yet not be the right kind of man to hold a commission, there were so many other duties for him to fulfill besides that of waving his sword in the bloody vicissitudes of battle. The constant care and active perseverance required to insure comfort, to maintain discipline, and to promote efficiency were quite as important as obligations of a more shining order. It was not an easy task to adapt the Western soldier to those rigid but indispensable rules which often seemed to be only arbitrary devices for trying his patience and subduing his energy. He could not see for a long time what so much drilling had to do with putting down the rebellion, or how the Union was being saved by compelling him to observe a given neatness in his apparel and to do his eating and sleeping according to an invariable time-table. But experience gradually enlightened him in this respect, and towards the last he came to be quite proud of his martial education, though he never forgot how irksome and provoking the process of learning had been. When the war was almost ended, one was heard to say on being aroused from a comfortable snooze, "The first thing I'm goin' to do after I git home is to hire a man to come and beat the reveille under my window every morning for a month, so I can poke my head out and tell him to go — to — thunder."

There were some officers who, like their men, were restive under the restraint and routine which necessity imposed upon them. They were unable, in particular, to appreciate the value of the minute records they had to keep, and the many reports they had to make; they had not enlisted, they would protest, for service of that mild and sedentary character. One of them went so far at one time as to refuse flatly to prepare an additional copy of one of his returns. "I've furnished a duplicate and a triplicate and a quadruplicate," he declared, "and I won't send any more — not another d—uplicate." He changed his mind, however, when ordered under arrest. "I s'pose I 'll have to do it," he grimly observed, "or the war can't go on." Many a company commander squared his tangled accounts and preserved his reputation by placing "lost in action" opposite the list of articles for which he had no vouchers. The deception did not signify that the property had been misappropriated, but only that the bookkeeping was irregular. Those who made money dishonestly during the war were others than soldiers. The men who did the fighting did not do the stealing. In all history, it may truly be said, there was never another army that had so many opportunities for plunder and yet

pursued its way with so much integrity. There was devastation where it marched, but solely because war at best exacts devastation as a penalty. At times more Federal troops were employed in protecting the property of the Southern people than in carrying on the work of fighting the Southern army. That was a mistake, as experience proved, and it was abandoned after a while; but it had its origin in principle, and illustrated a point of character.

The Western soldier watched eagerly for pay-day, however. He was not in the service on account of the wages, but nevertheless he wanted his money when it was due. That was one of the links that connected him with home, with family, with happiness. He liked to fold up the crisp new bills and put them in a letter to the woman who wrote him so cheerfully about herself and the children, in spite of the constant lump in her throat, and the burden of suspense that made even her dreams a source of agony. It was his habit to think a great deal more about those whom he had left behind him than about those with whom he was in daily association, or about himself and his adventures. If he happened to be in the rear, he was curious to know what was going on at the front; and the approach of a battle, with its hidden possibilities of gain or loss, absorbed his attention for the time. But it was news from home that had the largest place in his mind; and often a very little matter thus related would stir him deeply—as when he would read on the margin of his wife's last letter a babyish scrawl saying, "Dear papa, come back as soon as you can to me and mamma." That had coaxed a smile from mamma, he knew; ah, yes, and afterwards she had gone off by herself to cry, poor, dear woman! Then he would wish that the bugles might blow, or the drums beat, or the guns crack on the picket line. He was a soldier "for three years or during the war," and he must not let himself grow homesick. Some, alas, did fall victims to that insidious and pathetic influence. They had no disease that the doctors could discover, and yet they died—died of the *maladie du pays*.

These examples of death produced by morbid longing might easily have been more numerous if the soldiers as a class had not been blessed with that indefatigable sense of humor which a modern philosopher has declared to be the next best thing to an abiding faith in Providence. They insisted upon seeing the comic side of their toils and misfortunes, and were even able sometimes to invent a ludicrous side when in reality none existed. If melancholy sought to enter a camp it was apt to be halted and turned back by a dry joke from the first sentinel it encountered. There was grumbling in plenty, and it did not always stop short of profanity; but the

profanity was usually of that robust and peculiar quality which Emerson guarantees to have a "fructifying" effect. There was always room left for a laugh, if indeed the oath did not prepare the way for the laugh. The chaplains strove diligently for a season to correct this undevout tendency; but in course of time they practically gave it up, on the hypothesis, it may be assumed, that it was better to tolerate a certain kind of profanity than to enlarge the sick-list by repressing it. There is some reason to suspect that some of them had an eye to personal success. Those chaplains were most popular who did least preaching, and devoted their time mainly to works which helped to promote the comfort and welfare of the soldiers. Not a few of them thus endeared themselves to the ranks as they could never have done by the best of strictly spiritual service; and occasionally, too, they won admiration by acts of military sense and courage, like that of the one who, being ordered to burn the transportation and supplies that he had charge of in the rear of the Federal lines at the battle of Corinth, said, "No, sir; the boys are not whipped yet," and thus saved what the panic-stricken commander would have foolishly destroyed.

It was lucky for the soldiers of the West that to their gift of humor was added the even more important attribute of large and capable feet; for they had much marching to do, and were thus fitted to do it in a proper manner. They were always glad when an order came for such an experience. It suited them best to be moving; not only because that "looked like business," as they said, but also because it implied change of scene, duty, and diet. If the march lasted only a day, and had nothing but swamp-water and mosquitoes at the end of it, still it was a welcome relief; and when it was prolonged for weeks, and led to a great battle, like the march of Sherman's forces from Memphis to Chattanooga in the autumn of 1863, it became a supreme gratification. That notable expedition afforded the troops a rare chance to look upon the homes of the South in a continuous and leisurely way, and to learn how the war had affected them. The picture was sad enough in some respects; in others it was merely unpleasant; in yet others it was ludicrous. The Western soldier did not allow any of it to surprise him, unless it was the presence of so much chicken and honey where there were so many signs of general distress and decay. That seemed to him anomalous, and he took care to leave no cause for like wonder on the part of anybody who should visit that region after him. As for the rest, it was only what he had expected. It was the logic of things; and that was all there was to be said about it.

To be with the advance guard of the column, or with the roaming scouts and foragers, was to see army life in its most enjoyable aspect. The novelty of it was unending, with just sufficient peril to keep one thoughtful of his cartridges. If the people had entertained a conception of Yankee soldiers as creatures of low-browed ferocity and rapacity, they were speedily undeceived. A better-natured order of invaders never marched into any country. They were disposed to make themselves agreeable, so far as duty permitted, and to effect their "cramping," as they named the procedure by which they obtained necessary supplies, with as little offense as possible. They liked to sit on the doorsteps and chat with the women, and fumble at the toes of the babies, and have the negro urchins dance for them to the juba-patting of a presumptive Uncle Tom. It was very pleasant to them to hear a feminine voice again, if it did drawl its words and cut curious antics of pronunciation. The fact appeared very plainly that the Southern women were true to the cause for which the Southern men were fighting; and their blue-coated visitors really admired their fidelity while dutifully pretending to find it very shocking and lamentable. Their eyes snapped and their cheeks flamed very prettily as they talked of Chickamauga, and ironically pitied the poor Federals whom Bragg had "done got" surrounded at Chattanooga. They could not know—though they must have suspected—that they were then entertaining the very men who were to aid in delivering that beleaguered army, and inflicting a defeat upon Bragg from which he would never recover.

Many of these fair secessionists, with all their haughtiness and vindictiveness, were capable of pleading for the privilege of Rahab to bind scarlet lines in their windows against apprehended dangers. They knew how to be exceedingly polite and flattering when they wanted guards placed about their dwellings or their paltry residue of cows, sheep, and pigs saved from confiscation. Sometimes such negotiations led to episodes of marked romantic interest, in which the soldiers tasted nectar with their bacon and hard-tack, and made vows wholly unauthorized by the army regulations, thus attesting the loyalty of human nature to love in war as in peace. In some instances, too, these performances contained an element of treachery, and furnished prisoners to lurking bands of Confederate cavalry. In other words, it was not safe to assume that because the daughters of the South were willing to incline their ears to Federal love-making, they could not play the wooers false for a military advantage. Their hearts were well under control in that particular. They accepted homage with a reser-

vation of the right to profit by it as they might choose. There should have been some genuine Unionists among them, according to popular report, but on that march of forty days the soldiers came across only one, as they believed. She wore a large pink sun-bonnet and a well-starched white dress, and stood at a wood-pile in a stooping posture, with her back to a party of advancing foragers. The sergeant of the squad stole up behind her, put an arm quickly around her waist, and kissed her. Then he waited to be condemned. But instead of resenting the assault, she lifted a radiant face and said in a soft, appreciative tone, "You 'll find me right yer ev'ry day a-pickin' up chips."

The Federal commanders had cause repeatedly to attribute the failure of their schemes and hopes to the vigilance of the non-combatants of the South, especially the women. It was almost impossible to execute any movement that depended upon the mystification of the enemy. A voluntary and comprehensive system of spying and reporting existed which kept the Confederate authorities so well advised that they could rarely be taken unawares. By common consent those of both sexes who were at home watched continually in every direction for those signs by which the intentions of an army are foreshadowed and the opposite side made acquainted with valuable facts. From the day that a Federal regiment crossed the Ohio River, it was never exempt from this sort of surveillance; and the most innocent-looking old man, or meek-visaged woman, or wondering child was a possible bearer of important secrets to the nearest Confederate headquarters. There was no way to escape such an agency of mischief. The only thing that could be done in that connection was to deal summarily with all spies whose acts were definitely covered by the laws of war. One such, with a pass signed by General Bragg and other convicting documents on his person, was captured, tried by court-martial, and sentenced to be hanged. At the last moment, when sitting upon his coffin, with the gallows directly before him, he was offered an unconditional pardon if he would reveal the whereabouts of a certain prominent character under whose orders he had been immediately acting. He drew himself up, his hands tied behind him,—he was a slight, boyish, handsome fellow,—and answered scornfully, "Would *you* betray a friend? I'd rather die a thousand deaths!" That was as much as he cared to say. With a quick but firm step he ascended the scaffold and made good his fatal declaration. It was an odd coincidence, many of the soldiers remarked, that his name was Davis.

It is to be presumed that the Confederate spies notified Bragg promptly of every step

that Sherman took during that forty days' journey, and thus enabled him to divine in due season that the objective point in the case was Chattanooga. But Sherman's soldiers had no means of forecasting their destination. They thought one day that it might be one place, and another day another place. It was certain, at least, that they were not making such a long march merely "to take the kinks out of their legs and hunt up a little poultry," as their commander was said to have observed. There was hard work to be done somewhere, they were satisfied; but what it was or where it was they did not really know until they were ferried hastily over the Tennessee River by night and halted in the baleful shadow of Missionary Ridge. Then they understood. The enemy was to be forced from the strongest position that he had yet held, and Grant had sent for them — waited for them — to insure the success of the undertaking. They were very proud of that, and they were anxious to begin the assault. It was past noon when the last of their artillery crossed the river. At 1 o'clock they moved forward. A drizzling rain was falling, and as they mounted the hill a fantastic drapery of mist involved them. They looked above only to see the low-lying clouds that hid the summit of the ridge, as similar clouds concealed Lookout Mountain, where Hooker's men were also ascending. From the clouds came crash of cannon and peal of musketry to dispute their right to be there. The haze and the smoke met, mingled, and blotted out the heavens; it was as if night had suddenly intervened, and a new sky in which the stars were made by the bursting shells. Then, after a time, it grew lighter. It was not yet sundown, and they stood upon the top of the hill. There they rested for the next day's struggle.

The situation was not conducive to sleep, and the boys longed for the morning to come that they might go on. They got an early start, with bright weather to encourage them, and advanced rapidly to the next hill and to the main ridge, gaining a position at length that meant victory if they could hold it. And they did hold it. They were there for that purpose, and Grant was watching them from Orchard Knob. It was so awfully hot at times that they had to fall back a little; and then they would advance again, driving the enemy before them, and pushing on still farther than they had been before. Column after column was hurled upon them, as Grant had anticipated; it was a part of the plan for them to contend against heavy odds, and they did it with their accustomed courage and faith. In the pauses of the battle they would look about them for chances to serve wounded comrades, or to identify dead ones — and there were plenty

of those sorrowful opportunities. And when they died, they did it as if with a feeling that death was not a thing that they could afford to make a fuss about. "Boys," said one, "the doctor was mistaken; I can't live — I've got to go." The words were hardly spoken when he ceased to breathe. Said another, "Turn me over, some of you, so I can see — the colors"; and when they turned him over he was dead. Still another raised his hand as though it belonged to somebody else and with his own fingers closed his eyes for the grave. Thus it was that they talked and acted on Missionary Ridge. It was the way they had talked and acted when at home; and they saw no reason to do differently because they were in Tennessee instead of Illinois, or Iowa, or Kansas, or Minnesota. They realized, as they often quaintly remarked, that the Government did not provide against accidents to its soldiers. Certain things were to be taken for granted. If they should fortunately escape, very well; if not, then still very well. Such was their philosophy; and in a considerable measure it was also their religion.

In this brilliant and tremendous campaign against Bragg, the Western soldier touched elbows with the soldier of the East, and from that time on, more or less, they marched and fought together. The conjunction furnished a curious and suggestive study. The two types of men differed materially, and comparison was not only easy, but inevitable; in fact, the comparisons made themselves. It was evident that the Eastern soldier was not fortified by the same serene and immovable belief in victory that supported his Western comrade. He had grit and pride to match the best, but he admitted the possibility of failure, and was regardless of lines of retreat and partial to intrenchments. The idea of a campaign conducted without scrupulous regard for the art of war as taught by books did not meet his approval. He preferred to be so led that no disrespect should be shown to the opinions of Cæsar. Battles had been won, he conceded, by simply getting within fighting range of the enemy and staying there until success happened; but he doubted the excellence of such achievements, and held that it was better to be patient and do things scientifically. He thought the rebellion might ultimately be overcome if the North would stand sufficient drafting, and he feared that Mr. Lincoln had some bad advisers who were inducing him so to complicate matters in a political way as to discourage an amicable settlement of the contest. These views were expressed in confident, not to say dogmatic, terms. The Eastern soldier took himself and his cogitations seriously, so much so that at times he was a bit tiresome. But then

he had humorous intervals on other subjects, and at all times he was a man who obeyed orders whether he liked them or not.

The thing about the man from the Potomac that the Westerners thought most peculiar was his persistent admiration of McClellan. They could not understand why he should think a man a great soldier who had organized so much victory that never came to pass, and avoided so many defeats by reversing the theory of Hudibras, that military honor is to be won, like a widow, with brisk attempt, "not slow approaches, like a virgin." It seemed to them that while their Eastern brother's McClellanism, as they denominated it, included certain technical virtues that were undoubtedly worth having, it also tended to confuse and hamper him in the presence of circumstances to which they were always superior. He excelled them in drill, they frankly acknowledged; he wore his uniform as if he had never worn anything else, and in all his actions there was a distinct and self-conscious air of martial propriety. It was not true, as was grotesquely asserted, that he wore a corset, used cosmetics, and slept with gloves on. But it was true that he was remarkably fastidious, and attached much importance to his wardrobe. The deprivations of the siege of Chattanooga would probably not have vanquished him, had he been there to bear them, but his endurance would have lacked the capital cheerfulness which was displayed in that extremity of hunger and raggedness. Perhaps he would have joined in the search for undigested kernels of grain which had already served as food for horses and mules, but it would have been with a countenance bereaved of the power to smile; and certainly he could not have surveyed himself in patches and tatters and found it possible to exclaim, as did a Western soldier under those conditions, "Oh, no, I ain't sufferin' for clothes, but my heart 's a-breakin' for a diamond breast-pin!" He was

not so constituted. His home life had not qualified him for sacrifices of that kind. He could and did make them, let it be remembered to his honor; but he never learned how to do it in the Western mood of ready and tonic buoyancy.

The Western soldier felt that the victory of Chattanooga, following so soon after the successes of Gettysburg and Vicksburg, should bring the war rapidly to an end; but when he ascertained that such was not to be the case, he made the best of it, as he did of everything. He went on, as fast as the enemy could be persuaded to get out of the way, from Chattanooga to Atlanta; from Atlanta to the sea; thence to Richmond; and at last to Washington. His work was done, and done so well that it was its own most vivid and eloquent commendation. So they mustered him out. He was a soldier no longer, but a visiting citizen at the National Capital, who was to take the first train for home. His uniform was discarded with a sense of surpassing relief. The new garments which he hastened to put on made him feel stiff and awkward, and somehow his thoughts seemed to be affected in the same queer way. It was like beginning life all over again. His talk was not so much of what was past as of what was to come. The Union had been saved,—he had known all the time that it would be,—and he was eager now to get back to his folks. It cost him a little pang to give up his gun; he had come to regard it with a kind of affection. The pungent scent of battle smoke still lingered in its joints and creases. By that sign he had conquered. And having conquered, he was ready to go home. He had gone away under a heavy obligation to his country; now he was his country's creditor, and it acknowledged the debt with pride and gladness—

The debt immense of endless gratitude;
Still paying, still to owe.

Henry King.

TOPICS OF THE TIME.

No New Sectional Division.

THE old sectional line in the United States is fast vanishing. It may even be said already to have been wiped out a part of the way, when Delaware breaks her long succession of senators from one party, and West Virginia is claimed for weeks by both parties. It is obvious that neither North nor South can be counted upon as "solid" in future national struggles.

This result was as inevitable as it is desirable. The ancient division between the two sections was due to a single cause, and it could not long survive the final removal of that cause. It is an abnormal state of things

in a republic for a great group of States always to support the same party in an election—almost as abnormal as for all the men in a community to hold the same political opinions. The natural order is one of divergences among States as among individuals. No better illustration of this truth could be desired than is furnished by the experience of New England. Of all parts of the country this has always been regarded as the most distinctly defined and differentiated. The Yankee has been considered a type, almost a race, and one would have expected to find Yankees in every Yankee State taking the same side of a great public controversy. So far, however, has this been from the case that even such close neighbors as New Hamp-

shire and Vermont have over and over again parted company politically; indeed, they were for many years stoutly opposed to each other. Lying side by side, with only a river between them, similar in physical geography, settled by pioneers of the same character, one of them has gone overwhelmingly one way for more than a generation, while the other was long a "stronghold" of the opposite political party, and still continues a close State.

There were similar divergences in the South originally, and they continued until a special cause broke down all minor differences and fused rival States. In 1840 the Whigs carried Mississippi for Harrison, while Alabama, its next neighbor on the east, went Democratic by a good majority; North Carolina was strongly Whig, South Carolina strongly Democratic. In 1848 North Carolina remained a strong Whig State, while Virginia on one side and South Carolina on the other cast their electoral votes for the Democratic candidate. Even in 1852 Kentucky and Tennessee held aloof from the other Southern States in their adherence to the Whigs, and it was not until 1856 that all of the commonwealths in that part of the Union were found united in a Presidential election, and "Mason and Dixon's line" became an actual line of political division.

As only an overmastering interest which affected them all could weld together States that had differed sharply upon other questions, so the disappearance not only of that interest, but also of the issues which for a while survived its removal, must cause them to fall apart. For some time past it has been chiefly sentiment which has preserved the solidity of the section. The political struggles of the reconstruction era naturally maintained the feeling that the South must make common cause still, as in the years before the war, but the issues of that era have been settled, so far as they can be settled by any agency except that of time. The most urgent appeals to "stand firm," for fear that harm might yet be done to their common interests if they should divide, were not powerful enough last year to hold together the old Whigs and the old Democrats of Virginia, and enough ex-Confederates took sides against the majority of their old associates in the defense of slavery to leave the two great parties almost even in the total poll. It must be accounted one of the brightest auguries for our national future that the last Presidential election of our first century showed that the old sectional division in our politics is not to lap over into the second century.

Is a new sectional division to supplant the old? Now that the South is no longer to be solid, are we to see the West arrayed against the East? Such has been the forecast of some political prophets, and the suggestion is plausible enough to merit attention.

That the West should boast of its growing strength is most natural and justifiable. The centennial of Washington's inauguration serves to bring out in strong relief the wonderful advancement of Western progress. Washington received every electoral vote, but he received not one from beyond the Alleghanies. At the last Presidential election the States west of that range and north of the Ohio River line to the Pacific (counting Missouri among them, as obviously should be done) cast 151 out of 401 electoral votes — almost two-fifths of the whole number. "Beyond the Alleghanies," says Irving, in speaking of Washington's inauguration, "ex-

tended regions almost boundless, as yet, for the most part, wild and uncultivated, the asylum of roving Indians and restless, discontented white men." The last census showed 17,209,492 people, out of a total population in the whole country of 50,155,783, in the States already organized out of those regions. The census of 1890 will undoubtedly increase the proportion of the whole population to be found in those States. Moreover, the creation of four new States from the Territories in the North-west will raise still higher the percentage of the electoral college allotted to that portion of the country. It seems safe to say that more than two-fifths of the electoral votes in 1892 will be cast by States beyond the Alleghanies.

Meanwhile the East steadily loses power. Applying this term to New England and the "Middle States" of the old geographies, — New York, New Jersey, Pennsylvania, and Delaware, — we shall find that the region cast 76 out of 135 electoral votes after the census of 1790, and not until thirty years later failed to hold more than half of the whole number. Now these ten States have only 116 out of 401, or but a little more than a quarter. The proportion is likely to sink a little lower under the next apportionment. Already therefore the West, which, politically speaking, did not exist when Washington was inaugurated, far outweighs the East, and its preponderance seems bound steadily to grow for a long while to come.

That the West could rule the East and the country, through a union of its strength with three or four neighboring States to the southward, is evident enough. That it should be hastily suggested that a new sectional line of this sort may be drawn, is not strange. But reflection will show that such an alignment is both a moral and a physical impossibility. To begin with, the West is itself the offspring of the East. Its institutions are those which were carried by advancing settlers from the Atlantic seaboard. Its political traditions and associations have always been the same as those of the East. No peculiar interest has ever separated these two portions of the North, as slavery once put apart the North and the South. There is nothing in its political development to incline the West towards sectional action against the East. On the contrary, all those underlying causes which in the long run most profoundly influence men work irresistibly towards continued harmony.

The notion that an artificial line of division has been drawn which may array West against East on economical questions is equally fallacious. It is easy to say that the West is an agricultural section and the East a manufacturing one, but the statement will not bear analysis. As long ago as 1880 Ohio reported much more than half the amount of capital invested in manufactures which she should have had relatively to New York on the basis of population; Illinois, nearly half her quota on the basis of Pennsylvania; even Missouri, more than a third of the total needed to place her on an equality with New Jersey in the ratio of such capital to population. Clearly it will not answer to call such States agricultural communities.

Moreover, experience has shown that not even manufacturing States can be lumped together in politics. In the East, Pennsylvania and New York went one way in 1888; New Jersey and Connecticut, the other. It is already coming to be the same with the newer

manufacturing States in the West. Indiana has rapidly growing interests in this direction, and it is the closest State in all that region. Illinois has many more manufacturing than in 1880, but it gave Harrison a much smaller majority than Garfield. Call the West agricultural or manufacturing, as you please, it cannot be counted as solid any more than the East. The country has suffered so much from sectional politics in the past that the prospect of another line of division might well arouse apprehension, but happily it is plain that no such prospect exists.

Office Seeking the Man.

To a right-minded man, with a taste for public affairs and a conviction that he has the ability to render his country some service, scarcely anything can be more grateful than the spontaneous tender by his fellow-citizens of a position suited to his talents. To such a man also the idea is intolerable that he should have to seek an office in order to secure one; that he must go into the market and cry his own wares; that he may even need to establish "headquarters," and draw people to become his patrons by methods little above those employed by the "puller-in" of a Bowery shop-keeper.

It is always difficult to make comparisons as to the relative amount of office seeking the man and office-seeking by the man at different periods in our history. The longest memory can cover only a portion of the century, and the most trustworthy recollection is liable to err. Newspaper files afford little assistance, for the press of two and three generations ago was apt to overlook or disregard the very matters of detail which are necessary to afford material for a sound judgment. The unanimity with which the highest honors were thrust upon Washington is known to everybody, but the most careful investigation leaves the inquirer uncertain how large was the proportion of such cases and how often an Aaron Burr was ready for any intrigue to secure place.

The decline of rotation as regards representatives in Congress, and the tendency to reëlect senators term after term, are signs which indicate a decided gain in the attitude of the public. But there is a dark side to the picture. Even in a State where a senator is given a third term without a word of protest, lower offices may be sought and won by the hardest workers. "Nominations, nowadays, do not come to men who make no effort to get them, but rather go to those who organize and labor and expend money to secure them," was the melancholy confession last year of a newspaper in Massachusetts, in speaking of an impending vacancy in a congressional district which is largely composed of farming towns. "The idea of office seeking the man is nearly 'played out' in this State. An honest, deserving, and every way capable aspirant for a responsible position has little chance to obtain a nomination before a convention if his rival is a prominent politician, with an abundance of party workers to 'whoop it up' for him." Such was the bitter comment of a Boston paper a few months later. "Oh, what 's the use of talking about ——? He is n't doing anything. He is n't making any trades or giving any pledges, and men don't get elected speaker nowadays without trades and pledges." So spoke a busy Massachusetts politi-

cian, himself actively working last winter for another candidate, who had no such scruples.

Massachusetts is not a sinner above all other States in this matter; indeed, it is perhaps the memory of other traditions which were once exceptionally strong there that prompts the bitter confessions of her own people and fixes the surprised attention of outsiders. There is more than one State which at once occurs to the careful observer of national politics where a governorship or a United States senatorship has been carried off by a man whom nobody would have suggested as qualified for the place by eminent talent or distinguished public service; where every one recognizes that it is either money or "push" which secured the place that should have been awarded to merit.

Taken by themselves, such incidents are most discouraging. Even when viewed along with other more hopeful tendencies, they are calculated to depress one. The optimistic attitude is certainly the most agreeable — that they represent temporary and local set-backs in a current which on the whole makes for better politics. But this will only prove to be the case if the offenders are made to feel that public sentiment is outraged by such conduct. This is emphatically one of those cases where silence will be held to mean consent, and the press has a duty which it cannot afford to neglect.

Soldiers' Memorial Services.

WITH every repetition of the ceremonies of Memorial Week the true meaning and import of this unique festival is more fully disclosed. Just after the war the annual gathering of companies of old soldiers to strew with flowers the graves of their comrades who fell in the service was looked upon by the public as a natural and beautiful remembrance of the heroic dead; still, as then exercised, it was a rite affecting only a limited class in each community. When, however, the ceremony was followed up year after year, and the citizens in a body were invited to take part by the donation of flowers and other decorations, and to join in the services, — either in the parades, at the cemeteries, or in the general public exercises of the day, — it was apparent that the occasion appealed to the sentiments of all. Instead of being a narrow rite, and restricted to a class, it was a broad, patriotic symbol, and belonged to the whole nation. The nation adopted the new idea and to-day it is an institution; one, too, that promises to last long.

The world honors martial bravery, and it is not a sign of false civilization that such should be the case. Theoretically, wars in modern times have a moral purpose, and almost always there is a moral issue involved in every great strife. The traditions of this Republic, especially, are that war is justifiable only in a conflict of conscience. And for a man to risk his life for his belief is universally held to be the sublimest duty allotted to mortal. It is this lofty idea — this conviction which to many has the sacredness of a religious creed — that runs through all the ritual services of the military orders in commemorating their dead, and it is becoming generally adopted by orators when addressing public assemblies during Memorial Week. Even the martial bravery of the late enemy is remembered by the Grand Army veterans at the tombs of their own dead comrades, and they there solemnly pledge to their enemy "a soldier's

pardon." Upon the common ground of honoring the brave, the Union and Confederate veterans unite to offer tribute to departed valor.

There is another feature of this memorial work that makes the rite a broad one. It is not alone those who died for the cause that are thus honored by the Grand Army, but every Union soldier who has since passed away, so far as the graves can be identified. It does not matter that a veteran has devoted a quarter of a century to civil pursuits since his military service ended, or that changes of opinion on the issues of the war have been openly declared by him: all is forgotten except the fact that he once answered the call of duty. Mere partisan feelings are tabooed, and the veteran, though he died but yesterday, is remembered at his burial with military honors. To his comrades he has become a "dead soldier," whose "march" is just "over," and whose spirit has joined the "long column"

above. There is in this catholicity of soldier sentiment, winning, as it does, the admiration and sympathy of former foes, an earnest of civil security in the future.

In that strong fraternal impulse also, which is expressed in the most touching manner in the joint memorial services along the old border, and in some of the chief interior cities of the South, there is a trace of further development of that true national sentiment which has had such remarkable growth in the South since the war. Lincoln said of the people of the North and the South, in 1865: "Both read the same Bible and pray to the same God." To-day the veterans' memories of the conflict that called them to arms are on both sides turning to a single noble ideal—martial heroism. Surely the worshipers of that ideal will know no North and no South while twining chaplets to immortalize the brave.

OPEN LETTERS.

Fraternization—The Blue and the Gray.

IN the number of this magazine for July, 1888, I gave a list of the important reunions of organized bodies of Union and ex-Confederate veterans. The list was as full as the available records would permit.¹ Other instances of fraternal meetings were the receptions given to the Gate City Guard, of Atlanta, Georgia, in 1879, at Washington, Baltimore, Philadelphia, New York, Hartford, Boston, and elsewhere, by local military organizations, composed in part of Union veterans, and a reunion at Elizabeth, New Jersey, October 19, 1875, participated in by ex-Confederates living in the North and numbers of Union veterans who responded to the call.

Since the publication of my article on reunions, Mr. William G. James, Assistant Adjutant-General Department of Louisiana and Mississippi, G. A. R., has sent me the following item from the New Orleans "Picayune," in an account of the Confederate Memorial Services of April 6, 1878:

During the day a deputation from the Grand Army of the Republic visited the Confederate monument with an offering of two baskets of flowers and a number of bouquets, with this inscription attached:

IN MEMORIAM. A TRIBUTE TO THE FALLEN BRAVE FROM
JOSEPH A. MOWER POST NO. 1, DEPARTMENT OF
LOUISIANA, GRAND ARMY OF THE REPUBLIC.

Mr. James adds:

On the 30th of May following this occurrence, just as the steamboat with the comrades of Mower Post and their friends was landing at Chalmette National Cemetery, there came alongside a tugboat with a barge, evidently fitted up for the occasion, filled with ladies and gentlemen, who proved to be the members and guests of two Confederate veteran organizations, with floral offerings for our dead. This party was followed by another composed of the Continental Guards (ex-Confederates), also bringing offerings. On each Memorial Day since, these Confederate organizations have presented offerings and participated with us in our memorial services at Chalmette National Cemetery, and it is a question whether there are not more ex-Confederates than Union veterans present on these occasions.

¹ In the account of the Antietam reunion of September, 1887, the "50th N. Y. Volunteers" should read "20th N. Y. Volunteers."

Mower Post was organized April 3, 1872, and now has nearly 150 members in good standing.

General McClellan's Baggage-Destroying Order.

I. BY JAMES F. RUSLING, LATE BREVET BRIGADIER-GENERAL, U. S. V.

IN Messrs. Nicolay and Hay's "Lincoln," referring to General McClellan's conduct after the battle of Gaines's Mill, June 28, 1862 (see THE CENTURY MAGAZINE, November, 1888, p. 142), in a foot-note they say:

Lieutenant-Colonel B. S. Alexander, of the Corps of Engineers, gave the following sworn evidence before the Committee on the Conduct of the War (p. 592). He said he saw, on the evening of the 28th, at General McClellan's headquarters at Savage's Station, an order directing the destruction of the baggage of the officers and men, and he thought also the camp equipage; appealing to the officers and men to submit to this privation because it would be only for a few days, he thought the order stated. He went to the general at once, and remonstrated with him against allowing any such order to be issued, telling him he thought it would have a bad effect upon the army—would demoralize the officers and men; that it would tell them more plainly than in any other way that they were a defeated army, running for their lives. This led to some discussion among the officers at headquarters, and Colonel Alexander heard afterward that the order was never promulgated, but suppressed.

Now is it not very singular that nobody has ever produced a copy of that "order"? General McClellan in his official report of the Peninsula campaign, and also in his "Own Story" (1887), makes no mention of it. And yet it is the truth of history that just such an "order" was "issued" and "promulgated" by him on that occasion, for I myself saw and read it. I was then a captain and assistant quartermaster of Carr's (Patterson's) brigade, Hooker's division of the Third Army Corps (Heintzelman's). The order was received at brigade headquarters from the division headquarters about 8 P. M., June 28, and handed to me and others there for our official guidance. The brigade

itself was out on picket, in front of Fair Oaks, with headquarters pitched near Fair Oaks, just south of the railroad. After showing the order to me and others, the adjutant-general (C. K. Hall, now deceased) mounted his horse and rode to the front to promulgate it to the regiments of the brigade (the 5th, 6th, 7th, and 8th New Jersey and the 2d New York). What became of this order afterward I do not know, but suppose it was destroyed, with most of the official desks and papers of the brigade, near Bristow Station, Virginia, in the August following, when Stonewall Jackson got possession of the railroad there, in the rear of Pope, and burned several hundred cars, including the baggage of our brigade. But the substance of the order I entered in my "Army Journal" a few days subsequent to the issue of it, and it is recorded there as follows:

On the night of Saturday above mentioned (June 28, 1862), about dark, we received orders from army headquarters to load the trains with ammunition and subsistence, to destroy all trunks and surplus baggage, to abandon all camp equipage but not to burn it, and to decamp across White Oak Swamp, in the direction of James River, with as much expedition as possible. . . . Ordered headquarters train to gear up, then galloped to the regiments and directed regimental quartermasters to report with their trains to me near Savage's Station as soon as possible. Then returned to camp, and proceeded to arrange for the skedaddle. Resolved to save all private baggage and official papers at headquarters at any rate, and packed my train accordingly. . . . This done, I packed three tents, and abandoned the rest (only three), first cutting them to pieces, and with this exception loaded up everything. About 11 P. M. bade the staff "good-bye," and soon after 12 M. reached the plain by Savage's Station.

My recollection is that the "order" came by telegraph, and read about as follows:

The general commanding directs that the trains be loaded with ammunition and subsistence, and dispatched as promptly as possible by Savage's Station, across White Oak Swamp, in the direction of James River. All trunks and private baggage, and all camp equipage, will be abandoned and destroyed, but not burned. The general commanding trusts his brave troops will bear these privations with their wonted fortitude, as it will be but for a few days.

In obedience to this order, all of the regiments of our brigade abandoned and destroyed their camp equipage, and most of their private baggage, such as officers' trunks, valises, etc., as well as a large amount of new army clothing just received. The First and Second Brigades of the division received the same order, and of course obeyed it in the same way. Trunks and valises were knocked and hacked to pieces; clothing was cut and torn to rags; tents were ripped and slit to ribbons. Our wall, Sibley, and hospital tents — many almost new — were cut and ripped, and the poles chopped to pieces, but nothing was set on fire that night, lest the enemy should learn of our movement prematurely. Next morning, when the troops fell back to Savage's Station, fire was set to many things, including the commissary depot at Fair Oaks.

That extraordinary order certainly was "issued" and "promulgated" to Hooker's division of the Third Army Corps, and hence, I presume, to the rest of the corps. The truth, I think, is that it was promulgated to the Third Corps, and perhaps to another, but not to the rest of the army, because of the vigorous protests of Colonel Alexander and others, who saw its demoralizing tendency at a glance.

TRENTON, N. J.

II. BY GEORGE E. CORSON.

ON the twenty-eighth day of June, 1862, I was commissary sergeant, and acting quartermaster sergeant, of the first battalion, 17th regiment, United States Infantry, and as such on that date was with the wagon train of Sykes's division of Porter's corps, which was parked near and a little to the south-east of Savage's Station. About 5 or 6 o'clock in the afternoon of the 28th the quartermasters in charge of the train received orders to empty the wagons under their charge of the baggage of the officers and men, and of all camp equipage, and to destroy the same at once by burning. The order was immediately executed. All the personal effects of the officers, consisting of their clothing, bedding, mess-chests, etc., the knapsacks of the men, — left by them in our camp at Gaines's Mill on the morning of the 26th, when the troops were ordered off in light marching order in the direction of Mechanicsville, and which had been brought along in our wagons, — and the tents and other camp equipage, were removed from the wagons, made into large piles, and set on fire.

Strict orders were given the teamsters, guards, and others on duty with the train not to rifle, interfere with, or attempt to save from the flames any of the effects of the officers or men, though it was known that many of the officers' valises and knapsacks contained money, watches, revolvers, and other valuables. One or more of the teamsters or train-guard were, of my personal knowledge, wounded by the discharge of loaded revolvers from the burning piles. I narrowly escaped the same fate myself, while superintending the destruction of the property in my charge. After completing this destruction the now empty train was taken to Savage's Station and there loaded with hard-bread, pork, coffee, sugar, and other commissary stores. The remaining commissary stores, among which there was said to be three hundred barrels of whisky, and the vast amount of quartermaster's stores which had been accumulated at the station for the use of the army, were set on fire, and by the light of the great conflagration our train wended its way towards the James River.

It will be seen from these facts that the order of General McClellan, referred to by Colonel Alexander, was promulgated in the afternoon of June 28, to the officers in charge of the wagon-trains in the immediate vicinity of Savage's Station, to the great loss and hardship at least of the officers and men of Sykes's division; but whether said order was intended for the whole army, or made known to them, I never knew, and have no means of determining. Having assisted in executing the order, and the recollection of the scenes connected therewith being among the most vivid of my memories of the war, I was surprised, when I read Colonel Alexander's statement, to find that any officer connected with McClellan's headquarters should be ignorant of the fact that the order was promulgated and duly executed.

WASHINGTON, D. C.

The Abuse of Applause.

ONE of the canons of art insisted upon by Richard Wagner as an essential reform was that all applause during the acting of a drama or an opera was to be censured as interfering with the purpose of the represen-

tation. Take any one of our performances of Italian opera in recent years and consider for a moment the absurdities of the audience heaped upon the absurdities of the stage. We have each act interrupted by applause half a dozen times, and for the most frivolous reasons. When the chief singers of the evening come upon the stage for the first time the house breaks out into applause, no matter what is going on at the time; when the soprano shrieks out her highest note and the ushers trot down the aisle burdened with floral harps, ships, anchors, and other devices of the kind known in newspaper vernacular as trophies, the *Juliet*, *Lucia*, or *Amina* of the evening forgets her despair long enough to receive the flowers with an expression of counterfeited amazement and many smiles of gratitude. The same performance is gone through by the tenor, and perhaps by the baritone. Viewed seriously, it is a farce, for which nothing can be said. Thanks to Wagner's protests, many attempts have been made to remedy these absurdities; but, outside of the notable performances at Baireuth and some other German towns, little has been effected. In New York, until recently, we have had to suffer under the worst of such abuses. Under Mr. Mapleson's régime we had the flowers, the applause right in the middle of an act, the ten or twelve recalls after the performance.

This winter, in the course of the French plays at Palmer's Theater, the same thing was observed. Possibly in the case of a theatrical performance there is less to be said in excuse than where an opera is concerned, for music implies something peculiarly artificial. Think of the absurdity of it all. Take, for instance, Dumas's "Camille." Here we have a dramatist striving to create an illusion. We have a young woman who dies of grief and consumption after a stormy career. The play traces her life through some of its most stirring and pathetic passages. Every act closes with a dramatic incident. Notwithstanding that the whole work of the dramatist and the actors is intended to produce in the audience an illusion, the curtain is raised after every act, and *Camille* appears bowing and smiling, evidently in the best of spirits and full of good-will towards every one. In other words, what has just been built up with so much care and hard work is knocked down again. If we take the case of opera, the same criticism holds good. The singers work hard to fill us with sympathy for some unfortunate person who goes mad and dies, as does *Lucia*, or who stabs himself, as does *Edgardo*. But after harrowing up the feelings of the audience, these people come forward and virtually say that it is all a joke, and that *Lucia* is going forth to refresh herself with beer.

Against such absurdity Wagner inveighed. He tried to the best of his ability to make his art a serious one. That he succeeded no better is no proof of the fallacy of his position, but rather of the persistent wrong-

headedness of the Philistines. I take it that any one who goes to the Metropolitan Opera House and hears such noble masterpieces as "Tristan," "Die Walküre," or "Die Götterdämmerung" goes away profoundly impressed with the dramatic story. There, at least, no singer is allowed to notice the audience while the act is going on, and not one of the noted German artists whom we have had among us of late years—Frau Lehmann, Herr Niemann, Herr Fischer, and others—pays the slightest attention to the indiscreet applause which greets their entrance upon the stage for the first time during the evening. Nevertheless the practice of allowing the singers to come forward at the end of an act in order to bow their thanks to the audience still obtains. It seems to me that this also should be done away with. If we object to the audience breaking in upon the music and drowning it out with their applause, it is because such vicious practices destroy the illusion which the poet and the composer are striving to produce. Does not the appearance of the singer between the acts destroy this illusion? Take any one of Wagner's dramas. We have persons supposed to be in love with each other, or in deadly enmity, coming forward hand in hand between the acts; and in the case of many of the master's works we have, at the end of the opera, a lot of dead persons waking up in order to bow their thanks again and again.

In order to maintain the poetic illusion, there ought to be no appearance of the singers or actors of the evening except during the acts and in their characters. Neither between the acts nor after the final fall of the curtain ought the singers to be seen; they ought never to remind us that we have not been listening to *Wotan*, to *Siegfried*, and to *Brunnhilda*. We ought not to be compelled to take into consideration Herr Fischer, Herr Niemann, or Frau Lehmann. I admit that many persons will cry out that this is unfair to the public and to the artists. How are these admirers of Wagner's operas and of the work done by these great singers to testify their admiration? This is very true; and yet the public ought to be trained to rest satisfied with applause at the end of an act or at the end of a performance. In the case of an opera the conductor may be considered as the representative of the performers, and Herr Seidl may bow his thanks. In the case of a symphony concert the members of the orchestra do not rise to answer the applause. If any one can make out a valid defense for such sins against art as the appearance of the dead *Siegfried* and *Brunnhilda* bowing and smiling at the end of "Die Götterdämmerung," I should like to hear it.

BRIC-À-BRAC.

Arcady.

(ON SEEING THE WORD IN A BOOK OF CRITICISMS.)

ARCADY! the word has made
The rain, the mist, the rabble fade,
And in a corner of a copse,
Playing on his oaten stops,
Tityrus ripples rounds of song
Forever to a tiptoe throng.

'T was in a book of empty phrase
Where truth was hunted through a maze
That shut the sky out, tall and dark,
Of little leaf and withered bark:
There, weary with the flying skirt
Of beauty doubling through the dirt,
I came, as one at top of hill,
Sudden, on meadow, lawn, and rill.

See how the green slopes to a vale;
The leafage bends to a little gale
Of breeze, that seems to be the print
Of some light-walking spirit in 't;
See how, outside the tilting trees,
The grass grows up to the shepherd's knees,
And how within their rings of shade
The floor hath rugs of leafy braid;
And here, below the even boughs,
Look slanting down and see the cows
At pick and bite about the dell
And dairymaids at the willowed well.

And were it better pipe unheard
Feeding of honey and clean curd,
Corn, and the fruits the breezes pull
When autumn limbs are bending full —
Lusty of thew and tanned of face
From sun-kiss and the air's embrace —
Loving the thatchen eaves of home
Where swallows build and crickets come,
And voices of the melting night
Sing thought too sacred for the light?
Yea, were it better flute unheard
Than build and build the Babel word,
That, neighboring some unlooked-for sky,
Falls into dust nor knows not why?

God wot! And yet that word to me
Outsweetens knowledge — Arcady!

Harrison S. Morris.

At the Sign of the Blind Cupid.

WHEN blushing cheeks and downcast eyes
Set all the heart aflame,
When love within a dimple lies
And constancy 's a name,
Since every lass is passing fair,
Cupid must fly and see;
And, lightly flitting here and there,
A wingéd boy is he.

When creeping years steal on apace
And youth and vigor go,
When time with wrinkles marks the face
And strews the hair with snow,
Ah, then no wingéd boy is he;
But strong-limbed and complete,
With blinded eyes that need not see,
Since memory guides his feet.

Walter Learned.

The Toast.

DREAM not I hold too dear
The gleam of yonder shooting star,
One moment shining near,
The next fading afar.

You touched your glass to mine
In careless, half-regretfulness,
But while you drank the wine,
I drank forgetfulness!

Margaret Crosby.

Paragraphs from the German of Friedrich Nietzsche.

To owe gratitude oppresses a coarse nature; to receive it, oppresses a fine one.

SOCIALISM is the fantastical younger brother of a nearly spent despotism whose inheritance he claims.

To correct one's style means to correct one's thought — nothing else.

COWARDICE is the greatest giver of alms.

TRUTH has never yet proved fatal to any one; there are too many antidotes.

PREJUDICE is a more dangerous enemy to Truth than falsehood.

THERE is not enough religion in the world to admit of the annihilation of religions.

NOT when it is dangerous to tell the truth will she lack a prophet, but only when it is tiresome.

THE gardens of modern poetry too often betray a nearness to the drains of the cities.

MOST writers think badly, for they give us not only their thoughts, but the labor of their thoughts.

FOR many natures it is as much a duty of cleanliness to change opinions as to change clothes.

To treat everybody with equal benevolence may be an evidence of deep scorn as well as of deep love.

Helen Watterson.

Ad Astra.

BLOSSOM, little stars, and fill
The garden of the sky;
Drops of wine that you distil
Upon the grasses lie.

Every thirsty blade holds up
A blessing to the blue,
Every green spear fills its cup
With heaven's cooling dew.

Blossom, little stars of love,
In my beloved's heart;
Blossom like the stars above,
And study well that chart.

Far beneath you there is one
Who dares a cup to raise:
He has thirsted in the sun
These many dreary days.

Blossom, blossom soon, and bring
Love's gladness and the wine
That shall nourish hopes that spring
Up in this heart of mine.

No. 2.

THE CONVICT MINES OF KARA.

IN the vast sub-arctic wilderness of the Trans-Baikal (By-kal'), nearly 5000 miles by road from St. Petersburg and more than 1000 miles from the coast of the Pacific, in a dreary, lonely valley between two lateral spurs of the Yablonoi (Yah'blo-noy) Mountains, there is a little chain of log prisons, gold placers, and convict settlements, known to the Russian public as the mines of Kara (Kah-rah'). When, in your morning papers, you read a dispatch from St. Petersburg saying that such and such "Nihilists" have been tried, found guilty, and condemned to death, but that the Tsar has been pleased to commute their sentence to penal servitude in the mines, it is to the mines of Kara that reference is made. I purpose to describe, in the form of a simple personal narrative, a visit that we made to these mines in the late fall and early winter of 1885, and to set forth, as fully as space will permit, the results of our attempt to investigate the condition of the Kara prisons and to obtain trustworthy information concerning the life of the political prisoners. The subject is one of more than ordinary magnitude, and I shall be prevented by space limitations from dealing with it upon a scale commensurate with its importance; but I can draw, perhaps, a rough outline sketch of an East Siberian convict establishment, and give the reader an idea of what is meant in Russia by "Katorga" (Kat'or-gah), or penal servitude.¹

The mines of Kara are distant from Chita (Che'tah), the capital of the Trans-Baikal, about 300 miles; but for more than 200 miles the traveler in approaching them follows a fairly good post road, which runs at first through the valley of the Ingoda (In-go-dah') and then along the northern or left bank of the Shilka (Shil'ka) River, one of the principal tributaries of the Amur (Am-moor'). At a small town called Stretinsk (Stray'tinsk), where the Shilka first becomes navigable, this post road abruptly ends, and beyond that point communication with the Kara penal settlements is maintained by boats in summer and by sledges drawn over the ice in winter. For two or three weeks in autumn, while the ice is forming, and for a somewhat shorter period in the spring, after the river breaks up, the Kara mines are virtually isolated from all the rest of the world, and can be reached only by a difficult and dangerous bridle path, which runs for a distance of seventy or eighty miles, parallel with the river, across a series of steep and generally forest-clad mountain ridges. We hoped to reach Stretinsk in time to descend the Shilka to the Kara River in a boat; and when we left Chita, on Saturday, October 24, there seemed to be every probability that we should succeed in so doing. The weather, however, turned suddenly colder; snow fell to a depth of an inch and a half or two inches; and Wednesday morning, when we alighted from our telega (te-lay'ga) on the northern bank of the Shilka opposite Stretinsk, winter had set in with great severity. The mercury in our thermometer indicated zero (Fahr.); our fur coats and the bodies of our horses were white with frost;

¹ "Katorga" is a corrupted form of the Greek word *κάτεργον*, "a galley," and it points to the fact that in Russia, as in many other European countries, the

galleys were once manned by hard-labor convicts. The word is now used to designate penal servitude in the Siberian factories or mines.

and the broad, rapid current of the Shilka was so choked with masses of heavy ice as to be almost, if not quite, impassable. A large open skiff was making a perilous attempt to cross from Stretinsk to our side of the river, and a dozen or more peasants, who stood shivering around a small camp-fire on the beach, were waiting for it, with the hope that it would come safely to land and that the ferrymen might be persuaded to make a return trip with passengers. After watching for a quarter of an hour the struggles of this boat with the ice, Mr. Frost and I decided that it would be hazardous to attempt, in an open skiff, the passage of a rapid and ice-choked river half a mile wide, even if the boatmen were willing to take us; and we therefore sought shelter in the small log house of a young Russian peasant named Zablikoff (Zab'lee-koff), who good-humoredly consented to give us a night's lodging provided we had no objection to sleeping on the floor with the members of his family. We were too much exhausted and too nearly frozen to object to anything; and as for sleeping on the floor, we had become so accustomed

possibility of reaching the Kara mines at that season of the year by an overland journey across the mountains.

Descending the river in a boat was manifestly impracticable on account of the great quantity of running ice; we could not waste two or three weeks in inaction, and the horse-back ride to the mines over the mountains seemed to be the only feasible alternative. There were, on our side of the river, a few horses that Zablikoff thought might be hired; but they belonged to a merchant who lived in Stretinsk, and in order to get permission to use them, as well as to obtain the necessary saddles and equipments and secure the services of a guide, it would be necessary to cross the Shilka to the town. This, in the existing condition of the river, was a somewhat perilous undertaking; but Zablikoff offered to accompany me with two or three of his men, and early Thursday morning we carried his light, open skiff down to the beach for the purpose of making the attempt. The weather had moderated a little, but it was still very cold; the river had become an almost continuous

THE SHILKA RIVER AND THE TOWN OF STRETINSK.

to it that we should have felt out of place if we had tried to sleep anywhere else. We therefore had our baggage transported to Zablikoff's house, and in half an hour were comfortably drinking tea in the first decently clean room we had seen since leaving Nerchinsk (Ner'chinsk).

We devoted most of the remainder of the day to a discussion of our situation and of the

field of swiftly moving ice, intersected by narrow lanes of black open water, and a belt of fixed ice extended from the shore a distance of forty or fifty yards, becoming thinner and thinner as it approached the water's edge. Out over this treacherous surface we cautiously pushed our skiff, holding ourselves in readiness to spring into it quickly all together at the in-

LIVING-ROOM OF RUSSIAN PEASANT'S HOUSE AT UST KARA.

stant when the ice should give way under our feet. Four or five yards from the black, eddying current the ice yielded, we felt a sudden sinking sensation, and then, with a great confused crash we went into the water, Zablikoff shouting excitedly, "Now! Into the boat!" The skiff gave a deep roll, first to one side and then to the other, as we all sprung into it; but fortunately it did not capsize, and in another moment we were whirled away and swept rapidly downstream amid huge grinding ice-tables, which we fended off, as well as we could, with oars and boat-hooks. As soon as the first excitement of the launch was over, two of the men settled down to steady rowing, while Zablikoff, boat-hook in hand, stood in the bow as pilot and guided our frail craft through the narrow lanes of water between the swiftly running ice-floes. We were carried downstream about half a mile before we could reach the opposite shore, and when we did reach it the making of a landing on the thin, treacherous edge of the fast ice proved to be a more difficult and dangerous task than even the launching of the skiff. Three or four times while we were clinging with boat-hooks to the crumbling edge of the ice-foot I thought we should certainly be crushed or capsized by the huge white fields and tables that came grinding down upon us from above; but we finally broke our way into the stationary ice-belt far enough to get shelter. Zablikoff sprung out upon a hummock and made fast a line, and after being immersed in the freezing water up to my hips

as the result of an awkward jump, I gained a footing upon ice that was firm enough to sustain my weight. The weather was so cold that getting wet was a serious matter; and leaving Zablikoff and the men to pull out the boat, I started at a brisk run for the town and took refuge in the first shop I could find. After drying and warming myself I sent a telegram to Mr. Wurts, the Secretary of the United States legation in St. Petersburg, to apprise him of our whereabouts; found the owner of the horses and made a bargain with him for transportation to the first peasant village down the river in the direction of the mines; hired an old guide named Nikifer (Ne-ke'fer); procured the necessary saddles and equipments, and late in the afternoon made, without accident, the perilous return trip across the river to Zablikoff's house.

As early as possible on Friday we saddled our horses and set out for the mines, taking with us nothing except our blanket rolls and note-books, a bag of provisions, the camera, and about a dozen dry plates. The weather had again moderated and our thermometer indicated a temperature of eighteen degrees above zero; but the sky was dark and threatening, a light snow was falling, and as we rode up on the summit of the first high ridge and looked ahead into the wild, lonely mountainous region that we were to traverse, I felt a momentary sinking of the heart. I was still weak from my sickness in Troitskosavsk (Troy-its-kosavsk'), winter had set in, and I feared that

CENTRAL PART OF THE PENAL SETTLEMENT, KNOWN AS THE KARA LOWER DIGGINGS.

my slender stock of reserve strength would not carry me through a ride of eighty miles on horseback over such a trail as this was represented to be. Moreover, our winter equipment was scanty and not at all adapted to such a journey. Presuming that we should be able to descend the Shilka in a boat, we had not provided ourselves with fur sleeping-bags; our sheepskin overcoats were not long enough to protect our knees; we had not been able to obtain fur hoods; and our felt boots were so large and heavy that they would not go into our stirrups, and we were forced either to ride without them or to dispense with the support that the stirrups might afford. Fortunately the trail that we followed was at first fairly good, the weather was not very cold, and we succeeded in making a distance of twenty miles without a great deal of suffering. We stopped for the night in a small log village called Lomi (Lo'me), on the bank of the Shilka, slept on the floor of a peasant's house, in the same room with two adults and five children, and Saturday morning, after a breakfast of tea, black bread, and cold fish-pie, resumed our journey with fresh horses and a new guide. The weather had cleared off cold during the night, and our thermometer, when we climbed into our saddles, indicated a temperature of eight degrees below zero. The bodies of the horses were white and shaggy with frost, icicles hung

from their nostrils, and they seemed as impatient to get away as we were. With our departure from Lomi began the really difficult part of our journey. The trail ran in a tortuous course across a wilderness of rugged mountains, sometimes making long détours to the northward to avoid deep or precipitous ravines; sometimes climbing in zigzags the steep sides of huge transverse ridges; and occasionally coming out upon narrow shelf-like cornices of rock, high above the dark, ice-laden waters of the Shilka, where a slip or stumble of our horses would unquestionably put an end to our Siberian investigations. That we did not meet with any accident in the course of this ride to Kara seems to me a remarkable evidence of good luck. Our horses were unshod, and the trail in many places was covered with ice formed by the overflow and freezing of water from mountain springs, then hidden by a thin sheet of snow, so that it was impossible to determine from the most careful inspection of a steep and dangerous descent whether or not it would afford secure foothold for our horses. Throughout Saturday and Sunday we walked most of the time; partly because we were too nearly frozen to sit in the saddle, and partly because we dared not take the risks of the slippery trail. Three days of riding, walking, and climbing over rugged mountains, in a temperature that ranged from zero to ten degrees below, finally exhausted my last reserve of strength; and when we reached the peasant village of Shilkina at a late hour Sunday night, a weak and thready pulse, running at the rate of 120, warned me that I was near the extreme limit of my endurance. Fortunately the worst part of our journey was over. Ust Kara (Oost Kah-rah'), the most southerly of the Kara penal settlements, was distant from Shilkina only ten or twelve miles; the trail between the two places presented no unusual difficulties; and about noon on Monday we dismounted from our tired horses in the large village at the mouth of the Kara River, hobbled with stiffened and benumbed legs into the house of a peasant known to our guide, and threw ourselves down to rest.

The mines of Kara, which are the private property of his Imperial Majesty the Tsar, and are worked for his benefit, consist of a series of open gold placers, situated at irregular intervals along a small rapid stream called the Kara River, which rises on the water-shed of the Yablonoi Mountains, runs in a south-easterly direction for a distance of forty or fifty miles, and finally empties into the Shilka between Stretinsk and the mouth of the Argun (Ar-goon'). The name "Kara" — derived from a Tartar adjective meaning "black" — was originally used

merely to designate this stream; but it is now applied more comprehensively to the whole chain of prisons, mines, and convict settlements that lie scattered through the Kara Valley. These prisons, mines, and convict settlements, taking them in serial order from south to north, are known separately and distinctively as Ust Kara or Kara mouth, the Lower Prison, the Political Prison, the Lower Diggings, Middle Kara, Upper Kara, and the Upper or Amurski (Am-moor'skee) Prison. The administration of the whole penal establishment centers in the Lower Diggings, where the governor of the common-criminal prisons resides, and where there is a convict settlement of two or three hundred inhabitants and a company or two of soldiers in barracks. It seemed to me best to make this place our headquarters; partly because it was the residence of the governor, without whose consent we could do nothing, and partly because it was distant only about a mile from the political prison in which we were especially interested. We therefore left our horses and our guide at Ust Kara with orders to wait for us, and, after dining and resting for an hour or two, set out in a telega for the Lower Diggings. The road ran up the left bank of the Kara River through a shallow valley averaging about half a mile in width, bounded by low hills that were covered with a scanty second growth of young larches and pines, and whitened by a light fall of snow. The floor of the valley was formed by huge shapeless mounds of gravel and sand, long ago turned over and washed in the search for gold, and it suggested a worked-out placer in the most dreary and desolate part of the Black Hills.

We reached the Lower Diggings just before dark. It proved to be a spacious but straggling Siberian village of low whitewashed cabins, long unpainted log barracks, officers' tin-roofed residences, with wattle-inclosed yards, and a black, gloomy, weather-beaten log prison of the usual East Siberian type. The buildings belonging to the Government were set with some show of regularity in wide open spaces or along a few very broad streets; and they gave to the central part of the village a formal and official air that was strangely at variance with the disorderly arrangement of the unpainted shanties and dilapidated drift-wood cabins of the ticket-of-leave convicts which were huddled together here and there on the outskirts of the settlement or along the road that led to Ust Kara. On one side of an open square, around which stood the prison and the barracks, forty or fifty convicts in long gray overcoats with yellow diamonds on their backs were at work upon a new log building, surrounded by a cordon of Cossacks in sheepskin "shubas," felt boots, and

CONVICTS AT WORK UPON A NEW GOVERNMENT BUILDING
IN THE LOWER DIGGINGS.

muff-shaped fur caps, who stood motionless at their posts, leaning upon their Berdan rifles and watching the prisoners. At a little distance was burning a camp-fire, over which was hanging a tea-kettle and around which were standing or crouching a dozen more Cossacks, whose careless attitudes and stacked rifles showed that they were temporarily off duty. In the waning light of the cold, gloomy autumnal afternoon, the dreary, snowy square, the gray group of convicts working listlessly as if hopeless or exhausted, and the cordon of

Cossacks leaning upon their bayoneted rifles, made up a picture that for some reason exerted upon me a chilling and depressing influence. It was our first glimpse of convict life at the mines.

We drove at once to the house of the governor of the prisons, for the purpose of inquiring where we could find shelter for the night. Major Potulof, a tall, fine-looking, soldierly man about fifty years of age, received us cordially and said that he had been apprised of our coming by a telegram from the acting governor in Chita; but he did not really expect us, because he knew the Shilka was no longer navigable, and he did not believe foreign travelers would undertake, at that season of the year, the difficult and dangerous journey across the mountains. He expressed great pleasure, however, at seeing us, and invited us at once to accept the hospitalities of his house. I told him that we did not intend to quarter ourselves upon him, but merely wished to inquire where we could find shelter for the night. He laughed pleasantly, and replied that there were no hotels or boarding-houses in Kara except those provided by the Government for burglars, counterfeiters, and murderers; and that he expected us, of course, to accept his hospitality and make ourselves at home in his house. This was not at all in accordance with our wishes or plans.

We had hoped to find some place of abode where we should not be constantly under official surveillance; and I did not see how we were secretly to make the acquaintance of the political convicts if we consented to become the guests of the governor of the prisons. As there did not, however, seem to be any alternative, we accepted Major Potulof's invitation, and in ten minutes were comfortably quartered in a large, well-furnished house, where our eyes were gladdened by the sight of such unfamiliar luxuries as long mirrors, big soft rugs, easy-chairs, and a piano.

The Kara prisons and penal settlements, at the time of our visit, contained, approximately, 1800 hard-labor convicts.¹ Of this number about one-half were actually in close confinement, while the remainder were living in barracks, or in little cabins of their own, outside the prison walls.

The penal term of a Russian convict at the mines is divided into two periods or stages. During the first of these periods he is officially regarded as "on probation," and is held in prison under strict guard. If his conduct is such as to merit the approval of the prison authorities, he is released from confinement at the end of his probationary term and is enrolled in a sort of ticket-of-leave organization known as the "free command." He is still a hard-labor convict; he receives his daily ration from the prison, and he cannot step outside the limits of the penal settlement without a permit; but he is allowed to live with other "reforming" criminals in convict barracks, or with his family in a separate house of his own; he can do extra work for himself in his leisure hours, if he feels so disposed, and he enjoys a certain amount of freedom. At the end of this second or "reforming" period he is sent as a "forced colonist" to some part of Eastern Siberia for the remainder of his life.

The prisons connected with the Kara penal establishment at the time of our visit were seven in number, and were scattered along the Kara River for a distance of about twenty miles. The slow but steady movement of the working convict force upstream in the search for gold had left the Lower Diggings and Ust Kara prisons so far behind that their inmates could no longer walk in leg-fetters to and from the placers, and a large number of them were therefore living in enforced idleness. The direct supervision of the common-criminal prisons was intrusted to *smatritels* (*smah-tre'tels*), or wardens, who reported to Major Potulof; and

the prison buildings were guarded by detachments of Cossacks from the Kara battalion, which numbered about one thousand men. The two political prisons — one at the Lower Diggings for men, and the other at Ust Kara for women — were not under the control of Major Potulof, but were managed by a gendarme officer named Captain Nikolin (*Ne-ko'lin*), who had been sent out from St. Petersburg for this particular duty, and who was at the head

MAJOR POTULOF.

of a carefully selected prison guard of 140 gendarmes. The political prisons had also their free command, which at the time of our visit consisted of twelve or fifteen men and women, who had finished their terms of probation and were living in little huts or cabins of their own on the outskirts of the Lower Diggings. All of these facts were known to us long before we reached the mines, and we shaped our course in accordance with them.

The objects that we had in view at Kara were, first, to go through the common-criminal prisons and see the criminals actually at work in the mines; secondly, to make the acquaintance of the political convicts of the free command; and, thirdly, to visit the political prison and see how the condemned revolutionists

¹ According to the annual report of the Chief of Prison Administration the number of convicts in the Kara prisons and penal settlements on the 1st of January, 1886,—about two months after our visit,—was 2507. This number, however, included 600 or 800 women

and children who had come to the mines voluntarily with their husbands and fathers. (See Report of the Chief of Prison Administration for 1886, pp. 46, 47. St. Petersburg: Press of the Ministry of the Interior, 1888.)

TYPE OF HARD-LABOR CONVICT—SENT TO SIBERIA AT THE AGE OF 65.

lived, even if we were not permitted to talk with them. That we should succeed in attaining the first of these objects I felt confident, of the second I was not at all sure, and of the third I had little hope; but I determined to try hard for all. What instructions Major Potulof had received with regard to us I did not know; but he treated us with great cordiality, asked no awkward questions, and when, on the day after our arrival, I asked permission to visit the prisons and mines, he granted it without the least apparent surprise or hesitation, ordered out his horses and droshky, and said that it would give him great pleasure to accompany us.

It is not my purpose in the present paper to describe minutely all of the prisons in Kara that we were permitted to inspect, but I will sketch hastily the two that seemed to me to

be typical, respectively, of the worst class and of the best.

The Ust Kara prison, which in point of sanitary condition and overcrowding is perhaps the worst place of confinement in the whole Kara Valley, is situated on low, marshy ground in the outskirts of the penal settlement of the same name, near the junction of the Kara River with the Shilka. It was built nearly half a century ago, when the Government first began to work the Kara gold placers with convict labor. As one approaches it from the south it looks like a long, low horse-car stable made of squared but unpainted logs, which are now black, weather-beaten, and decaying from age. Taken in connection with its inclosed yard it makes a nearly perfect square of about one hundred feet, two sides of which are formed by the prison buildings and two sides by a stockade

about twenty-five feet in height, made of closely set logs, sharpened at the top like colossal lead-pencils. As we approached the court-yard gate, an armed Cossack who stood in the black-barred sentry-box beside it presented arms to Major Potulof and shouted, "Starshe!" (Star'-shay)—the usual call for the officer of the day. A Cossack corporal ran to the entrance with a bunch of keys in his hand, unlocked the huge padlock that secured the small door in the larger wooden gate, and admitted us to

has a suggestion of damp decaying wood and more than a suggestion of human excrement—and still you will have no adequate idea of it. To unaccustomed senses it seems so saturated with foulness and disease as to be almost insupportable. As we entered the corridor, slipped upon the wet, filthy floor, and caught the first breath of this air, Major Potulof turned to me with a scowl of disgust, and exclaimed, "Otvratitelni tiurma!" (Ot-vra-te'tel-nee tyoor-ma')—"It is a repulsive prison!"

A KAMERA, OR CELL, IN THE UST KARA PRISON.¹

the prison court-yard. Three or four convicts, with half-shaven heads, ran hastily across the yard as we entered, to take their places in their cells for inspection. We ascended two or three steps incrustated with an indescribable coating of filth and ice an inch and a half thick, and entered, through a heavy plank door, a long, low, and very dark corridor, the broken and decaying floor of which felt wet and slippery to the feet, and where the atmosphere, although warm, was very damp, and saturated with the strong peculiar odor that is characteristic of Siberian prisons. A person who has once inhaled that odor can never forget it; and yet it is so unlike any other bad smell in the world that I hardly know with what to compare it. I can ask you to imagine cellar air, every atom of which has been half a dozen times through human lungs and is heavy with carbonic acid; to imagine that air still further vitiated by foul, pungent, slightly ammoniacal exhalations from long unwashed human bodies; to imagine that it

The Cossack corporal who preceded us threw open the heavy wooden door of the first kamera (kah'mer-ah) and shouted, "Smirno!" (Smeer'no)—"Be quiet!" the customary warning of the guard to the prisoners when an officer is about to enter the cell. We stepped across the threshold into a room about 24 feet long, 22 feet wide, and 8 feet high, which contained 29 convicts. The air here was so much worse than the air in the corridor that it made me faint and sick. The room was lighted by two nearly square, heavily grated windows with double sashes, that could not be raised or opened, and there was not the least apparent provision anywhere for ventilation. Even the brick oven, by which the cell was warmed, drew its air from the corridor. The walls of the kamera were of squared logs and had once been whitewashed; but they had become dark and grimy from lapse of time, and were blotched in hundreds of places with dull red blood-stains where the convicts had crushed

¹ This picture is the reproduction of a rough, hasty sketch made by Mr. Frost from memory. The number of prisoners that the cell contained has been intention-

ally diminished in order not to hide the nares, or sleeping-platforms. The point of view is the threshold of the door.

bed-bugs. The floor was made of heavy planks, and, although it had recently been swept, it was incrustated with dry, hard-trodden filth. Out from the walls on three sides of the room projected low sloping wooden platforms about six feet wide, upon which the convicts slept, side by side, in closely packed rows, with their heads to the walls and their feet extended towards the middle of the cell. They had neither pillows nor blankets, and were compelled to lie down upon these sleeping-benches at night without removing their clothing, and without other covering than their coarse gray overcoats. The cell contained no furniture of any kind except these sleeping-platforms, the brick oven, and a large

it gave me an impression of freshness and comparative purity. We then went through hastily, one after another, the seven kameras that composed the prison. They all resembled the first one except that they varied slightly in dimensions, in shape, or in the number of prisoners that they contained. In the cell shown in the illustration on page 171 I noticed a shoemaker's bench on the sleeping-platform between the windows, and the foulness of the air was tempered and disguised, to some extent, by the fresh odor of leather. Even in this kamera, however, I breathed as little as possible, and escaped into the corridor at the first opportunity. The results

of breathing such air for long periods of time may be seen in the Kara prison hospital, where the prevalent diseases are scurvy, typhus and typhoid fevers, anæmia, and

wooden tub. When the door was locked for the night each one of these 29 prisoners would have, for 8 or 10 hours' consumption, about as much air as would be contained in a packing-box 5 feet square and 5 feet high. I could discover no way in which a single

VIEW NEAR UPPER KARA, AND HOUSES OF THE FREE COMMAND.

cubic foot of fresh air could get into that cell after the doors had been closed for the night.

We remained in the first kamera only two or three minutes. I think I was the first to get out into the corridor, and I still vividly remember the sense of relief with which I drew a long breath of that corridor air. Heavy and vitiated as it had seemed to me when I first entered the prison, it was so much better than the atmosphere of the overcrowded cell that

consumption. No one whom we met in Kara attempted to disguise the fact that most of these cases of disease are the direct result of the life that the convicts are forced to live in the dirty and overcrowded kameras. The prison surgeon admitted this to me frankly, and said: "We have more or less scurvy here all the year round. You have been through the prisons, and must know what their sanitary condition is. Of course such uncleanness and overcrowding result in disease. We

CONVICTS AT WORK IN ONE OF THE KARA GOLD PLACERS.

have 140 patients in the hospital now; frequently in spring we have 250."¹

¹ In 1857, when the famous, or infamous, Razgildeyef (Raz-gil-day'yef) undertook to get for the Tsar out of the Kara mines 100 poods (about 3600 pounds) of gold, more than 1000 convicts sickened and died in the Kara prisons from scurvy, typhus fever, and overwork. Alexander the Liberator was then Tsar, and it might be supposed that such awful misery and mortality in his own mines would inevitably attract his attention, and that he would devote at least a part of the gold bought with a thousand men's lives to the reformation of such a murderous penal system. Nothing, however, was done. Ten years passed, and at the ex-

Most of these cases come from a prison population of less than one thousand; and the hos-

piration of that time, according to Maximoff (Max-im'-off), there were at the Kara mines "the same order of things, the same prisons, and the same scurvy." (See "Siberia and Penal Servitude," by S. Maximoff, Vol. I., p. 102. St. Petersburg: A. Transhel, 1871.) Nearly twenty more years had elapsed when we visited the mines in 1885, and the report still was, "We have more or less scurvy here all the year round."

The number of cases of sickness treated in the Kara prison hospital and lazarets in 1886 was 1208. The average daily number was 117. (See Report of the Chief Prison Administration for 1886, pp. 46, 47.)

pital records do not, by any means, represent the whole aggregate of sickness in the Kara penal settlements. Many convicts of the free command lie ill in their own little huts or cabins, and even in the prison *kameras* there are scores of sick whose cases are not regarded as serious enough to necessitate their removal to a hospital that is perhaps overcrowded already. A convict in the early stages of scurvy may therefore lie in a prison *kamera* for a week or two, poisoning with his foul, diseased breath the air that must be breathed by men who are still comparatively well.

After visiting all the *kameras* in the men's prison, we came out at last into the pure, cold, delicious air, crossed the court-yard, went through another gate in the stockade, and entered the women's prison—a similar but smaller log building, which contained two large cells opening into each other. These rooms were well warmed and lighted, were higher than the cells in the men's prison, and had more than twice as much air space per capita; but their sanitary condition was little, if any, better. The air in them had perhaps been less vitiated by repeated respiration, but it was so saturated with foul odors from a neglected water-closet that one's senses could barely tolerate it. The floor was uneven and decayed, and in places the rotten planks had either settled or given way entirely, leaving dark holes into a vacant space between the floor and the swampy ground. Into these holes the women were evidently in the habit of throwing slops and garbage. I went and stood for a moment over one of them, but I could see nothing in the darkness beneath; and the damp air, laden with the effluvium of decaying organic matter that was rising from it, seemed to me so suggestive of typhoid fever and diphtheria that I did not venture to take a second breath in that vicinity. The *kameras* in the women's prison had no furniture of any kind except the plank sleeping-platforms, which, of course, were entirely destitute of bedding. I did not see in either room a single pillow or blanket. In these two cells were imprisoned 48 girls and women, 6 or 7 of whom were carrying in their arms pallid, sickly-looking babies.

At every step in our walk through the two prisons Major Potulof was besieged by unfortunate convicts who had complaints to make or petitions to present. One man had changed names with a comrade on the road while intoxicated, and had thus become a hard-labor convict when he should have been merely a forced colonist, and he wanted his case investigated. Another insisted that he had long since served out his full prison term and should be enrolled in the free command. Three more

declared that they had been two months in prison and were still ignorant of the nature of the charges made against them. Many of the convicts addressed themselves eagerly to me, under the impression, apparently, that I must be an inspector or "reviser" sent to Kara to investigate the prison management. In order to save Major Potulof from embarrassment and the complainants from possible punishment, I hastened to assure them that we had no power to redress grievances or to grant relief; that we were merely travelers visiting Kara out of curiosity. The complaints, and the manifestly bad condition of the prisons, seemed to irritate Major Potulof, and he grew more and more silent, moody, and morose as we went through the *kameras*. He did not attempt to explain, defend, or excuse anything, nor did he then, or at any subsequent time, ask me what impression the Ust Kara prisons made upon me. He knew very well what impression they *must* make.

In another stockaded yard, adjoining the one through which we had passed, stood the political prison for women; but Major Potulof could not take us into it without the permission of the gendarme commandant, Captain Nikolin. From all that I subsequently learned with regard to this place of punishment, I have little doubt that, while it is cleaner and less overcrowded than the common-criminal prisons, it does not rank much above the latter in comfort or in sanitary condition.

Early Tuesday afternoon we visited the Middle Kara prison, which was perhaps the best one we inspected at the mines. It was distant from the Lower Diggings about three miles, and was reached by a road that ran up the right bank of the Kara River through a desolate, snowy valley, dotted here and there with the dilapidated huts and cabins of the free command. More wretched and cheerless places of abode than these can hardly be imagined. Readers who remember the so-called "shanties on the rocks" in the upper part of New York City can form, perhaps, with the aid of the illustration on page 172, some faint idea of their appearance. The best of them could hardly bear comparison with the poorest of the Irish laborers' houses that stand, here and there, along our railroads, while the worst of them were mere dog kennels of driftwood and planks, in which it was almost incredible that human beings could exist throughout a Siberian winter.

The ostensible object of organizing a free command in connection with the Kara prisons was to encourage reformation among the convicts by holding out to them, as a reward for good behavior, the hope of obtaining release from confinement and an opportunity to better their condition. It does not seem to me, how-

CONVICTS RETURNING AT NIGHT FROM THE MINES.

ever, that this object has been attained. The free command is a demoralizing rather than a reforming agency; it promotes rather than discourages drunkenness and licentiousness; it does not guarantee, even to criminals who are actually reforming, any permanent amelioration

of condition; and every decade it is the means of turning loose upon the Siberian population three or four thousand common criminals of the worst class. The custom of allowing the wives and children of convicts to accompany them to Siberia and to live — sometimes alone

and unprotected—in the free command, results necessarily in great demoralization. Such wives and children are supported—or at least aided to exist—by the Government, with the hope that they will ultimately exert a beneficial domestic influence over their criminal husbands and fathers; but the results rarely justify official anticipations. The women and girls in a great majority of cases go to the bad in the penal settlements, even if they have come uncorrupted through two or three hundred overcrowded *étapes* and forwarding prisons. There is little inducement, moreover, for a convict in the free command to reform and establish himself with his family in a comfortable house of his own, because he knows that in a comparatively short time he will be sent away to some other part of Siberia as a “forced colonist,” and will lose all the material results of his industry and self-denial. He generally tries, therefore, to get through his term in the free command with as little labor and as much vicious enjoyment as possible. Hundreds, if not thousands, of convicts look forward with eagerness to enrollment in the free command merely on account of the opportunities for escape that it affords. Every summer, when the weather becomes warm enough to make life out of doors endurable, the free command begins to overflow into the forests; and for two or three months a narrow but almost continuous stream of escaping convicts runs from the Kara penal settlements in the direction of Lake Baikal. The signal for this annual movement is given by the cuckoo, whose notes, when first heard in the valley of the Kara, announce the beginning of the warm season. The cry of the bird is taken as an evidence that an escaped convict can once more live in the forests; and to run away, in convict slang, is to “go to General Kukushka for orders.” (Koo-koosh’ka is the Russian name for the cuckoo.) More than 300 men leave the Kara free command every year to join the army of “General Kukushka”; and in Siberia, as a whole, the number of runaway exiles and convicts who take the field in response to the summons of this popular officer exceeds 30,000. Most of the Kara convicts who “go to General Kukushka for orders” in the early summer come back to the mines under new names and in leg-fetters the next winter; but they have had their outing, and have breathed for three whole months the fresh, free

A CONVICT OF THE FREE COMMAND SURREPTITIOUSLY
WASHING OUT GOLD.

air of the woods, the mountains, and the steppes. With many convicts the love of wandering through the trackless forests and over the great plains of Eastern Siberia becomes a positive mania. They do not expect to escape altogether; they know that they must live for months the life of hunted fugitives, subsisting upon berries and roots, sleeping on the cold and often water-soaked ground, enduring hardships and miseries innumerable, and facing death at almost every step. But, in spite of all this, they cannot hear in early summer the first soft notes of the cuckoo without feeling an intense, passionate longing for the adventures and excitements that attend the life of a *brodyag* (*brod-yag'*, a vagrant or tramp).

“I had once a convict servant,” said a prison official at Kara to me, “who was one of these irreclaimable vagrants, and who ran away periodically for the mere pleasure of living a nomadic life. He always suffered terrible hardships; he had no hope of escaping from Siberia; and he was invariably brought back in leg-fetters, sooner or later, and severely punished; but nothing could break him of the practice. Finally, after he had become old and gray-headed, he came to me one morning in early summer—he was then living in the free command—and said to me, ‘Bahrin, I wish you would

please have me locked up.' 'Locked up!' said I. 'What for? What have you been doing?' 'I have n't been doing anything,' he replied, 'but you know I am a brodyag. I have run away many times, and if I am not locked up I shall run away again. I am old and gray-headed now, I can't stand life in the woods as I could once, and I don't want to run away; but if I hear General Kukushka calling me I must go. Please do me the favor to lock me up, your High Nobility, so that I *can't* go.' I did lock him up," continued the officer, "and kept him in prison most of the summer. When he was released the fever of unrest had left him, and he was as quiet, contented, and docile as ever."

There seems to me something pathetic in this inability of the worn, broken old convict to hear the cry of the cuckoo without yielding to the enticement of the wild, free, adventurous life with which that cry had become associated. He knew that he was feeble and broken; he knew that he could no longer tramp through the forests, swim rapid rivers, subsist upon roots, and sleep on the ground, as he once had done; but when the cuckoo called he felt again the impulses of his youth, he lived again in imagination the life of independence and freedom that he had known only in the pathless woods, and he was dimly conscious that if not prevented by force he "must go." As Ulysses had himself bound in order that he might not yield to the voices of the sirens, so the poor old convict had himself committed to prison in order that he might not hear and obey the cry of the cuckoo, which was so intimately associated with all that he had ever known of happiness and freedom.

It may seem to the reader strange that convicts are able to escape from penal settlements garrisoned and guarded by a force of a thousand Cossacks, but when one knows all the circumstances this ceases to be a matter for surprise. The houses of the ticket-of-leave convicts in the free command are not watched; there is no cordon of soldiers around the penal settlements; and it is comparatively an easy matter for a convict who is not under personal restraint to put into a gray bag a small quantity of food saved from his daily ration, tie a kettle to his belt, take an ax in his hand, and steal away at night into the trackless forest. It is a well-known fact, moreover, that many prison officials wink at escapes because they are able to turn them to pecuniary account. This they do by failing to report the runaways as "absent," by continuing to draw for weeks or months the clothing and the rations to which such runaways would be entitled if present, and by selling to the local representatives of Jewish speculators the food and garments thus ac-

quired. Not infrequently these speculators have contracts to furnish prison supplies, and they fill them by reselling to the Government at a high price the very same flour and clothing that have just been stolen from it by its own officials. To an unscrupulous prison warden every dead or runaway convict is a source of steady revenue so long as his death or flight can be concealed and his name carried on the prison rolls. Under such circumstances, energetic measures to prevent the escape of criminals or to secure their recapture could hardly be expected.

The prison of Middle Kara, which is situated in the penal settlement of the same name, is a one-story log building of medium size, placed in such a way that one of its longer sides stands flush with the line of the street, while the other is inclosed by a high stockade so as to form a nearly square yard. It did not seem to me to differ much in appearance or plan from the prison at Ust Kara; but it was in better sanitary condition than the latter, and was evidently of more recent construction. As nearly all its complement of prisoners were at work in the upper gold placer when we arrived, I could not determine by inspection whether or not it would be overcrowded at night. Major Potulof told me, in reply to a question, that the number of criminals confined in it was 107. At the time of our visit, however, its *kameras* contained only a few men, who had been excused from hard labor on account of temporary disability, or who had been assigned to domestic work such as sweeping or cooking. The atmosphere of the *kameras* was heavy and lifeless, but it seemed to be infinitely better than the air in the Ust Kara prison, and I could breathe it without much repugnance. By fastening against the walls over the sleeping-platforms large fresh boughs of hemlock and pine, an attempt had apparently been made to disguise the peculiar odor that is characteristic of Siberian prisons. Between these boughs, in some of the *kameras*, I noticed, tacked against the logs, rectangular cards about twenty inches long by twelve inches wide, bearing, in large printed letters, verses from the New Testament. The only ones that I can now remember were: "Him that cometh to me I will in no wise cast out," and "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Whence these scriptural cards came I do not know, but there seemed to me to be a strange and almost ghastly incongruity between the dark, grimy prison walls and the festal decorations of aromatic evergreens—between the rough plank sleeping-benches infested with vermin, and the promise of rest for the weary and heavy laden. How great a boon even bodily rest would be to the hard-

labor convicts was shown in the pitiful attempts they had made to secure it by spreading down on the hard sleeping-benches thin patchwork mattresses improvised out of rags, cast-off foot-wrappers, and pieces cut from the skirts of their gray overcoats. Not one of these mattresses contained less than twenty scraps and remnants of old cloth, while in some of them there must have been a hundred. They all looked like dirty "crazy-quilts" made out of paper-rags in a poor-house, and they could hardly have made any appreciable difference in the hardness of the plank sleeping-platforms. A man might as well seek to obtain a comfortable night's rest on a front-door step by interposing between it and his tired body a ragged and dirty bath-towel. There can be no reasonable excuse, it seems to me, for the failure of the Russian Government to provide at least beds and pillows of straw for its hard-labor convicts. Civilized human beings put straw even into the kennels of their dogs; but the Russian Government forces men to work for ten or twelve hours a day in its East Siberian mines; compels them after this exhausting toil to lie down on a bare plank; and then, to console them in their misery, tacks up on the grimy wall over their heads the command and the promise of Christ, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Mr. Frost and I made a careful examination of ten prisons in the province of the Trans-Baikal, and in none of them—with the single exception of the new central prison in Verkhni Udinsk (Verkh'nee Oo'dinsk)—did we find a bed, a pillow, or a blanket. Everywhere the prisoners lay down at night in their gray overcoats on bare planks, and almost everywhere they were tortured by vermin, and were compelled to breathe the same air over and over again until it seemed to me that there could not be oxygen enough left in it to support combustion in the flame of a farthing rush-light. If any one who can read Russian thinks that these statements exaggerate the facts, I beg him to refer to the description of the convict prison at the Kara Lower Diggings in Maximoff's "Siberia and Penal Servitude," Vol. I., pages 100-103; to the description of the old Verkhni Udinsk prison in Orfanoff's "Afar," pages 220-222; and to the statements of the latter author with regard to East Siberian prisons and prison management generally in the second part of his book.¹ I am not saying these things for the first time; they have been said before, in Russia and by Russians. I do not repeat them because I like to do it; but

because they *ought* to be repeated until the Russian Government shows some disposition to abate such evils.

After we had finished our inspection of the cells in the Middle Kara prison, we made an examination of the kitchen. Hard-labor convicts at Kara receive a daily ration consisting of three pounds of black rye-bread; about four ounces of meat, including the bone; a small quantity of barley, which is generally put into the water in which the meat is boiled for the purpose of making soup; and a little brick tea. Occasionally they have potatoes or a few leaves of cabbage; but such luxuries are bought with money made by extra work, or saved by petty "economies" in other ways. This ration seemed to me ample in quantity, but lacking in variety and very deficient in vegetables. The bread, which I tasted, was perhaps as good as that eaten by Russian peasants generally; but it was very moist and sticky, and pieces taken from the center of the loaf could be rolled back into dough in one's hands. The meat, which I saw weighed out to the convicts after it had been boiled and cut up into pieces about as large as dice, did not have an inviting appearance, and suggested to my mind small refuse scraps intended for use as soap-grease. The daily meals of the convicts were arranged as follows: in the morning, after the roll-call, or "verification," breakfast, consisting of brick tea and black rye-bread, was served to the prisoners in their cells. The working parties then set out on foot for the gold placers, carrying with them bread and tea for lunch. This midday meal was eaten in the open air beside a camp-fire, regardless of weather, and sometimes in fierce winter storms. Late in the afternoon the convicts returned on foot to their cells and ate on their sleeping-platforms the first hearty and nourishing meal of the day, consisting of hot soup, meat, bread, and perhaps a little more brick tea. After the evening verification they were locked up for the night, and lay down to sleep in closely packed rows on the "nares," or sleeping-benches, without removing their clothing, and without making any preparations for the night beyond bringing in the "parashas," or excrement buckets, spreading down their thin patchwork crazy-quilts, and rolling up some of their spare clothing to put under their heads. The clothing furnished to a hard-labor convict at Kara consists—or should, by law, consist—of one coarse linen shirt and one pair of linen trousers every six months; one cap, one pair of thick trousers, and one gray

¹ "Siberia and Penal Servitude," by S. Maximoff. St. Petersburg: A. Transhel, 1871. "Afar," by M. I. Orfanoff. Moscow: Kushnereff & Co., 1883.

Mr. Orfanoff says, for example,—and says it in

italics,—that in the course of nine years' service in Siberia, he "never saw a prison in which there were less than twice the number of prisoners for which it was intended." (Page 233.)

overcoat every year; a "polushuba" (pol'oo-shoo-ba), or outer coat of sheepskin, every two years; one pair of "brodnias" (brode'nee-yas), or loose leather boots, every three and a half months in winter; and one pair of "kati" (kot-tee'), or low shoes, every twenty-two days in summer. The quality of the food and clothing furnished by the Government may be inferred from the fact that the cost of maintaining a hard-labor convict at the mines is about \$50 a year, or a little less than fourteen cents a day.¹

After having examined the Middle Kara prison as carefully as time and circumstances would permit, we proceeded up the valley to a point just beyond the penal settlement of Upper Kara, and, leaving our vehicles there, walked down towards the river to the mines.

The auriferous sand in the valley of the Kara lies buried under a stratum of clay, gravel, or stones, varying in thickness from ten to twenty feet. The hard labor of the convicts consists in the breaking up and removal of this overlying stratum and the transportation of the "pay gravel," or gold-bearing sand, to the "machine," where it is agitated with water in a sort of huge iron hopper and then allowed to run out with the water into a series of shallow inclined troughs, or flumes, where the "black sand" and the particles of gold fall to the bottom and are stopped by low transverse cleats.

The first placer that we visited is shown in the illustration on page 173, which was made from an imperfect photograph taken by Mr. Frost under very unfavorable conditions. The day was cold and dark, a light powdery snow was falling, and a more dreary picture than that presented by the mine can hardly be imagined. Thirty or forty convicts, surrounded by a cordon of Cossacks, were at work in a sort of deep gravel pit, the bottom of which was evidently at one time the bed of the stream. Some of them were loosening with pointed crowbars the hard-packed clay and gravel, some were shoveling it upon small hand-barrows, while others were carrying it away and dumping it at a distance of 150 or 200 yards. The machine was not in operation, and the labor in progress was nothing more than the preliminary "stripping," or laying bare of the gold-bearing stratum. The

convicts, most of whom were in leg-fetters, worked slowly and listlessly, as if they were tired out and longed for night; the silence was broken only by the steady clinking of crow-bars, a quick, sharp order now and then from one of the overseers, or the jingling of chains as the convicts walked to and fro in couples carrying hand-barrows. There was little or no conversation except that around a small camp-fire a few yards away, where half a dozen soldiers were crouching on the snowy ground watching a refractory tea-kettle and trying to warm their benumbed hands over a sullen, fitful blaze. We watched the progress of the work for ten or fifteen minutes, and then, chilled and depressed by the weather and the scene, returned to our vehicle and drove back to the Lower Diggings.

The hours of labor in the Kara mines are from 7 A. M. to 5 P. M. in winter, and from 5 A. M. to 7 P. M. in summer. A considerable part of this time, however, is spent by the convicts in going back and forth between the "razreis" (raz-rays'), or "cutting," and the prisons where they spend their nights. The amount of gold extracted from the placers annually is eleven poods, or about four hundred pounds, all of which goes into the private purse of his Majesty the Tsar. The actual yield of the mines is probably a little more than this, since many of the convicts of the free command surreptitiously wash out gold for themselves and sell it to dealers in that commodity, who smuggle it across the Chinese frontier. To have "golden wheat," as the convicts call it, in one's possession at all in Siberia is a penal offense; but the profits of secret trade in it are so great that many small speculators run the risk of buying it from the convicts, while the latter argue that "the gold is God's," and that they have a perfect right to mine it for themselves if they can do so without too much danger of detection and punishment. The cost of maintaining the Kara penal establishment was estimated by Major Potulof at 500,000 rubles, or about \$250,000, a year. What proportion of this expense is borne by the Tsar, who takes the proceeds of the convicts' labor, I could not ascertain. He receives from all his gold-mines in Eastern Siberia—the "cabinet mines," as they are called—about 3600 pounds of pure gold per annum.

¹ This was the estimate given me by Major Potulof.

George Kennan.

THE LAST ASSEMBLY BALL:¹

A PSEUDO-ROMANCE OF THE FAR WEST.

BY MARY HALLOCK FOOTE,

Author of "The Led-Horse Claim," "John Bodewin's Testimony," etc.

PART III. THE CATASTROPHE. (CONCLUDED.)

IV.

FRIDAY, the anniversary of the Assembly Ball, was general sweeping-day at Mrs. Dansken's. Ann had taken cold, or so she chose to assert, perhaps as an excuse for an irritability which vented itself in savage excesses of work. Milly's help was wanting, but Ann wrought for both. She worried her tasks, growling like a dog with a bone when her mistress attempted to take a share.

It was matter for curiosity to Mrs. Dansken and for solitary headshakings for Ann that Milly's trunk still stood in the hall, a silent postulate, no one inquiring for it and no sign of the owner's interest in its disposal.

"Don't ye be frettin'," said Ann, who was doing all the fretting herself. "She 'll not be long parted from her clothes. Belike she's sick like meself, with thrampin' thim snawy streets."

Mrs. Dansken, in the Nile-green silk, looked and felt every year of her age as she took her place at table, opposite Hugh Williams, to give him his late supper. He had just presented himself, although the stage had been in an hour. He had not seen his partner; Mrs. Dansken had the field to herself, but she took no advantage. She gave Williams the history of the household during his absence from a point of view that was magnanimous, considering the soreness of the narrator.

"And where is the girl now?" Williams asked.

"She is at the Sisters'."

"No, she is n't; because I've just been there myself, to make some inquiries about her. I got on the track of that brother of hers — turns out to be her husband." Mrs. Dansken listened with relief and entire conviction to Williams's account of what he had learned about Milly.

"Oh, I shall give Master Frank a dose, if he needs one," he ended. "We 'll have him

back here within the week. You don't suppose he could have sent her the gown?"

Mrs. Dansken flouted the idea. "Is it like Frank Embury to be bribing servant girls with cheap finery?" Mrs. Dansken's survey of Frank's purchase had been a hasty and prejudiced one.

"No, of course that's out of the question," Williams agreed. "She has smiled and retreated with somebody else."

"I 'm not sure about that," said Mrs. Dansken. "Ann insists she is all right — but then, they always stand up for each other."

"I 'm perfectly satisfied, myself," said Williams. "The Sisters had no idea they were giving it away — I 'm keeping you from your party." He looked at his watch.

"Are n't you going?"

"No; I've done my duty, and it seems there was no hurry after all. And now I 'm going to sleep."

Williams showed the brisk confidence of an ally newly arrived with fresh information on the scene of old complications. Mrs. Dansken was doubtful that the last word had been said; but she knew herself to be helpless, and was glad to leave the matter in his hands.

She was not happy at the thought of meeting Frank, with the difference between them unhealed. The keystone had fallen from the arch of domestic unity. She was no longer sure of the allegiance of her boys. It might transpire that a faction of separatists had secretly been forming in Frank's support; and a revolted favorite has ever been held the most dangerous of private enemies.

It was a relief to find that at half-past nine o'clock — the Assembly assembled early — Frank was not there.

The ladies were all on the floor. Mrs. Dansken noticed the exchange of emphatic looks, the occasional low-spoken words, as they crossed each other's orbits in the dance. The overstock of young men were whispering and smiling queerly in little knots against the wall. Strode was waltzing with a Mrs. Paul, one of

¹ Copyright, 1889, by Mary Hallock Foote.

the new ladies in the camp, still under consideration by the other ladies, but entirely acceptable, it seemed, to Mr. Strode. The lady was in a thorough-going mood to-night; she neglected even the business of waltzing for energetic conversation with her partner, and seemed impatient of the coolness of his replies.

"He intends to capture the room—take us all by storm." Mrs. Dansken caught these words as the pair swept by her. "Good idea—before you ladies have a chance to combine."

"He's too late, then," said Mrs. Paul. "It does n't take us long, I can assure you, when we've got a cause."

Strode laughed, and stooped to murmur something in her ear, with a glance at Mrs. Dansken.

"Does n't she know?" Mrs. Paul exclaimed aloud. "How very queer! Somebody must tell her at once."

The name of her escort, Mr. Blashfield, was the only one on Mrs. Dansken's card; but now the waltz was over and she found herself in the midst of her accustomed circle. She perceived that Strode was walking across the room with Mrs. Paul, and instantly fixed her features in an expression of unconsciousness until they were at her side, when she turned in effusive surprise. But Mrs. Paul proceeded at once to business.

"Mrs. Dansken, have none of these gentlemen told you of the introduction we are to be favored with to-night? They are very considerate, I'm sure, but it's no time now to spare one another's feelings. We are to be taken by surprise, it seems."

"Yes?" said Mrs. Dansken.

"I think it's perfectly abominable he should n't have told you! I'm afraid you don't look after your young gentlemen, Mrs. Dansken. You are too busy making them comfortable."

Allusions to her professional hospitality were not pleasing to Mrs. Dansken, but she merely smiled, and asked if it was Mr. Strode who needed looking after.

"Oh, Mr. Strode can take care of himself, I think. He is n't going to be run off with by anybody's pretty waitress. It's that poor young Embury and your Annie, Allie, whatever her name is: they were married last night—goodness knows where! He's going to present her to us this evening. Do you mean to say you had n't the faintest suspicion what was going on?"

"My dear," said Mrs. Dansken, gallantly hugging to her breast her deep chagrin, "I've had these young persons on my mind all day, especially 'my' Annie, as you call her. I had my suspicions, but I was ashamed of them." She could not help a little huskiness in her voice. "But it seems one need n't be ashamed

of anything. I'm happy to say nothing that *girl* could do could possibly surprise me."

"But it is too bad about Frank Embury! And the worst of it is, we can't punish her without punishing him too. I think it's the brazenest performance I ever heard of! The question is, how are we to receive her—as what she is, or what he wants to make us believe she is?" asked Mrs. Paul.

"Oh, I don't care what she is! She is his wife now—let him look out for her." Mrs. Dansken disdained the applause that followed this speech. It was bitter to her that the catastrophe of her household should be paraded in this way, and that a Mrs. Paul should be the one to inform her of it.

"He's quite capable of it," she went on, her smarting eyes fixed on a far corner of the room. "He has quite circumvented me. I begin to think I'm a perfect child."

"I don't see why Embury has n't a right to bring his wife. I should want to bring mine, if I had one," said Strode, judicially. "Let them have their dance, I say. Embury has paid for his share of the floor."

"They may have the whole of it for me," said Mrs. Dansken. She asked Blashfield to give her his arm and he took her away, out of the discussion.

"*She's* all right," commented Mrs. Paul, looking after her. "She will never forgive him—and I would n't either. Any young man may be foolish, but to marry her, and brazen it out to our very faces!"

"I wish you would take me home," said Mrs. Dansken. "I believe I'm not much of a fighter after all. Mrs. Paul seems to have taken the whole thing upon her shoulders. She will see that justice is done; I can't say I care to stay and look on. It will be thumbs down with every woman in the room."

"I ain't anxious to see it myself," said Blashfield. "But don't you think—had n't we better stand by him, Mrs. Dansken? Frank's a pretty good boy."

Mrs. Dansken gave him a look. "*You* can come back and stand by him, if you wish to. I think you'll have your hands full."

They were in the middle of the room, opposite the main entrance, when the whisper went round, "There they come!"

Blashfield fairly blenched. He fell back, leaving Mrs. Dansken to face the triumphant young couple, advancing; Embury looking handsomer than she had ever seen him, with a girl on his arm who was the apotheosis of Milly.

All his personal grievances had been outlawed in that day of Frank's seclusion with his wife—the day that had lasted years. He saw Mrs. Dansken before him, as in dreams one sees a friend from whom one has long been

separated. He remembered only that she had been kind—that now, if ever, she must be kind. He looked at her earnestly, insistently, imploringly, seeing that her face remained cold. He held out his hand. She swerved from him, and bore off Blashfield with her to a bench against the wall.

"Tell him to come to me one moment—without that girl."

Blashfield obediently crossed the room to the place where Frank had seated his wife. The neighboring ladies had instantly moved away; he was standing at her side, covering her isolation. He had taken her fan and was beating back the bright hair from her temples, not daring to look at her now the ordeal was upon them.

He could have embraced Blashfield for his bow to Milly and his matter-of-course manner to them both, though the little man was pink with embarrassment. He attempted no foolish congratulations, but asked Milly, quite naturally, if she were well, and said, with a deeper blush, that they missed her awfully.

Milly came out of her stony silence to say, "Mr. Blashfield, would you give my love to Ann, please, and tell her—" A look from Frank disturbed her and she stopped.

"Yes, indeed, Mrs. Embury." Again Frank would have liked to embrace poor Blashfield, who was having a desperate time of it. "Ann is a regular funeral in the house ever since you left. Embury, Mrs. Dansken wants to speak with you. Will you let me stay with Milly?" This was somehow even better than the "Mrs. Embury"; a choking feeling in her throat made Milly put down her head.

"Mrs. Dansken might have spoken to me a moment ago," said Frank. "She did n't seem particularly anxious then."

"She was taken by surprise, you know. You'd better go and speak to her, Embury. Don't you think he had?" He addressed himself to Milly, who turned her face away and said, "I don't want to speak to Mrs. Dansken."

Blashfield looked unhappy. He rose up and bowed again to Milly. "Take her away, for God's sake!" he muttered to Frank, apart. "She has n't a friend in the room."

Frank was cool and savage.

"It would be all right if the women were n't here. But you can't fight women with a woman you know—and your wife. Take her out of it."

"We'll have a dance first," said Frank. "But I thank you, Blashfield."

"I'd like to dance with her myself," said Blashfield, "but I've got to take Mrs. Dansken home."

"What is the matter with Mrs. Dansken?"

"She is afraid there's going to be a row.

Come and speak to her, Frank; you ought to, for your wife's sake."

"For my wife's sake!" said Frank, scornfully. "I must go back to my wife. Thank you, Blashfield."

"Blashfield is the flag of truce," the ladies said. But the flag of truce disappeared a moment later with Mrs. Dansken, and the ladies understood that the terms of surrender were off.

Frank and Milly took their places as third couple in the lancers. He had not dared to ask her if she could dance, but she showed no hesitation and bore herself to his entire admiration. The manner of the perfect servant, which Mrs. Dansken had approved, did not forsake her now; she stood up as calmly as if she had been behind her mistress's chair, with the double file of laughing young men's faces in front of her.

"My brave girl—my beauty," Frank whispered, and the next moment he saw that they were deserted. The set had melted away and they stood in their places alone. He whirled Milly off into another set that was forming; that too dissolved, and left them objects of commiseration or of derision to the room.

Then they took their seats. "I wish we could go away," Milly said.

"We will go, after a while. I will not skulk out of the room with you and leave a trail of sneers behind us. Who are they?—a lot of washed-out old women; and where did they come from, I should like to know? Ladies don't assemble in mining camps, as a rule." Frank stopped, and Milly said:

"I'm not a lady. I never pretended to be."

"And they do pretend, that is just the difference." He was more sure of himself, now that the case was simple—his bride to buckler against the world. "We will have one waltz together. Can you waltz, Milly?"

Milly smiled faintly in reminiscence. "What should I care about the music if I'd never danced to it?" she asked.

"Ah, that night! Poor Milly!—Heavens, how beautiful you look! You are my Cinderella after all. We'll make those proud sisters own up who is the belle of the ball. Wait till the men have their turn."

Frank was not himself to-night. He was not in the habit of such speeches as these, but the form of attack he was meeting called up all that was crudest and coarsest in his nature. The company had now got down to the level of primitive instincts. It was simply a tussle for supremacy.

When the waltz began Frank rose and took Milly by the hand. Her hand was cold. He looked at her beautiful face and saw that she was colorless, except for her bright hair and

her opaque, gem-like eyes, on which the light floated as on dark green water.

"Can you go through with it?" he whispered.

"Can I waltz?" asked Milly. "You will see."

"What are those poor things going to do now?" Mrs. Paul exclaimed as they took their places. "Does he imagine that she can dance? I propose we give them the floor."

It was yielded them by tacit consent, and they floated over it, a pair of dancers who might have been chosen to incarnate the spirit of the waltz.

"That's business," Strode murmured, and then not another word was spoken. The company were reduced to the attitude of mere spectators; every eye followed the exalted, dreamlike motions of the beautiful young pair.

This was Milly's triumph. Whether it was worth the cost Frank did not ask himself. He flung himself into it with an aching forecast that such henceforth would be the nature of his wife's triumphs — conquered by strife, and in a field open to all competitors without subtle distinctions. A perfect physical endowment; a sense of rhythm; muscles true to the quiver of a nerve; a calm, uneager face. The soul of the waltz passed, in anguished ecstasy, before the silent company, and the hearts of the women were pained and the men were at Milly's feet.

But none the less was she doomed.

"Really, one would think it was professional," said Mrs. Paul. "How does she keep herself in practice?"

"By Jove, she's stunning! It does n't look as if she needed much practice," said Strode.

Such remarks did not help Milly's case, especially as a majority of the young men carried their defection to the point of going over to her in a body, asking to be introduced, and crowding her card with their names.

The ladies were beaten from the field. Those who had escorts summoned them, and at 11 o'clock Milly was the only woman in the room.

The best of the men had gone with the ladies. It needed but a glance to show Frank that the tables were turned, and that the retreat of the women had been a stroke of vengeance. The men whose names were on Milly's list were not such as he intended his wife should dance with.

When it was seen that he was taking his beautiful waltzer away, a crowd of protestants gathered about them, reproaching her familiarly and joking with Frank in a way that drove him wild. Some of them had been drinking. Decidedly Strode was not himself. He had disposed of Mrs. Paul at her door and had hastened back, pausing for a parenthetical glass at the bar, to confirm his indorse-

ment of Milly. It was he who followed up the retreat, who intercepted the pair at the foot of the staircase, and tipsily demanded his dance with the bride. The stairs went up from the office of the hotel, where a crowd of men were laughing witnesses of the scene.

"Some other time, Strode," said Frank, controlling himself.

"Wha' 's your hurry? Have n't you cut her out and got you' brand on her?" Strode muttered, lapsing into cowboy slang.

They had reached the first landing, Strode pursuing. Frank turned upon him. "Clear out, before I kick you downstairs."

Strode braced himself, and Frank took him by the collar and flung him backwards off the landing. It was not far to fall. Strode was up and at the bedroom door, sobered and white with rage, as Frank shut the door upon his wife and faced about to meet him.

Strode looked into his eyes. "You've got to apologize," he muttered.

Frank laughed at this proposition, following the scene on the stairs. He was perfectly cool. "Do you want any more of the same sort?" he asked.

"When will you meet me like a gentleman?"

"Like an idiot, you mean! Gentlemen don't fight duels off the stage."

"Gentlemen, with us, don't use their fists," said the Arkansas boy. "You are a — cow-ard!"

"Am I? You shall prove it — any ridiculous way you like, and as soon as you like."

"Twelve o'clock then, out here in the lot back of the hotel. Who's your friend?"

Frank thought a moment. "Blashfield," he said. "You need n't make a noise about it."

"I think you will squeal first," said Strode.

"Hound!" said Frank, looking after him.

He went into his room and took Milly in his lap, putting his head down upon her shoulder. She laid her hands timidly one on each side of his temples, and felt the hot veins throbbing. Her heart was very soft towards him, her wonderful young lover, her protector, whom she found more formidable than all the dangers he had tried to save her from.

"He'd taken too much, had n't he?" she whispered.

Frank shuddered.

"You ain't afraid he'll make you trouble?"

He shook his head. He gripped her to him, gave her a little shake, and put her down from his knees.

"Why would n't you let me dance?" she asked presently, following him with her eyes as he strode about the room. "You was n't jealous, was you?"

He threw up his head like a creature that feels itself stifling. It was clear that Milly had

not perceived the nature of her success, and was immensely supported by it. Her exhilaration was even more dreadful to him than the incomprehension he had been beating himself against all day.

"Milly," he said, "did I ever show you my mother's picture?"

"Is it that one in a leather frame on your bureau?"

Again, was it possible he could be sensitive on so slight a point as that Milly should be already intimate with his personal belongings in her domestic capacity? "Yes," he said, with a sigh. Once he had compared this beautiful girl to Enid, who was so sweet and serviceable, and had sympathized with Geraint in his desire to "kiss the tender little thumb that crossed the trencher as she laid it down"; though as a matter of fact Milly's thumb was neither little nor tender, and she had been instructed by Mrs. Dansken never to let it cross the trencher.

"My mother was never anything but kind to any living soul, I believe. Do you think you could be fond of her, Milly? Have you looked at her face?"

"Yes," said Milly, listlessly. "She looks older,"—she hesitated,— "but that, maybe, is the way she's dressed."

"The way she is dressed? Why, how should she be dressed?" Did Milly suppose his mother wore her hair in a fuzz on her forehead, like Mrs. Dansken, and dressed in Nile-green silk? Then he remembered that the picture had been taken when she was in mourning. But it did not matter. He felt as if he should never speak of his mother again.

Milly was silent, feeling that she had missed the right words, as usual. She had not been thinking much of what she was saying. She had not got as far as Frank's mother yet. Frank saw she had sunk into that attitude of stolid watchfulness, with something reproachful in it, that all day had been his despair. Her triumph was cold. He looked at her, fair as she was, with a face of that simple but elusive type the masters felt for, with broad, soft touches, in palest chalks, on the margins of bolder conceptions; he thought of Andrea del Sarto, of Lydgate, of all the men who had wrecked their lives in such frail craft as this. He thought of that nameless youth who was surprised and stabbed as he stepped from a gondola after a night's delirious drifting—the youth who boasted that he had "lived." But he could not find the comfort of a prototype, either in romantic reality or in realistic romance. He was no Andrea, no Lydgate: he was merely even a youth who had "lived"; he was merely the husband of Milly. As for the duel, it was the crowning act of this dreary little farcical

romance. He most certainly did not intend to hit Strode, and he doubted, on general principles, that Strode would be able to hit him, should the affair culminate in their pointing pistols at each other.

At a quarter to twelve Blashfield came to the door. "Strode will apologize," he said, "if you will give him a chance."

"I'll give him every chance when we get on the ground."

"He is downstairs now. He has come to himself. There's no sense in this meeting, you know."

"What do you want of me? It's a quarter to twelve now. Let him meet me where he said he would and we will shake hands. No, I won't go downstairs, Blashfield. I shall punch his head if I do."

"Are you going to be reasonable?"

"I have been reasonable. Strode was tipsy. Let him say so, when the time comes, and ask my pardon. I'm not going to hunt him up."

"I'll bring him up here."

"Thank you, I've no use for him up here. Keep an eye on him, Blasshy, if you're afraid he won't stay with it."

"He is n't my man."

"Keep with him all the same. I'll meet you at the barber's."

The quarter-hour was passed. Frank had said to Milly that he would have to go out for a few moments; it was the little engagement he had told her he would have to sit up for: He would tell her about it, and make her laugh, when he returned. He himself laughed as he kissed her.

He was leaving the hotel when he met Hugh Williams, beaming with outstretched hand.

"The dance lets out early to-night," he remarked pleasantly. "I did n't know Mrs. Dansken was at home till I stumbled over Blashfield."

Frank decided, after a look at Williams, that Blashfield had kept the meeting quiet.

"Well, how's everything since I've been away? I've been asleep for two hours. Mrs. Dansken gave me some supper—and, by the way, I'm mightily pleased that girl has gone." Williams had concluded to give Frank his "dose" while he could speak without apparent knowledge of all that had taken place in his absence, since it would never do to let Frank suppose he had been talked over.

"What girl?"

"Come out here, Frank," said Williams; and when they were in the street he said, "You know who I mean—the Perfect Treasure. I met the partner of her brother. The brother turns out to be a husband. He was n't a particularly good one, it seems, and so she hedges a little and calls him—"

"It's a lie."

"I thought it was a lie myself, Frank." Williams would not look at his friend to see how he was taking it. "I'm not much in the habit of packing lies about, especially lies about a woman, so I stepped round to the Sisters'," he went on, trying to speak naturally and in an unpremeditated way—"who took care of her, you know, when her child was born—"

Frank clutched him by the shoulders. "Stop!" he panted, "you are talking about my wife."

The two men reeled apart and stared at each other.

"Curses on it, why did n't you tell me?"

"Why did you open on me, before I could speak? Out with it now, to the last word!"

"I have nothing to say about your wife, Frank."

"I'll have it out of you, I say."

Blashfield, who had been waiting for his principal, caught sight of him and joined them. He gripped him by the elbow. "Do you know what time it is?" he suggested.

"I'll be with you in a moment, Blashfield; I want to speak with Williams—I'll be around."

Blashfield gave his arm another squeeze and ran off to the rendezvous.

"Frank," said Williams, "I can't take those words back, but you should allow for my ignorance. I've been gone a thousand years, it seems."

"You can say you believe me when I tell you those words are false."

Williams did not speak.

"Your silence, do you know, is insulting."

"I have nothing to say about your wife, Frank," Williams repeated, "except that she is a very handsome girl and I hope you will be happy."

"It is kind of you to mention her beauty."

"I think we had better not talk any more to-night. There's all to-morrow, you know."

"I have no desire to talk, but I think there is something more for you to say."

"What is it?"

"You will finish what you began to tell me, and then you will say whether you believe it is true."

"What does it matter what I believe? Go to your wife and find out the truth."

"Go to my wife, and ask her if she has had a child?"

"God help you, Frank. Go to her and learn to know your wife; and be thankful, whatever she is, that she is no worse. You've got to know the truth, sooner or later. It's all over the camp to-night."

"What is the truth?"

"Go to her, man. Don't ask me. For God's sake, am I to tell you she has been a mother; that her child was born at the hospital; that its father deserted her before it was born? I'd have kept it from you with my life, but I told Mrs. Dansken two hours ago, before she went to the ball. It's all over the town by now, God forgive me!"

Frank could not have been sure that he heard the last words of his friend, or that he was the man who was being led up and down the street, brokenly, like one intoxicated or asleep.

The rage had all gone out of him, the flame that had driven him for the past five days, since the evening he was published before the household. In its place was a light-headed calmness, in which he could think of Milly with a strange indifference.

"Have you got any money about you?" were the first words he said.

"Any money?" said Williams. "Do you want money to-night?"

"Yes, I want some money. I want a good deal. Do you know it's my wedding night?"

Williams stopped him in the street and fairly shook him, to get his attention.

"Frank, do you mean she is n't your wife yet?"

"Yes, she's my wife. I was married last night."

"Then, it is too late—"

"Too late to desert her? She's been deserted once, you say?"

Williams groaned, and they resumed their aimless walk.

"Did you say you had n't any money in your clothes?"

"I've got two dollars and a half."

"Don't get excited," said Frank; "I'm not out of my head. I'm going upstairs a moment. You need n't follow me. Can't a man speak to his wife?"

He went up swiftly to the door of his room. There was something he had yet to do; it was rather a crazy thought, but it chimed in with his fancy that he must not be ungentelemanly, whatever he meant by that. He stood a moment, listening by the door. The room was quiet. Could she be asleep on her wedding night—his bride without a history; the girl who within the year had suffered, in poverty and desertion, the agony of motherhood; who had buried her child; who had waltzed in his arms that night, a spectacle—how had he paraded his shame! This was why the ladies had retreated and the men had staid, those who were suited to the company of his bride. He prayed that she might be asleep.

Milly had been lying dressed and awake on the bed, when she first heard her husband's

step and knew that the moment she had been drifting upon had come, and that she must meet it, at last, with her lamp unlighted and the darkness of falsehood in her soul. She wondered if it might be possible for her to speak even now; but as Frank approached the bed the instinct of dread alone prevailed, and she lay still, scarcely breathing, and trembling like a hare in its form.

He stooped over her and thought that she slept; but with that horrible weak yet heavy beating of the heart going on inside his breast he would not have known if it had been death he looked upon, instead of sleep. In the hollow of her arm that was nearest him he deposited all the gold and silver he could find in his pockets, softly, one piece laid against another, not to waken the sleeper. He did not despoil himself further. His watch and the ornaments that completed his dress he kept upon his person. He looked at her once more, her face turned away from the little heaps of coin gleaming against the whiteness of her arm. The sight smote him, and yet what more did he owe her now?

Williams watched him as he came through the office. He stopped at the bar and asked for a glass of brandy; he drank it and then went over to the desk and spoke to the clerk, saying something about feeling the brandy in his head. His behavior struck Williams as simply idiotic under the circumstances, unless the boy had some purpose in making a fool of himself. He caught sight of Williams and smiled in a way that did not allay his friend's uneasiness. Hugh took him by the arm and said, speaking low as they stood by the door together:

"This is n't fair to her, Frank. You ought to give her a chance to explain."

"She can't explain now," said Frank, lightly. "She's asleep. And I have an engagement. Will you go up there and wait till I come back? The room is the one opposite the ladies' parlor. Stay round where you can hear her if she calls."

"Where in the world are you going? I don't like your engagement, at 12 o'clock at night."

"A man can't help his engagements," said Frank. "You heard me promise Blasshy I'd be there. You were pretty rough on her, Hugh. You owe her a good turn. And if your friend's wife is n't all you'd like her to be, is that any reason you should n't stand by her?"

"I should prefer, just now, to stand by you."

"So you will, if you'll just wait, you know. Wait up there till I get back."

"Go on, then; I will wait: and don't be out all night."

Frank smiled back at his friend with that wretched, inconsequent smile.

Hugh was still uneasy, but the fact that Blashfield was concerned with Frank's engagement comforted him somewhat: his friend could not have any very desperate or tragic intentions, with Blasshy in tow.

The ladies' parlor was empty, but Williams was too restless to compose himself to solitary contemplation of its splendors. He walked the length of the hall, back and forth, pausing once at Milly's door when he thought he heard a sound of weeping. "Poor little fool," he said to himself, "I could be sorry for her if it was n't for Frank — his life spoiled at twenty-four."

He stood in one spot in the middle of the hall for some moments, thinking of his friend's future.

"And what is he up to now, I wonder?" He looked at his watch and saw that Frank had been gone three-quarters of an hour.

A window at the lower end of the hall was open and the wind blew harshly in, making the lamps flicker. He stepped down the hall to close it, and as the keen night air crossed his face he heard the report of a pistol. He went to the window and looked out. It was a high window, opening on the narrow fenced alley between the hotel kitchen and the open lot behind. The alley was lighted for a short distance by the lamps of late workers in the kitchen; beyond, as far as he could see in the direction of the shot, all was dark.

Williams found the door of a back stairway and ran down to a rear entrance opening upon the fenced passage. One or two of the hotel servants — there were but few up at that hour — stood bareheaded in the alley, in the light from the hot kitchen, staring into the blackness of the lot.

"What is it?" Williams asked.

"Some young fellows went past here a while back," one of the waiters said, peering ahead of him. "I do' know what they're up to."

Williams crowded by him and met Blashfield, a few steps farther on, running, his face towards the light.

"Who is hurt?" asked Williams, seeing that something was wrong.

"Embury."

"How — who did it?"

Blashfield did not answer, but ran on. He gave money to one of the waiters, who disappeared and took himself the nearest way into the street.

Williams ran blindly forward towards a spot of light near the rear fence of the lot. There were figures moving against it; those nearest the light were motionless, but one was moving back and forth in a curious trot. A few steps brought Williams near enough to see that it was Strode, still in evening dress except that he had changed his coat for a reefing-jacket.

He grasped Williams by the hand and began a childish babbling. Hugh could not shake him off; he ran beside him talking excitedly.

"I thought you were the sheriff. I'm waiting to give myself up; but the boys will tell you, Williams, I never meant to fight. I had n't a thing against him. I offered to apologize. I was n't even heeled. The boys will tell you one of 'em had to lend me a pistol; I had n't a weapon on me."

"Let go of me, Strode. Where is he?"

"I'm taking you there. He was bound to have the thing come off. You can ask the boys if I could help myself. I don't know how I came to hit him. I never meant to do it. And he never fired a shot. His pistol was cold. I think he was drunk, Williams, or else he's off his head. Why, good Lord, it was nothing—what I said."

The figures by the spot of light moved aside and showed one that lay on the snow, in an angle of the fence, sheltered from the wind. A lantern at his feet shone upward upon his blanched hands and chin and throat.

"How are you now, Embury?" asked Strode, pressing up. "You ain't much hurt, are you?"

Hugh put him aside. "Where is it, Frank?" he said. "Are you bleeding much?"

Frank groaned as Hugh passed his hand over the soaked clothing, feeling for the wound.

"It was the brandy," he muttered. "You saw me take it, Hugh. Went to my head like—keep them off a minute," he whispered.

"Has Blashfield gone for a doctor?" Hugh inquired.

"Yes," he was told. "We thought we had n't better move him."

"Well, step away, boys, a moment, will you? O Frank, I could curse myself to death, if that would save you!"

"I've got what I wanted. You'll hush up the talk, Hugh? Let them think it was the brandy—went to my head," he murmured wanderingly.

"Is there anything else, dear boy? You'll get a chill lying here."

"No—I wanted to tell you—I've got what I wanted," Frank repeated dreamily. "You must not think—that you—" He sighed, and gave up the effort to explain. "It was not happy," he whispered, trying to fix his eyes upon his friend's face. They could not hold the look; the meaning faded out of them, and he spoke no more.

"We must get him in," said Hugh. They laid him on an overcoat stretched upon the snow and carried him in, past the lights of the kitchen, by the servants' entrance.

"Not upstairs," Hugh whispered.

They turned into the dining-room, where the tables were set in order again for the morning,

and laid him on the floor with a pile of cheap quilts from one of the waiter's beds under him.

The doctor had gone, commanding that Frank should not be moved, his slender chance for life depending on absolute quiet. It was a Leadville night, wind and sharp volleys of sleet succeeding the early hours of still darkness. From time to time the watchman came in and put coal noiselessly, with his mittened hands, upon the fire.

Frank had not spoken since his fainting-fit when they carried him in. Towards morning he opened his eyes and turned them upon Hugh, with that look which those who have watched by the dying recognize as the approach of the final change—the look that obliterates personality, that makes the young face old and the old face young. Hugh saw that he wished to speak. He gave him the stimulant the doctor had ordered in case of a return to consciousness, and waited for its effect.

"Could you go up softly, before she wakes, and take that money away?" Frank whispered.

Hugh thought that he was wandering. Presently he said, quite collectedly, "When you take me home, tell them everything. Perhaps they will not mind, if they know—I got what I wanted."

"Oh, my dear boy, was there no way out of it but this?"

"Not for me—the way of the foolish," he murmured.

But at the last the smile that dawned upon the still face was an awesome sight to see. Williams thought, as he dwelt and dwelt upon it, and tried to strengthen his faith and ease his pain by gazing, that if Frank's father and mother could but see that look, there must have been consolation, even for them, in that marvelous light shed by the unknown upon this wreck of the known.

When the smile, with its silent protest against grieving, had been put away out of sight, Hugh's pain returned; he saw all the wasted moments of retrieval, all the turning-points that had been hurried past.

Mrs. Dansken showed him a letter she had written to Frank's mother, bitterly accusing herself and giving minute details.

"You have n't said anything about what I did," said Hugh, when he had read the letter.

"You did nothing that I was not responsible for."

"You can't tell the whole truth about this matter, Mrs. Dansken. Better leave it alone. I will tell them all that he wanted them to know."

"But they will never know his provocation."

"They know their own boy—and would it comfort them to think we had muddled his

life away here among us? You can't tell the whole truth, Mrs. Dansken. We don't know it ourselves."

THERE have been dancers and dancing on the floor of the Clarendon dining-room since the night of Milly's *début*, but very few of the original Assembly ever appeared there again in pursuit of pleasure.

There was one corner of the room, over against the bench where Milly had sat at bay, that was haunted for those who helped to lay the young bridegroom there upon the floor, as it might have been, at her feet. Milly herself never entered the room again, nor willingly looked in the face of one of those who witnessed her entrance and her exit there. Six months after that evening the household at No. 9 had dispersed, and knew each other no more except by hearsay.

Blashfield continued on his amiable career westward until he reached Honolulu, where he married an heiress of the island, with a shade, it is said, of the liberally disseminated blood of the royal family in her veins. She is reported to be a beautiful woman, with a yard or more of darkest brown hair and a constitutional leaning towards the wearing of wrappers in the afternoon.

Mrs. Dansken continued to make Hugh Williams the confidant of her grief and repentance for the miscarriage of her relations with Embury, but in respect to Milly she could never be brought to accuse herself except for the fact of the girl's presence in the house. With no audience to applaud, Hugh ceased to try to make points against her in conversation. Before a year had passed he was the sole boarder at No. 9, and this time the arrangement was a permanent and exclusive one. Mrs. Dansken was a few years older than her philosophical husband, but his was the elder temperament. Hugh had parted with his best hopes, in the way of marriage, some time before he made the acquaintance of his Leadville landlady: he had always liked the merry, capable, honest little woman; he used to feel her wearinesses, her mistakes, and humiliations almost as if they had been his own; he did not mind her sharp tongue or her rowdy little ways,

and she made him, he believed, a better comrade in his wandering Western life than a delicately bred, supersensitive, romantic girl from the more carefully weeded ranks of society. But it was long since he had known any girl of this sort, and his ideas on the subject were somewhat vague.

Strode went to New Mexico, where the story of his having killed his man in a duel after a Leadville dance had preceded him, and won for him prestige of a kind he did not covet under the circumstances. He never had occasion to confirm the report which described him as a dead-shot and a dangerous man in a quarrel.

Milly went to live with Mrs. Black, who, with her gift for discerning what was best in those around her, discovered that Milly was "a born sick-nurse"—of the capable and restful, rather than the intuitive, kind. There was plenty of employment outside of the hospitals for Milly's powers during the succeeding season at the camp. Sometimes it was the mother of a young babe at some crazy cabin on a claim that the father was "holding down," perhaps with barricade and shotgun; sometimes a houseful of little children prostrated by an epidemic. Once it was a traveler overtaken at his hotel—a big stock-raiser from Montana, in beaver overcoat and diamond pin, who perforce upon his recovery presented his pretty nurse with the life he was pleased to owe to her services. What Milly did with the gift, after she went back with him to his cattle-ranch, is not known. But Mrs. Black was glad to have the girl off her mind, she said. "For a girl as pretty as that, who has n't learned to say either yes or no, is n't safe to have around in a place where there are so many men folks."

Poor Frank, alas! had given occasion for all the family prophets who had ever doubted him to say, "I told you so." But there is one little girl who will always believe that if they had only allowed her to marry her own love all would have been so different. Perhaps a belief of this kind is a better thing than its realization could have been; at all events, Mr. and Mrs. Mason still think that they knew best.

Mary Hallock Foote.

THE BLOODHOUND.

My hounds are bred out of the Spartan kind,
So flew'd, so sanded; and their heads are hung
With ears that sweep away the morning dew;
Crook-kneed, and dew-lapp'd like Thessalian bulls;
Slow in pursuit, but match'd in mouth like bells,
Each under each. A cry more tuneable
Was never hallowed to, nor cheer'd with horn,
In Crete, in Sparta, nor in Thessaly:
Judge, when you hear.

A Midsummer Night's Dream.

THE bloodhound, formerly called the sleuth-hound (from the word slouth, probably meaning scent), slow or slough hound (as he frequently pursued over bogs or sloughs), limier or lime-hound (so called because he was often led in a leathern thong), is the most ancient breed of hounds in England; and although the favorite of the painter, and universally admired for his majestic and dignified appearance and for his associations with the old-time romances in which he took such an exciting part, and which have been celebrated so frequently in song and prose, he is not common even in England, and is perhaps less understood than any other of the canine race.

Until comparatively recent times these hounds were only to be found in the kennels of the nobility, and even now well-bred bloodhounds are in the hands of very few breeders, and are all closely related.

Jesse says the earliest mention of bloodhounds was in the reign of Henry III. The breed originated from the talbot, which was brought over by William the Conqueror, and seems to have been very similar to the St. Hubert, a breed from St. Hubert's Abbey in Ardennes, which, according to the old legends, was imported by St. Hubert from the south of Gaul about the sixth century. The talbot was the popular hound from the twelfth to the sixteenth century, but became extinct about the end of the last century. The southern hound, another very old breed showing many characteristics of the bloodhound, is very difficult to find now in his pure state, although many of our old packs of harriers are descended chiefly from him. The best authorities agree that the St. Hubert, talbot, and bloodhound are all very closely allied.

Many writers assert that all our English breeds of hounds are descended from the bloodhound; but I am not aware that any attempt has been made to prove this, and must regard

these statements as conjectural. At the same time I do not know that any one can trace our other breeds of hounds to any other source than the bloodhound or talbot, and certainly this conjecture seems a very probable one.

One of the most careful and best informed authorities on hound lore, who contributes to "Baily's Magazine" under the signature of "N.," contends that the foxhound is not descended from the bloodhound, but is a hound of pure race, indigenous; or, if not indigenous, that probably his ancestors were brought back by the crusaders, as Xenophon describes a Grecian hound that is very similar. The same writer warns us not to accept the statements of those who assume

that when fox-hunting became a really national sport, some 150 years ago, the dog now known as the foxhound had to be manufactured in order to carry it out, instead of being already in existence, and, as I may say, only waiting to be put to that special use.

The old English bloodhound is quite different, both in appearance and disposition, from the Cuban bloodhound of slave-hunting notoriety. An authority says:

We are not of opinion that the dogs which were used in tracing the Indians of Cuba were the same with the bloodhound here alluded to. The dogs of South America were undoubtedly introduced by Columbus from Spain; and, if we mistake not, the Cuban dogs were of such a make and shape as would be produced between the mastiff and pointer, both of which breeds were common to Spain. The British bloodhound is more of an indigenous nature, originally cultivated from a mixture of olden races of *sagaces* and *celeres*, or sagacious and swift-footed, whereas the Cuban dogs were, in all probability, derived from an intermixture between the *pugnaces*, or dogs of war, and *celeres*.

Bloodhounds were originally used for tracking wounded game, and afterwards in the pursuit of outlaws.

"The Actis and Deidis of Wallace," by Blind Harry the Minstrel, who is believed to have written about 1470, contains a description of a pursuit of that chief made with the assistance of a bloodhound; and a bloodhound plays an important part in the poem of Barbour's, written in the fourteenth century, which recites how Sir Aymer de Valence and John of Lorn assembled a large force to attack the Bruce.

In Nicholson and Burns, "History of the

Antiquities of Westmoreland and Cumberland," published 1777, we find that

slough dogs were for pursuing offenders through the sloughs, mosses, and bogs that were not passable but by those that were acquainted with the various and intricate by-paths and turnings. These offenders were peculiarly styled moss-troopers: and the dogs were commonly called bloodhounds, which were kept in use till within the memory of many of our fathers.

And all along the pursuit of "hot trod" (*flagrant delicto*), with red hand (as the Scots term it), was by hound and horn and voice.

At a still later time bloodhounds were used for the capture of sheep-stealers and others, and a tax was often levied for their maintenance for this purpose.

It is only in very old writings that we find talbots, or white bloodhounds, mentioned. The "thick, round head" Somerville describes would certainly not be admired now, and I believe was never an accurate description of the bloodhound. A long, narrow, peaked head is indicative of great scenting powers, and large flews and dewlap of a deep, mellow voice.

The bloodhound has a much more delicate nose than any other known breed of hound, and can puzzle out a cold scent under the most adverse conditions. He is remarkable for adhering to the scent of the animal on which he is laid. Some years since a pack of staghounds was kept in Derbyshire, and it was no infrequent occurrence for the hunted deer to take refuge among a herd in some park. In this case the pack was whipped off and a couple of bloodhounds laid on, who stuck to the hunted deer until they got him clear of the herd, when the pack was again laid on.

The bloodhound is easily entered to hunt anything, and with a strong scent will sometimes absolutely sit down on his haunches for a few seconds and throw tongue in sheer delight. The note is very deep, mellow, and prolonged, and may be heard for miles. The bay, or "singing," of a kennel of bloodhounds just before feeding or exercising is most melodious.

The bloodhound was originally so slow that in border warfare he was taken up and carried on horseback for a time when the pursuers came to soft ground, where the trail was visible. If the horse of that period was faster than the bloodhound, the latter must indeed have been slow.

Lord Wolverton owned a pack of bloodhounds a few years ago with which he hunted turned-out deer in Dorsetshire and the Blackmoor Vale. He finally gave them up, and Lord Carrington brought them to hunt in Buckinghamshire, but only kept them a season, as he either had not the key to Lord Wolverton's

management, or the country was not so suitable for them. In 1881 the greater part of this pack was sold to Count le Couteulx de Canteleu, who has kept a number of pure English bloodhounds for many years, and used them with others crossed between the bloodhound and some of the old French breeds, hunting deer and wild boar.

Count le Couteulx told me that he found the pure bloodhound very suitable for this purpose, except that he is often not so courageous as is desirable for boar-hunting. He showed me the head of a boar which was brought to bay in the middle of a forest and killed eight hounds before the horseman could get up to perform the happy dispatch.

Some years since Mr. Selby Lowndes hunted outlying deer in Whaddon Chase with a small pack of bloodhounds, and sometimes hunted deer-stealers and sheep-stealers with them also, to the great discomfiture of these outlaws. An old man now living who used to hunt with these hounds relates that a hound called Gamester was the most reliable man-hunter they had, and that on one occasion when hunting a sheep-stealer, the man had gone away from his cottage some considerable distance to an old shed or cow byre, where he had literally buried himself in the manure which had been allowed to accumulate there; but the dog found him at once, and he was forced to come out from his hiding-place.

Mr. Lowndes bought Gamester out of a higgler's cart which he was drawing (although quite a puppy), giving £10 for him. Soon afterwards he refused £100 for the hound. The old servant referred to above stated that Gamester was so powerful that he could take up a horse's head, such as a man could only lift with some little difficulty, and leap on his high bed with it. He would hunt a buck through all his travels in the night and find him the next day.

Until a comparatively short time since, each keeper in the New Forest was required to keep a couple of bloodhounds on his walk. They called them talbots, and one keeper named Primer, on the Boldrewood walk, used to boast that he had had the breed in his family for more than three hundred years.

Some forty to fifty years ago Mr. Thomas Nevil of Chillend, New Winchester, procured one or two couples of these hounds from Primer, and from them originated a small pack which is deserving of a separate article. These hounds were described as being much like our present bloodhounds, but somewhat lighter in build, although Random, one of the finest hounds Mr. Nevil bred, is said to have been so high that he could walk round a high dining-room table and with his forefeet on the ground help

himself to anything he liked. Mr. Nevil took a fancy to have them all as nearly black as he could,—marked like black-and-tan terriers, in fact,—and so they were at his death. He always destroyed the lighter-colored puppies. Mr. Nichols, one of our most noted bloodhound breeders, obtained a hound called Countess from Mr. Nevil about 1876, and the cross was so successful that there is scarcely a bloodhound living to-day that has not some of this blood in his veins; and through Mr. Nevil's fancy for this color, which had become so emphasized in his pack, the general color of our bloodhounds is much darker than formerly.

Speaking of Mr. Nevil's black St. Huberts, a writer in "Baily's Magazine" says:

They were the descendants of that pack of which William Rufus was master. They were certainly splendid-looking hounds when we saw them, and their deep bay was a grand thing to hear. Mr. Nevil hunted everything with them, from the wild jackal and the lordly stag to the water-rat and "such small deer." . . . In the summer time, when the St. Huberts were taking holidays, no better sport could be imagined, said Mr. Nevil, than a run with a fine water-rat; and the earnestness with which he described to us a "run" of this sort, and the wonderful behavior of the St. Huberts under rather trying circumstances, was most amusing. He had trained his hounds to hunt the stags he kept in a paddock adjoining his house, and to trot home together side by side, the hunters and the hunted, after the stag had been taken. We have mentioned a jackal—an animal that lay on the rug like a collie dog, and was quite willing to be hunted by the St. Huberts and return to his rug after the hunt was over; but his chief loves were the stags. He had taught them to come to his call and feed out of his hand. He had taught the hounds that hunted them one day to be their companions the next, while the jackal went in and out as an occasional visitor.

There is not now any established pack of bloodhounds in England. Mackenzie's "History of Northumberland," published at Newcastle-on-Tyne in 1811, gives the following account of a pack of partly bred bloodhounds:

SPITTLE HILL, PARISH OF MILFORD.

The late William Bullock, Esq., of this place, was a keen and skillful sportsman, and kept a small but choice and valuable pack of hounds. So excellently were they trained that, like sleuth-dogs of the borderers, they could trace out a thief through all his turnings and windings. Whenever a hen-roost was robbed, geese killed, or other depredation committed by reynard in the neighborhood, Mr. Bullock was applied to and seldom failed to exterminate the nocturnal robber. At one time a most extraordinary instance occurred of the quality of two of his hounds. He threw off his pack in a covert near this place: when beating the bushes, a fox was unkenneled on the flank of the near hounds. They doubled upon him with their usual eagerness, and

after a spirited chase lost his track; but the two leading hounds were missing, and they neither came up at the voice of the huntsman nor the sound of bugle. The fox took towards Rothbury Forest, where he was seen followed by the hounds. Here it would appear he was headed off, when he directed his course to a stronghold on Simonside Hill, from whence, being still pursued, he ran northward and crossed the Coquet at crag-end, where he expected to find an asylum. Being again disappointed, he made towards Thrunton Crag, where he was equally unsuccessful. He then stretched across the country towards Cheviot. A shepherd on the skirts of that mountain in the evening heard the cry of hounds in the distance, and shortly after saw a fox coming towards him at a slow pace, and two hounds a few yards behind, running abreast and alternately chanting in a feeble key. The man confined his cur and stood stationary till they came up to the fox, which they tumbled down and fell upon but were unable to worry. The spectator then sprang to the spot, took reynard by the brush and pulled him forward in order to dispatch him, but he was already at the point of expiring. As soon as the hounds were a little recovered, he gave them some pieces of bread, and then conveying them to his cottage entertained them with the best viands his cupboard could afford. He had them called at Wooler market and the neighboring churches, but no person claimed them. They continued under his hospitable roof until Mr. Bullock accidentally heard of their place of residence, when he instantly recovered his two favorites and liberally rewarded their kind host. The zigzag course they had run in the chase was computed at upwards of seventy miles, and, what is remarkable, the fox seemed perfectly acquainted with all the strongholds in this passage. The writer has often heard these anecdotes repeated in this part of the country, where he resided for some time.

In "Boyle's Life and Works," by T. Birch, 1772, I find the following remarks "On the Strange Subtlety of Effluvia":

A person of quality, to whom I am nearly allied, related to me that to make a trial whether a young bloodhound was well instructed (or, as the huntsmen call it, made), he caused one of his servants, who had not killed or so much as touched any of his deer, to walk to a country town four miles off, and then to a market town three miles distant from thence; which done, this nobleman did, a competent while after, put the bloodhound upon the scent of the man, and caused him to be followed by a servant or two, the master himself thinking it also fit to go after them to see the event; which was that the dog, without ever seeing the man he was to pursue, followed him by the scent to the above-mentioned places, notwithstanding the multitude of market people that went along in the same way, and of travelers that had occasion to cross it; and when the bloodhound came to the chief market town, he passed through the streets without taking notice of any of the people there, and left not till he had gone to the house where the man he sought rested himself, and found him in an upper room, to the wonder of those that followed him. The par-

ticalars of this narrative the nobleman's wife, a person of great veracity, that happened to be with him when the trial was made, confirmed to me.

When we consider the marvelous attributes of the bloodhound, it is difficult to understand how it could possibly have gone almost out of use, as it evidently did. Probably this decadence began when he was no longer required in border warfare. For some reason he gradually ceased to be used as a limier, and the pursuit of criminals by means of bloodhounds was entirely given up long before the public learned to regard the new police, established in 1829, as their natural protectors. As a matter of course the breed became very scarce, and was only kept up by old families who were loath to part from their ancient traditions, or who had deer parks and used bloodhounds for tracking wounded deer. Fortunately, dog shows came to the rescue, or the breed would probably have by this time become extinct.

I fear that dog shows and their attendant changes of fashion have done an immense amount of harm to some of our most useful breeds; but luckily the bloodhound has been estimated most highly for his best and most characteristic qualities, and the long, narrow, peaked head, always associated with special scenting powers, and the long ears and immense dewlap, indicative of voice, are much more common now than ever before. The chief alteration has been in the lines denoting speed, and we now have a very much faster hound than in the moss-trooping days; in fact, many bloodhounds are quite as fast as average foxhounds. They have seldom been hunted in packs, and it would take generations of careful breeding and handling to make them suitable for English fox-hunting.

Nothing but the foxhound would work with a mob of perhaps 200 or 300 horsemen crashing behind him, and then trot home gayly after 10 or 12 hours of hard work. The huntsman of a pack of foxhounds has to lift them constantly and often guesses his fox to death, but the bloodhound would not stand this treatment. He likes to work out a scent carefully and cast himself, and will not brook much interference. No doubt he might be modified in this respect if it were thought desirable to do so; but it must be remembered that for generations many of our most experienced men have spared neither time, trouble, nor money in the perfection of our foxhound, and for his particular work it would seem scarcely possible to produce a more suitable hound. Probably out of 100 foxhound puppies bred annually at Belvoir Castle all but about 20 are drafted, and out of these 20 one-half are not bred from again; and this kind of careful selection has been going on all over England

for nearly a century. I should think that for every bloodhound reared in England there are five hundred foxhounds; and of course foxhounds have had the advantage of being bred for work, which has not latterly been the case with bloodhounds. We have, however, been intensifying the type and formation indicative of the special properties inherent in him, and I am satisfied that with a reasonable amount of careful training we may obtain much more wonderful results in the tracking of criminals than have ever been attained before. We have now few hounds trained to hunt the "clean boot,"—*i. e.*, merely the natural scent of a man through his boots,—and the very few bloodhound owners who attempt anything of this kind do not devote sufficient time to the pursuit to bring their hounds to even a moderate degree of excellence.

I am convinced that the time has now come when we may hope to see this matter taken up in a thoroughly intelligent manner; and if this is done, we shall, in a very few years, be quite unable to understand why the bloodhound was ever allowed to fall into disuse for this purpose. Each succeeding generation of trained hounds must become much more proficient than the last one; and when they have come into general use the deterrent effect on crime will be incalculable. Such detectives would be incapable of accepting a bribe, and would often discover criminals when other means could only end in failure.

At the Warwick dog show of 1886 some bloodhound trials were attempted in the castle park. Seven hounds were entered, but unfortunately several of them had evidently never been trained, and the courses run were made much too short for any real test of the capabilities of the hounds. Still three of them ran the line very accurately, although they had not been trained at all until about two months before the trials.

Some few years ago the idea of the use of bloodhounds for detective purposes was mooted in the daily papers, and the howl of horror at the barbarity of such a proceeding that it raised from the uninformed was most amusing to those who know the tractability of the bloodhound. He was associated with the tales of slave-hunting in "Uncle Tom's Cabin" and "Dred," and was supposed to be a ferocious monster, endowed with witch-like attributes, and capable of pursuing his victim successfully under any conditions until caught, when he would certainly tear him limb from limb.

The horrible murders committed in the East End of London last year and the complete failure of the police to trace the perpetrator of these outrages were the means of calling attention once more to the qualifications of

this old-time detective. The daily papers were filled with letters advocating his use; but, from the thoroughly impracticable nature of many of these epistles, I fear that the change in public opinion was due more to a strong desire for vengeance on an exceptionally loathsome miscreant than to increased knowledge of the disposition of the bloodhound. At one time the police received about 1200 letters daily containing various suggestions, and of these some

police authorities and various representatives of the press, and sufficiently demonstrated the facts that the hounds will run a man who is a complete stranger to them, that when they have come up to their man they will not molest him in any way, and that although the line may be crossed by others they will not change. While in London I never ran them without the line of the hunted man being crossed (often by quite a number of people),

but the hounds never once changed. They could carry the line across and for a short way along the gravel paths in the parks, but the experiments made on the London stones could not be considered as satisfactory as we should have wished. Hunting the clean boot on a London pavement is, I believe, the most severe test that any hound can be put to, and will of course require special and careful training.

I think I know every breeder of bloodhounds in England, and am not aware that this has ever been attempted before. I have not the least doubt that an intelligent, patient trainer, with well-bred hounds, can surmount these difficulties. At present I believe that no one does more training to hunt the clean boot than myself, but I am unable to give my hounds one-tenth of the work necessary to show really first-rate results.

One method of training advocated is to rub with blood the boots of the man who runs for the hounds, and to discontinue this gradually as the hounds become more expert. This is

a very bad system. It is quite easy to enter bloodhounds without any artificial aid of this kind, and it is much more difficult to get them to run a man after they have become accustomed to a stronger scent. I consider that hounds work better when entered to one particular scent and kept to that only, and I never allow my hounds to hunt anything but the clean boot. I begin to take my pups to exercise on the roads when three or four months old, and a very short time suffices to get them under good command. You can begin scarcely too early to teach pups to hunt the clean boot. For the first few times I find it best to let them run some one they know; afterwards it does not matter how often the runner is changed. He should caress and make much of the pups and then let them see him start, but get out of

BELHUS.¹

400 proposed the use of bloodhounds. Some of the newspaper correspondents seemed to believe that the police had only to take a bloodhound of any kind to the place where a murder had been committed weeks or months before, and the animal would at once scent out the trail of the murderer in preference to thousands of others and infallibly run the man down.

In the beginning of October I was consulted by Sir Charles Warren, then the Chief Commissioner of Metropolitan Police, as to the feasibility of employing bloodhounds to track the Whitechapel murderer, and after some correspondence I took two hounds up to London to experiment with. We ran them repeatedly in the parks for the information of

BLUEBERRY AND PUPS.

their sight as quickly as possible and run in a straight line, say two hundred yards up wind on grass-land, and then hide himself. The man who hunts the pups should know the exact line taken, and take the pups over it, trying to encourage them to hunt until they get to their man, who should reward them with a bit of meat. This may have to be repeated several times before they really get their heads down; but when they have once begun to hunt they improve rapidly and take great delight in the quest. Everything should be made as easy as possible at first and the difficulties increased

very gradually. This may be done by having the line crossed by others, by increasing the time before the pups are laid on, or by crossing roads, etc. When the pups get old enough they should be taught to jump boldly and to swim brooks where necessary. When young hounds have begun to run fairly well it will be found very useful to let the runner carry a bundle of sticks two feet or two feet six inches long, pointed at one end and with a piece of white paper in a cleft at the other end. When he makes a turn or crosses a fence he should put one of these sticks down and incline it in the

BABETTE.

direction he is going to take next. This will give the person hunting the hounds some idea of the correctness of their work, though the best hounds do not always run the nearest to the line. On a good scenting day I have seen hounds running hard fifty yards or more to leeward of the line taken. These sticks should be taken up when done with, or they may be found misleading on some other occasion. The hounds will soon learn to cast themselves or try back if they overrun the line, and should never receive any assistance so long as they continue working on their own account. It is most important that they should become self-reliant. The line should be varied as much as possible. It is not well to run hounds over

when hunting any wild animal, but many hounds run perfectly mute when hunting man. This is, however, very much a matter of breeding. Some strains run man without giving tongue at all; others are very musical.

If any reader is fond of seeing hounds work and has only a limited amount of country to hunt over, he will find much pleasure in hunting man with one or two couples of bloodhounds. In such circumstances it is a great convenience to be able to select the course, which cannot be done if hunting some wild animal, and a great variety of different runs can be made over limited ground. Bloodhounds can be easily entered to hunt a horse; and, if this is preferred, a man may be sent across country

BURGHES.

exactly the same course they have been hunted on some previous occasion. If some hounds are much slower than the rest it is best to hunt them by themselves, or they may get to "score to cry," as the old writers say, instead of patiently working out the line for themselves.

It is a great advantage to get hounds accustomed to strange sights and noises. If a hound is intended to be brought to a pitch of excellence that shall enable him to be used in thoroughfares, he should be brought up in a town and see as much bustle as possible. If he is only intended to be used in open country, with occasional bits of road work, this is not necessary. Bloodhounds give tongue freely

on horseback and the hounds laid on when it is thought that he has had sufficient start.

I know nothing more delightful than to see bloodhounds working out a scent carefully under varying circumstances, and to hear their sonorous, deep, bell-like note. To my ear there is more melody in a chorus such as this than was ever put into song or ballad.

To become, however, a complete fanatic in the breed, one well-bred bloodhound should be kept as a constant companion and inseparable friend. Under these circumstances the hound's individuality is developed, and his capacity as a good comrade will be chiefly determined by the intelligence and fraternity of his human associate. He is essentially and

preëminently a gentlemanly dog, and when you have once won his esteem he may be depended upon as your stanch, trusty, and life-long friend. He has a solemn, stately bearing, and a thoughtful, ingenuous expression, which is quite in keeping with his princely birth.

Landseer painted some very good portraits of the bloodhounds of his day. He was associated with Mr. Jacob Bell in the breeding of bloodhounds, and it is related that on one occasion Mr. Bell drove into his stable-yard when an old favorite named Countess was lying asleep in a hayloft. She half woke up at the familiar sound made by her master's wheels,

be kept clear of this contagion or infection, they are as hardy as other breeds of dogs. Breeders in France and Germany have been more successful, probably owing to their hounds having been bred and reared in a different climate and under different conditions. The last time I had distemper in my kennels I lost only one out of eight pups attacked, and I attribute this good fortune to the use of quinine in large doses. I gave from three to four grains twice daily, and this is the only drug I have tried that has had any effect in reducing the fever.

The most important matters are great clean-

BARNABY — CHAMPION.

came to the door, and falling down into the yard was killed instantly. If the death of Countess was sudden her immortality was immediate, for Mr. Bell put her into his dog-cart and drove at once to Sir Edwin Landseer, who posed the hound and painted the picture known as "The Sleeping Bloodhound," which is now in the National Gallery.

Grafton, the model for "Dignity and Impudence," was considered a very fine specimen at that time, but we have now many hounds which are very much better in every particular, so far as it is possible to form an opinion from the picture.

When bloodhounds contract distemper they generally have the disease in a very severe form, owing to their close in-breeding; but if they can

lines and unsparing use of disinfectants, absolute quiet, a room of even temperature, admitting plenty of fresh air without draught, and a variety of the most nourishing liquid food possible, given very frequently in small quantities. The puppy should not have any exercise until he has completely recovered and the temperature has for some days been quite natural, as a relapse is generally fatal.

The bloodhound may be described as follows:

The head is the chief characteristic of the breed and should be estimated very highly; the skull is very long (good dogs generally exceed eleven inches in length), narrow, and very much peaked; muzzle deep and square; ears very thin, long, and pendulous, set on very

DUCHESS OF RIPPLE.

low, hanging close to the face and curled upon themselves; eyes hazel colored, deep set, with triangular shaped lids showing the haw. Flews long, thin, and pendulous, the upper lip overhanging the lower one. Neck long, with great quantity of loose skin or dewlap. The skin of the face should be very loose and wrinkled, and when the nose is depressed a roll of loose skin should be seen on the forehead. The coat should be close, but rather silky in texture, and the skin thin. Height, dogs from twenty-five to twenty-seven inches at shoulder, bitches rather less. Shoulders deep and sloping, brisket particularly well let down, forming a sort of keel between the forelegs; loins broad and muscular; powerful, muscular thighs and second thighs; good legs and round feet, hocks well bent; tapering, lashing stern.

The color most generally admired now is

WYNDYATE, NEAR SCARBOROUGH, ENGLAND.

black and tan, the legs, feet, and all or part of the face being a tan color, and the back and sides and the upper part of neck and stern black. There is generally a white star on the chest, and a little white on the feet is admissible. Some fifteen years since it was not at all uncommon to see white flecks on the back — making the hound look as if he had been out in a snow-storm — and a white tip to stern. The former peculiarity seems unfortunately to be quite lost, but the white tip to stern is still sometimes met with. A deep red with tan markings is common; but to my mind the most beautiful color of all is a tawny, more or less mixed with black on the back. It is, however, very rare, and I only know one or two hounds of this color. The bitch is somewhat smaller than the dog, and in her the head properties are not so fully developed.

Edwin Brough.

BRADSHAW.

EARLY HEROES OF IRELAND.

NE who turns over the leaves of a Japanese book of hermits is apt to exclaim: "How like these old men are to hard-featured Scotchmen, or to Irish peasants from Ulster or Connaught!" It

is only on studying the past of Ireland and Britain that one sees resemblances much more impressive than such coincidences — perceives they are more than coincidences, and rather in the nature of a radical correspondence between the race mixtures at the two points about the round of the earth east and west between which lies the greatest stretch of land. As a stone dropped in a quiet pool sends waves equally in every direction, so for purposes of illustration

the wealth of materials now at hand. Of the many glories of little Ireland this is one, to have retained in her mythology and legends much that illustrates the history of humanity before what is strictly called history found its way into books.

The narrative ballads of Oisín, whose name is explained by the Gaels of Ireland as "little fawn," in connection with an enchantment of his mother into the form of a doe previous to his birth, contain the longing and resentment of pagans under the yoke of Christianity. He is a revenant from the Land of Youth who finds St. Patrick in virtual control of Ireland. Gone are all the delights intellectual, all the pleasures carnal, of the Fenian days, when the summers were passed by that national militia in picnics among the abundant forests, hunting wild oxen, boars, deer, and wolf, harassing the foes of the arch-king who refused tribute of cattle, sleeping in the open, keeping pirates out of the rivers and estuaries; whose winters were passed in warm quarters at the homesteads of farmers, who did not dare refuse them anything their insolence asked. Oisín finds asceticism the ideal of the day. The monkish rule forbids bloodshed, sensuality, and carousal, limits polygamy, and in a thousand ways enforces uncomfortable Chris-

LARGE AND SMALL HORNS OF BRONZE FOR CHASE AND WAR,
MUCH REDUCED IN SIZE.

we can imagine that from some central point of folk-disturbance successive waves of emigrants, conquerors, colonists rippled out to what was called of old the uttermost parts of the earth.

With the bold imagery of the peoples of Asia Minor, with the pride of the great commonwealths of Semitic-Turanians on the Euphrates, the Bible places that point on the plain of Shinar and gives for the reason of the dispersion a confusion of tongues about the tower of Babel. Under this imagery, under the distortions inevitable from historical perspective and the need of presenting complicated facts in a definite concrete shape, it is the privilege of modern research to find the grand outlines true, and to correct the minor inaccuracies due to ages which lacked

tian precepts founded on a general doctrine of self-denial.

We may well ask how it comes that such defiant utterances as are given below were able to survive centuries of Christian rule during which the professed teachers of that faith were very often the keepers of tradition. To explain it we must not forget that the people had reason to resent the endowment of village bishopric, village cure, monastery, and clerical establishment. The largess of chief and provincial king to clerics was at the expense of the peasants; always it was the latter who had to pay, and their consent was no more asked than it was under paganism when the Fenians rode over them roughshod. Listen to the dialogue between St. Patrick and Oisín,

A KEEPER OF THE LEGENDS OF IRELAND.

translated by John O'Daly for the Ossianic Society:

PATRICK. Misery attend thee, old man,
Who speakest the words of madness ;
God is better for one hour
Than all the Fians of Eire.

Oisín. O Patrick of the crooked crozier,
Who makes me that impertinent answer,
Thy crozier would be in atoms
Were Oscur present !

Were my son Oscur and God
Hand to hand on Cnoc-na-bh-Fiann.
If I saw my son down —
I would say that God was a strong man !

These are the words of a poet who saw the artistic value of Oisín's contrast with St. Patrick and made sharp that contrast by a touch of blasphemy ; but the spirit is true to the old national feeling of the irksomeness of a religion forced upon the people by their rulers and soon developing into another sort of tyranny from

LISTENING TO THE LEGENDS.

that which their ancestors suffered. Looking back they saw the glories of the pagan past, and did not realize its iniquities; yearned for its freedom, and forgot its death-fires and anarchy. The parish priest of Ireland can best tell if the peasants do not show glimpses of this medieval attitude towards the Church, in spite of three centuries of Protestant oppression which have riveted the bands of love between the people and their pastors. I venture to say that from the point of view at the Vatican the *habitants* of Lower Canada are better Catholics than the Irish, though the latter have done and suffered far more for the sake of their religion; and I explain it from the fact that whereas the *habitants*, by removing from Brittany and Normandy, have broken with most of the traditions of paganism, the Catholic Irish have kept those traditions alive, because all the efforts (even Cromwell's) to dislodge them from the land have been without avail. They possess Ireland still, and retain traces of paganism in the face of steady opposition from their own priests.

Who keeps this healthy, this dignified, note of a nation's past sounding down the centuries despite the frown of the Roman priest, the superciliousness of the Protestant minister, the jeers of the Orange faction? An old witch like this one in the picture, against whose invincible habit of collecting fagots from the "demesne" the landed proprietor builds those charming gray walls crowned with ferns and daisies which convert some Irish roads for mile after mile into open cuts between masonry soft with age. Seated by the turf fire she croons out scraps of old ballads, while the little girl whose earnest face is here depicted listens as if her life depended on it. When the village bard begins to collect his stock of ballads it is from such sources he takes the impulse and materials. Most of the lyrics and dramatic ballads written down between the twelfth and fifteenth centuries have owed their continued existence at one time or another to these humble imitators of the brave old bards and genealogists who lived in times when their office was honored and well recompensed.

The ballad from which the above verse is taken is comparatively late and serves as introduction to the Battle of Cnoc-an-Air, or Hill of Slaughter, in which Oscar succeeds in killing Talc mac Treoin, a demon hero who has forced the king of Greece to give him his daughter.

The latter flies to Fion to demand protection—as well she might if Talc looked like this: "Not without cause did I hate him," she says. "Black as the coal was his skin; two ears, a tail and the head of a cat are upon the man of repulsive countenance." His name appears to mean Stout, son of Strong, and as such purely fictitious; but the description tallies with a Celtic view of the aboriginal Irish, with the Finnish view of Lapps, with the fauns and satyrs of Greek statuary, and with Scandinavian descriptions of the *iotuns*, or giants, from whom Jutland gets its name—in general with the darker-skinned inhabitants of Europe exaggerated in the descriptions of Aryans. Compare in the Shah-Nameh the contrast between the champions of Iran and the Deevs they vanquished.

Mixed with these traditions of an actual warfare in the remote past are more poetic ideas such as Professor John Rhys of Oxford brings out with too much exclusion of the historical groundwork in his Hibbert lectures, namely, "Ideas of Night in Contest with the Day, Winter with Summer, the Powers of Darkness and Cold with the Sun." The champion who arrives in Ireland to avenge the death of Stout, son of Strong, is called Meargach, or Melancholy. When Fion mac Cumhal reviews his army before joining battle with this most redoubtable foe it is curious to observe that the van, the first of his seven battalions, is composed of "heroes smooth and fresh." The allusion is to their complexions, and points to the fair-haired, tall Kelts, who were the latest comers into Ireland and the ruling military caste—those blue-eyed, yellow-haired Kelts who sacked Rome, ravaged Greece, and founded the Galatian commonwealth in Asia Minor. The battalion of "middle-sized men" and that of "small men" we may understand as recruited from the true hunter and fisher tribes, who gave the name Fenian to the army itself and Fion to the folk-hero. While it does not seem well to go so far as the author of "Ancient and Modern Britons" (London, 1884) in supposing that there were black tribes in Britain and Ireland, there is evidence of dark and light colored tribes, the former of which perhaps contained more Aryan, the latter more Turanian, blood. But the mixing of these peoples has been so intimate, and lies back so far in the past, that we must be content with the barest hints.

Fion is often called Finn, descendant of Stammering, instead of son of Bondage, which may refer to the contempt one race bears another whose speech they understand with difficulty, and be the nickname Kelts gave to the Ugrian tribes of Ireland. We may even detect the ancient race hatreds among the leaders of the Fenians in the feud that subsists between Fion and a chief lieutenant of his, one-eyed

Goll, descendant of Morna. When Fion asks Goll whether he will face Melancholy alone, that champion sneers :

O Fionn, saith Goll, cunningly and wisely,
'T is true thou lovest not me ;
Thou wouldst wish to put me in danger
And Ocur from trouble to be safe.

Conan the Bald, another officer, was always ready to show the same spirit of revenge for ancestral wrongs. Goll the One-eyed, though a captain under Fion, had previously slain in battle not only Fion's father, but Luichet the Finn. His sept dwelt in Finn-

TURANIAN OF FINLAND IN THE ANCIENT DRESS.

magh near Athlone, whence we may suppose they had expelled the former Finno-Ugrian inhabitants. These are only a few instances of traces that confirm the idea that the Fenians were largely made up of aboriginal Irish, between whom and the purer Kelts the antique feuds only slumbered. We must think of Finns as living in Germany, Scandinavia, and Britain. Bania, the queen of an Irish king of the second century, is called the daughter of Scal the Stammerer, king of Finland. She is even said to have been grandmother to Fion. Here we may understand an allusion to Badb, old war-goddess of the primitive Europeans, taken into the pantheon of the Kelts. We lack pictures or sculptures of these early heroes. The woodcut of a warrior of the old Finnic type is taken from an edition of the Kalewala as the nearest approach to the appearance of a Fenian soldier of Ireland of the Turanian type.

Among the most curious traditions concerning Fion not the least is that by which St. Patrick is sharply marked out among saints, namely, the destruction of *piasts*, or dragons, in Erin. As Wainamöinen of Finland enters into the mouth of the Song-monster Wipunen, so Fion and his "Fianna" are swallowed by the Arrach, in the ballad called "The Finnian Hunt of Sliabh Truim," in John O'Daly's edition of Fenian poems:

It swallowed Fionn in the midst of them
When the Fianna of Eirinn raised a shout ;
We were for some time without aid,
And the serpent dealing destruction amongst us.

An opening in each side of his body
Was made by Fionn, whose mind was not ill
Until he let out without delay
Every one of the Fianna he had swallowed.

In the Kalewala the same episode is wrought with more artistic skill by the rustic bard, possibly with some assistance from Lönnrot when

he prepared that epic as now published ; but the general scene, though more circumstantially described, belongs to a more primitive race than the Irish.

Wainamöinen of Wainola
In his iron shoes and armor
Careless walking, headlong stumbles
In the spacious mouth and fauces
Of the magic bard Wipunen.

BEATEN GOLD ORNAMENT. SUPPOSED TO BE A GORGET OR BREAST ORNAMENT OF CHIEFS. GREATLY REDUCED.

Wise Wipunen, full of song-charms,
Opens wide his mouth and swallows
Wainamöinen and his magic
Shoes and staff and iron armor.

Other water-dragons slain by Fion are those which haunted Lough Cuillinn, Lough Neagh near Belfast, the Hill of Howth close to Dublin, loughs Erne, Rea, Mask, and Remar, and the river Shannon. But it hardly is necessary to note many more of the parallels between Fion and Wainamöinen from Irish ballads and Kalewala, when their very names are the same. In the Kalewala the magical bard, demi-god, and national hero is also called Vaino, plainly a form of Fion, the root being the same as *wana* in Esthonian and *ven* in Hungarian. The meaning is, "the old one." Fion, son of Bondage, is the same humanized god of the Finno-Ugrians as Vaino, but overlaid by Aryan ideas in Ireland to the point of losing most of his godlike traits.

The hero Cuchulinn belongs to a more shadowy past than Oscar, Oisín, Fíon mac Cumhal, and Diarmait, who elopes with Fíon's bride, the sun-goddess. Yet he does many things like Fíon, and seems to be another version of the same ancient sun-god. With Cuchulinn we enter an earlier cycle, where Conchobar mac Nessa takes the place of Fíon, Cuchulinn has Diarmait's place, Fergus mac Roig stands in the same relation to Cuchulinn that the Bard of the Boyne stood to Fíon, as tutor or teacher. These heroes are assigned to the period of Christ's appearance in Judea, while those who revolve about Fíon belong to the second century A. D. As Oisín went to the Land of Youth and married the daughter of its king, returning several centuries later to find, like Rip Van Winkle, and the hero of a similar story in Japan, all his friends mere legends, so Cuchulinn is forced to visit a magical kingdom and marry the daughter of the Irish Neptune, Mananan mac Lir, though he returns betimes to console his jealous wife. The shadowy personage appears in the Kalewala as Mana, the god of death, and came down to Shakspeare as a true historical king, namely, King Lear.

Though placed several centuries earlier than the Fenians, the heroes of Ulster at the court of Conchobar mac Nessa belong to the most complete drama of any in Irish legendary. Here occurs an epic of wonderful roundness, in which Ailill and Medb, or Mab, king and queen of Connaught, are arrayed with their heroes against Conchobar of Ulster, whose Achilles is Cuchulinn. It would take more space than this paper affords to tell even in outline the story of the war begun for the possession of a famous bull, and the feats of the chief hero in his contest at the ford with Ferdiadh, his former classmate at the military school of a war-goddess. Mention may be made of two feats, however. When his ordinary weapons fail to overcome Ferdiadh, and his own second begins to revile and taunt him from the bank of the river for his supineness, Cuchulinn gets his fury-fit aboard and turns into the primitive god of the savage; that is to say, he surpasses mere human deeds. He flies through the air and alights bodily on the rim of Ferdiadh's shield.

This Turanian trait crops up in far-off Japan with Yoshitsuné, a hero to whom the Japanese, like the Irish, assign a definite age, and whom they consider a historical personage. A favorite subject for Japanese painters, for the deft mold-

ers of decorations for sword-guards and trappings, is Yoshitsuné soaring in the air above Benkei, a burly ruffian whom he finally overcomes and attaches to himself as henchman. The Japanese hero has the same misfortunes in early life, his mother being forced to con-

GOLD ORNAMENTS, SUPPOSED TO BE DOUBLE BUTTONS FOR CLOAKS.
FOUND OF MANY SIZES, SOME VERY LARGE.

ceal him, and he too learns swordsmanship from the dark powers, a king of the demons, who is represented in Irish by Scatach, the "shadowy," a female teacher of the military art in Caledonia. In Ireland the Turanian hero fights at a ford, since bridges at that early date were hardly more than stepping-stones or baskets full of stone sunk at convenient distances. In Japan, however, the fight is on a bridge. In both cases there must be some underlying reason for the locality connected with the fact that gods were worshiped at fords, as we know from the votive swords, spears, and coins which are found in such spots.

The other feat is the employment of a weapon whose appearance has not been accounted for by Irish archaeologists, whose relationship to known weapons is obscure, whose method of use as given by the epic seems preposterous. Yet the mention of this dart is so specific that no mistake is possible. Thus O'Curry translates:

This was the character of that dart: it was upon a stream it should be set, and it was from between his toes he should cast it. It made but the wound

of one dart in entering the body; but it presented thirty inverted points against coming back, so that it could not be drawn from a person's body without opening it.

It is this archaic weapon which compasses the death of Ferdiadh in the fearful struggle at the ford when Cuchulinn and his old school-mate are forced to fight each other to the bitter end. Cuchulinn was the only hero who could wield this water-dart. To extract it from the body of his friend, Cuchulinn had to cut him open. Plainly we have here a barbarous weapon managed with the foot, an Indian or Eskimo salmon-spear, the several barbs of which are detached in the flesh of the prey. Yet a spear propelled by the foot was, and perhaps still is, part of the gear of a Lapp, and has found its way into print among the meager remains of Lapp songs collected by Professor O. Donner. A descendant of the sun, whose father, the sun-prince, has been slaughtered just as Fion's father was, approaches the old slayer of his parent, and a combat ensues like that between Cuchulinn and Ferdiadh in the main, but full of the utmost barbarism, while the Irish battle has along with its wild traits a host of chivalric ideas. The old enemy of the sun-child attempts to kill him with many weapons, among which is a poisonous spear driven by the foot from a bow:

With his footbow from the
window
Casts the old one
At the youth a poisoned javelin.

Doubtless this represents a weapon of the chase and of war, once known in Ireland, the tradition of which adheres to Cuchulinn, a Finno-Ugrian demi-god accepted and explained by the Gaels in their own tongue.

The sun-heroes of Ireland may be sought in a more primitive form in the Kalewala, while the Lapps show the same legends in the most primitive shape. Yet the sun is by no means always masculine in sex. Diarmait the Beautiful is forced by Fion's bride to elope with her, and Fion sends his unwilling heroes in pursuit. She is the humanized Sun, feminine in old Ireland as still among the Germans, who say *Die Sonne* but *Der Mond*, as also in

Japan, whose legendary preserves the curious story of the sun-goddess sulking in the cave and lured out by dances which we see so often depicted in the art of Nippon. The story is very different in the cycle that includes Cuchulinn; there it is the Spring who elopes with the hero. Thereby hangs this tale:

In a campaign undertaken against an island, said to be the Isle of Man, a "gray fighter" takes part with the heroes of Conchobar, and is so extraordinary in valor and efficiency that he is allowed what he stipulated as his own part of the spoils, namely, the finest gem. Instead of a jewel, however, he selects from the spoil Blathmat, the "blossom," a lovely princess

TORQUES AND CHAINS, FOR NECK AND WAIST, MADE BY TWISTING GOLD BARS. GREATLY REDUCED.

whom Cuchulinn intended for his own. Being pursued by that champion he turns and defeats him, binds him hand and foot, cuts off his long hair and rubs his head in filth, then disappears to the westward. Afterwards Cuchulinn visits one Curoi mac Dairé in Kerry, and discovers that the "gray fighter" who overthrew him has Blathmat to wife. Like Grainné, bride of Fion in the later cycle, she hates the man Fate has assigned to her, and concocts a plot. Cuchulinn returns to the wild mountain stream that rushes down past the fort of Curoi on a peak of the Kerry hills, and waits for the signal. At last he sees the water of the brook turn

ARMLET OF BEATEN BRONZE.

white; Blathmat has caused vats of milk to be emptied in the stream. The champion and his men rush up to the fort, burst open the gates, and murder Curoi as he lies with his head on his wife's lap; then he carries off Blathmat and various wonder-working objects that belonged before to Midir, the fairy-king.

The name of this blossom princess, the stream white from the freshest, the traits of Cuchulinn which ally him to male representatives of summer and the sun, are indications of the seasonal element in the story. The blossoms of Spring are rescued from the frosty arms of Winter. But Finnic legends show in Kuura, the hoarfrost, the same person as Curoi, and prove the "gray fighter" to be, like Fion, one of the original Turanian gods taken up into Gaelic legendary. Cuchulinn, on the other hand, though undoubtedly at bottom Turanian, has been so amplified by the Kelts that he is more national, perhaps, than any other hero. If he can be identified with the Gaulish god of war Cocidius, found on votive stones, his cult must be extremely ancient among the Kelts. Professor John Rhys has very acutely pointed out a Welsh parallel to the story of the frail Blathmat, the false one having a name also meaning the Blossom.

The hero Cuchulinn seems to unite in his story the strains of many traditions both human and divine. Perhaps no other hero famous in Irish song and prose legend takes up in himself so complicated a skein of threads from the Celtic and Turanian past. It may be remembered from an earlier paper that his name was elaborately explained by the Gaels to mean *cu* the dog, *culainn* of Culann, a certain smith whose watch-dog he slew with his childish hands. The Welsh parallel of Cuchulinn serves among others to expose the fallacy of this translation, for in Welsh legend he is associated with King Arthur under the

name of Kulhooch. Just as the champions of Ulster search all Ireland for a wife befitting Cuchulinn, so the knights of King Arthur of Wales search Britain for a wife for Kulhooch. She is Olwen, the "wheel" of the seasons, and her father is a giant named Hawthorn who represents Winter. The combat between him and Kulhooch has remarkable points of resemblance to that of the Lapp hero just mentioned. Great is the rejoicing when Kulhooch, the sun-hero, storms the fortress of Winter, and seizes his bride, the Spring. It is the same idea we have just seen in the story of Cuchulinn storming the castle of the "gray fighter" at the signal of the whitened stream, slaying him and tearing Blossom from his embrace. Of Olwen it is said that clover-blossoms sprung up wherever she walked. Eimer, Cuchulinn's first wife, is seized in much the same way.

But how are we to account for that first syllable *cu* in the Irish hero's appellation which rationalizing Gaels translated "dog"? Kulhooch explains Culinn, but not the whole name.

Here we come upon a most curious matter, which shows another strand in the parti-colored thread of Cuchulinn. For that special mystic bird of spring, the ventriloquist cuckoo, was mixed up with the legends about Cuchulinn long before the explanation "dog of Culann" was dreamed of. In Wales the cuckoo, *coocoog* (in Irish *clach*), held the same position in popular lore as it does to this day in Roumania and Finland, on the one hand as the harbinger of spring, on the other as an oracle—moreover, a bird of sly immoral habits, difficult to see, and hard to locate in the woods owing to the peculiarity of its song. English children sing:

In April
He tunes his bill,
And in May
He sings all day.

Then in June
He alters tune,
In July
Away to fly.

The British superstition is that cuckoos turn

ARMLET OF BEATEN BRONZE.

into merlin hawks at midsummer. Its brown back seems to have given a name to an article of dress common in Ireland when we first get authentic accounts of the national garb from historians, namely, the *cuchul*, Latin *cucullus*, the hooded cloak which the old Romans found among the Gauls and borrowed from them. In Cichol Gri the footless, whose name from the very earliest Gaelic records has been suggested in a former paper for the earlier aspect of Cuchulinn, we get a point where the cuckoo legend and the meaning of hood coalesce.

The rude piece of carving found in the Vosges district in ancient Belgium which has been called a Hercules appears to give this god, from whom Cuchulinn got his name. Keating quotes from an old poem :

The seventh people that possessed
The beauteous Eri of high plains
Came with curt Kical, the short-legged,
To the fair fields o'er Inber Domnan.¹

He represents the piratical tribes who lingered longest on remote islands west and north of Britain, and, from constant use of the small skin-boat, were fabled to be like seals, without true feet. The Aryan on his horse who is smiting down this monster must have been the sculptor, for the same reason given by the lion in the fable. In this connection we must recall the Shetland ballad already quoted, in which the seals that turn into men and women are called Finns. They are the same as the Fomoraigh (now pronounced Fowri), and are still thought of as monsters as well as pirates. But the old idea of Cichol must have become blended with ideas of "cuckoo" and "hood" at a very remote period, probably during the amalgamation between a mixed immigration from Britain and the pure Turanian aboriginals.

The Welsh word *coccooll*, "hood," has come into our tongue as "cowl," while in modern Welsh *cocoogs*, "cuckoo," has been contracted to *cog*, and has entered English with the meaning "to cheat" as used by Shakspeare. The pedigree of Cuchulinn in his connection with the bird of magic may be run back to figures like two in the Kalewala of the Finns, who show in a tragic way those traits of immorality which popular observation associates with the cuckoo, the bird that has no nest: one is a gay, reckless libertine, who loses and gains with equal light-heartedness; the other is guilty of worse crimes than Cuchulinn, without having any of his success or his virtues.

One Finnish equivalent of Cuchulinn, a figure in the Kalewala that springs from the same stem in the Turanian past, is the luckless Kullervo, to dishonor his own sister. But first note that the cuckoo is a sacred bird among the

Finns, associated with misfortune, and particularly with unhappy lovers.

When I hear the cuckoo calling
Then my heart is filled with sorrow;
Tears unlock my heavy eyelids,
Flow adown my furrowed visage,
Tears as large as silver sea-pears;
Older grow my wearied elbows,
Weaker fall my aged fingers,
Wearily in all my members
Does my body shake in palsy—
When I hear the cuckoo singing,
Hear the sacred cuckoo calling.²

Cuchulinn is, like Kullervo, a son of Bondage, all his family being destroyed while he is

SO-CALLED HERCULES OF THE VOSGES MOUNTAINS—A KELTIC GOD OVERCOMING A GOD OF THE TURANIANS.
(FROM "LIBRAIRIE DE L'ART," BY PERMISSION.)

a baby, and he is saved with difficulty from the foe. Hardly more than a boy, he develops the strength of a giant. The story of the cheat practiced by the wife of the wondersmith Ilmarinen on Kullervo, namely, the stone baked in the cake, is not told of Cuchulinn, but crops up in a late legend of Fion mac Cumhal. Many of the early legends of Fion are found in the story of Kullervo, where he takes the place of Cuchulinn. But neither can be carried far as a parallel to the Finnic child of ill-luck, whose adventures belong to a very much more primitive state of society than those of the Irish heroes. It must suffice here to say that the name of Kullervo and that of Kulhooch of Wales are the same in probable derivation. Kulhooch has a Welsh explanation in *culhan*, to grow lean, *coola*, faltering, languid. *Chullinn* may be traced to Finnic *kulun*, to lessen, decline. Several Tatar languages have *kul* in the meaning of evil demon. Kindred terms are Finnic *kuolen*, to die, Hungarian *hulla*, corpse, Etruscan and Finnic *kalma*, death. So far as his name is concerned, Cuchulinn harks back

¹ John O'Mahony's translation.

² Kalewala, Rune IV. Crawford's translation.

to the gods of night and death. This seems to have been his primitive aspect; but under successive alterations by Turanians and Kelts, particularly those made by the purer Gaels, he became a god of the sun and summer, with the sacred cuckoo merely as a herald and the blossom as his partner for a season.

The other parallel of Cuchulinn in Finnic legend is Lemminkäinen, often called Kauko, a name in which we see a common term for the cuckoo — Irish *cuach*, Lettish *kauk*, Norse *gaukr*, German *gauch*, English gowk. In him appears the less tragical side of the sun-god symbolized by the cuckoo. He seduces all the women, carries off a bride, plays havoc in Pohjola with the magic of his songs and harp-tones, goes like Cuchulinn to remote islands in the West, and is habitually at war with the peoples who represent night and winter. Longfellow has introduced some of his sportive, unstable nature into Paupuk-keewis, the gambler, in "Hiawatha."

Those who are so wedded to Greek and Latin mythology that they have little patience with that of barbarians, whether Teutonic or Keltic or Turanian, may be glad of a parallel drawn from the old stores. They will find a plain one in Picus (the woodpecker), the father of Faunus. And if, surprised at the appearance of deified birds among the barbarian as well as classic peoples, they study deeper into the matter, other surprises are in store. Thus Fion is not only the equivalent of Vaino, but is also the equivalent of Faunus among the Latins, and explains that Faunus also once meant, in a language that held Italy before Latin, "the old one." Now the identity of Faunus and the great god Pan, or Phan, is an old story; so that we are able, starting from Ireland, to teach the Greeks what their forefathers of the time of Pericles did not know, namely, that Pan, the old nature deity of the Arcadians, can be explained by languages similar to those spoken by the inhabitants of Greece before the Aryan tribes overran it. As we know, the attempt of the Greeks to explain the name by their own dialects was more in the nature of a pun than serious; but when there is chance to show the analogies between the name and characteristics of this old Greek god and those of Turanian nations, his place and meaning will become clear.

The "Book of Rights" presents a very singular mass of laws mixed with superstitious observances in alternate passages of prose and verse, meant as aids to the memory of those bards and seannachies whose duty it was to prompt the provincial kings by quoting custom and precedent. The strangest, wildest things are taboo to this or that provincial king of Ireland. It also has mention of many articles of luxury

and common use which we may confidently assign to those periods when the heroes of Fion and those who fought for or against Conchobar are supposed to have lived. Cloaks, saddles, bridles, querns for grinding grain, coats of mail, belts, red, black, green and blue shields, tunics, helmets of brass, rings of gold and other metals (a primitive form of wealth before coins were known), mugs carved of wood and the same imitated in precious metals, drinking-horns richly ornamented, spears, chariots, enormous pins of bronze inlaid with silver, boats, ships large enough to have sleeping-berths, armlets, bracelets, gold spirals to wind about the hair, broad crescents of gold to decorate the head or lie upon the breast, baldrics highly decorated, a great variety of missile weapons defined by extraordinary names — these are some of the furniture of a rich farmer's home and of a chieftain's fortress. They played with a ball and sticks a game like the "hockey" our boys play on the ice. The chiefs were fond of a game of checkers or chess — one that demanded much pondering, at any rate, and required a board covered with squares, movable pieces, and a system of attack and defense of positions, ending in the capture of a last man by moves long foreseen.

In some respects the ballads yield nowise to the songs of Asia Minor and Greece molded into the incomparable poems of Iliad and Odyssey. They seem to be at the stage just preceding that reached by the Greek epics, needing only some Homer to cast them into undying flawless form. There is the same fighting of individual heroes with spear and sword, on foot or from chariots; the same boasting and superhuman feats of prowess; the same well-nigh invincible champions who succumb at last, Cuchulinn falling by a little warrior lad named Erc, as Achilles fell by the smooth-faced Paris.

The feats which these early heroes performed to show their expertness in the use of their weapons are many and singular, but they cannot be given here. There is an analogy between the relations heroes bore to the invisible beings, the fairies and ogres in hills, lakes, and distant islands of the sea, and that borne by champions at Troy to the minor gods of Olympus; but of course the Irish is far more crude and primitive than the Greek thought. Human heroes attack and wound supernatural beings; sometimes they aid them, as Venus was wounded before Troy and the gods were defended by Hercules. In the delectable story of Bricriu Poison-tongue, a big island is visited by Cuchulinn, who kills Eocho Glas, a ruler who keeps the *sidhaighe*, or fairy-folk, in subjection. As soon as he is dead the vengeful race of beings whom he oppressed appear.

KELT OF THE ROMAN PERIOD—FROM THE COLUMN OF ANTONINUS, AT ROME.

"Spring into the valley from east and west the *sidhe*-folk to bathe in his blood, since he had insulted them. Thereafter all were made sound [satisfied] from that insult." The word *sidh* or *sighe*, long pronounced "shee" in Irish, was borrowed from the non-Keltic tongue of Ireland, as it well may have been, considering the probability in favor of the oldest race giving the term for the lowest and most ubiquitous form of spirits. It is now known in the compound "banshee," woman-fairy, the apparition said to foretell the death of members of certain famous families in Ireland. *Ban* is the Gaelic word for woman, but of old there was another word, *na*, *ni*, or *nue*, taken up from the tongue of the aboriginals, but now obsolete. *Shee-nu* would therefore mean in the old language "fairy-woman," just as banshee does. In Finland it has entered mythology in the name of Suoyatar, the mother of the serpent. Lemmin-käinen, stayed on his hero-raid against Pohjola by the monster-serpent, sings:

Leave thy station for the borders,
I will hunt thine ancient mother,
Sing thine origin of evil,
How arose thy head of horror,
Suoyatar, thine ancient mother,
Thing of evil, thy Creator!

The Finns have therefore carried the idea

of fairies further than the Irish, making a place for one in the pantheon, while the Tatars show the primitive origin of fairies as the ghosts of dead men rather than as personifications of objects in nature, an idea which in their case appears to come later. Among the Irish the fairies have some connection with the wind, however, particularly with whirling winds, which the peasant ascribes to the impish sports of this sly race, a blast of wind being called *sheeyo* and *shee*. In Roumania it is the devil dancing with a witch. Perhaps we may connect the Etruscan word *suthi* with this chain, since Dr. Isaac Taylor translates it "tomb" and *suthina* "offering."

But this word must be left for completer identification at another time. Analogies of Irish legends with those of China, Siberia, Finland, and Etruria are given in order to place them in their general relations to the common stock of mythology throughout the world, in the hope that readers, however prejudiced they may be against the Irish from religious or political reasons, will feel their value and enjoy with a better understanding such popular books as the delightful compilation of Mr. Patrick Kennedy, "Legendary Fictions of the Irish Celts," a book that contains much information given in a brisk and picturesque way. It combines much of the lore dug from the old

literature by Eugene O'Curry, President W. K. Sullivan, Whitley Stokes, the late W. H. Hennessy, and others who are not of Irish birth, with similar legends gathered fresh from the lips of village story-tellers and farmers' wives. From such books as these—and there is a wealth

of them nowadays—the reader may step to the works of the Irishmen, Frenchmen, and Germans who look chiefly to the “*Revue Celtique*,” edited by Professor H. d'Arbois de Jubainville, for the latest news of interest in Keltic myth and legend.

Charles de Kay.

THE WOMAN IN THE CASE.

“**W**ELL, Alston, my accidental Croesus, there 's nothing like the meeting of old friends. It wakes up the sympathies, it checks the heart's corrosion. But you—rust has n't touched that organ. How prosperity has agreed with you! Me!—tartrate of acrimony has been my medicine for many a day, and what good has it done me?”

Alston said nothing, but stood looking at the speaker. The two men leaned against the marble breastwork thrown up in the office of the great hotel that the clerks might not be overrun by invading hordes. Servants came and went, arriving and departing travelers jostled one another in their eagerness. Those who sought guests, and guests themselves, attacked the fortified men with ceaseless and varied demands, some perhaps asking to see a potentate, others possibly desiring a postage stamp.

It was a characteristic night in the thronged corridors and crowded rooms. Thousands—fortunes, perhaps—were made or lost in the quick utterance of short words. Hopes, ambitions, found then and there happy issue or paralyzing defeat. A man, master of world-craft, might laugh with light or bitter sarcasm, as was his temperament or his mood, as he looked upon those who met and talked together, or who sat or stood separately around. He would know, for it was in the air, that the future even of a political party depended largely upon the action of a score or more of its managers gathered in the house that night. A half-dozen

men, whose sleight of management was with as many counties, laughed at the turns of speech of another, who thought he manipulated a State, while they awaited the expected appearance of a man of national reputation who intended to “capture” all of them. A rumor flitted about like a bat in a twilight room, that it was expected by the knowing that before midnight a plan would reach its golden acme—a plan by which all the producers of one of the country's great products would finally unite in a long desired, long unattainable “trust,” the obdurate and recalcitrant manufacturer without whose concurrence all was impracticable having finally yielded to the irrefragable logic of necessity. In the afternoon there had been one of the usual flurries in the “street.” Zenith and Nadir preferred had gone off three points, and brokers slid about with whisper, glance, and shrug, wondering whether a thrill of sympathetic depression would tingle along the stock of competing lines. Lawyers, editors, noted and powerful, were there; millionaires, arch-millionaires, whose wealth made them world-famous, were in the throng. Not only the city's habitual dwellers were to be seen, but many parts of the country had sent worthy representatives to this chaotic congress. Silent and self-contained owners of plantations in Louisiana chatted with alert, restless men whose wealth lay in the dark and odoriferous forests of Maine. A mining expert from Colorado, panging the stock of a silver company risen, so to speak, from the lode that day, walked up and down between two rigorously dressed, smooth-shaven capitalists from Massachusetts. Ranchmen from the prairies, almost awkwardly inert just then, and evidently the men they

really could be only where there were scope and air and action, talked with prim and pragmatism business men from Manhattan's "swamp." Here and there a quiet provincial, with unacknowledged longing for his home, gazed silently upon the individuals, groups, the crowd, and wondered if he could really like what he thought he saw. Now a messenger boy hurried out; now a telegraph boy, hastening in, handed a dispatch over the counter—a dispatch that might mean so very much, so very little. The incessant tramp—not breaking silence, but crushing it as if into atoms under foot—mingled with the unceasing grind, the suppressed roar, of the wheels in near and in distant streets.

Alston's inattention to all around grew even deeper. His companion stood gathering the ragged end of his mustache between his teeth, biting it vigorously. It was easy to see that, though apparently for the moment lost in thought, he was struggling towards some resolution. His eyes were fixed upon a large mirror that seemed to open up a vista of other lighted halls, filled with other clustering or hurrying men. Then the deep shadowed lines in his face grew thinner, straighter, as if beneath sudden and stronger tension, and he turned towards Alston with at first an inarticulate sound, too unformed for an oath, too raucous for a laugh—still like either, but above all fit at once to arrest attention by its mocking tone of defiant propitiation.

"I say, Alston, I want to celebrate your return. I want some money, I want—" It was evident he was forcing his recklessness to a point where it might give way. "I must do this occasion honor. I want to drink your health. I am particular about my drinks: a man must be particular about something or he'll lose his self-respect. I want to drink your health at one particular place—a place where they know me, perhaps not wisely but certainly too well. But there's nothing like a money difference to keep men apart. I've had their liquors and I have n't liquidated. Lend me—"

Alston turned upon him with a look that was a peremptory stop, a sentinel's challenge to one about setting foot on prohibited ground. The last speaker glanced furtively up, checked himself abruptly, and with sudden confusion his forced effrontery came to a momentary end. Again he gathered his mustache between his teeth, gnawing it savagely, and brushed a particle of dust from the sleeve of his perfectly fitting coat. It was an obstinate particle; it required some embarrassing seconds for its removal, and then the eyes of the men met, but only in instantaneous encounter. They were young men, neither over thirty-five; Alston, perhaps from his heavier figure and broader shoulders,

apparently the older of the two; both evidently in the full vigor of manhood; both men with every aspect full of that indescribable significance that belongs only to one who has had something far more than the usual life, who has undergone much and lived all through it, without the weakening of a muscle or the lessening of a faculty. For a moment Alston stood silently looking at his companion—looking at him with the questioning, long practiced look with which experience so quickly sums up, so to speak, the human column that stands before it.

"Trego," he said,—and there was contempt, wonder, pity, perhaps a touch of triumph even, in that one word,—"Trego, come up to my room. I want to talk to you."

Alston turned without waiting for reply and moved towards the main stairway. Trego, not in reluctance, but only instinctively pausing that he might the better gather into comprehensible compass all that the unexpected meeting, the strangely different fortunes of the two, the past and the outlook for the future, brought in mingled confusion to his half-consciousness, stood motionless for an instant, and then with hurried step caught up with Alston, already half-way across the hall, and slipped his hand familiarly over his arm.

"Ah, Alston," he said, "there's nothing like having been boys together."

Alston half drew away.

Without another word they mounted the marble stairs.

"They seem to know you," said Trego, in a tone of jarring, significant jocularity, painful to Alston's ear, as they entered the room. "They've lodged you well. I don't believe they missed a single million when they took your measure for these rooms. I see the railroad president in the bright hangings. I tread on traces of a dozen directorships in big corporations when I walk on these carpets. There is not even a chair in which I cannot detect the essential rich man. Everywhere I see that devil-on-two-sticks, the dollar mark."

It was merely the main room of a suite of apartments in the huge hotel reserved for guests distinguished worthily, or perhaps sometimes unworthily, from their kind—a room not like so many where provision for comfort is so apparent as to make all uncomfortable; where colors are in confusion without blending tone; splendor in its new clothes; a strike, a riot of upholstery, which even assuaging shadows cannot quell. Nevertheless it was a place to which no human creature could ever be bound by the gradually tightening bonds of daily association—a place which retained no more personal impress from any of the hundreds that it had harbored than its mirrors had

retained trace of the changing forms they had reflected.

Alston turned up the gas already lighted, and threw himself with decisive action into one of the large arm-chairs.

"Sit down, Trego," he almost commanded, pointing to another. "Sit down; I've something to say to you."

Trego had really lost nothing of the defiant assurance that had for a moment apparently deserted him, an assurance evidently the result of exertion so apparent that his assumed airiness of language and ease of manner were almost ghastly in their unnaturalness—ghastly as is the flutter, the involuntary twitch, following sudden animal death.

Silently, and a little sullenly, he took the seat to which Alston pointed.

"I didn't think," said Alston, "that you had come to this."

"Nor have I," answered Trego, instantly. "It's all come to me. I might say that I have n't come to anything. It would be the strict truth."

"No jesting," said Alston, sternly. "I've a reason for asking. How do you live?"

"I might tell you it was none of your business," answered the other. "But I don't. It's seldom I can afford such luxury. You might feel insulted. I live on my wits. They don't quote such stock in the market, but it pays nevertheless—pays something. But there's another kind that pays better, it's so weak and well watered—the witlessness of others."

"You are telling me the truth," said Alston, half rising.

"Sit down," said Trego. "Truth is another delicacy I can't afford, but to-night I feel extravagant. I waste my substance on a returning friend."

Alston drew his chair slightly nearer the speaker.

"To be fair with myself," Trego began, "I am not generally as low as this. It's neap tide with me, and my life shows the slime and the ooze and the crawling things. I've a most irregularly regular occupation, a most unlearned profession, requiring a man to know everything. I am"—and then some humorous recollection or some grotesque turn of thought gave the first real ring of merriment to his voice—"I am an empirical philosopher; peripatetic, and with such places as these for my groves, my porticos. I am a psychological expert. I profess human nature in all its branches. I am about to issue a business card: 'William Trego, Guide, Philosopher, and Friend. Address, care of the Devil, No. 1 the Broad Road.'"

"Trego," interrupted Alston, with peremptory impatience, "what do you do?"

"Practice a liberal art—liberal if it only paid better."

He glanced quickly at Alston before he resumed.

"As fortune failed," he went on,— "and it soon did,—I felt I must be practical. I devoted myself to the study of that sufficiently unnatural branch of natural history—humanity. Perplexing, is n't it, there's so much of human nature in man, so little of the man in human nature? I found myself hard pressed. Something must be done. I had read or thought—perhaps I thought it—that if a man could supply one of the ordinary needs of mankind in a more satisfactory way than did any other, he might be assured of fortune. What could I do? Supplying appetites was overworked; very accommodating millions were quite busy doing a good many things about people's necessities. Really I did n't want to disturb so many worthy persons by setting up the same kind of shop. Were there any other demands? Curiosity and vanity untiring, insatiate. Here were unbounded wants. Could I bring to market delicacies, in season or out, never before offered? The press had partly anticipated me, but there was much to which that altogether lovely thing 'personal journalism' had not given type. I could beat the newspapers, I thought, and I have done it. I am ringmaster in the world's great though single-ringed circus of performing animals."

The sudden light of merriment that had danced before each sentence as he went on sunk as sinks the will-o'-the-wisp, as he stopped for a moment, abandoning his face to an expression as lacklusterless and repelling as before. The smile stiffened and his lips tightened in his usual expression of light scornfulness.

"What do you mean?" said Alston, exasperated by what seemed to him a display of extravagant nonsense.

"Mean?" said Trego, the underlying bitterness edging every word with spiteful tone. "I'll tell you what I mean. Suppose yourself some mere raveling from civilization's untrimmed edge, some sober thread pulled from the warp or woof of provincial life; suppose yourself one of human nature's tolerably well-meaning creatures, alone in this considerable city, anxious to see the world, without insurmountable objection to the flesh, and not so terribly averse to that gentleman whose reputation improves every day—the devil. Would it satisfy you to see parks, buildings, libraries, galleries? Would n't it depreciate you with yourself a little that you did n't see more, where you knew there was so much more to be seen? Of course it would. You would rather lounge at the side scenes than sit with the audience. To know a city is more than to

know a science or another language than your own, and it takes much more time. I know this city. I give gentlemen seeking knowledge the benefit of what I know—for a consideration. I am a Mentor in a mustache to any Telemachus, white-bearded or otherwise. You jostle against a man in the street and, if it were not for me, you would not know that he bore a name that is a household word. I point out the man of awe-inspiring millions; the politician, who drops, on sight, from his apotheosis; the great actor, on the pavement so very unlike himself as he walked down the stage last night; the gentleman who drives a successful trade in parts of speech, English warranted to go, and who sells his phrases to be put in print; the quite aberrant man, astray from the commands of the decalogue, the prohibitions of the statutes, who might be in prison if others did not fear to go there too; notorieties; celebrities; worthies and unworthies; philanthropists; criminals; mezzomalefactors, gay enough to catch the public eye—I show them all, all the performers in my raree-show, performers who furnish their own wardrobes and support themselves, playing among properties certainly not mine, every one a star. I am ready to meet all requirements. I furnish gratification for the moment, and I do more—I supply a lasting pleasure. I enable my patrons to make their neighbors and friends miserable, as they recount, in rural quiet, adventures such as have never come within such simple experience. Would you like,” he added mockingly, “to see what there is in town, Mr. Alston?”

“Trego,” said the other severely, “are you telling me the truth?”

“Truth, not the whole truth, but something very like the truth,” answered Trego, in the tone of one administering an oath.

“You mean that you are—”

“I mean nothing,” said Trego, suddenly and almost fiercely starting into assumed dignity. “But if you think I am more in a mood for jesting than you are, Harry Alston, you are mistaken. You mistake”—and for an instant he remembered himself, but at once was lost again in the rattling, jibing tone—“the sound of the fool’s-cap bells. If you think it was an easy thing, a bearable thing, for me, remembering what I was, to ask you, remembering what you were and recognizing what you are, to lend me money, you think me worse than I think myself. Your plummet sounds, swings in an abyss deeper, wider, darker than any to which I have sunk.”

“Why, then, did you attempt it?”

“I am talking to-night as I never expected to talk again. I’ll tell you even that. I did it—strange, is n’t it?—from self-respect.”

“From self-respect?”

“Those who have always held the straight way know but little of the tricks perverted nature plays us in the crooked. Had I, by the sight of you, found myself so far removed from what I thought myself as to forego an act to which I supposed I had been long since hardened, I should have been shaken in that strength of stolid indifference, cultivated and at last attained, which has become my best protection from shame and remorse. It is as unsettling to skilled, consistent, useful depravity to admit a good impulse as for an honest man to yield to a bad one.”

“And you have done a shameful thing to prove to yourself that you were strong enough—or weak enough—to act as if wholly lost to shame.”

“Yes.”

As he answered he looked up defiantly, and his almost convulsive grasp tightening on the arm of his chair was all that showed consciousness of his situation.

There was silence for a minute, broken only by Alston’s scarcely audible step on the thick carpet.

“Trego,” said Alston at last, “I will be even more frank than you. I shall speak of much that you know, but when I have said what I shall say you will understand why I have said it.”

Trego silently bowed.

“Boyhood,” continued Alston, “is no time for friendship; companionship is all it really knows. We were companions—nothing more, nothing less; but as we grew older,—let me be frank,—as each gathered to himself those many things that make character what it is, we did not like each other. It was hardly hatred, possibly only instinctive aversion arising from the repugnance of incongruous, irreconcilable dissimilarity; a feeling, however, at last given intensity by that hostile instinct that comes to all male things at such time as came to us when you were to marry Mary Hayden.”

Again Trego bowed his head; now, however, with more emphatic assent.

“But I will go back a little,” Alston went on. “You remember Class Day. It is a day when in sudden kindness men say things that sometimes they do not and sometimes will not remember. If ever there was a time to stand by every inference even a friend might then draw, it is now.”

“You are generous,” said Trego.

“I am not. We did not think then who would give or take. We will not now. Perhaps you can give me much—more perhaps than I can give you.”

“I—”

“Do not speak. I barely got my degree;

they gave you honors — whether you deserved them or not does not matter now. Then trouble came to me,—ruin they called it,—the consequence of squandered time, of qualities, merits, perhaps, if only differently directed. You may have gloried in my failure—I do not know. I, if it had been otherwise, might have gloried in yours—I do not know. I was disgraced, and then, when all thought me lost—then there came to me that weakness that was my only strength. I dared not ask Mary Hayden to marry me—I—but you—then I must have hated you—you, rich, unassailably respectable, skillful in the pretty, petty ways of what is called society, easily master of that indescribable grace of manner and flexibility of speech that, more than wealth, or reputation, or personal attractiveness, win their way with women; you plying light arts in piqued persistence, affecting humility, yet stealing an upward look to see whether the affectation would not give you vantage enough to push a ready, careful foot another line's breadth in approach—you—you murmured and laughed, and at last, filling a presence into which I was too little or too much of a man to step, you won. I hated you then, Trego, and in such a nature as mine I do not believe such hatred wholly dies out. But I will help you if—if—in such act I can repay in smallest fraction anything of what I owe—to another."

Alston paused, as if hoping that Trego might say something, but the other sat silent. With slow, firm step Alston approached him, and for a moment stood silent himself before the silent man.

"If you knew how I loved her," he continued, "you might not listen to me. I loved her as a strong man, not yet wholly lost, loves the marvel of earth, a good woman; loved her as a man almost lost, a man not unfamiliar with evil, can love the woman who represents to him all that there is of good—for dull inexperience can never have true appreciation of the full beauty of such pure, high, gracious rectitude. I heard of your engagement. Calamity—her loss—neither sunk me in despair nor roused me into anger. All only braced me—it seemed strange to me then, it seems stranger to me now—with strength concentrated in vigorous capability; every power, all that I was, was bent towards the attainment of that wealth and power that best attest success to the world."

Alston paused for an instant.

"I have lived a dozen lives in the last ten years," he resumed. "A man finds easy field for it beyond the Mississippi. I have known mere manual toil—months, years of it—in the very midst of all that was squalid, vicious, vile. I have lived years when I gave up every

minute, every power, to that unremitting labor absolutely necessary to the seizure of opportunity, to the control of circumstances, the mastery of men. Courage, firmness, continued endeavor, strength in its fullness, and more, are necessary to win all that I have won in the last ten years. But I feel no touch of vanity. I know too well what we all are, and how weak the strongest is. I know that even with such strength as mine, unaided, I should perhaps have attained little. Mere integrity, industry, intensity of purpose, would not have been enough for me; for men are busy, and expediency, impatience in accomplishment, many things, hasten or persuade men into doing what they otherwise might not have done. But if ever there is present one noble idea, if there lives before the mind's eye a personality, living, breathing, of human kind, though seemingly above it, whose every thought, whose whole being, is purest, best—yes, and most beautiful; and if such personality is loved, worshiped, loved, Trego,—resent it, if you dare, for I speak of your wife,—then comes knowledge of the reality, the power of all things good; then for him who so loves there is a rule ever present, ever strong to control evil, to restrain passion, quick to mold and direct character, acts, career. So my ten years of life have been shaped. The cunning of a doctrine, the stress of a moralist, the dogmatism of a creed, would have been to me as nothing. I was subdued, governed by the idea of one beautiful life. It is the serene life lived nearly two thousand years ago that to-day gives our religion prevailing actuality—the serene life of the sad Man without laughter. I hold but the half-fearful, half-hopeful credence of so many in these days. But there is one devotion that always has had, always will have, strong appeal to my better self—the worship of the Madonna. With an awe that would soften to tenderness if reverence did not restrain, I found my shrine, I worshiped my Madonna. I regulated my life by what I supposed, had she known my acts and all that surrounded them, Mary Hayden would have thought worthy of a man true to himself. I found an absolutely adequate and unfailing rule of conduct. I submitted every plan, every purposed act, to this test—would she approve if she knew all? And more, would I shrink from telling her? There was my safety. The thought that I might so shrink aroused alarm; some baseness must lurk somewhere. It was enough. I did nothing that I would not gladly have told her had I been permitted to seek her guidance—a guidance that I do not believe, Trego, you have followed."

Trego started.

"See here, Alston," he exclaimed, "have

you—how much do you believe a man will—can bear?"

"Sit still and hear me out," said Alston. "This simple rule," he continued, "this simple method—this, more than what I was, has made me what I am, master of circumstance and of myself; has given me all that I possess—wealth, power, the confidence of men. It is as unfailling now—when I am attempting to do mere justice to her; when, not flattering myself, I am the first man in my State—as when all that I had to resist was the push of an appetite, or the persuasion of the chance of small gain. No matter how complicated the circumstances, my rule never fails me. Motives are dexterous in specious pretenses, but what would she say—she, who not knowing all that men know would yet know infinitely more? All else has been nothing, and is nothing, compared with the thought of her. That thought has been my strength, my test, my restraint, my impulsion. It is the vital point around which my life gathers—the nucleus of what otherwise would be baseless, unformed, empty. Life without this reality would be objectless, scattered, weak. Trego, understand me. I did not expect to know anything so soon. That I would have sought information of her and of you before I returned is true. Our meeting here to-night is of course purely accidental. Had I found you holding the place in the world expected of you,—that she expected of you,—I would have said nothing. I would have gone, and neither of you would have seen me. But I have not found you occupying such position. I find you resorting to an expedient, to say the least of it, questionable, even if necessary to the earning of your livelihood. I ask you—and remembering what Mary Hayden has unconsciously done for me, I have the right of a more than grateful man to ask it—what have you done for her? Has she suffered? has she been in want? does she suffer? is she in want now? Have you been as false to the promises that you made to her as you have to the promises you gave the world?"

"Had any other man spoken as you speak," said Trego, hoarsely, "he would suffer for it."

"Not if he spoke as I speak," answered Alston quietly, almost solemnly. "Not if he spoke with such a motive as mine. There is no remedy for the past. We can mend the present. We must assure the future. We cannot do that properly if every word is not the plain, severe truth. What would Mary Hayden say that I should do now if she knew all?"

Trego did not answer.

Both had been silent for some minutes when there came a rap at the door. Neither gave it attention, and Alston continued his walk.

The knock was repeated.

"There is some one at the door," said Trego.

"Come in," commanded Alston.

A servant entered with a card.

"I must see him," said Alston, after he had taken it and glanced at the name it bore. "He is here in answer to my dispatch. I will be gone but for a moment. Wait here; I will meet him in the next room."

He drew a heavily wrought portière aside and passed through the doorway.

Trego did not leave his chair. He glanced at Alston as he disappeared; then, after a moment of irresolution, he drew a letter from his pocket and spread it out upon his knee, carefully smoothing down its creases and turning back its crumpled edges.

He nervously glanced about the room as if he was fearful that some one might see what it contained.

"If I were the man he thinks I am—if I were the man I thought myself—I would do it," he muttered. "I could shake the foundation of his self-satisfied assurance. I could make him feel something of what I have suffered. Hates me, does he? I hate him. Why? How has he hurt me? As success always hurts him who has failed. Because he can—dare offer me aid. But—shall I do him this harm? Shall I take from him that in losing which he says he would lose all? Rich as he is, shall I make him poorer than I am? Shall I rob him of his illusion—of his reality? Because the coin is counterfeit shall I take it from him? And still, he hates me, and I—"

Bending low and with difficulty making out the faint and blotted lines scrawled on the coarse paper, without date or intimation of place, he read:

DEAR BILLY: When in my first love-letter I so wrote your name it was with something of the timidity with which I write it now, and yet how different the feeling! Then I wrote with joyous satisfaction, with shrinking, girlish glee; now I write in shame, and now I am afraid. I did not think then that, as a broken-hearted woman, borne down with the sense of all that she has done, I should write to you, unworthy of forgiveness as I am, and only daring to use that name that I may ask you to remember what I once was to you—what I once really was. I cannot live long, Billy, they tell me, and it is really all that I can do to write this letter. I may die to-night, and I may live longer, and with something of my old strength; but the time will soon come when all that will be left of Mary Hayden will be her bitter memory in the mind of the man she loved with all the strength of which she was ever capable. For I have always loved you, Billy, in my way. All the time that I clogged your every effort, all the time I slowly but surely dragged you down, I loved you,—always in my way,—slight, perhaps, but still outlasting everything else. At the very last I loved you, strange as it may seem and

hard as it is to be believed. What I did was through flattered vanity and the need, fierce as an opium eater's, for things—trifles, yet so much to me— which with only our narrowing means I could not have. Even the night when I went away, unnatural as it may seem, I remember thinking how much nicer it would be if you were going with us. It is absurd to have thought it at such a time, but I wanted you to go too—I really did. I was not bad, Billy, I was not. I never could quite see, feel things as others did; I believe I never had what they call a moral sense. But I did so like pretty things, gayety, joy, abundance of bright life. But I am not attempting a vindication. I only wish before I die to tell you the truth, to tell you the remorse I feel for what I have done to you. I have ruined you and I know it. You would have been a good man, perhaps a great man, if it had not been for me.

Everybody I once knew, for whom I cared, thinks me dead—every one but you. It was the least I could do, after leaving you, to help you in the deception. And it is the bitter truth that I am dead. Every hope, every joy that belonged to Mary Hayden has passed away. I am not what I was, a woman yet to suffer, but am dead to you, and dead to all once so very pleasant, so very dear. And I do not tell you what I suffer. I believe even now it would give you pain could you know, and I am silent. If the girl you married could cling to your heart one moment,—sin and suffering have left her a woman even yet, and she would not hurt the man she loved,—agony could not wring from her even one murmur. It may come, for you have not succeeded in the world, and suffering explains so much, softens so much, teaches us to pardon so much: it may come—some moment of tenderness at thought of some little thing; not when our lips met, for such thoughts madden, but of some time when my hand just touched your arm and I laughed up in your face, happy in mocking caprice—some moment of tenderness when you might even wish to see me. But do not seek to do it. I long, but I could not bear it, Billy. Could you? And I will not tell you where I am.

I am dead; and if, as some say, remorse is the punishment that awaits our sins hereafter, I am already in hell. I know the anguish of ineffectual repentance. My guilt stands out in all its naked hideousness, without any of the palliations with which I once clothed it, and I recognize the evil I have always been: do you think that He will punish us that way? He knows we are women and how weak we are. Is it just that the weak should suffer most? If it were so, annihilation were far kinder than a merciful Father. If we sin, how much are we overtempted, how weak to withstand temptation! I know that He will be kind to us. One of us was the mother of the Child.

I can hardly write any more. Why I have written at all, I have told you. I am sorry. That is all I can say. If you can feel more kindly towards me because I feel so kindly towards you,—she who I was would say so much more than this,—I would be glad. But do not seek to have me know it. I shall soon be where if it be possible to know anything I shall know all, and if one does not, then it does not matter.

Good-bye, Billy. I owe you the happiest and

best days of my life, and, weak creature that I was, you held me for a long time above myself. I should like to feel that this poor letter even for one moment has softened you towards me, and so made some one better—better through me, who have made so many worse. Good-bye. I am sorry. Good-bye.

MARY.

He ceased reading and sat resting his head upon his hand, gathering the skin of his forehead between his fingers, as is the habit of some men when lost in thought.

"I can't do it," he muttered hoarsely. "I would not darken her heaven; I would not add one agony to her hell. It might be justification of myself, revenge upon him, but—I cannot show him that letter. But they say He knows. He trusted me. Perhaps there is some good left in me after all."

He was so absorbed that he did not notice when Alston entered the room. He said nothing to him, even when he had crossed the floor and stood silently before him.

"I am waiting for your answer," said Alston.

"Wait," he replied roughly.

He rose, went to the window and looked out. The evening was well advanced, but the crowds from the theaters soon to fill the walks had not yet appeared. The square and the converging streets were dismal, almost slimy, repulsive, shining as they were from the just fallen rain. The sharp shadows made by the electric lights, heavy and distinct as the border of a mourning-card, seemed to edge everything—to harden what he saw into greater and more impressive severity.

"What have you to say?" demanded Alston.

"Nothing," replied Trego.

Then he turned, faced Alston for a moment, and added:

"She died five years ago."

Alston stood rigidly erect.

"Died!" he said; "died—and yet it is better so. But stand there—she is no man's now. I too have my rights. Tell me did she die before—did she know—"

"What I am?" said Trego fiercely. "Drop that. You had better."

"I will know the truth."

"I swear, Henry Alston," said Trego, in a tone that dispelled all doubt—"I swear that she suffered nothing from me. I swear it to you by all that there is left to me to hold sacred."

"And I believe you," answered Alston; "and it is well that I do. If I did not, I would shoot you down where you stand."

"Possibly," said Trego, with harsh, rattling, enigmatical laugh.

He rose and moved towards the table in the center of the room.

"Will you allow me?" he added. "A lady's letter. I must see that it reaches no other hands."

He held the paper to the gaslight and the two men stood watching the eager flame snatch at it, watched the play of the yellow blaze, saw the blackening, writhing edges as the paper burned, saw the light ashes fall and pass from sight—watched, and said nothing. Would either have spoken had either thought how typical it was of a lost life?

The rain had stopped some time before, but the air seemed still heavy with moisture. A thin fog had come up suddenly and the usual bright coronal above the trees in the small park was dimmed, and the light lay in only dull, overspreading glow. As the two men stepped upon the walk, the crowd from the theater close at hand had just begun to break upon the street.

"I could not stay inside," said Alston. "There's a life in every breath of air."

Trego said nothing.

"I am going back to-morrow," continued Alston.

"Yes," replied Trego, absently.

Both men spoke as if there was but little left for which they might care. They seemed bewildered, lost, as if chaos had suddenly turned to blank space—vacancy without confine.

They walked in silence up the avenue.

Then suddenly there came, dull and yet distinct, that ominous sound that means so much to the dwellers in cities,—to every one who knows what it is,—the rush, the clang, the nearing, passing, departing something that brings to mind dark thoughts of disease, of casualty, of crime, of the long silent suffering of the sick-bed, of the mutilation of sudden accident, of the direful wrongs man dares do to man; a sound that brings to mind thoughts of the hospital, the knife, the grave. No man loiters so carelessly that he will not turn in sudden gravity when he hears it; none is so busy that he will not pause as it comes to his ear, a throbbing, dominating sound, heard now above the rattle of glittering equipages giving way before it, and now, at midnight, lessening down the distance of some deserted street.

Alston scarcely noticed the ambulance as it approached.

People farther along were gathered about

the edge of the sidewalk, and Trego hastened on alone. What led him to thrust aside those who stood in his way?

A woman lay upon the pavement, her head resting upon the curb-stone as upon a pillow.

With quick, sharp exclamation he started back. The gathering whiteness, the tightening rigidity of his face, could be plainly seen beneath the hard, brutal glare of the electric light. He fell upon his knees, and drawing a handkerchief from his pocket dropped it over the upturned face.

The ambulance came to a sudden stop. The young physician who came with it sprung out and made a hurried examination, utterly disregarding the kneeling man, but in a minute he instinctively turned to him with significant gesture.

"She is dead?" asked Trego.

The young man bowed his head, and with that instantaneous something that, when occasion comes, tells any man whither to turn for aid, he said:

"Will you help me?"

Trego staggered to his feet, and together they placed the lifeless body within the terrible shelter of the injured and the dead.

The bell struck the silence as with sudden blow; the horse leaped beneath the lash; the wheels rattled on the pavement, and the ambulance vanished down the avenue as might some quick and ghastly vision of the night.

"What is it?" asked Alston, as he came up to Trego, who stood silent in the thinning crowd.

He did not answer.

"What is it?" repeated Alston, taking Trego by the arm.

Trego started.

"The end of a tragedy," he answered steadily, rigidly.

Then, after a moment, he added abruptly:

"Let me have some money. I have n't a dollar. I must have money to-night. I'll need it to-morrow. It is the only way I can get it, and I must have it. Let me have some money. Do you hear me? Money! I will repay it; you may be sure of that."

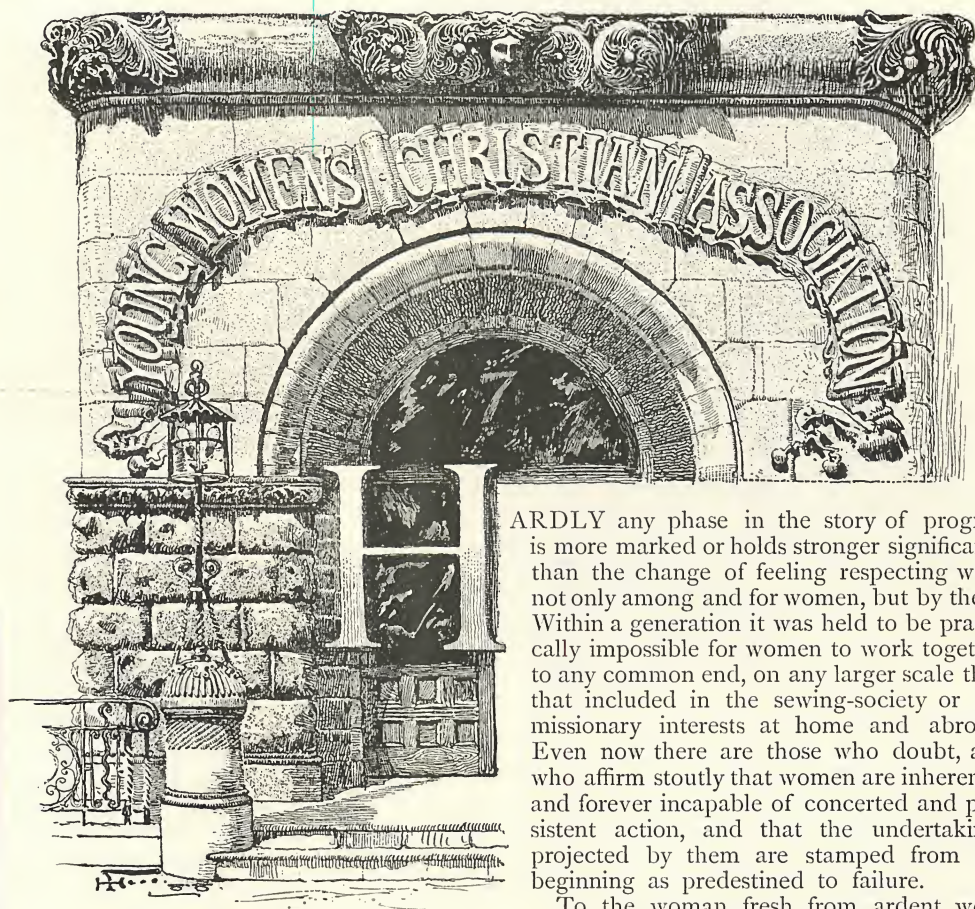

"Would she say that I should if she knew?" asked Alston.

"Yes," answered Trego, more quietly—"if she knew all that you have told me to-night."

George A. Hibbard.

CERTAIN FORMS OF WOMAN'S WORK FOR WOMAN.

HARDLY any phase in the story of progress is more marked or holds stronger significance than the change of feeling respecting work not only among and for women, but by them. Within a generation it was held to be practically impossible for women to work together to any common end, on any larger scale than that included in the sewing-society or the missionary interests at home and abroad. Even now there are those who doubt, and who affirm stoutly that women are inherently and forever incapable of concerted and persistent action, and that the undertakings projected by them are stamped from the beginning as predestined to failure.

To the woman fresh from ardent work with and among her own sex, any doubt as to the possibility of success ceased long ago, and she may even be too absorbed to realize that the question is still asked or the statement still made with a calmness born of ignorance and an obstinacy that ignores facts and accepts no judgment but its own.

In this wonderful march of the nineteenth century it is always hard to understand how any can be deliberately standing still; or, if moving, moving merely because they are carried on by others, with neither volition nor consciousness of their own. To encounter this form of conservatism in the remote country is not so surprising. The need for organization has had small occasion to define itself there, and one therefore need not wonder at coming suddenly, in the midst of this experimental generation, upon both men and women holding with resolute firmness to some fossilized theory more akin, one would say, to the spirit of the fifteenth than that of the nineteenth century. The narrow village may be pardoned, but what shall be said to the Philistines in town and city, who, with facts before them, close their eyes and announce the same theory?

Happily it is an always lessening number who hold to this belief—a belief that not so long ago had more reason for its existence than it would now be easy to credit. It was not that individual capacity for working harmoniously with others did not exist, but that theology stood always in the way, and hedged in the worker within the sharply defined boundaries of a sect. The earnest Baptist or Methodist or Presbyterian felt always that such service as could

YOUNG WOMEN'S CHRISTIAN ASSOCIATION, 7 EAST 15TH STREET, NEW YORK CITY.

be rendered belonged to the denomination, and the passage out of this conviction was slow and full of uncomfortable doubts and suspicions. Women remained under their sway long after their husbands and brothers had settled to their own satisfaction that union is strength, and that prosperous work depends upon union for its successful accomplishment.

Now and then, it is true, some cause or issue held such compelling force that persons and personalities had no place save as both urged to a common action; but this was exception rather than rule, and so the faith formulated itself, and found expression in the creed, "Women cannot work together."

The civil war opened the eyes of all women to the fact that union was not only possible but essential, the Sanitary Commission binding them to a common effort; and there has been no retreat from the position taken then. Yet, inertia is so strongly rooted, that in each fresh step there has always been the same form of opposition to encounter; and though every real worker learned long ago that it is soon silenced,

it is none the less a force to be taken into account in every new undertaking.

The war and its lessons were soon supplemented by the first attempts at organized charities, the wonderful results of which have been as powerful for the workers as for those in whom their interests centered; and as the field broadened, and mere alleviation gave way to the search for methods of prevention, one more argument for union has arisen.

This is no place for any demonstration of this gradual process. It is rather with results that we are to deal—results and their possibilities for the future. For New York such possibilities are in ever-increasing ratio, no city on the continent facing a problem so complicated or so uncertain of solution. It is not with her own poor or her own workers alone that she must deal, but with the same classes from every nation under heaven, each with its own peculiar disabilities, national and otherwise, and each demanding separate and individual methods. There are white-haired women, whose faces may still be seen at special meetings of the conference of organized charities, who remember

well the days when New York had no poor save the limited number who could be disposed of in the poor-house, and whose workers in factory or at trades were either bound out, and thus secure from care, or shared the family life of the employer. Less true for women than for men, it was still true for both, and there was small occasion to ask how their lives might be bettered, since such gifts as life held were practically common property.

Save for isolated instances here and there, all this ended for New York forty years ago. With its transformation to a mere dumping-ground for the offscourings of all nations was born the New York tenement-house, a type at its lowest ranking side by side with the worst that London has to offer. With the tenement-house and its gradual degradation of the inmates, whether workers or whether objects of charity, was born also the conviction that institutions, well endowed, could, if only big enough, hold all who needed help, and thus transfer individual labor to certain fixed centers, a sub-

scription being all that the average citizen need supply. And so year by year the number swelled till the fair islands of the East River one by one were given up to wretched lives, and crime and shameful want became the only passports to such breathing-places as yet remained to the city. Year by year the worker fared worse and the criminal better, till society seemed to have entered into a conspiracy to render labor hopeless of any return save barest existence. The factories, large and small, kept pace with the institutions. Men knew the faces of their employees, and not always even this; but where they lived, or how, formed no part

sion towards the crop of home heathen, planted and carefully cultivated by ourselves, and presenting as the result a harvest of faithless and often hopeless souls, toiling because they must, and seeking where they could such gleams of pleasure and satisfaction as could by any means, questionable or otherwise, be made a part of their starved and dreary lives. Wealth has come to be more often curse than blessing, but always among its owners may be found a few who count it their own only so far as it can be made to mean good for the many as well as the few. To these few it had become plain that the pauper and the criminal were not the only

PARLOR OF THE YOUNG WOMEN'S CHRISTIAN ASSOCIATION.

of the contract. Here and there some "Home" sprung up, gray and cheerless, hedged about with sharp restrictions, and ignoring most of the real needs of the dwellers within its walls. But the mass of working-women, reinforced perpetually by the stream of country girls whose faces turned always towards that Mecca in which for them all good was enshrined, had neither homes nor teaching that could give them better outlook for the future, nor any good thing save what their own dull eyes and weak hands saw and held as good.

Men were too busy making money to spend thought on any conditions that might underlie the process; but women had begun to think, and to realize that the energy given chiefly to the heathen needed immediate diver-

members of the community demanding attention. Imperceptibly had come up among us a class whose existence was denied, whose needs were ignored, and who found no standing-ground save in the Purgatory which made up the only life the worker seemed likely to know. Evil fortune might thrust her still lower into the Inferno we devote to our poor, but to the Heaven of opportunity and freedom to grow there was no access. It appeared impossible for those who lived at ease to take in the new conditions or to accept the fact that more than one class must be dealt with. We had so assiduously repeated the old formula, "All men are born free and equal," that there had been no time to observe the class distinctions defining themselves more and more sharply every year.

THE LIBRARY.

"We have no class divisions; there is equal chance for all," piped the politician; and the wife of the politician sounded the same note, supplemented by the mass of women who take their opinions at second-hand, and wonder vaguely why things are so uncomfortable, and what had better be done about it. Such wonder, however, did not begin till evils had grown to such dimensions that further ignoring was impossible. It was not alone the poor and the wretched who were pouring into the city, but an equal stress of half-trained, ambitious, eager girls, who looked to factory or shop, or the trades opened up to women, as the road to fortune, and who, as the dream faded and they came face to face with increasing toil and pitifully small reward, turned, many of them, to the life which means temporary ease, and some flavor at least of what the century counts as chief good. Here and there a voice sounded a note of warning. Here and there a worker affirmed that for any such result society was directly responsible; yet neither church nor any method current in society seemed able to control the situation or to make life more tolerable for the mass of women, who, for want of a better term, must be called middle-class. No Palace of Pleasure existed anywhere save

in the brain of some persistent dreamer; and facing this lack and this obtuseness of perception, Arnold Toynbee, who spent his high young life in a vain struggle with conditions

that he could not alter, wrote:

I suppose what impresses us most in London is the dreariness of life. I do think that the question of recreation is a question for the great landlords in London to consider. Will not one of these great men ransom his soul by building a great building where people may come out of the dreary streets and rest, and listen, if they like, to music such as Milton listened to? Why should they not get, as we do, a sense of the Infinite?—for a great building is really the Infinite made visible. Why should they not get a sense of the Infinite from great buildings? Why should not they also share in our pleasures? If these great men would do this thing, it would be worth their while in many ways. I do think that that is a thing which the rich at any rate might think of.

What was true of London was true a hundred-fold of New York hardly ten years ago. One woman, whose name stands high on the roll of those whose mission is something more than alleviation, said deliberately in a meeting of those who had projected special missions, "midnight" and otherwise, to a class of women popularly considered unreachable:

I think, friends, that there are women even here—I certainly will include myself—who, if forced to live their starved and dreary lives six months, would accept anything that seemed to offer larger outlook. Until we provide some means of interesting and guiding them, give them a few at least of the things that make life worth living, we stand as their impulse towards ruin, and are responsible for every one of these wandering souls. It is not alone for them, but for the thousands we are driving in the same direction, that I speak. Something must be done. Let us consider what.

It was from such thought that the most tangible and fruitful work for women was born, and that the year 1871 saw the first formal report of the Young Ladies' Christian Association, known in the beginning as the "Young Ladies' Branch of the Ladies' Christian Union," the old-fashioned title carrying with it the flavor of Mrs. Ferrer's "Young Ladies' Guide," and being actually a barrier between its holders and the work they most honestly desired to do. But conservative women looked upon the name as in itself a guarantee against unpleasant criti-

cism, and the thirty-one members who formed the little corporation were too busy and too much in earnest to spend any time upon a question of such apparently slight importance. Some common meeting-place was the first essential, and this was found in the room rented for that purpose, furnished, and put in charge of a superintendent who filled all the offices of all the embryo departments.

The desire [read the first report] to extend Christian kindness to the multitudes of young women who come from quiet country homes to this city in search of employment or educational advantages

185,000 young men for whom clubs and gymnasiums and libraries had grown up were offset by 200,000 young women for whom there was nothing save this one oasis, and to most of whom it was still unknown. Five hundred places of business where women were employed were visited in 1872 and the purpose of the Association made known, and as fast as means admitted facilities for work were enlarged and improved. By 1875 the report announced the "Young Women's Christian Association of the City of New York," and thenceforth the woman who helped and the woman to be helped stood side

THE CHAPEL.

led to the formation of plans by which employment and safe boarding-places in private families might be secured for them; also church privileges with social and intellectual pleasures.

Here, for the first time, was to be found "an accessible free circulating library for women," and the providers announced with gentle pride the fact that it numbered "five hundred bound volumes." An employment bureau, with a paid secretary, was also opened; but superintendent and secretary and the thirty-one members together had no power to deal adequately with the flood of applicants pouring in upon them. Swift and sudden as the tide of Solway Firth these pent-up lives massed and rushed towards this new haven. The room became a house, the "five hundred bound volumes" doubled, various training classes proved themselves indispensable, and all within the first six months.

By 1872 statistics had been taken, and the

by side, with no self-erected barrier of name between, and in mutual effort learned more of the underlying facts of human nature than had often found place in the scheme of any organization. It seemed the smallest, most trifling, of matters to a few of those who discussed the change; to others, a momentous departure from tradition, certain to bring disaster. But the point once gained demonstrated at once the wisdom of those who had urged it as vital. A year or two longer in the always narrowing quarters, and then the final move to 7 East 15th street, where the work went on with unflagging enthusiasm, demanding imperatively at last something more than any one house could offer. Friends and funds were equally ready. The ground occupied by the old house, 75 by 103 feet, offered ample room for more generous accommodations, and these were planned after long deliberation as to what were the chief

A CLASS IN PHONOGRAPHY.

needs to be met, more space for social purposes being one of the most imperative.

Necessarily silence had been the rule in the old library, which, for want of space, had served also as reading-room, and the girls begged for any room, no matter how small, where they might talk freely. Plans were studied with anxious deliberation, but it was not till December 1, 1886, that the corner-stone was laid, the Association resigning itself to many months' restriction in a smaller house.

Delays lengthened the period of waiting, but January 18, 1887, saw the dedicatory ceremonies, and the simple, but beautiful building, five stories in height, was thrown open for public inspection. Brick, with red freestone arches and trimmings, was the material employed, terra-cotta ornamentation being freely used, the result being one of the most attractive façades among the many examples of good work which New York now offers in this direction. A vestibule with tiled floor gives access to a broad hall, finished, like the entire interior, in ash,

stained to produce the effect of antique oak. Wide double doors open on the west side to the social parlor, thirty feet square, with carved mantel and cheerful open fire; on the east, to the employment rooms and their various offices; while back of both is the chapel, running completely across the building and some 70 by 40 feet. On the second story is the library, running across the entire front, two small rooms at each side being partitioned off—that on the east as reading and reference room; on the west, for magazines and periodicals. Something over 10,000 volumes are now on the shelves, space having been allowed for 50,000; and any woman may use the library as she would the Astor, only working-women, using the term in its largest sense, being allowed to take volumes from the building.

The third, fourth, and fifth stories are devoted to the class-rooms, including type-writing, stenography, machine and hand sewing,

IN THE DESIGNING-ROOM.

dress cutting and fitting, book-keeping and arithmetic, and technical design; in short, all the branches in which women engaged in over thirty trades may desire to fit themselves for more efficient work. In all these, save dress cutting and fitting, instruction is free to members, whose small yearly fee gives opportunities in every direction. On the fifth floor are two art rooms with artists' skylights, one of them occupying the entire back of the building, which is slightly narrower than the front. Altogether the Educational Department occupies more space than any other, and is doing invaluable work, not only for the numbers who seek the city as their working-ground, but for the other numbers

prayer-meetings, monthly evening meetings, and various special services. A relief committee cares for the sick and needy among the members, and sends tired women to the country, ten thousand having had this opportunity last year, at an actual cost of less than a dollar per head. The yearly expenses are slightly over \$10,000, and it is safe to say that no system of education as applied in our public schools gives in any degree so valuable return for the same expenditure. With more money better work could be done, but the sum handled is made to yield the utmost that a dollar can accomplish. Had our legislators any training in real political economy, every ward in the

THE SEWING-CLASS.

who graduate from our public schools, helpless as babies for the real work of life: to such the Association gives the first hint of real education, four hundred having graduated from its classes in 1886, all of whom found positions. These are not included in the 12,000 who found work by means of the Employment Bureau, which in 1886 registered 1985 applications, the successful proportion making 66 per cent. An Industrial Room gives seamstresses an opportunity of exhibiting their work, fancy and otherwise, and orders are taken for every variety. Monthly entertainments, concerts, recitations, etc., give needed diversion; and a small gymnasium with a skilled teacher is the satisfactory climax of the work undertaken.

This is the temporal side. The religious includes as varied help. The great Bible class has 750 regular members, transient ones running it up in 1886 to 1263. There are weekly

city would have a similar building, supplemented by kindergartens and industrial schools for those not yet compelled to earn, and thus abolish forever the necessity for the enormous appropriations now demanded by asylums and reformatories and the myriad engines of philanthropy. Here, in the Association, is demonstrated again the fact that when brain and hand work together, in conditions that mean rest as well as stimulus, there is neither room nor time for vicious thought or vicious action. The day's work, long and exhausting as it often is, has no power to quench the enthusiasm with which these girls labor at their self-elected task, coming to it in all weather and leaving it reluctantly. Watching their enthusiasm as well as patience, and the steady development of unsuspected powers, one can only long for a time when an earlier beginning may be made possible, and cry shame upon the system which

wastes the most susceptible years in mere routine, and makes any genuine education of brain and heart and hand the almost unattainable thing.

Few of the recruits who fill the new building have any knowledge of the various forms of industrial training which have kept pace with the work of the Association and are now

The educated poor — the thousands who have "seen better days" and who have no training which can serve them when evil days have come — form often the most hopeless class of would-be earners. Cultivated, yet cultivated in that half-way fashion which is one of the curses of American society, they had ample power for pretty work which could not stand before any genu-

A COMMITTEE MEETING.

in more definite shape than anything yet attempted since the organization of Dr. Felix Adler's most successful work. Such training for the children of the poor began as a branch of practical philanthropy, and the endeavor to teach domestic industrial arts to children whose home-life held no possibility of such knowledge. The Kitchen Garden Association, formally incorporated in 1880, had its origin in the endeavor of Miss Emily Huntingdon to apply some of the principles of Froebel's kindergarten system to domestic service, her theory taking form in an admirable little book published in 1878. Twenty-nine classes and 990 children were taught in New York alone during the first year, the results demonstrating the entire practicability of the idea, and 13 other cities at once organized similar classes.

Here then stand two phases of the work already accomplished for women in New York. They deal chiefly with a class to whom self-support was from the beginning a necessity. For another class no less needy, yet shrinking from any public recognition of such need, there was no provision, until wise heads and gentle hearts a few years ago made a way of escape.

ine criticism. So long as it meant merely the production of ornamental nothings for their own houses,—sketches, draperies, embroideries, decorated china, and the myriad possibilities of bric-à-brac,—they were safe, for critics and criticized were alike ignorant. But when an artistic production to be judged by artists became the question, once more the inherent falsity of the system of modern education demonstrated itself, and the wretched victims found themselves compelled to accept a fresh training and to demolish with all speed such foundations as they had counted firm and sure. The Decorative Art Society and the Associated Artists came to the rescue of the best order of intelligence in these directions, and with the Woman's Exchange have acted as a high training-school, the work accomplished in the last ten years showing what quick perception and patient effort have worked together to produce the results we see. In the Woman's Exchange the object was simply to offer a place where the handiwork of gentlewomen, of whatever nature, might be put on sale. Later, when success had become certain, the clear-headed projector of the undertaking told of her conster-

nation at the first meeting, when "thirty almost worthless articles covered a small table, and letters in great numbers waited to be answered, from anxious women, wanting to know what would sell."

Naturally the Exchange became instantly a school. General intelligence did its usual good service as background, and out of sharp necessity was born the inspiration that gave invention and skill. Anything and everything good of its kind, from a pickle to a portière, found place in one or another department, and the

PHOTO-NEGATIVE RETOUCHING AND DRAWING FROM CASTS.

Exchange has been forced to enlarge its borders, the cheerful house at 329 Fifth Avenue overflowing with the handiwork of women. In seven years it has sent to its consignees \$19,074.06, one woman alone receiving in a year over \$1000, and eight societies have been established in other cities on the same plan.

The Associated Artists have taken but one side of the same work,—all that could properly come under the head of decorative art,—and have done work of inestimable value in educating not only the worker but the buyer. A new sense has been born in both. The presiding officer, whose instinct for beauty is only less strong than her nice sense of what definition

best fits the word, has faced every obstacle of ignorance, prejudice, and a false standard of taste, and one after another seen them diminish to the vanishing-point. It was perfectly evident that the time was ripe for a more thorough education in artistic work, not alone as a means of help to workers to whom such outlet of energies was the only practicable one, but as a necessity for the people at large.

The tyranny of the Puritan creed trampled out and well-nigh obliterated any æsthetic sense, and our homes represented a consecrated ugliness against which few revolted, because few had the trained eye to distinguish ugliness from beauty. Yet an instinctive protest was made. The æsthetic sense was not dead, but sleeping; but save for the few who traveled, and thus discovered what part beauty had in life, there was small hint of awakening till the Decorative Art Society began its work. The

MODELING.

sense of harmony and fitness in color and fabric was an American possession, gradually discovering itself in the dress of our women, but our houses defied every law of taste. We have yet an infinite deal to learn. We still overload with ornament and are apt to measure by quantity rather than quality; but the tide has turned. The "impassioned seekers after the invisible truth and beauty and goodness" counted any earthly type a distraction from the contemplation of the heavenly. But they were idealists—the disciples, not of things as they are, but of things as they ought to be; and the time came when idealism asserted itself in other lines than the religious, and men claimed the long-withheld inheritance in every form of art. Everywhere the sense of beauty was groping its way to the light, and if its first glimpses held slight distortions, they were at least prophecies of something better to come.

To awaken even in faintest degree this sense of beauty is an instant enlargement of the poorest life, and it is hardly possible to exaggerate its influence on the utilitarian character of the average American, whose life is more barren of beauty than that of any civilized people under heaven. The old idealism had fallen and vanished in the struggle for life on a new continent and the growing passion for getting on, and only in a rousing and quickening of the sense in every child can there be hope of emancipation from the bondage that is the portion of all. To the student of social conditions this fact demonstrates itself at once, and such student alone can rightly estimate the value and importance of a work at which the mere utili-

tarian sneers. Industrial art is a prime essential of the new industrial training, and is the first hint to the child of this generation of the beauty that coming generations will own. For such possession industrial education in its largest sense is the only foundation. With the many who accept it, as I have lately written elsewhere, "it stands merely an added capacity to make money, and if taken in its narrowest application this is all that it can do. Were this all, it would be simply an added impetus towards the degeneration that money-making for the mere sake of money inevitably brings. But at its best, perfected as it has been by patient effort on the part of a few believers, it is far more than this. Added power to earn comes with it, but there comes also a love of the work itself, such as has had no place since the great guilds gave joyfully their few hours daily to the cathedrals whose stones were laid and cemented in love and hope and a knowledge of the beauty to come that long ago died out of any work the present knows. The builders had small book-knowledge. They could have been talked down by any public-school child in the second or third year. But they knew the meaning of beauty and order and law; and this trinity stands to-day, and will stand for many a generation to come, as an ideal to which we must return till like causes work again to like ends."

The factory dominates daily life. Wholesale manufacture, while it cheapens and gives to the mass the "store clothes" craved by the country lad, destroys all possibility of individual, characteristic work. Reaction is inevitable, and thus the meaning bound up in the phrase "hand-made" has at last made itself plain, and the

true disciple of beauty revolts against the deadly monotony of factory production and demands that the human hand shall once more lend its mysterious quality to the fabric which long ago parted with it.

Thus an invaluable part of the work projected as well as that accomplished by the Associate Artists lies in the fact that this necessity has been recognized, and that through their means we see again the opening for the slower processes still in vogue in the mountains of the South, whose women have begun to ask what will sell. And broader outlook still is the possibility that in every quarter of the United States women may come to see how they may associate themselves together, settling upon what industry best suits their special locality, and developing it to its highest point. Thus far all work has been hap-hazard, the result of circumstance, seldom of concerted or deliberate action. A thousand opportunities all untried await women who must earn, but who have never yet sought to discover the real meaning of organization. Practically it is becoming the principle in all philanthropy; but it grows slowly, the intense individualism born of our principles and institutions dominating all life and thought. The organized charities, the Industrial Association, the many industrial schools, the kindergartens managed on this system, are all demonstrations of what may come when the laws of concerted action are taught us from the beginning; and in accepting this wisest type of socialism, the evils of socialism fall away.

I have dwelt at length upon this phase of

work, because to my mind its importance as a reconstructing agent can hardly be overestimated. What is true of one great city must, with certain exceptions, be true of all, and the theories that hold regeneration for one hold it for all. Were this article a catalogue of charities, a minutely detailed account of the noble work done by women for women, it would even then point to the same end. From the Wilson Industrial School—the pioneer of much of the work now going on under other names—to the latest trades-school, the one aim is to restore to labor the place it held in the old days, when the poorest cottage possessed what we know now as works of art, and the poorest child had its inheritance of beauty for eye and ear. To all such beauty is still possible, and once a national possession, grosser ideals fall away and new possibilities lie before every child of the Republic. The training-school underlies any and all work of the future. The women who work to-day in countless ways seeking to alter existing conditions know this as truth, and bend every energy towards reaching the children and setting their feet in the only path that leads to freedom or fulfillment of desire. We have had enough of charity. All that is needed now is simple justice—a chance for the child whose time to earn has not yet come; a chance for the earner, for whom life can be made less barren. Accept this, and institutionalism dies naturally. Reject it, and we remain at its mercy, and have no refuge save in never-ceasing additions to the long list, which, if it means honor to warm and tender hearts, means also unending shame to senseless heads.

IN THE CUTTING AND FITTING ROOM.

THE SALESROOM.

We want no more institutions. Rather we want to empty those that already exist; and this will be done most effectually by precisely the order of work imperfectly recorded here.

It is not pessimism or even a momentary despair that impels the final word which must have place. We want no more institutions, and we want as little the palaces of pleasure which at present are the latest ideal in philanthropic work, unless, indeed, these palaces be owned and built by the people themselves. That there is need of them need not be affirmed, nor that in time every city will see great buildings dedicated to such happy uses.

"Every great city must have, every great city will have in time, its 'People's Palace,'" said an eager philanthropist not long ago. "Here we have the wealth to endow it, the poverty that needs such solace, and the philanthropy to utilize the first for the benefit of the second. Let us have more and more 'people's palaces.'"

Can there be any question of the beauty, the fitness, the justice of such action? For the writer the first doubt was silenced; but as, more and more, a question seemed involved, words were spoken for a few, that have reproduction here only because time appears to seal their truth, and to make such interrogation the first necessity for every eager worker. Till it arises, it is the instinct of such worker to urge the rich everywhere to give from their abundance towards the creation of such tre-

mendous redemptive forces, and to bend every energy born of personal conviction to the same ends. Hope and desire and fruition seem marching hand in hand in this new path. Is it possible that it is still a side path, and that the king's highway to the Delectable Mountains has been missed? Can ardent souls have lost the way, and is the palace not the Palace of the Interpreter, but the fortress in which Giant Despair still crouches, and from which he will still issue to destroy? It is hard to question anything so beautiful, so filled with promise; hard to doubt where the best that man can do for man would seem to be at work; and yet never was there sterner need of question. Manhood is emasculated, freedom abolished, slavery of mind and soul perpetuated by every new form of charity; and there is no hint of anything but charity in these free schools, free baths, free concert halls, and all the appliances of the "palaces." Could they be built like the great cathedral in New York, from the small contributions of untold numbers, so that each might feel his or her personal share in work and ownership, this curse of mere charity might be annulled. But the gift of one or of many, to whom fortune may have come through a lifetime of oppressing their fellows, holds small justice. Better such return than none; yet for many of these givers the very stones will cry out and some day bear witness against them. The man who sees before him a Palace of Pleasure as the end for which he works is

just so far beyond the man whose hope is bounded by his own pleasure; and yet, encompassed by that future, the day that is passes out of sight. Deeper than any need recognized by charity in general lies the need of a justice that asks, "What place, what right, have this man and this woman on the earth where we are walking side by side? How shall I help them to that place? How shall I teach them to know it when it opens before them?" When we have learned how to answer this question, there will

be fewer institutions, for no numbers will stand waiting to fill them; and there will be less need for "palaces of pleasure," for men and women will have found that the "gate beautiful" is within their own souls, and that earth and sky — nay, the universe itself — makes the palace. If this seem carping, or even a form of hopelessness or pessimism, read again and find if such words do not hold the only escape from pessimism, the only sure hope for this or any age.

Helen Campbell.

SPINELLO ARETINO (1330-6-1410).

(ITALIAN OLD MASTERS.)

IN Spinello we have at least the satisfaction of a clear artistic genealogy which goes back to Giotto. He was the pupil, properly apprenticed, of Jacopo di Casentino, who was the pupil of Taddeo Gaddi, the pupil of Giotto. Jacopo was one of the founders of the Company of Painters of Florence, a similar association to that which we have noticed¹ as having at an early date been founded in Siena, and, like the Sienese, the Florentine Company was the outgrowth of the religious feeling which was characteristic of the time as well as of its art. The preamble of their constitution was the expression of the sentiment of the masses of the people of Florence as much as of the Company of Painters:

As it is our understanding that during this perilous pilgrimage on earth we should have St. Luke the Evangelist for our special advocate before God and the most blessed Virgin, and that at the same time his followers should be pure and without sin, we order that all who subscribe themselves members of this company, be they men or women, shall confess their sins or show that they intend doing so at the first opportunity, etc.

The dates for the biography of the artists of this epoch are mainly to be found in the records of work done, in the entries of the books of convents and of communes, and in contracts preserved by chance from the ravages of war and from the consumption of parchment by the gold-beaters. Of Spinello, as of others whom I have dealt with, we know little else than what comes to us in this way; but that little shows how wide was his range of influence and his reputa-

tion. That his early literary education was much neglected by his father we know from the scraps of Latin that he left, for they are curiously incorrect for one who must be supposed to have read the Bible continually for his subjects. His love of painting, however, led to his being put early to study under Jacopo di Casentino, and his perseverance and talent were such that, by the time he was twenty years old, according to Vasari (who had a weakness for prodigies), he had surpassed his teacher. His early productions show also the influence of Bernardo Daddi, one of the most eminent of the Giottesques, whose work is contemporary with that of Taddeo Gaddi, and who, though conventional in design and somewhat heavy in color, shows a certain sense of proportion and facility in the draping of his figures. Besides possessing these good qualities of his masters, Spinello manifested more freedom and energy in his story-telling and was perhaps the best of Giotto's followers at the end of the fourteenth century, excelling all his contemporaries in vivacity of coloring and largeness of execution. His frescos, as is frequently the case in this period, are more interesting than his easel-pictures, owing probably in part to the fact that the latter were often intrusted to his pupils, but mainly to the fact that his style was better suited to a large scale. Very few of his works are dated, and this makes their classification difficult.

It is probable that Spinello accompanied his master Jacopo to Florence about the year 1347, and that Jacopo worked with him there in decorating the church of Santa Maria Novella with many legends of the Virgin and of St. Antonio. Very little remains of these paintings, a few figures only having been discovered under the coating of whitewash with which they were subsequently covered, and even those in very bad preservation. Vasari tells of frescos

¹ See article on Duccio, in *THE CENTURY* for December, 1888.

painted in various other churches of Florence, but no trace of them remains, save in San Miniato.¹

After the democratic revolution at Arezzo about 1360, Spinello was called thither by the governing body of citizens to decorate several churches. In S. Francesco he executed an Annunciation, which is considerably damaged by the damp and by retouching; and near it have recently been discovered, under the white-wash, remains of another fresco, evidently by the same hand, representing a bishop and a figure holding a young child. In the chapel of St. Michael he painted a fantastic composition of the archangel driving Lucifer from heaven. The evil spirits are in the form of hideous serpents. This fresco was afterward repeated by him in the same city for the guild of St. Angelo. On the other wall of the chapel is the vision of Pope Gregory when Michael appeared to him. In a shrine over the gate of the Misericordia is a Trinity, which Vasari praises very highly. In Spinello's own shop is a half-figure of the Virgin and a Christ crucified, with wings, as he appeared to St. Francis. In 1361 Spinello painted a panel for the Abbey of the Camaldolesi in the Casentino. The side-pieces of an altar-piece painted for the altar of Monte Oliveto Maggiore of Chiusi, illustrating the life and martyrdom of various saints, are to be found, according to Cavalcaselle, at Cologne in a private collection, bearing the names of the builder and carver of the frame² and the date MCCCCLXXX.

In 1384, Arezzo having been sacked, Spinello took refuge in Florence, with his family, among whom was his son Parri, who painted with him. There, in the sacristy of San Miniato, Spinello painted scenes from the life of St. Benedict. They are, according to Cavalcaselle, very much in the manner of Giotto, though in attitude and expression they reveal a slight influence from the Siennese school.

Spinello's fame was now great, and he was soon after called to Pisa to fill in the empty spaces in the Campo Santo there. He set to work in 1391. In one compartment was represented the legend of St. Ephesius, who, being sent by Diocletian at the head of an army to persecute the Christians, was converted by a vision of Christ and turned his forces against the heathen of Sardinia. St. Michael gave him the banner which afterward became the standard of the Pisans. Ephesius was condemned to the stake, from which his prayers saved him.

¹ The frescos from the history of St. Cecilia and St. Urban, in the sacristy of Santa Maria del Carmine, Florence, which were discovered in 1858 and are attributed by Baedeker to Spinello, are now thought to be the work of his master Jacopo di Casentino, in which Spinello assisted. The same relation no doubt existed in the work which has been mentioned as

He was afterward beheaded. The three scenes underneath, representing the legend of St. Potitus, with the exception of the scene of the saint's decapitation and the removal of the coffin to Alexandria, are almost entirely defaced.

The documents relating to this work are preserved in the archives of the Campo Santo, and from them we learn that, having completed the frescos in the spring of 1392, Spinello received 150 florins [about \$330] for the life of St. Ephesius, and 120 for that of St. Potitus. In 1391 he had painted for the church of San Andrea in Lucca the panel of the Madonna and Saints which is now in the Academy of Florence. From Pisa, Spinello, always accompanied by his family, went back to Florence, then to Arezzo again, where Vasari makes him die of fright at a horrible dream of the Lucifer which he himself had painted. But in 1404 we find him writing to Caterino Cosimo of Siena to say that he will fulfill his promise of going there, although his countrymen are unwilling to let him leave them. In October of that year father and son arrived at Siena, where they were lodged and fed at the expense of their hosts, receiving besides 11½ florins [about \$25] a month, while they worked in the Duomo. This they did uninterruptedly till August 17 of the next year, save for a short visit Spinello paid to Arezzo; yet no trace of this work remains.

They returned to Florence, where at each of his visits Spinello received new commissions; and in 1407 we find him again with his son Parri in Siena, where they painted the walls of the council-room in the town hall, while Bartolomeo, a Siennese painter, decorated the ceiling. The subject chosen was the struggle between Venice and Barbarossa, and the frescos illustrate the triumphs of the Republic and of Pope Alexander III., and the humiliations and defeats of the Emperor and his son. One represents the naval battle in which Otho was taken prisoner; another, Barbarossa prostrating himself at the feet of the Pope, the latter blessing the Emperor; while the best of the whole series, which includes many scenes of the same nature, shows the Pope on horseback, his bridle held by the Doge Ziani and Barbarossa. The last we hear of Spinello in Siena is in 1408, after which time he probably returned to his birthplace, where he died in March, 1410. He was buried at Morello. He had two sons, of whom the elder, Parri, was, as we have seen, a painter.

formerly in Santa Maria Novella. See *Encyclopædia Britannica*, article "Spinello Aretino."—EDITOR.

² The frames of these altar-pieces were generally complicated architectural designs comprising many separate subjects. I have mentioned heretofore a capital example in the Boston Museum of Fine Arts. (See *THE CENTURY* for February, 1889, p. 543.)

“BATTLE OF ST. EPHESIUS AGAINST THE PAGANS OF SARDINIA,” BY SPINELLO.

(IN THE CAMPO SANTO, PISA.)

Spinello may be counted as in one sense the most important of the Giottoesques, in that he was the last great and individual painter who followed throughout the precepts and traditions of the master, and his immense fertility and readiness of invention are surpassed only by Giotto himself. The naturalistic element had not made its appearance, and the supreme creative power of Giotto descended on none of his school; but in the distinctly scholarly (*i. e.*, school-like) manner of composition, in which much is clearly artificial and even conventional as it is scholarly, which manner is the dominant characteristic of the school of Giotto as opposed to the spontaneous and vision-like character of the compositions of the master himself, Spinello was, I conceive, the foremost of his followers. The color in the school remains always the same in system—broad surfaces were to be covered with lovely tints which should furnish relief by their variation alone, as the churches were dark and the work required the high key and the opaque surface of the fresco to be distinguishable; and the general effect was much the same as in mosaic. There can be no attempt at tone, nor at what I must be allowed to call orchestration of color, even in the simple form of harmonies which we shall find a little later in the Florentine school and of which a hint may be found in a picture by Ambrogio Lorenzetti in the Academy—a hint, however, so slight, and so alone, that I fear to give it too great importance. The landscape throughout is absolutely conventional and shows not even a recollection of the aspect of nature; and the drawing is, to use a familiar expression, “done out of the artist’s head,” as all rightly ideal work must be. The relief depends entirely on variety of color, as there is no instance, so far as I can remember, in any of

the work of the Giottoesques, of one figure in a picture throwing a shadow on another, or even on the ground. Nothing is thought of but the telling of the story, and with Spinello this is always done intelligibly. Of all his works known to me, the frescos at Pisa are the most instructive and characteristic, and are, moreover, in the upper line of subjects, well preserved; and of these the piece which Mr. Cole has engraved is, on the whole, the most interesting. In the church of St. Dominic at Arezzo, which was entirely painted by Spinello, there remain only two noble figures of apostles, framed separately in painted architectural framings characteristic of the time, and a few fragments, a head here and part of a figure there; but of these, one is an angel’s head so beautiful in its profile that I am half inclined to attribute it to Piero della Francesca, who painted many things at Arezzo at a later time; but I have only this beauty to justify me in this attribution, and one of Spinello’s heads in the *Annunziata* in the same city (which I have not been able to see) is spoken of as of extreme beauty.

It is in the composition of single figures—the casting of broad draperies where no action is involved—that we see the best quality of Spinello’s ability. In his groups he seems indifferent to harmony of line, as were his lesser and greater school-fellows; and the “Martyrdom of St. Ephesius,” the companion of the combat from which Mr. Cole’s example is taken, shows most violent defiance of the academical in its repetitions of lines. But this is better than the extreme artificiality of some of the later schools, for it is the result of one of the most precious qualities in art—naïveté—and it is more or less characteristic of all archaic art. Art for art’s sake was an object of study that had not yet dawned on the Italian schools.

W. J. Stillman.

NOTES BY T. COLE, ENGRAVER.

THE block represents a portion of a fresco in the Campo Santo, Pisa. It is the first one on the right as one enters, and measures about ten feet high by twenty feet long, and is known as the “Battle of St. Ephesius against the Pagans of Sardinia.” The lines that I have put on three sides of the block define the extent of the fresco in those directions, so that the continuation is in the direction of the side left without

a line. I have chosen the thickest portion of the fight, where the action is most lively and where two angels appear fighting on the side of the Christians. The coloring of the whole is light and vivacious, delicate greenish, yellowish, brownish, and gray tints prevailing. The upper right-hand corner of the fresco is somewhat obliterated. In black and white it looks like a blank portion of the wall that runs around the city.

BIRD MUSIC.

THE MEADOW LARK.

THE meadow lark, like the partridge, has favorite places of resort. His flight resembles that of the partridge and of the quail. Though one of the largest of our singing birds, his voice is neither loud nor deep, some of his tones being rather sharp and weak. Although his music is charming, he lacks the vocal power of the robin and of the oriole, a bird of not more than half his size; still Wilson, in comparing him with the skylark, says: "In richness of plumage, as well as sweetness of voice (as far as his few notes extend), he stands eminently its superior." The meadow lark's song is essentially tender and plaintive.

In the early, dewy morning and towards evening he will stand a long time upon a stump, a large rock or rock-heap, singing at intervals little snatches of melody, occasionally, like the oriole and the kingfisher, giving his "low, rapid, chattering" monotones.

It is a favorite pastime with him to repeat these four tones many times in succession, with rests intervening:

These fragmentary strains form, when connected, an original and interesting song. Now and then there is a subtle tremor in the tones of this singer, no more to be described than the odor of a rose, but somewhat resembling that in the tones of Wilson's thrush as he trembles along down to the close of his quivering silvery song.

TOWHEE BUNTING, OR CHEWINK.

THIS sprightly, showy bird indulges in a variety of vocal exercises, the most characteristic of them consisting of one loud and well-prolonged tone, followed by a trill a sixth above it, rather softly given. At a little distance the effect is that of the singing of two birds; one taking the long tone, the second taking the trill.

The trill, however, is often wholly lost in the distance.

But this pompous singer is not confined to the interval of a sixth. During the last days of May and the first of June, I have heard him as follows:

At other times,

The chewink generally sings in the key of C. I once heard him in F, in which key he made the skip of an octave in place of a sixth or fourth.

It is worthy of notice that the second example, if we cut short the trill, is identical with the first strain of "Rock of Ages." This species seems to have a special dislike to the sea. So says the close observer Wilson; but I have found him much at home at different points close to the ocean.

SCARLET TANAGER.

THE tanager is the only rival of the oriole in beauty of plumage. The tanager is less active, less vigorous than the oriole, and has the weaker voice; but it would be difficult to imagine a bird more fascinating, both to the eye and to the ear, than this scarlet singer, bound in black, as he stands shining in the early sun, and singing his morning song.

The percussive tones of the oriole invite or compel attention; while the tanager is content to sing in the forest with his fellows, with no human ear to hear. The oriole must be out of the forest and near the earth, where he can be

heard and seen of men. The oriole is restless, always in motion when he sings; he even chatters as he flies; while the tanager is gracefully quiet, moved only by the vibrations of his voice. I heard him nearly every day during last bird season (1888), when he repeated almost exactly over and over again the following nine tones:

The key was F minor except in one instance; then it was only a degree higher:

If there is some of the oriole's music here, I must think it original with the tanager.

Other forms of the tanager's song:

YELLOW-BIRD, OR AMERICAN GOLDFINCH.

THE roadsides afford these birds an abundance of seeds, especially those of which they

are so fond and from which they take the name "thistle-bird." Frequenters of our door-yards and gardens, they are tame and confident, and of all birds the gentlest mannered. With their heads crowned with black caps, their yellow bodies, black wings and tails, they are dainty, high-bred visitors. When singing in chorus, as is their habit, their soft warblings are expressive of great delight. In their most characteristic song, of only four notes, they are stronger voiced, and sing with distinctness and moderation. This song is performed while on the wing, and is all the more charming because of the touch of sadness that it has for the sensitive listener. The flight of the yellow-birds follows the fashion of the woodpeckers. It is like the riding of a boat over great billows — up — down — up — in graceful curves, with a stroke of the wings for each swell, to the accompaniment of the little song:

With sweep and swing from crest to crest, the song runs:

Since writing the above description, a friend showed me a very similar one by Burroughs.

Simeon Pease Cheney.

DECORATION DAY.

WITH acclamation and with trumpet tone,
 With prayer and praise, and with triumphal state
 Of warlike columns, and the moving weight
 Of men, whose firmness never overthrown,
 Proved itself steadfast; which did add to fate
 Speed, vision, certainty, and ever grown
 More terrible as more enduring shone
 A fire of retribution and swift hate,
 All visibly advancing — with these we keep
 Unsullied in our breast and pure and white
 The spirit of gratitude that may not sleep, —
 A nation's safeguard against shame and blight, —
 Since sacred memories and the tears men weep
 Alone can keep a nation at its height.

Langdon Elwyn Mitchell.

THE RELATIONS OF THE UNITED STATES AND CANADA.

A CANADIAN VIEW.¹

ORTH AMERICA, considered geologically, consists of three fundamental divisions, in a general sense parallel to one another and to the adjacent oceans, viz.: the Appalachian section, the central plain, and the Rocky Mountains section. No natural line of demarcation extends east and west across the continent. All the great rivers flow either to or from the north; the great mountain chains follow the meridians. From the semi-tropical region of the Gulf States to the icy coast of Labrador, from the Mexican border to the snowy peaks of Alaska, there is an uninterrupted gradation in climate, and hence in natural products. No mountain range, like the great Altai, or the Himalayas, or even the Alps, presents a barrier alike to man, animals, and vegetation; no vast desert, like the Sahara, or far-penetrating sea, like the Mediterranean, tends to develop diverse races, or by the force of physical necessity compels a marked diversity of habits and occupations among the people, or abrupt changes of species in the animal and vegetable kingdoms. Geographically, commercially, agriculturally, and industrially the continent is by nature one country—the north the complement of the south, the south of the north.

If events had so shaped themselves during the last century that North America had been developed as one country politically, a suggestion that an arbitrary line ought to be drawn across the continent from east to west, and that trade between the regions thus set apart should be hampered by regulations, artificial, variable, and often inconsistent, would be treated as contrary to nature and to common sense. It would be pointed out that every argument which could be urged in favor of one such line could with equal force be advanced in favor of a score. But events have proved themselves for the time being stronger than nature, and the statesmen of America have to deal with the resulting conditions. Indications multiply that the time is near at hand when the many difficult questions involved will demand solution.

In the abstract the question of continental free trade is simple enough; but however

unnatural a line of demarcation may be, to remove it will give more or less of shock to the established order of things. Commerce and industry adapt themselves in a measure to political conditions; important interests are developed by favoring tariffs; national sentiment gets a bias from long years of semi-antagonism. Hence to deal with the commercial amalgamation of the United States and Canada as a measure of practical politics is a matter of no small difficulty. One phase only of the subject is treated in this paper, namely, the interchange of natural products.

Reaching from the Atlantic to the Pacific, the United States and Canada divide North America between them into two nearly equal parts. The institutions of both countries are the same in principle. Their people have for the most part the same origin, speak the same language, read the same literature, cherish the same aspirations, and follow the same general trend of thought. There are differences between Americans and Canadians; but these are no greater than the differences between the inhabitants of the several States on the one hand, or of the several Provinces on the other.

This condition of things is without precedent or parallel, and presents a political and commercial problem altogether *sui generis*, in the solution of which Old World experience is of little value. American questions must be settled in America by Americans. This is recognized by English statesmen of both parties, the consensus of opinion being that Canada must be allowed full liberty to work out her own destiny, the Imperial Government holding itself ready to assent to any political change or commercial arrangement desired by the people of the Dominion.

For ten years previous to 1864 what is commonly called the Reciprocity Treaty was in force, by which the unrestricted interchange of natural products between the two countries was permitted; and under its fostering influence international commerce increased with tremendous strides, even though the resources of Canada were at that time scarcely guessed at, and the demands of the United States market had not assumed so varied a character or become of such enormous magnitude as in recent years. Since the expiration of the treaty both countries have industriously set up tariff walls against each other, until in the year ending June 30, 1887, Canada collected over

¹ An American view of the resources of the United States will be presented in articles now being prepared.—EDITOR.

seven millions of dollars in duties from imports from the United States, the latter country collecting a much larger sum from imports from Canada. Yet, notwithstanding opposing tariffs, if account be taken of all the ramifications of their dealings, it will undoubtedly appear that more than half of the business that the less than five million Canadians do with the world outside of their own country is done with the people of the United States, and that fully one-tenth of all the foreign business of the sixty millions of Americans is done with these same less than five million Canadians. The transactions between the two countries of which the custom-house takes cognizance average upwards of eighty million dollars a year. They rose to \$97,701,056 in 1883; and in the twelve months ending June 30, 1887, were \$82,767,265.¹ There are, in addition, many vast transactions and numberless minor ones of which the customs authorities are not supposed to keep a record, such as the disbursements in connection with railway lines having a part of their systems in both countries, with the shipping carrying commerce between them, with the purchase and transportation of merchandise, and the enormous sum spent in each country by visitors from the other.

Following is a statement of the trade in natural products between the two countries. The figures are taken from the Trade and Navigation Returns of Canada for the year ending June 30, 1888.

	<i>Imports of Canada from U. S.</i>	<i>Imports of U. S. from Canada.</i>	<i>Total.</i>
Animals and their products.	\$5,477,213	\$6,949,270	\$12,426,483
Agricultural produce.	7,711,242	7,634,185	15,345,427
Products of fisheries.	439,294	2,697,432	3,136,726
Coal	7,465,901	1,252,867	8,718,768
Lumber	1,711,310	9,620,235	11,331,545
Other articles (about)	1,800,000	2,200,000	4,000,000
	\$24,604,960	\$30,353,989	\$54,958,949

Or, in round numbers, \$55,000,000.

Although the increase in this international commerce is not constant from year to year, if periods of five years are taken it will be found that its growth is continuous, on the Canadian side at least, notwithstanding frequent changes in the tariff, and other elements of disturbance, such as the expiration of the Treaty of Washington, the strained interpretation sometimes put upon the customs laws in both countries, not to speak of panics and crises affecting the whole commercial world.

Are there any reasons to anticipate a great development in this interchange of natural products? Is one country at all necessary, in a commercial sense, to the other? Or if not necessary, is close commercial intercourse between them a thing to be fostered in the interest of both? In order to arrive at satisfactory

answers to these questions, several lines of investigation must be followed.

First, as to the probable demand in the United States for the products of her northern neighbor.

I approach this branch of the subject with considerable hesitation, knowing how any statements made in regard to it will be challenged. The practice is to represent the food-producing capacity of the United States as practically boundless; but in computing the ability of America to support a resident population, the statistics of China or of India, which are generally quoted, or even those of continental Europe, are of very little value. Americans live better than the people of the Old World. They require food in greater quantity and in greater variety. They employ more horses in work and pleasure; wear more clothes and better ones; live in better houses and furnish them better; and, what is perhaps of even more importance, they are as prodigal of land as of everything else. They are far from thorough in methods of cultivation; they require vast ranges for pasturage for their flocks and herds, even in localities where the population is comparatively dense; and they have gone on exhausting the fertility of the soil as though there was no limit to the supply of arable land. These considerations must be kept in mind when we endeavor to estimate, not the possible expansion of United States agriculture under certain fanciful conditions, but its probable relation to the population thirty years from now, when there will be 120,000,000 people living within the bounds of the Republic, if the present rate of increase continues.

To supply the needs of the United States for home consumption in 1887 and the \$523,073,798 worth of agricultural produce exported, over eight acres per head of the population were required. This calculation is based on an estimated population of 60,000,000. Not that to every individual the crop grown on eight acres was, on an average, necessary for food purposes; for, in addition to the human population, an immense number of animals were maintained to supply food or materials to be worked up into various manufactured articles, or to be themselves employed in some useful capacity. Following is a statement of the number of animals kept in the United States in the year 1888.²

Horses. 13,172,936	Sheep. 43,544,755
Mules. 2,191,727	Swine. 44,346,525
Milch cows. 14,856,414	Other cattle. 34,378,363

These animals are sustained from the land, either by harvested crops or by pasture; and it

¹ Trade and Navigation Returns of Canada for 1887.

² Report of Department of Agriculture on number of farm animals, February, 1888.

is reasonable to suppose that for the next thirty years there will be an increase in live stock corresponding with that in population. Therefore in estimating the capacity of the country to sustain population under existing conditions, the acreage necessary for the support of live stock must be taken into account.

Estimate of the land in crop and pasture in 1888:

Acreage in wheat.....	36,000,000	} Report of United States Agricultural Department, 1888.
" Indian corn.....	78,000,000	
" oats.....	27,000,000	} Based on Department returns for 1884.
" other grains.....	6,500,000	
" potatoes.....	2,800,000	
" hay.....	40,000,000	
" tobacco.....	700,000	
" cotton.....	19,000,000	
" other crops.....	10,000,000	
Total acreage in crop.....	220,000,000	
Pasturage for sheep.....	10,000,000	
" cattle.....	245,000,000	
" horses.....	15,000,000	
Total.....	490,000,000	

It is impossible to be accurate in the estimate of pasturage; but taking the country as a whole, there is in the settled districts fully as much land in pasture as in crop. Much of it, indeed by far the most of it, is unimproved land, some of it serving the double purpose of wood reserve and pasture. Under cultivation it would carry an immensely increased amount of stock; but it is to be remembered that a very large area must be left unimproved in order that the supply of fuel may be kept up. In addition to the pasturage appurtenant to farms, the great extent of land included in the Western cattle ranches has to be considered.

This question may be looked at from another point of view. The number of acres in farms in the United States, as given in the report of the Department of Agriculture for 1884, and taken apparently from the census of 1880, was 536,081,835. An examination of later crop statistics, a comparison with the increase in previous years, and the well-known rapidity with which vacant lands in the West have been taken up, justify an estimate of a twenty per cent. increase since 1880, or that the area in farms in the United States in 1888 probably exceeded 700,000,000 acres, nearly one-third of which appears from the returns quoted above to have been in crop. This indicates that the productive capacity of the farms has not been nearly reached; but in estimating upon any probable expansion several considerations must be kept in mind. One of these is the preservation of forests, the importance of which, for both climatic and economical reasons, is being more strongly inculcated and better understood from year to year. As population be-

comes denser the necessity for judicious forest conservation becomes greater. For the sole purpose of providing fuel it is estimated that at least one-fourth of the farm lands must be reserved as woodland, leaving available three-fourths for tillage and pasture. On this basis there is an immense area on existing farms to be utilized as tillage land, sufficient, no doubt, to permit their food-producing capacity to be doubled; but here comes up the question of cost. To double the area in crop on existing farms—that is, to clear the land of forest, where that is necessary, or to break up the virgin prairie, to provide fencing, implements for planting and harvesting, and buildings to store the crop and house the additional stock needed—would cost fully \$40 per acre, or a total of \$8,800,000,000. To duplicate the live stock now on the farms—and this would have to be done if their productive capacity is to be doubled—would call for an outlay of \$2,409,043,398,¹ making in the whole upwards of \$11,000,000,000. In other words, to double during the next thirty years the output of existing farms would require an expenditure of \$366,000,000 annually on capital account, or ten per cent. of their present product. This would be in addition to the enormous but indefinable sum which must be expended in keeping up the fertility of the soil, in repairs to buildings and fences,² the renewal of farm implements, and the payment of interest on mortgages. This estimate is necessarily only an approximation, but it will serve as a measure of the tremendous problem involved in providing for the wants of the rapidly increasing population of the Republic.

Hitherto the greater part of the increase in the agricultural product of the United States has been due to the taking up of new farms; and if the present rate is maintained, every available acre of arable land will be in the hands of private owners before the close of the present century. The estimate generally received of the extent of this arable land is 1,500,000 square miles, or 960,000,000 acres; and if this is correct it follows, from what has been stated above, that only 260,000,000 acres are not already included in farms, which is clearly not sufficient for the needs of the 60,000,000 people likely to be added to the population of the United States during the next three decades. Therefore within a few years the Republic will be brought face to face with a new and most difficult problem—a rapidly increasing population and all the arable land in the hands of private owners. This does not take account of the elevated western

¹ Report of the Department of Agriculture on the numbers and values of farm animals, 1888.

² In 1871 the Department of Agriculture estimated

that the fencing in the United States had cost, as it then stood, \$1,747,549,931, and that the annual expenditure for repairs was \$198,806,182.

areas, of which the Department of Agriculture in the Report for 1884, page 468, says:

A large part of the elevated western area is assumed to be unfit for general agriculture, though special culture, carefully adapted to situation and humidity, with amelioration of irrigation and cultivation and judicious selection of plants in crop distribution, will produce results in agriculture which will surprise the farmers of to-day who live to witness the development of the next twenty years.

In the four years 1871-74 the yield of corn over the United States averaged $25\frac{1}{2}$ bushels to the acre. In the next four years it was 27.2 bushels; in the next four, 25 bushels; in 1883, 23.7 bushels; in 1884, 26 bushels. In 1886 it was 22 bushels; in 1887, 20 bushels; and the preliminary reports for 1888 put the probable yield below that of 1887. I have not the returns for 1885 by me. The annual average yield of wheat per acre in the ten years ending 1879 was 12.4 bushels per acre, while for the subsequent nine years it was 11.8 bushels. The average yield of oats for the ten years ending 1879 was 28.4 bushels per acre; in the eight years 1880-87 it was 26.5 bushels. Let it be remembered that during all this time a vast and constantly increasing area of virgin soil has been added yearly to the tilled land, the tendency of which is to keep up the average product per acre, and it will be conceded to be at least arguable that when the whole of the arable public domain has been divided up into farms, as will be the case within a little more than a decade, a permanent reduction in the yield per acre may be looked for, unless an improvement takes place in methods of cultivation and more attention is paid than is now given to keeping up the fertility of the soil.

From a paper published in the "North-western Miller" I gather that in the five years ending 1878 the export of wheat was, in round numbers, 300,000,000 bushels, that of Indian corn 266,000,000 bushels; in the five years ending 1883 the respective amounts were, of wheat 626,000,000 bushels, of Indian corn 358,000,000 bushels; and in the five years ending 1888, of wheat 374,000,000 bushels, of Indian corn 222,000,000 bushels.

From the facts above presented, the following conclusions seem warranted:

That the population of the United States will be 120,000,000 by the year 1920;

That, to provide food for this number of people, to keep farm stock proportionate in number to what is now kept, and to maintain a relative position in the matter of exports of farm produce, 980,000,000 acres will be required for tillage land and pasture.

That there are in round numbers about

500,000,000 acres of arable land exclusive of the mountain section not now utilized;

That at the close of the present century this area will be in the hands of private owners;

That a large portion of it is below the line of profitable wheat culture, and is not adapted to successful stock raising.

Therefore, if Canada contains any great extent of fertile virgin soil, capable of profitably producing breadstuffs, beef, mutton, and other commodities of this class, the United States will probably become a very extensive purchaser of them, if the tariff is not absolutely restrictive; and in proportion as the commercial relations between the two countries are broadened and the interchange of commodities is facilitated, the demand for the products of Canada will be augmented.

Has Canada such a territory?

In considering this phase of the subject it is necessary to be on guard against "glittering generalities," to take no account of the fanciful figures and hasty conclusions in which political orators and even parliamentary committees sometimes indulge. Fifteen years ago the people of the Dominion had little idea of the resources of their country. Since then a vast mass of facts has been collected. Areas which less than a score of years ago were supposed to be a trackless waste of snow for the greater part of the year and a barren inhospitable wilderness for the remainder have been found to possess a summer climate of a highly favorable character. It has been shown that summer isotherms are independent of latitude; that the slight elevation of the Canadian North-west above the sea, the Chinook winds from the Pacific, and the alternate southerly winds, heated on the plains of the United States, cause a balmy temperature to extend during five months of the year to within twenty-five degrees of the Pole; so that wheat is a reasonably safe crop in the great Mackenzie Basin within a comparatively short distance of the Arctic Circle. The Canadian Senate committee in 1888, after examining over a hundred witnesses, either orally or by correspondence, felt warranted in reporting that there was in the great Mackenzie River Basin and north of the fifty-fourth parallel of latitude an area of 800,000 square miles suitable for grazing, of which 316,000 square miles were adapted to the cultivation of wheat.¹

This conclusion is so startling, so out of keeping with the preconceived ideas of almost everybody, that it will be received with hesitation; yet it seems fully borne out by the testimony given before the committee. The Canadian North-west is full of surprises, pre-

¹ Appendix to the Journal of the Senate of Canada, Vol. XXII., p. 10.

senting a most inviting field for exploration ; but the region spoken of above—that is, the country north of the fifty-fourth parallel of latitude—may be disregarded for the purposes of the present article, as, in view of the large unoccupied area south of that parallel, it is doubtful if the more northerly area will play any considerable part in international commerce during the next thirty years. As showing the probable ultimate development of Canadian agriculture, the following estimate may be given of what is officially claimed to be either arable or grazing land :

	<i>Acres.</i>
In the Maritime Provinces.....	18,000,000
In Ontario and Quebec.....	130,000,000
In Manitoba, Saskatchewan, Assiniboia, and Alberta.....	200,000,000
In British Columbia (exclusive of Peace River).....	50,000,000
In the Peace River and Mackenzie valleys.....	500,000,000
Total.....	898,000,000

For the reason given above, the last item will be eliminated from the present calculation, leaving 398,000,000 acres of tillable or pasture land in Canada south of the fifty-fourth parallel. Of this not more than 60,000,000 acres are now embraced in farms, so that 338,000,000 acres are yet to be occupied. One hundred million acres, principally in the North-west Territories, may be regarded as more especially adapted to grazing than to cultivation; so that we arrive at the conclusion that there is in Canada, south of the fifty-fourth parallel, 238,000,000 acres of vacant tillage land. Or, to state the case in general terms, the area of arable land in Canada within the well-ascertained limits of profitable wheat culture is about equal to the arable public domain in the United States. I am satisfied that this is a moderate estimate. Canadians generally will be inclined to think it far below the mark. Adding to the Canadian area the vacant arable land in the United States, we get a total of over 500,000,000 acres, or sufficient to provide for the wants of the people of this continent, at the present rate of increase and under present methods of cultivation, for the next quarter of a century, without calling for any large increase in the product of existing farms.

Taking up the several parts of the Dominion in detail, the Maritime Provinces may be first considered. These are Nova Scotia, New Brunswick, and Prince Edward Island. The whole area set down to their credit in the foregoing statement may be treated as fit for agriculture. Only about one-tenth of it, or 1,800,000 acres, is under cultivation; so that, making a reasonable allowance for pasturage, their yield of farm produce may be increased fivefold without any improvement upon existing methods of farming. They furnish the New England States with horses, sheep, potatoes, eggs, hay, and some other articles.

The principal export of agricultural produce from Quebec to the United States consists of hay and potatoes, the aggregate value of the two items being about \$1,000,000 annually. This will probably increase from year to year gradually, but no very great stress ought to be laid upon the part which this province will play in supplying the market of the Republic. French-Canadians, at least the agricultural part of the population, are not aggressive in a business sense, and not likely to be formidable competitors in any foreign market. What the *habitants* would do if spurred up by an active demand for the products of their farms remains to be seen. The province is adapted to much the same class of farming as the Maritime Provinces.

Ontario is a great agricultural province. Its wheat crop in 1881, 20,406,091 bushels,¹ had in 1884 risen to over 31,000,000 bushels.² This last amount was exceeded in 1887 by only four of the United States (Ohio, Indiana, Illinois, and Minnesota) and one Territory (Dakota). The average yield per acre of wheat in Ontario, as taken from returns to the Provincial Bureau of Agriculture, extending over a period of six years, is 18½ bushels. This is exceeded only by the yield of California and Colorado. After supplying the demand from the eastern part of the Dominion, Ontario has annually a large surplus of wheat; and as only about 1,700,000 acres of its available area have been sown to this grain, it is evident that the wheat-producing capacity of the province has not nearly been reached. Ontario also produces a surplus of barley, of which 9,365,724 bushels were sold to the United States in 1887. Its yield of this grain can be enormously augmented. The province also exports largely of horses, cattle, and sheep, the first and last to the United States principally, by far the greater number of the horned stock finding a sale in Great Britain. The total area of Ontario is 128,000,000 acres, of which, up to 1885, 22,000,000 acres had been granted to private owners. Of the remainder 12,000,000 must be deducted for water surface, leaving 94,000,000 acres to be drawn upon for new farms. With a liberal allowance for non-arable land, it is evident that Ontario agriculture and stock-raising are capable of great expansion; and as the people of the province are energetic and enterprising, they will be sharp competitors in any market open to them.

I have estimated the arable and pasture land of British Columbia at 50,000,000 acres, exclusive of the Peace River region. The climate of this province and its luxuriant and

¹ Census of 1881.

² Report of Bureau of Agriculture, 1885.

nutritious grasses adapt it especially to stock-raising.

There remain to be considered Manitoba and the North-west Territories, south of the fifty-fourth parallel, embracing within the limit of wheat cultivation 276,000,000 acres. Of this area the late Hon. Horatio Seymour of New York is quoted by the Canadian Department of Agriculture as saying: "There is a country owned by England with greater grain and stock-raising capacity than all the lands on the Baltic, the Black Sea, and the Mediterranean combined." United States Vice-Consul Taylor, in a letter to be found at length in the Appendix to the *Journal of the Canadian Senate* for 1888, Vol. XXII., says:

I can add nothing to the demonstration, by innumerable explorations and reports, that the navigable channels of the Mackenzie and Mississippi are connected by a territory of 1500 miles in extent north-west of St. Paul, Minnesota, having an average width of 800 miles (1,200,000 square miles), which is substantially identical in climate and natural resources. There is a great variety of illustrations, but I shall confine myself to one—a flower. The prairie's firstling of spring has the popular designation of "crocus," but it is an anemone. . . It is often gathered on the Mississippi bluffs near the Falls of St. Anthony on the 15th of April. It appears simultaneously on the dry elevation near Winnipeg. It was observed even earlier, on the 13th of April, during the Saskatchewan campaign of 1885, and is reported by Major Butler as in profusion on Peace River, 1500 miles from St. Paul, on the 26th of April. Even 1000 miles beyond, on the Yukon, within the Arctic Circle, Archdeacon Macdonald, a missionary of the Church of England, has gathered the flower on the 14th of May. Equally significant as this delicate herald of spring are the records of ice obstruction in rivers—their emancipation being simultaneous from Fort Snelling, Minnesota, to Fort Vermilion, Athabasca.

A fair estimate would perhaps take from the area of the district now under consideration, which does not include the whole country referred to by Mr. Taylor, 76,000,000 acres as adapted to neither agriculture nor grazing, and divide the remainder equally between those two industries.¹ In other words, there is in the Canadian North-west, south of the fifty-fourth parallel, 100,000,000 acres of land admirably adapted to wheat culture. The average yield per acre over the whole district, as given by the census of 1886 (a local census), was, of wheat, 18.4 bushels; of barley, 22.5 bushels; and of oats, 32.4 bushels. By far the greater part of this region is unoccupied; indeed, immigration has only of recent years begun to find its way into it. It lies adjacent to existing and projected railways, and may be regarded as im-

mediately available for the production of bread-stuffs for the markets of the world.

What may be regarded as the probable wheat-producing capability of this district? The area in farms in Ohio, Illinois, Indiana, Minnesota, and Iowa was in round numbers 100,000,000 acres in 1880, or about equal to the acreage of arable land in Manitoba and the Canadian North-west, south of latitude 54°. Of the area of the States named sufficient was sown to wheat and corn in that year to have produced if sown to wheat alone 320,000,000 bushels. Indian corn will not assume especial importance as a field crop in the Canadian North-west for some time, if ever; certainly not until years of acclimatization have produced a variety which will come to perfection with great rapidity. It is otherwise with wheat, which is essentially a northern grain, growing in its greatest perfection during the long days of the high latitudes. Therefore it is reasonable to presume that the Canadian farmer will sow in wheat alone an area corresponding to that which his neighbor in Iowa and the other States named sows in corn and wheat. But the average yield of wheat per acre in the virgin soil of Manitoba and the Canadian North-west is one-third greater than in the old-settled States to the south; hence the probable wheat production of this part of Canada, which may be described as lying west of Lake Superior, east of the Rocky Mountains, north of the United States boundary, and south of the fifty-fourth parallel of latitude, is 426,000,000 bushels. This, however, will only be possible when the population of the country has reached 8,000,000, the population of the States named in 1880 necessitating a home consumption of 60,000,000 bushels, which leaves the probable surplus wheat production of the district 366,000,000 bushels annually, an amount equal to the total probable increase in the annual consumption of wheat in the United States at the expiration of thirty years from the present date.

So much for the trade in one direction. What of that in the other direction? Will Canada continue to increase her purchases of the products of United States farms? No reason can be assigned why she should not. No important item of her agricultural imports from her southern neighbor can be replaced by home-raised articles. The trade between the two countries rests upon the natural and legitimate foundation of an interchange of products between a southern and a northern region.

Canada purchases \$13,000,000 worth of the products of her neighbor's farms every year, including both animal and vegetable products, but exclusive of articles manufactured from

¹ The area of arable land in this part of the North-west is equally put at 140,000,000 acres, but this seems excessive.

material raised on the farms; that is, about three dollars' worth per head. In the future the several items will of course vary from year to year; but there will be a constant increase even under existing tariffs. An important influence which will affect and stimulate the Canadian importation of United States farm produce is to be found in the constant improvement in the condition of the people. The number of those who eat little except what they raise themselves, and wear nothing except the products of their flocks and the little patch of flax before the door, has greatly decreased and is becoming less every year. In part this is due to a general improvement in the condition of the people, who are advancing beyond the pioneer stage, and in part to the opening of the country by railways.

Certain lines of Canadian imports from the United States may be considered as necessities; such, for example, as Indian corn and meal, and cotton, raw and manufactured. Portions of the Dominion are adapted to the successful growth of Indian corn, but there is no probability of its being cultivated in those localities in sufficient quantity to affect appreciably the foreign supply. Hence also pork, which can be grown cheaper in a corn-producing country than elsewhere, will always be imported largely into Canada.

Raw and manufactured cotton may both be classed among the products of the farms of the United States in this connection. The Canadian import of these articles from the States in 1887 was valued at \$8,404,430. The first point to be noted is that of the \$2,933,078 worth of raw cotton imported by Canada in 1887, all but \$799 worth came from her southern neighbor. The second is that of the \$5,471,352 worth of manufactured cottons imported by Canada in the same year, the United States furnished goods to the value of \$915,126 only, the bulk of the remainder coming from Great Britain. There is no reason to anticipate that Canada will buy her raw cotton outside of the continent. It is now admitted into Canada duty free; the import is steadily increasing, and as large amounts of capital have been invested in mills and the cost of manufacturing is not greater than in the United States, it is probable that, no matter how intimate the trade relations of the two nations become, the amount of raw cotton needed in the Dominion will grow larger from year to year. There can also be no doubt that if the Canadian duty were removed from manufactured cottons coming from the United States, that country would furnish more than one-sixth of the Dominion's purchases in foreign markets. It would seem indeed not unreasonable to anticipate that if continental free trade became

established, the larger part of the Canadian importation of raw and manufactured cottons would be supplied by the United States.

Next in value to farm products in this international trade come the products of the forest; but in this line the purchases made by the one country from the other do not nearly balance each other, the United States paying Canada over five dollars for wood and wood goods for every dollar that Canada pays in return. Perhaps there is no one line in which consumption is increasing more rapidly in the United States than in this; and there certainly is none in which the source of supply is in such danger of being exhausted. It can be only a few years at the most before the principal source of the wood supply of the United States will be the forests of Canada. No approximation can be given of the resources of the Dominion in this particular. Practically every acre of unimproved land in the five eastern provinces, or, in round numbers, 300,000,000 acres, is covered with a forest growth of some commercial value. The North-west Territories contain an immense area covered with forest. Captain Craig, in his evidence before the Senate committee, said the forest extended from the head of Lake Manitoba to the Rocky Mountains, a distance of a thousand miles. How wide the timber belt is, it is impossible to say with accuracy; but the committee felt justified in reporting that the growth was "far in excess of the needs of the district, and of great prospective value to the treeless regions of Canada and the United States." The principal woods in this region are spruce and poplar, which grow as large as two feet in diameter; not large certainly when compared with the trees of British Columbia or of the great pine regions of the Northern States, yet of sufficient size to make valuable timber. The forests of British Columbia are very extensive and the growth is of the highest quality. Speaking in general terms, the forests of Canada can probably meet any demand likely to be made upon them for many years to come. The Canadian export of forest products averages from \$20,000,000 to \$25,000,000 in value annually, of which considerably less than a half finds its way to the United States market, the greater part of the remainder being sold in Great Britain, in competition with stock brought from Scandinavia and the Baltic. It is conceded by the best authorities in the trade that a very slight change in existing conditions would divert Canadian lumber largely from European channels, and hence the means are at hand to more than double the lumber trade between the Dominion and the Republic the moment the pressure of circumstances renders it necessary that the foreign wood supply of the latter

country should be increased by removing the duty from the imported article.

Some anthracite coal is found in Canada, but there are no reliable data as to the extent of the known deposits; nothing indicates a probability of their being sufficient to lessen the importation of this mineral from the United States, which in 1887 was of the value of nearly \$4,500,000. This line of trade will increase steadily, especially as the cities and towns in Canada grow larger. Of bituminous coal both countries have a supply essentially inexhaustible, the development of the international trade in it depending altogether upon the cheapness at which it can be delivered at the place of consumption. Ontario buys nearly \$4,000,000 worth of bituminous coal annually in the United States and pays the duty upon it, presumably for the reason that it comes as cheaply this way as the Nova Scotia article, which is, of course, free of duty. In like manner California imports largely of British Columbia coal. If the duty were removed, the New England States would undoubtedly become large purchasers of Nova Scotia coal, as it could be brought from the mines by water. Immense coal-fields are found in nearly every part of the Canadian North-west, from the shores of the Arctic Ocean to the international boundary. Their existence, while having an important bearing upon the settlement of the country, and indirectly upon the timber supply of the future, is not material at present in connection with international commerce.

The effect which continental free trade would have upon the trade in metallic ores between the United States and Canada must be a matter of mere conjecture, and the same may be said of the probable trade in the crude metals themselves. It is interesting to note the presence of excellent iron ore in Nova Scotia in close proximity to large coal deposits; of great beds of Bessemer iron ore in Ontario, in the immediate vicinity of a part of country which is an extensive consumer of Pennsylvania coal; of manganese, antimony, building stone, and other minerals of value; but these have more bearing upon the internal development of Canada than upon the interchange of natural products between the two countries.

In her extensive and productive fisheries Canada possesses what must be of inestimable advantage to her in the future. There is no measure of her wealth in this particular; for in addition to her seaboard fishing-grounds, there are thousands of miles of river and lakes teeming with food fishes. In recent years a large trade in fresh frozen fish has been done between the gulf shore of New Brunswick and the cities of New England, the fish being shipped in refrigerator cars, the demand keeping pace

with the supply. In like manner, as population increases in the central plain of the continent, the great northern rivers and lakes of Canada will be drawn upon as a source of food supply. It may not be within a quarter of a century, but the time cannot be far distant when the enterprise of Canadians will provide railway communication as far north as the Great Slave Lake, an immense body of water, little, if any, smaller than Lake Superior, and with the Mackenzie River, which during five months of the year affords a navigable channel on which for over a thousand miles large steamers can safely float to the Polar Ocean.¹ Considerable progress has already been made in this direction. A railway from Winnipeg to Hudson's Bay is also projected, and its early construction appears probable.

The masterly way in which Canada has set about the herculean task of utilizing her vast domain will, when it is better understood, challenge the admiration of the world. It is impossible to read the long reports of explorers and the voluminous testimony of residents, or to reflect upon the magnitude of the great enterprises completed, undertaken, or contemplated, without feeling that the men who have gone into the Canadian North-west are worthy to be the founders of a nation. To hear of railways projected into a region which, only twenty-five years ago, we were told in school was given up to the dominion of the Polar bear and the reindeer; to read of successful farming in a latitude so northerly that during the summer months there is scarcely any night at all; to be told that the navigation of Hudson's Bay and even of the Arctic Ocean, by way of Behring Strait to the mouth of the Mackenzie and thence up that stream, two thousand miles into the heart of the continent, to a land capable of producing millions upon millions of bushels of wheat, of pasturing almost countless herds of cattle, of supplying the petroleum market of the world and abounding with gold and other valuable mines—to realize that this not only is feasible, but likely soon to become a reality, is to get a new insight into the probable future of the continent and of the race which is taking possession of the northerly but by no means less valuable half of it. The purview of this paper does not embrace the discussion of the future of Canada; but it may be asked whether, in view of the great natural advantages hereinbefore referred to, the Dominion cannot claim to possess the elements necessary to the establishment of an independent nationality; by which I mean, not politically independent, but commercially. I wish to avoid the political side of the question at present. The

¹ Report of Canadian Senate Committee, 1888, pp. 56-60.

principal products of Canada are of the class which the world needs—food, clothing, and building materials. Her geographical position is commanding, her eastern ports being nearer Europe and her western ports nearer Asia than any other accessible harbors on the seaboard of America. Much has been said recently of the dependence of the Dominion upon the United States for a winter outlet; and if the views expressed by numerous newspaper writers and others are indicative of the general opinion of the United States public, the commonly received idea in that country is that in the winter Canadian railways are long stretches of unbroken snow, extending from vast drifts in the interior to ice-bound harbors on the coast. As a matter of fact the Canadian railway system is probably not more interrupted by snow than are the railways in the Northern States, while the harbors on the east, at Halifax, St. John, and elsewhere, and on the

west on Queen Charlotte Sound, are open and safe to vessels of all classes every day in the year. If not a self-contained nation, Canada has too many and too great resources to render it necessary for her to become a suppliant for commercial favors. Undoubtedly it is in her interest to obtain the most intimate trade relations possible with her southern neighbor. To the people of this continent the trade of the continent is of greater importance than commerce with the other hemisphere, and hence whatever tends to promote this trade ought to be a matter of paramount consideration. The expensive and unnatural tariff wall between the United States and Canada ought to be removed; but Canadians are unwilling to admit that the benefit of such a step would be all on their side, and that if it is not taken the Dominion will disintegrate and drop piecemeal into the arms of the Republic.

Charles H. Lugin.

KING SOLOMON OF KENTUCKY.

By the author of "The White Cowl," "Two Gentlemen of Kentucky," etc.

IT had been a year of strange disturbances—a desolating drought, a hurly-burly of destructive tempests, killing frosts in the tender valleys, mortal fevers in the tender homes. Now came tidings that all day the wail of myriads of locusts was heard in the green woods of Virginia and Tennessee; now that Lake Erie was blocked with ice on the very verge of summer, so that in the Niagara new rocks and islands showed their startling faces. In the blue-grass region of Kentucky countless caterpillars were crawling over the ripening apple orchards and leaving the trees as stark as when tossed in the thin air of bitter February days.

Then, flying low and heavily through drought and tempest and frost and plague, like the royal presence of disaster, that had been but heralded by all its mournful train, came nearer and nearer the dark angel of the pestilence.

M. Xaupi had given a great ball only the night before in the dancing-rooms over the confectionery of M. Giron—that M. Giron who made the tall pyramids of méringues and macaroons for wedding suppers, and spun around them a cloud of candied webbing as white and misty as the veil of the bride. It was the opening cotillon party of the summer. The men came in blue cloth coats with brass buttons, buff waistcoats, and laced and ruffled shirts; the ladies came in white satins with ethereal silk overdresses, embroidered in the figure of a gold beetle or an oak leaf of green. The walls of the ball-room were painted to represent landscapes of blooming orange trees, set here and there in clustering tubs; and the chandeliers and sconces were lighted with innumerable wax candles, yellow and green and rose.

Only the day before, also, Clatterbuck had opened for the summer a new villa-house six miles out in the country, with a dancing-pavilion in a grove of maples and oaks, a pleasure boat on a sheet of crystal water, and a cellar stocked with old sherry, Sauterne, and Château Margaux wines, with anisette, "Perfect Love," and Guigiolet cordials.

Down on Water street, near where now stands a railway station, Hugh Lonney, urging that the fear of cholera was not the only incen-

tive to cleanliness, had just fitted up a sumptuous bath-house, where cold and shower baths might be had at twelve and a half cents each, or hot ones at three for half a dollar.

Yes, the summer of 1833 was at hand, and there must be new pleasures, new luxuries; for Lexington was the Athens of the West and the Kentucky Birmingham.

Old Pete Leuba felt the truth of this, as he stepped smiling out of his little music-store on Main street and, rubbing his hands briskly together, surveyed once more his newly arranged windows, in which were displayed gold and silver epaulets, bottles of Jamaica rum, garden seeds from Philadelphia, drums and guitars and harps. Dewees & Grant felt it in their drug-store on Cheapside, as they sent off a large order for calomel and superior Maccoboy, rappee, and Lancaster snuff. Bluff little Daukins Tegway felt it, as he hurried on the morning of that day to the office of the "Observer and Reporter" and advertised that he would willingly exchange his beautiful assortment of painted muslins and Dunstable bonnets for flax and feathers. On the threshold he met a florid farmer, who had just offered ten dollars' reward for a likely runaway boy with a long fresh scar across his face; and to-morrow the paper would contain one more of those tragical little cuts representing an African slave scampering away at the top of his speed, with a stick swung across his shoulder and a bundle dangling down his back. In front of Postlethwaite's Tavern, where now stands the Phoenix Hotel, a company of idlers, leaning back in Windsor chairs and planting their feet against the opposite wall on a level with their heads, smoked and chewed and yawned, as they discussed the administration of Jackson and arranged for the coming of Daniel Webster in June, when they would give him a great barbecue and roast in his honor a buffalo bull taken from the herd emparked near Ashland. They hailed a passing merchant, who, however, would hear nothing of the bull, but fell to praising his Rocky Mountain beaver and Goose Creek salt; and another, who turned a deaf ear to Daniel Webster, and invited them all to drop in and examine his choice essences of peppermint, bergamot, and lavender.

But of all the scenes that might have been observed in Lexington on that day, the most remarkable occurred in front of the old courthouse at the hour of high noon. On the mellow stroke of the clock in the steeple above, the sheriff stepped briskly forth, closely followed by a man of powerful frame, whom he commanded to station himself on the pavement several feet off. A crowd of men and boys had already collected in anticipation, and others came quickly up as the clear voice of

the sheriff was heard across the open public square and old market-place.

He stood on the topmost step of the courthouse and for a moment looked down on the crowd with the usual air of official severity.

"Gentlemen," he then cried out sharply, "by an ordah of the cou't I now offah this man at public sale to the highest' biddah. He is able-bodied but lazy, without visible property or means of suppoht, an' of dissolute habits. He is therefoh adjudged guilty of high misdemeanor an' is to be sole into labah foh a twelvemonth. How much, then, am I offahed foh the vagrant? How much am I offahed foh ole King Sol'mon?"

Nothing was offered for old King Solomon. The spectators formed themselves into a ring around the big vagrant and settled down to enjoy the performance.

"Staht 'im, somebody."

Somebody started a laugh, which rippled around the circle.

The sheriff looked on with an expression of unrelaxed severity, but catching the eye of an acquaintance on the outskirts, he exchanged a lightning wink of secret appreciation. Then he lifted off his tight beaver hat, wiped out of his eyes a little shower of perspiration which rolled suddenly down from above, and warmed a degree to his theme.

"Come, gentlemen," he said, more suavisely, "it's too hot to stan' heah all day. Make me an offah! You all know ole King Sol'mon; don't wait to be interduced. How much, then, to staht 'im? Say fifty dollahs! Twenty-five! Fifteen! Ten! Why, gentlemen! Not *ten* dollahs? Remembah this is the blue-grass region of Kentucky—the land of Boone an' Kenton, the home of Henry Clay!" he added, in an oratorical *crescendo*.

"He ain't wuth his victuals," said an oily little tavern-keeper, folding his arms restfully over his own stomach and cocking up one piggish eye into his neighbor's face. "He ain't wuth his 'taters."

"Buy 'im foh 'is rags!" cried a young law-student, with a Blackstone under his arm, to the town rag-picker opposite, who was unconsciously ogling the vagrant's apparel.

"I *might* buy 'im foh 'is *scalp*," drawled a farmer, who had taken part in all kinds of scalp contests and was now known to be busily engaged in collecting crow scalps for a match soon to come off between two rival counties.

"I think I 'll buy 'im foh a hat-sign," said a manufacturer of ten-dollar Castor & Rhorum hats. This sally drew merry attention to the vagrant's hat, and the merchant felt rewarded for his humor.

"You 'd bettah say the town ought to buy 'im an' put 'im up on top of the cou't-house

as a scarecrow foh the cholera," said some one else.

"What news of the cholera did the stage-coach bring this mohning?" quickly inquired his neighbor in his ear; and the two immediately fell into low, grave talk, forgot all about the auction, and turned away.

"Stop, gentlemen, stop!" cried the sheriff, who had watched the rising tide of good-humor, and now saw his chance to float in on it with spreading sails. "You are runnin' the price in the wrong direction — down, not up. The law requires that he be sole to the highest biddah, not the lowest. As loyal citizens, uphold the constitution of the commonwealth of Kentucky an' make me an offah; the man is really a great bargain. In the first place, he would cost his ownah little or nothin', because, as you see, he keeps himself in cigahs an' clo'es; then, his main article of diet is whisky — a supply of which he always has on han'. He does n't even need a bed, foh you know he sleeps jus' as well on any doohstep; noh a chair, foh he prefers to sit roun' on the curbstones. Remembah, too, gentlemen, that ole King Sol'mon is a Virginian — from the same neighborhood as Mr. Clay. Remembah that he is well educated, that he is an *awful* Whig, an' that he has smoked mo' of the stumps of Mr. Clay's cigahs than any other man in existence. If you don't b'lieve *me*, gentlemen, yondah goes Mr. Clay now; call *him* ovah an' ask 'im foh yo'se'ves."

He paused, and pointed with his right forefinger towards Main street, along which the spectators, with a sudden craning of necks, beheld the familiar figure of the passing statesman.

"But you don't need *anybody* to tell you these fac's, gentlemen," he continued. "You merely need to be reminded that ole King Sol'mon is no ordinary man. Mo'ovah he has a kine heaht, he nevah spoke a rough word to anybody in this worl', an' he is as proud as Tecumseh of his good name an' charactah. An', gentlemen," he added, bridling with an air of mock gallantry and laying a hand on his heart, "if anythin' fu'thah is required in the way of a puffect encomium, we all know that there is n't anothah man among us who cuts as wide a swath among the ladies. The'foh, if you have any appreciation, any magnanimity; if you set a propah valuation upon the descendants of Virginia, that mothah of presidents; if you believe in the proud laws of Kentucky as a State of the Union; if you love America an' love the worl' — make me a generous, high-toned offah foh ole King Sol'mon!"

He ended his peroration amid a shout of laughter and applause, and, feeling satisfied that it was a good time for returning to a

more practical treatment of his subject, proceeded in a sincere tone:

"He can easily earn from one to two dollahs a day an' from three to six hundred a yeah. There's not anothah white man in town capable of doin' as much work. There's not a niggah han' in the hemp factories with such muscles an' such a chest. *Look* at 'em! An', if you don't b'lieve me, step fo'wahd and *feel* 'em. How much, then, is bid foh 'im?"

"One dollah!" said the owner of a hemp factory, who had walked forward and felt the vagrant's arm, laughing, but coloring up also as the eyes of all were quickly turned upon him. In those days it was not an unheard-of thing for the muscles of a human being to be thus examined when being sold into servitude to a new master.

"Thank you!" cried the sheriff, cheerily. "One precinc' heard from! One dollah! I am offahed one dollah foh ole King Sol'mon. One dollah foh the king! Make it a half. One dollah an' a half. Make it a half. One doll-doll-dollah!"

Two medical students, returning from lectures at the old Medical Hall, now joined the group, and the sheriff explained:

"One dollah is bid foh the vagrant ole King Sol'mon, who is to be sole into labah foh a twelvemonth. Is there any othah bid? Are you all done? One dollah, once —"

"Dollah and a half," said one of the students, and remarked half jestingly under his breath to his companion, "I'll buy him on the chance of his dying. I want to dissect him."

"Would you own his body if he should die?"

"If he dies while bound to me I'll arrange *that*."

"One dollah an' a half," resumed the sheriff; and falling into the tone of a facile auctioneer he rattled on:

"One dollah an' a half foh ole Sol'mon — sol, sol, sol, — do, re, mi, fa, sol, — do, re, mi, fa, sol! Why, gentlemen, you can set the king to music!"

All this time the vagrant had stood in the center of that close ring of jeering and humorous bystanders — a baffling text from which to have preached a sermon on the infirmities of our imperfect humanity. Some years before, perhaps as a master-stroke of derision, there had been given him that title which could but heighten the contrast of his personality and estate with every suggestion of the ancient sacred magnificence; and never had the mockery seemed so fine as at this moment, when he was led forth into the streets to receive the lowest sentence of the law upon his poverty and dissolate idleness. He was apparently in the very

prime of life — a striking figure, for nature at least had truly done some royal work on him. Over six feet in height, erect, with limbs well shaped and sinewy, with chest and neck full of the lines of great power, a large head thickly covered with long reddish hair, eyes blue, face beardless, complexion fair but discolored by low passions and excesses — such was old King Solomon. He wore a stiff, high, black castor hat of the period, with the crown smashed in and the torn rim hanging down over one ear; a black cloth coat in the old style, ragged and buttonless; a white cotton shirt, with the broad collar crumpled, wide open at the neck and down his sunburnt bosom; blue jeans pantaloon, patched at the seat and the knees; and ragged cotton socks that fell down over the tops of his dusty shoes, which were open at the heels.

In one corner of his sensual mouth rested the stump of a cigar. Once during the proceedings he had produced another, lighted it, and continued quietly smoking. If he took to himself any shame as the central figure of this ignoble performance, no one knew it. There was something almost royal in his unconcern. The humor, the badinage, the open contempt, of which he was the public target, fell thick and fast upon him, but as harmlessly as would balls of pith upon a coat of mail. In truth, there was that in his great, lazy, gentle, good-humored bulk and bearing which made the gibes seem all but despicable. He shuffled from one foot to the other as though he found it a trial to stand up so long, all the while looking the spectators full in the eyes without the least impatience. He suffered the man of the factory to walk round him and push and pinch his muscles as calmly as though he had been the show bull at a country fair. Once only, when the sheriff had pointed across the street at the figure of Mr. Clay, he had looked quickly in that direction with a kindling light in his eye and a passing flush on his face. For the rest, he seemed like a man who has drained his cup of human life and has nothing left him but to fill again and drink without the least surprise or eagerness.

The bidding between the man of the factory and the student had gone slowly on. The price had reached ten dollars. The heat was intense, the sheriff tired. Then something occurred to revivify the scene. Across the market-place and towards the steps of the courthouse there suddenly came trundling along in breathless haste a huge old negress, carrying on one arm a large shallow basket containing apple crab-lanterns and fresh gingerbread. With a series of half-articulate grunts and snorts she approached the edge of the crowd and tried to force her way through. She

coaxed, she begged, she elbowed and pushed and scolded, now laughing, and now with the passion of tears in her thick, excited voice. All at once, catching sight of the sheriff, she lifted one ponderous brown arm, naked to the elbow, and waved her hand to him above the heads of those in front.

"Hole on, marseter! Hole on!" she cried, in a tone of humorous entreaty. "Don' knock 'im off till I come! Gim *me* a bid at 'im!"

The sheriff paused and smiled. The crowd made way tumultuously, with broad laughter and comment.

"Stan' aside theah an' let Aun' Charlotte in!"

"*Now* you 'll see biddin'!"

"Get out of the way foh Aun' Charlotte!"

"Up, my free niggah! Hurrah foh Kentucky!"

A moment more and she stood inside the ring of spectators, her basket on the pavement at her feet, her hands plumped akimbo into her fathomless sides, her head up, and her soft, motherly eyes turned eagerly upon the sheriff. Of the crowd she seemed unconscious, and on the vagrant before her she had not cast a single glance.

She was dressed with perfect neatness. A red and yellow Madras kerchief was bound about her head in a high coil, and another was crossed over the bosom of her stiffly starched and smoothly ironed blue cottonade dress. Rivulets of perspiration ran down over her nose, her temples, and around her ears, and disappeared mysteriously in the creases of her brown neck. A single drop accidentally hung glistening like a diamond on the circlet of one of her large brass ear-rings.

The sheriff looked at her a moment, smiling, but a little disconcerted. The spectacle was unprecedented.

"What do you want heah, Aun' Charlotte?" he asked kindly. "You can't sell yo' pies an' gingerbread heah."

"I don' *wan'* sell no pies en gingerbread," she replied contemptuously. "I wan' bid on *him*," and she nodded sidewise at the vagrant.

"White folks allers sellin' niggahs to wuk fuh *dem*; I gwine buy a white man to wuk fuh *me*. En he gwine t' git a mighty hard mistiss, you heah *me*!"

The eyes of the sheriff twinkled with delight.

"Ten dollahs is offahed foh ole King Solomon. Is theah any othah bid? Are you all done?"

"'Leben," she said.

Two young ragamuffins crawled among the legs of the crowd up to her basket and filched pies and cake beneath her very nose.

"Twelve!" cried the student, laughing.

"Thirteen!" she laughed too, but her eyes flashed.

"*You are bidding against a niggah,*" whispered the student's companion in his ear.

"So I am; let's be off," answered the other, with a hot flush on his proud face.

Thus the sale was ended, and the crowd variously dispersed. In a distant corner of the courtyard the ragged urchins were devouring their unexpected booty. The old negress drew a red handkerchief out of her bosom, untied a knot in a corner of it, and counted out the money to the sheriff. Only she and the vagrant were now left on the spot.

"You have bought me. What do you want me to do?" he asked quietly.

"Lohd, honey!" she answered, in a low tone of affectionate chiding, "I don' wan' you to do *nothin'*! I wuz n' gwine t' 'low dem white folks to buy you. Dey 'd wuk you till you dropped dead. You go 'long en do ez you please."

She gave a cunning chuckle of triumph in thus setting at naught the ends of justice, and, in a voice rich and musical with tender affection, she said, as she gave him a little push:

"You bettah be gittin' out o' dis blazin' sun. Go on home! I be 'long by en by."

He turned and moved slowly away in the direction of Water street, where she lived; and she, taking up her basket, shuffled across the market-place towards Cheapside, muttering to herself all the while:

"I come mighty nigh gittin' dah too late, foolin' 'long wid dese pies. Sellin' *him* 'ca'se he don' wuk! Umph! If all de men in dis town dat don' wuk wuz to be tuk up en sole, d' would n' be 'nough money in de town to buy 'em! Don' I see 'em settin' 'roun' dese taverns f'om mohnin' till night?"

She snorted out her indignation and disgust, and sitting down on the sidewalk, under a Lombardy poplar, uncovered her wares and kept the flies away with a locust bough, not discovering in her alternating good and ill humor that half of them had been filched by her old tormentors.

This was the memorable scene enacted in Lexington on that memorable day of the year 1833—a day that passed so briskly. For whoever met and spoke together asked the one question: Will the cholera come to Lexington? And the answer always gave a nervous haste to business—a keener thrill to pleasure. It was of the cholera that the negro woman heard two sweet passing ladies speak as she spread her wares on the sidewalk. They were on their way to a little picture gallery just opened opposite M. Giron's ball-room, and in one breath she heard them discussing their toilets for the evening and in the next a large painting representing Christ in the Garden of Gethsemane.

So the day passed, the night came on, and M. Xaupi gave his brilliant ball. Poor old Xaupi—poor little Frenchman! whirled as a gamin of Paris through the mazes of the Revolution, and lately come all the way to Lexington to teach the people how to dance. Hop about blithely on thy dry legs, basking this night in the waxen radiance of manners and melodies and graces! Where will be thy tunes and airs to-morrow? Aye, smile and prompt away! On and on! Swing corners, ladies and gentlemen! Form the basket! Hands all around!

While the bows were still darting across the strings, out of the low, red east there shot a long, tremulous bow of light up towards the zenith. And then, could human sight have beheld the invisible, it might have seen hovering over the town, over the ball-room, over M. Xaupi, the awful presence of the plague.

But knowing nothing of this, the heated revelers went merrily home in the chill air of the red and saffron dawn. And knowing nothing of it also, a man awakened on the doorstep of a house opposite the ball-room, where he had long since fallen asleep. His limbs were cramped and a shiver ran through his frame. Staggering to his feet, he made his way down to the house of Free Charlotte, mounted to his room by means of a stairway opening on the street, threw off his outer garments, kicked off his shoes, and taking a bottle from a closet pressed it several times to his lips with long outward breaths of satisfaction. Then, throwing his great white bulk upon the bed, in a minute more he had sunk into a heavy sleep—the usual drunken sleep of old King Solomon.

He too had attended M. Xaupi's ball, in his own way and in his proper character, being drawn to the place for the pleasure of seeing the fine ladies arrive and float in, like large white moths of the summer night; of looking in through the open windows at the many-colored waxen lights and the snowy arms and shoulders; of having blown out to him the perfume and the music; not worthy to go in, being the lowest of the low, but attending from a doorstep of the street opposite—with a certain rich passion in his nature for all splendor and revelry and sensuous beauty.

II.

ABOUT 10 o'clock the sunlight entered through the shutters and awoke him. He threw one arm up over his eyes to intercept the burning rays. As he lay outstretched and stripped of grotesque rags, it could be better seen in what a mold nature had cast his figure. His breast, bare and tanned, was barred by full,

"YOU HAVE BOUGHT ME. WHAT DO YOU WANT ME TO DO?"

arching ribs and knotted by crossing muscles; and his shirt-sleeve, falling away to the shoulder from his bent arm, revealed its crowded muscles in the high relief of heroic bronze. For although he had been sold as a vagrant, old King Solomon had in earlier years followed the trade of a digger of cellars, and the strenuous use of mattock and spade had developed every sinew to the utmost. His whole person, now half naked and in repose, was full of the suggestions of unspent power. Only his face, swollen and red, only his eyes, bloodshot and dull, bore the impress of wasted vitality. There, all too plainly stamped, were the passions long since raging and still on fire.

The sunlight had stirred him to but a low degree of consciousness, and some minutes passed before he realized that a stifling, resinous fume impregnated the air. He sniffed it quickly; through the window seemed to come the smell of burning tar. He sat up on the edge of the bed and vainly tried to clear his thoughts.

The room was a clean but poor habitation—uncarpeted, whitewashed, with a piece or two of the cheapest furniture, and a row of pegs on one wall, where usually hung those tattered coats and pantaloons, miscellaneous collected, that were his purple and fine linen. He turned his eyes in this direction now and noticed that his clothes were missing. The old shoes had disappeared from their corner; the cigar stumps, picked up here and there in the streets ac-

cording to his wont, were gone from the mantelpiece. Near the door was a large bundle tied up in a sheet. In a state of bewilderment, he asked himself what it all meant. Then a sense of the silence in the street below possessed him. At this hour he was used to hear noises enough—from Hugh Lonney's new bath-house on one side, from Harry Sikes's barber-shop on the other.

A mysterious feeling of terror crept over and helped to sober him. How long had he lain asleep? By degrees he seemed to remember that two or three times he had awakened far enough to drink from the bottle under his pillow, only to sink again into heavier stupefaction. By degrees, too, he seemed to remember that other things had happened—a driving of vehicles this way and that, a hurrying of people along the street. He had thought it the breaking-up of M. Xaupi's ball. More than once had not some one shaken and tried to arouse him? Through the wall of Harry Sikes's barber-shop had he not

heard cries of pain—sobs of distress?

He staggered to the window, threw open the shutters, and, kneeling at the sill, looked out. The street was deserted. The houses opposite were closed. Cats were sleeping in the silent doorways. But as he looked up and down he caught sight of people hurrying along cross-streets. From a distant lumber-yard came the muffled sound of rapid hammerings. On the air was the faint roll of vehicles—the hush and the vague noises of a general terrifying commotion.

In the middle of the street below him a keg was burning, and, as he looked, the hoops gave way, the tar spread out like a stream of black lava, and a cloud of inky smoke and deep-red furious flame burst upward through the sagging air. Just beneath the window a common cart had been backed close up to the door of the house. In it had been thrown a few small articles of furniture, and on the bottom bedclothes had been spread out as if for a pallet. While he looked old Charlotte hurried out with a pillow.

He called down to her in a strange, unsteady voice:

"What is the matter? What are you doing, Aunt Charlotte?"

She uttered a cry, dropped the pillow, and stared up at him. Her face looked dry and wrinkled.

"My God! De chol'ra 's in town! I'm waitin' on you! Dress, en come down en fetch

de bun'le by de dooh." And she hurried back into the house.

But he continued leaning on his folded arms, his brain stunned by the shock of the intelligence. Suddenly he leaned far out and looked down at the closed shutters of the barber-shop. Old Charlotte reappeared.

"Where is Harry Sikes?" he asked.

"Dead en buried."

"When did he die?"

"Yestidd'y evenin'."

"What day is this?"

"Sadd'y."

M. Xaupi's ball had been on Thursday evening. That night the cholera had broken out. He had lain in his drunken stupor ever since. Their talk had lasted but a minute, but she looked up anxiously and urged him.

"D' ain' no time to was'e, honey! D' ain' no time to was'e. I done got dis cyart to tek you 'way in, en I be ready to start in a minute. Put yo' clo'es on en bring de bun'le wid all yo' yudder things in it."

With incredible activity she climbed into the cart and began to roll up the bedclothes. In reality she had made up her mind to put him into the cart somehow, and the pallet had been made for him to lie and finish his drunken sleep on, while she drove him away to a place of safety.

Still he did not move from the window-sill. He was thinking of Harry Sikes, who had shaved him many a time for nothing. Then he suddenly called down to her:

"Have many died of the cholera? Are there many cases in town?"

She went on with her preparations and took no notice of him. He repeated the question. She got down quickly from the cart and began to mount the staircase. He went back to bed, pulled the sheet up over him, and propped himself up among the pillows. Her soft, heavy footsteps slurred on the stairway as though her strength were failing, and as soon as she entered the room she sank into a chair, overcome with terror. He looked at her with a sudden sense of pity.

"Don't be frightened," he said kindly. "It might only make it the worse for you."

"I can' he'p it, honey," she answered, wringing her hands and rocking herself to and fro; "de ole niggah can' he'p it. If de Lohd jes spah me to git out'n dis town wid you! Honey, ain' you able to put on yo' clo'es?"

"You 've tied them all up in the sheet."

"De Lohd he'p de crazy ole niggah!"

She started up and tugged at the bundle, and laid out a suit of his clothes, if things so incongruous could be called a suit.

"Have many people died of the cholera?"

"Dey been dyin' like sheep ev' since yes-

tidd'y mohnin' — all day, en all las' night, en dis mohnin'! De man he done lock up de huss, en dey been buryin' 'em in cyarts. En de grave-diggah he done run away, en hit look like d' ain' nobody to dig de graves."

She bent over the bundle, tying again the four corners of the sheet. Through the window came the sound of the quick hammers driving nails. She threw up her arms into the air, and then seizing the bundle dragged it rapidly to the door.

"You heah dat? Dey nailin' up cawfins in de lumbah-yahd! Put on yo' clo'es, honey, en come on."

A resolution had suddenly taken shape in his mind.

"Go on away and save your life. Don't wait for me; I 'm not going. And good-bye, Aunt Charlotte, in case I don't see you any more. You 've been very kind to me—kinder than I deserved. Where have you put my mattock and spade?"

He said this very quietly and sat up on the edge of the bed, his feet hanging down, and his hand stretched out towards her.

"Honey," she explained coaxingly, from where she stood, "can't you sobah up a little en put on yo' clo'es? I gwine to tek you 'way to de country. You don' wan' no tools. You can' dig no cellahs now. De chol'ra 's in town en de people 's dyin' like sheep."

"I expect they will need me," he answered.

She perceived now that he was sober. For an instant her own fear was forgotten in an outburst of resentment and indignation.

"Dig graves fuh 'em, when dey put you up on de block en sell you same ez you wuz a niggah! Dig graves fuh 'em, when dey allers callin' you names on de street en makin' fun o' you!"

"They are not to blame. I have brought it all on myself."

"But we can' stay heah en die o' de chol'ra!"

"You must n't stay. You must go away at once."

"But if I go, who gwine tek cyah o' you?"

"Nobody."

She came quickly across the room to the bed, fell on her knees, clasped his feet to her breast, and looked up into his face with an expression of imploring tenderness. Then, with incoherent cries and with sobs and tears, she pleaded with him—pleaded for dear life; his and her own.

It was a strange scene. What historian of the heart will ever be able to do justice to those peculiar ties which bound the heart of the negro in years gone by to a race of not always worthy masters? This old Virginia nurse had known King Solomon when he was a boy playing with

her young master, till that young master died on the way to Kentucky.

At the death of her mistress she had become free, with a little property. By thrift and industry she had greatly enlarged this. Years passed and she became the only surviving member of the Virginian household, which had emigrated early in the century to the blue-grass region. The same wave of emigration had brought in old King Solomon from the same neighborhood. As she had risen in life, he had sunk. She sat on the sidewalks selling her

fused to go. A hurried footstep paused beneath the window and a loud voice called up. The old nurse got up and went to the window. A man was standing by the cart at her door.

"For God's sake let me have this cart to take my wife and little children away to the country! There is not a vehicle to be had in town. I will pay you—" He stopped, seeing the distress on her face.

"Is he dead?" he asked, for he knew of her care of old King Solomon.

"GOOD-BYE, OLD SOLOMON!"

fruits and cakes; he sat on the sidewalks more idle, more ragged and dissolute. On no other basis than these facts she began to assume a sort of maternal pitying care of him, patching his rags, giving him money for his vices, and when, a year or two before, he had ceased working almost entirely, giving him a room in her house and taking in payment what he chose to pay.

He brushed his hand quickly across his eyes as she knelt before him now, clasping his feet to her bosom. From coaxing him as an intractable child she had, in the old servile fashion, fallen to imploring him, with touching forgetfulness of their real relations:

"O my marseter! O my marseter Solomon! Go 'way en save yo' life, en tek yo' po' ole niggah wid you!"

But his resolution was formed, and he re-

"He *will* die!" she sobbed. "Tilt de tings out on de pavement. I gwine t' stay wid 'im en tek cyah o' 'im."

III.

A LITTLE later, dressed once more in grotesque rags and carrying on his shoulder a rusty mattock and a rusty spade, old King Solomon appeared in the street below and stood looking up and down it with an air of anxious indecision. Then shuffling along rapidly to the corner of Mill street, he turned up towards Main.

Here a full sense of the terror came to him. A man, hurrying along with his head down, ran full against him and cursed him for the delay:

"Get out of my way, you old beast!" he

cried. "If the cholera would carry you off it would be a blessing to the town."

Two or three little children, suddenly orphaned and hungry, wandered past, crying and wringing their hands. A crowd of negro men with the muscles of athletes, some with naked arms, some naked to the waist, their eyes dilated, their mouths hanging open, sped along in tumultuous disorder. The plague had broken out in the hemp factory and scattered them beyond all control.

He grew suddenly faint and sick. His senses swam, his heart seemed to cease beating, his tongue burned, his throat was dry, his spine like ice. For a moment the contagion of deadly fear overcame him, and, unable to stand, he reeled to the edge of the sidewalk and sat down.

Before him along the street passed the flying people—men on horseback with their wives behind and children in front, families in carts and wagons, merchants in two-wheeled gigs and sulkies. A huge red and yellow stage-coach rolled ponderously by, filled within, on top, in front, and behind with a company of riotous students of law and of medicine. A rapid chorus of voices shouted to him as they passed:

"Good-bye, old Solomon!"

"The cholera 'll have you befoah sunset!"

"Dig yoah grave, old Solomon! That 'll be yoah last cellah."

"Dig us a big wine cellah undah the Medical Hall while we are away."

"And leave yo' body there! We want to use yo' skeleton."

"Good-bye, old Solomon!"

A wretched carry-all passed with a household of more wretched women; their tawdry and gay attire, their haggard and painted and ghastly faces, looking horrible in the blaze of the pitiless sunlight. They, too, simpered and hailed him and spent upon him their hardened and degraded badinage. Then there rolled by a high-swung carriage, with the most luxurious of cushions, upholstered with white satin, with a coat-of-arms, a driver and a footman in livery, and drawn by sparkling, prancing horses. Lying back on the satin cushions a fine gentleman; at the window of the carriage two rosy children, who pointed their fingers at the vagrant and turned and looked into their father's face, so that he leaned forward, smiled, leaned back again, and was whirled away to a place of safety.

Thus they passed him, as he sat down on the sidewalk—even physicians from their patients, pastors from their stricken flocks. Why should not he flee? He had no ties, except the faithful affection of an old negress. Should he not at least save her life by going away, seeing that she would not leave him?

The orphaned children wandered past again, sobbing more wearily. He called them to him.

"Why do you not go home? Where is your mother?" he asked.

"She is dead in the house," they answered; "and no one has come to bury her."

Slowly down the street was coming a short funeral train. It passed—a rude cortège: a common cart in the bottom of which rested a box of plain boards containing the body of the old French dancing-master; walking behind it, with a cambric handkerchief to his eyes, the old French confectioner; at his side, wearing the robes of his office and carrying an umbrella to ward off the burning sun, the beloved Bishop Smith; and behind them, two by two and with linked arms, perhaps a dozen men, most of whom had been at the ball.

No head was lifted or eye turned to notice the vagrant seated on the sidewalk. But when the train had passed he rose, laid his mattock and spade across his shoulder, and, stepping out into the street, fell into line at the end of the procession.

They moved down Short street to the old burying-ground, where the churchyard is to-day. As they entered it, two grave-diggers passed out and hurried away. Those before them had fled. They had been at work but a few hours. Overcome with horror at the sight of the dead arriving more and more rapidly, they, too, deserted that post of peril. No one was left. Here and there in the churchyard could be seen bodies awaiting interment. Old King Solomon stepped quietly forward and, getting down into one of the half-finished graves, began to dig.

The vagrant had happened upon an avocation.

IV.

ALL summer long, Clatterbuck's dancing-pavilion was as silent in its grove of oaks as a temple of the Druids, and his pleasure-boat nestled in its moorings, with no hand to feather an oar in the little lake. All summer long, no athletic young Kentuckians came to bathe their white bodies in Hugh Lonney's new bath-house for twelve and a half cents, and no one read Daukins Tegway's advertisement that he was willing to exchange his Dunstable bonnets for flax and feathers. The likely runaway boy, with a long, fresh scar across his face, was never found, nor the buffalo bull roasted for Daniel Webster, and Peter Leuba's guitars were never thrummed on any moonlighted verandas. Only Dewees & Grant were busy, dispensing, not snuff, but calomel.

Grass grew in the deserted streets. Gardens became little wildernesses of rank weeds and riotous creepers. Around shut window-lattices

roses clambered and shed their perfume into the poisoned air, or dropped their faded petals to strew the echoless thresholds. In darkened rooms ancestral portraits gazed on sad vacancy or looked helplessly down on rigid sheeted forms.

In the trees of poplar and locust along the streets the unmolested birds built and brooded, the oriole swung its hempen nest from a bough over the door of the spider-tenanted factory, and in front of the old Medical Hall the blue

cotton saturated with camphor. Oftener the only visible figure in the streets was that of a faithful priest going about among his perishing fold, or that of the bishop moving hither and thither on his ceaseless ministrations.

But over all the ravages of that terrible time there towered highest the solitary figure of that powerful grave-digger, who, nerved by the spectacle of the common misfortune, by one heroic effort rose for the time above the wrecks of his own nature. In the thick of the plague, in the very garden spot of the pestilence, he ruled like an unterrified king. Through days unnaturally chill with gray cloud and drizzling rain, or unnaturally hot with the fierce sun and suffocating damps that appeared to steam forth from subterranean caldrons, he worked unfalteringly, sometimes with a helper, sometimes with none. There were times when, exhausted, he would lie down in the half-dug graves and there sleep until able to go on; and many a midnight found him under the spectral moon, all but hidden by the rank nightshade as he bent over to mark out the lines of one of those narrow mortal cellars.

What weaknesses he fought and conquered through all those days and nights! Out of what unforeseen depths of nature did he draw the tough fiber of such a resolution! To be alone with the pestilential dead at night—is not that a test of imperial courage? To live for weeks braving swift death itself—is not that the fierce and ungovernable flaring up of the soul in heroism? For all the mockery and derision of his name, had it not some fitness? For had he not a royal heart?

V.

NATURE soon smiles upon her own ravages and strews our graves with flowers, not as memories, but for other flowers when the spring returns.

It was one cool, brilliant morning late in that autumn. The air blew fresh and invigorating, as though on all the earth there were no corruption, no death. Far southward had flown the plague. A spectator in the open court-square might have seen many signs of life returning to the town. Students hurried along, talking eagerly. Merchants met for the first time and spoke of the winter trade. An old negress, gaily and neatly dressed, came into the market-place, and sitting down on a sidewalk displayed her yellow and red apples

ON THE STEPS OF THE COURT-HOUSE.

jay shot up his angry crest and screamed harshly down at the passing bier. In a cage hung against the wall of a house in a retired street a mocking-bird sung, beat its breast against the bars, sung more passionately, grew silent and dropped dead from its perch, never knowing that its mistress had long since become a clod to its full-throated requiem.

Famine lurked threateningly in the wake of the pestilence. Markets were closed. A few shops were kept open to furnish necessary supplies. Now and then might have been seen, driving a meat-wagon in from the country, some old negro, his nostrils stuffed with white

and fragrant gingerbread. She hummed to herself an old cradle-song, and in her soft, motherly black eyes shone a mild, happy radiance. A group of young ragamuffins eyed her longingly from a distance. Court was to open for the first time since the spring. The hour was early, and one by one the lawyers passed slowly in. On the steps of the court-house three men were standing: Thomas Redd, the sheriff; old Peter Leuba, who had just walked over from his music-store on Main street; and little M. Giron, the French confectioner. Each wore mourning on his hat, and their voices were low and grave.

"Gentlemen," the sheriff was saying, "it was on this very spot the day befoah the cholera broke out that I sole 'im as a vagrant. An' I did the meanes' thing a man can evah do. I hel' 'im up to public ridicule foh his weaknesses an' made spoht of 'is infirmities. I laughed at 'is povahty an' 'is ole clo'es. I delivahed on 'im as complete an oration of sarcastic detraction as I could prepare on the spot, out of my own meanness an' with the vulgah sympathies of the crowd. Gentlemen, if I only had that crowd heah now, an' ole King Sol'mon standin' in the midst of it, that I might ask 'im to accept a humble public apology, offahed from the heah of one who feels himself unworthy to shake 'is han'! But, gentlemen, that crowd will nevah reassemble. Neahly ev'ry man of them is dead, an' ole King Sol'mon buried them."

"He buried my friend Adolphe Xaupi," said François Giron.

"There is a case of my best Jamaica rum for him whenever he comes for it," said old Leuba.

"But, gentlemen, while we are speakin' of old King Sol'mon we ought not to fohget who it is that has suppohted 'im. Yondah she sits on the sidewalk, sellin' 'er apples an' gingerbread."

The three men looked in the direction indicated.

"Heah comes ole King Sol'mon now," exclaimed the sheriff.

Across the open square the vagrant was seen walking slowly along with his habitual air of quiet, unobtrusive preoccupation. A minute more and he had come over and passed into the court-house by a side door.

"Is Mr. Clay to be in court to-day?"

"He is expected, I think."

"Then let's go in; there will be a crowd."

"I don't know; so many are missing."

They turned and entered and found seats as quietly as possible. For a strange and sorrowful hush brooded over the court-room. Until the bar assembled, it had not been realized how many were gone. The silence was that of a common overwhelming disaster. No one spoke with his neighbor, no one observed the vagrant as he entered and made his way to a seat on one of the meanest benches, a little apart from all the others. He had not sat there since the day of his indictment for vagrancy. The judge took his seat and, making a great effort to control himself, passed his eyes slowly over the court-room. All at once he caught sight of old King Solomon sitting against the wall in an obscure corner; and before any one could know what he was doing, he hurried down and walked up to the vagrant and grasped his hand. He tried to speak, but could not. Old King Solomon had buried his wife and daughter — buried them one clouded midnight, with no one present but himself.

Then the oldest member of the bar started up and followed the example; and then all the other members, rising by a common impulse, filed slowly back and one by one wrung that hard and powerful hand. After them came all the other persons in the court-room. The vagrant, the grave-digger, had risen and stood against the wall, at first with a white face and a dazed expression, not knowing what it meant; afterwards, when this was understood, his head dropped suddenly forward and his tears fell thick and hot upon the hands that he could not see. And his were not the only tears. Not a man in all that long file but paid his tribute of emotion as he stepped forward to honor that image of sadly eclipsed but still effulgent humanity. It was not grief, it was not gratitude, nor any sense of making reparation for the past. It was the softening influence of an act of heroism, which makes every man feel himself a brother hand in hand with every other — such power has a single act of moral greatness to reverse the relations of men, lifting up one, and bringing all others to do him homage.

It was the coronation scene in the life of old King Solomon of Kentucky.

James Lane Allen.

COROT.

COROT AT WORK. (FROM A DRAWING BY WYATT EATON.)

WHAT do we understand by the interest that attaches to an artist's work? First, I think, the interest that may lie in any one of his creations separately judged—in its peculiarities as a piece of beauty and as an interpretation of some aspect of nature or mood of the mind. Then, the larger interest we find when his work is considered as a whole and its revelation of his gifts and methods is thoroughly understood. And, finally, the interest of the work and the man together

as factors in the history of art—as proofs of the development of antecedent tendencies, or types of the general temper of art in their time, or prophets or leaders of the future course of things.

Sometimes an artist who is not very important in himself is extremely important from the historical point of view. But when one who has produced very fine and individual work has likewise been a potent influence in art at large—then, indeed, his claim upon us is insistent. This is the case with Corot. He was one

of the greatest landscape painters who has ever lived, and one of the most influential leaders and teachers that our century has seen.

I.

JEAN BAPTISTE CAMILLE COROT was born in Paris in the year 1796. His father, a native of Rouen, had been a hair-dresser, but, marrying a milliner, transferred his talents to her service, and in their little shop on the Rue du Bac gradually amassed a snug bit of a fortune. An artist in his way was this elder Corot, and not deprived of such fame as the Muse of Fashion can bestow — advertised in a popular comedy which held the stage of the Français for years. "I have just come from Corot's," cries one of

in a soul which by birth was peculiarly receptive; and we read of long night-watches at his bedroom window filled with vague poetic musings, visions of nymphs, and aspirations towards some more congenial tool than the yardstick. Indeed, the brush was soon the yardstick's rival. An easel was set up in the humble bedroom; a sketch-book was always in hand out-of-doors; and lithographic stones and sheets of scribbled paper strewed the merchant's counter, underneath which they retired with Corot during the pause between one customer and the next.

A casual acquaintance with the young painter Michallon brought about the crisis long deferred by Camille's sweet and docile temper. The tale is the old one of loud parental oppo-

FOREST OF FONTAINEBLEAU. (OWNED BY MRS. S. D. WARREN.)

the actors, "but I could not see him. He had retired to his *cabinet* to compose a *bonnet à la Sicilienne*."

Meanwhile Camille was at school in Rouen, where he remained seven years and gained the whole of his education. From school he went to a cloth-merchant's shop in the Rue de Richelieu, and here eight years were passed. Then his love for art broke through the uncongenial tie. While at Rouen his holidays had been spent with an old friend of his father's in long walks beside the borders of the Seine; and later the unwilling "dry-goods clerk" found solace in summer days at Ville d'Avray, where his people had a little country home. A love for nature was thus gradually fostered

sition, but is not followed by the usual sequel of lasting bitterness. When once convinced that there was nothing else to do, Corot *père* made a rather sharp bargain with his son, but stuck to it ever after in good faith, if for thirty years with no slightest mitigation of its sharpness. "Your sisters' dowries have been promptly paid, and I meant soon to set you at the head of a respectable shop. But if you insist upon painting, you will have no capital to dispose of as long as I live. I will make you a pension of fifteen hundred francs. Don't count upon ever having more, but see whether you can pull yourself through with that." And Camille; "much moved," fell upon the neck of the artist in Sicilian caps: "A thousand thanks! It is all I

VIEW OF THE COLISEUM, ROME. (OWNED BY ERWIN DAVIS.)

need, and you make me very happy." He too kept his word. For thirty years he lived on his three hundred annual dollars, pulled himself very well through, and was one of the happiest mortals in Paris.

The first day he was free he took easel and brush and set himself down before the first thing he saw—a view of the Cité from a spot near the Pont Royal. "The girls from my father's shop," he said in later life, "used to run down to the quay to see how Monsieur Camille was getting on. There was a Mademoiselle Rose, for instance, who came most often. She is still alive, and is still Mademoiselle Rose, and still comes to see me now and then. Last week she was here, and oh, my friends, what a change and what reflections it gave birth to! My picture has not budged. It is as young as ever, and keeps still the hour and the weather when it was done. But Mademoiselle Rose? But I? What are we?"

Michallon taught Corot at first and gave him counsel good for a youngster—to put himself face to face with nature, to try to render her exactly, to paint what he saw, and translate the impression he received. But soon he died, and Corot, seeking help elsewhere, chose Victor Bertin, who had been Michallon's own master. Bertin was a landscape painter of the classic school, worshiping Poussin's mastery of form, but in his own execution cold, measured, mechanical, and hard. He might have taught Corot more and hurt him more had he not been forestalled by the long apprenticeship to nature, and an inborn gift. As it was, he taught him two things of priceless value—accurate drawing, and a sense for "style" in composition.

VOL. XXXVIII.—34.

In 1825 Corot went to Rome, where most of his fellow-artists laughed at his work, but where all of them loved the worker, gay in spirit as he was, with a good voice for a song, and a modest, patient ear for the spoken words of others. Encouragement first came from Aligny, who, surprising him at work on a study of the Coliseum, declared that it had qualities of the first value—exactness, skillful treatment, and an air of style. Corot smiled at the chaffing of a friend; but the friend was an authority in the artist circle at the Café Grec, and, repeating there what he had said in private,—protesting that Corot might some day be the master of them all,—the bashful young clerk soon found that his art was respected and his future believed in. Many years later, when Aligny's body was brought from Lyons to be re-interred in Paris, Corot was one of the very few who followed it; a "sacred duty," as he said,—the duty of gratitude to his first champion,—bringing him forth in his white hairs under the swirling snow of a bitter winter dawn.

Naples as well as Rome was visited at this time, and perhaps Venice too. In 1827 Corot returned to France and sent his first picture to the Salon exhibition; and thereafter, until his death, in 1875, he was never once absent from its walls. In 1834 he went again to Italy, but got no farther than Venice, coming promptly home when his father wrote how much he missed him. In 1842 it was Italy again for some five or six months. In 1847 his father died. During all his later years Corot traveled much in Switzerland and various parts of France, and once he went to England and the

Netherlands. In 1874 the widowed sister with whom he had lived for many years died, and his own health broke down. And on the 23d of February, 1875, his spirit passed away.

This is not much to tell of a life which lasted seventy-nine years; but it is all there is to be said about Corot's, except as it was bound up with his art. He never married, for, he said, he had a wife already—a little fairy called Imagination, who came at his call and vanished when he did not need her. He lived chiefly at Ville d'Avray, with always a *piéd-à-terre* and studio in Paris, and mixed in no society but that of his brother artists.

II.

IN 1833 Corot got a minor medal for one of his exhibited pictures; but almost the first mention of his name that can be traced in print is where Alfred de Musset, writing of the Salon of 1836 in the "*Revue des Deux Mondes*," speaks of "Corot, whose 'Roman Campagna' has its admirers." The next year Gustave Planche praised a "St. Jerome," which now hangs (the gift of Corot) in the little church at Ville d'Avray. In 1846 he was decorated for a scene in the forest of Fontainebleau. In 1855 he received a first class medal, and in 1867, oddly enough, one of the second class, but accompanied by the higher decoration of the Legion of Honor; and year by year artists and critics were louder in his praise. But the public was long in learning the fact that he even existed, and his father was quite as long in believing that his art was really art. When the first decoration came, "Tell me," he said to one of Corot's comrades, "has Camille actually any talent?" Nothing would convince him that he was "the best of us all"; nevertheless he doubled his pension.

Fifty years old when he thus achieved an income of six hundred dollars, Corot was sixty before any one bought his pictures, save now and then a brother artist. When the first customer departed with his purchase, "Alas!" he cried in humorous despair, "my collection has been so long complete, and now it is broken!" And when others followed he could hardly believe them serious, or be induced to set prices on his work. "It is worth such and such a sum; but no one will give that, and I will not sell it for less. I can give my things away if I see fit, but I cannot degrade my art by selling them below their value." When he actually dared to price one at ten thousand francs, and heard that it had been sold, he was sure he had dropped a zero in marking the figures, and wrote to the Salon secretary repeating the sum in written-out words. When a sale of his works was held at the Hôtel Drouot in 1858 he ac-

cused his friends of kindly cheating because it brought him \$2846; yet there were thirty-eight pictures, and among them five of great importance.

Fortunately, Corot lived long enough to see the prices he thought no one would pay increased twenty-fold at public sales. A picture he had sold for 700 francs went many years later in the auction-room for 12,000, and Corot "swam in happiness," for, he felt, "it is not I that have changed, but the constancy of my principles that has triumphed." Never, indeed, did artist pursue his own path with a steadier disregard of public praise; and rarely has an artist so persistently neglected lived to enjoy his fame so long. It is a record to set against Millet's for the reviving of faith in the justice of Heaven.

Yet even had Corot died at seventy-nine without seeing a ray of the coming aureole, we can fancy no despairing exit. Material cares never weighed upon him in his bachelorhood, and he had the merry heart that goes all the day with less discomfort than a somber spirit finds in the first mile or two. The fact of living and the act of painting were almost enough for him, and the appreciation of a few brother artists filled his cup. We read of seasons of brief discouragement, and there were tears in his eyes sometimes when he came home from a Salon where his pictures were obscurely placed and he had overheard a scoffing phrase. But a look at his easel soon brought comfort, and the darling children of his hand were there in a "complete collection" to assure him that he had not lived in vain. "It must be confessed," he once exclaimed, "that if painting is a folly it is a sweet one—one that should excite envy, not forgiveness. Study my looks and my health and I defy any one to find a trace of those cares, ambitions, and remorseful thoughts which ravage the features of so many unfortunate folk. Ought one not to love the art which procures peace and contentment and even health to him who knows how to regulate his life?" But just here was Corot's talisman, shared, alas, with how few! He knew how to regulate his life, and knew that it meant to live for his painting and to paint for himself.

In his young days he was the liveliest among the lively. Tall of stature and herculean in build, possessed of perfect health, high spirits, and a gentle temper, student balls and studio suppers were his delight, and he was the delight of their frequenters. Yet wherever he was he never failed to disappear for a while at 9 o'clock, when *la belle dame*, as he called his mother, awaited him for a hand at cards. In his old age he was "Papa Corot" to the whole artist world of Paris—no one more respected, more beloved and cherished; no one so ready with

THE WOODGATHERERS. (OWNED BY THE CORCORAN GALLERY, WASHINGTON)

a helping hand full of money, a helping tongue full of cheer and wise advice.

Of book-learning he had little, and his interest in the world outside his art was never very great. He often bought books from the stalls along the quays, but merely for the sake of their

bête I must write, the French word means so much more — to kill people and destroy the face of nature and the works of man. "Compare the savage hate of war with art, which at the bottom means simply love!" Yet with the instinct of a patriot he came back to Paris

LANDSCAPE WITH CATTLE. (OWNED BY P. H. SEARS. PHOTOGRAPHED IN THE AMERICAN ART GALLERY.)

shape and color. He had an odd superstition that he ought to read "Polyeucte" through, and began it perhaps a score of times; but he never got to the end, and we find no record of attempts with other works. Music, however, he loved with passion and rare intelligence. Nature he adored, understood, and explained with singular felicity of speech. In his walks abroad he wore a long black coat and a high satin stock; in his studio, a blouse, a gay striped cotton night-cap, and invariably smoked a long clay pipe; and with his shock of white hair and smooth-shaven face — where the very wrinkles did but define a smile around the vigorous mouth — we can well believe that he looked at first sight less like a poetical painter than a *roi d'Yvetot* or a jolly Norman carter. We smile back with pleasure even at his printed portrait, and wish ourselves among the students of Paris as they clustered, charmed, about the clever, wise, benevolent, and brave old man.

There seems to have been no serious cloud upon his life until the fatal year when France was slaughtered. Then he said he should have gone mad had he not had the refuge of his easel. It was not only wrong but stupid —

when the siege seemed certain, and gave largely from his slender purse not only to relieve the sick but "to drive the Prussians out of the woods of Ville d'Avray." His brush and his summer memories filled part of his time, and the rest was spent among the poor and suffering. During the whole siege he ministered and worked, and some of his loveliest pictures date from these dreary weeks.

When they were shown in 1874 he narrowly missed, for the second time, the grand medal of honor. But a better reward came to him in a letter from a group of artists saying that after all "the greatest honor is to be called Corot." And soon after the same impulse found still more emphatic expression. A gold medal was subscribed for by a long list of artists and amateurs and presented to the venerable master. The state never had a chance to retrieve its error. This was the year when Corot's sister died, and when her death proved the beginning of his own. The day when the medal was given him at a big banquet in the Grand Hotel, when he read its inscription, "To Corot, his brethren and admirers," and could only whisper through deep emotion, "It makes one very happy to be loved like this"

(*loved*, let me emphasize the characteristic word) — this was the last day he was seen in public, and even then he was nervous, weak, and broken.

Dropsy was the final stage of his disease, and he foresaw the fatal end. "I am almost resigned," he said to his pupil Français, watching by his bed, "but it is not easy, and I have been a long time getting to the point. Yet I have no reason to complain of my fate — far otherwise. I have had good health for seventy-eight years, and have been able to do nothing but paint for fifty. My family were honest folk. I have had good friends, and think I never did harm to any one. My lot in life has been excellent. Far from reproaching fate, I can only be grateful. I must go — I know it; but don't want to believe it. In spite of myself there is a little bit of hope left in me." The next day he asked for a priest, saying his father had done so, and he wished to die like his father. But his last thought was for his art. His feeble fingers believed they held a brush, and he exclaimed, "See how beautiful it is! I have never seen such beautiful landscapes." And then he died.

At his funeral the great church was more than full, and the crowd spread through the streets outside. Faure sang his requiem to an air Corot had himself selected — the slow movement from Beethoven's seventh symphony. And by the open grave M. de Chennevières, Director of the Beaux Arts, spoke about him in touching words: "All the youth of Paris loved him, for he loved youth, and his talent was youth eternally new. . . . And in his immortal works he praised God in his skies and birds and trees."

As the last phrase was spoken, we are told, a linnet perched on a branch near by and burst into a gush of song; and when in 1880 a monument to the beloved great painter who talked so often of "*mes feuilles et mes petits oiseaux*" was set up by his brethren on the border of the little lake at Ville d'Avray, the sculptor carved on it the branch and the singing bird.

III.

EVERY one knows that Corot was a landscape painter with an especial love for the neighborhoods of Ville d'Avray and for effects of springtime foliage and early morning or evening light. But it is a great mistake to think of him as confined to such effects, or even as narrowly devoted to landscape painting. He painted all hours of the day and now and then moonlight too, and all seasons of the year save those when snow lies on the ground. Figures enliven nearly all his landscapes. Sometimes they are peasants laboring

in wood or field; more often classic nymphs or dancers in surroundings that reveal his memories of southern scenes; and occasionally the characters of some antique fable. Twice, for instance, Corot painted Orpheus and once Silenus, Diana at the bath, Homer with a group of shepherds, Democritus, Daphne and Chloe, Biblis, and Virgil serving as a guide to Dante. Sacred history likewise attracted him. Nothing he produced is more remarkable than the "St. Sebastian" now in Baltimore; and he often drew upon the life of Christ and the stories of the Old Testament. He also painted flowers, and still-life subjects and interiors; many street and distant city views; animals; large draped figures and studies of the nude, and no less than forty portraits. Mural decoration he essayed whenever he got the chance — which was by no means so often as he wished. In his later years he etched some delightfully characteristic plates. And whoever glanced through his sketch-book or his letters saw that nothing which had met his eye had appealed to his hand in vain.

But the grossest misconception with regard to Corot is not the one which ignores his width of range. It is a much more serious mistake to believe that because he "idealized" nature he did not represent her faithfully, because he suppressed details he did not see or could not render them, because his maturer work looks "very free" he had not studied conscientiously. Nothing so afflicts a real student of Corot as to hear him called an exponent of superficiality or "dash."

If ever a man worked hard at his art it was Corot. The number of his preparatory studies was immense, and they were made in his latest as well as his earliest years. "Conscience" was his watch-word, the nickname his scholars gave him, the one recipe he gave them when they asked him how to learn to paint. The first thing to produce, he said, were "studies in submission"; later came the time for studies in picture-making. He did not approve of academies and schools, and deemed it enough to study the old masters with the eye, without much attempt at actual copying. He thought the great school of nature might suffice to form soul and sight and hand; but this school one should never desert and could not frequent too diligently. It is true, as a friend once said, that what Corot wanted to paint was "not so much nature as his love for her." But to love her meant to peruse her with patient care, to know her well and fully; and to paint his love meant not to alter her charm, but to bring into clear relief those elements therein which most appealed to him. Individuality in art no man prized more highly. But he defined it as "the individual expression of a truth"; and said

ORPHEUS GREETING THE MORN. (IN THE POSSESSION OF COTTIER & CO.)

LAKE NEMI. (OWNED BY THOMAS NEWCOMB. PHOTOGRAPHED IN THE AMERICAN ART GALLERY.)

that to develop it one must work "with an ardor that knows no concessions." His whole life was given up to work, and his whole work was an effort to see nature with more and more distinctness and to render her with more and more fidelity. A gray-haired man, a master among his fellows, a poet before the world, he was to the end a child at the great mother's knee; and to the end a conscientious, often a despairing, aspirant when he had a brush in hand.

No one can doubt Corot's accurate vision and patient labor who has seen his earlier pictures. Certain of his noblest qualities appear in them all — his care for harmony in composition and for dignity and grace of line, his belief that the whole is of more importance than any one part, and his desire to speak from a personal point of view. But there is none of the breadth, freedom, synthesis, which characterize his later works. Conscientiousness is apparent as well as real; details are carefully expressed, and the touch is dry, slow, and not a little heavy. Even the splendid "Forest of Fontainebleau" here reproduced, which was painted in 1846 and won the cross of the Legion of Honor, might not be recognized as a Corot by superficial students of those later pictures with which in this country we are more familiar. But a wiser critic would feel sure that an "early

Corot" must be pretty much what we find it: he would know that truth cannot be based on ignorance, and that knowledge cannot be acquired except through patient labor.

Corot's aim was always to simplify expression, to disengage the thing he wished to say — the main idea and meaning, the picture he had in mind — from the thousand minor pictures and ideas that had been wound up with it in nature. As he lived and labored his power to do this increased. When he retouched an early canvas he never added anything; improvement always meant suppression — some broadening, simplifying touch. But the fact is a proof of growing knowledge, not of waning interest in truth. What he wanted to repeat were not nature's statistics, but their sum total; not her minutiae, but the result she had wrought with them; not the elements with which she had built up a landscape, but the landscape itself as his eye had embraced and his soul had felt it. This he wanted to paint, and this he did paint with extraordinary truth as well as charm and individuality. But can any superficial brush do this? Can any one know the things to say without knowing the things to omit, build up broad truths in ignorance of the minor truths which compose them, reproduce an impression without remembering what elements

had worked together to create it and which had been of preponderant, controlling value?

No: the real lesson taught by Corot's pictures and Corot's life is that breadth in painting (if it is not meaningless and empty) must repose on accurate knowledge; that freedom (if it is not mere idle license) must have its basis in fidelity to facts; that feeling must be guided by reason and self-restraint. Corot's knowledge of natural facts — within the cycle of such scenes as he preferred to paint — was greater probably than that of any painter who has ever lived, except Théodore Rousseau; and the loving patience of his efforts to express it has never been surpassed. These are the reasons why he could permit himself to be the most free and personal and poetic of all landscape painters.

IV.

"TRUTH," said Corot, "is the first thing in art and the second and the third." But the whole truth cannot be told at once. A selection from the mass of nature's truths is what the artist shows — a few things at a time, and with sufficient emphasis to make them clearly felt. You cannot paint summer and winter on a single canvas. No two successive hours of a summer's day are just alike, and you cannot paint them both. Nor, as certainly, can you paint everything you see at the chosen moment. Crowd in too much and you spoil the picture, weaken the impression, conceal your meaning, falsify everything in the attempt to be too true.

This was Corot's creed. What now were the truths that he interpreted at the necessary sacrifice of others which were less important in his eyes? They are implied, I think, in the words I have already written.

Corot prized effects rather than what the non-artistic world calls solid facts. But effects are as truly facts as are the individual features and details which make them. Indeed, they are the most essential as well as interesting of all facts. It is effects that we see first when we are in nature's presence, that impress us most, and dwell the longest in our minds. Outlines, modeling, local colors, minor details — these shift, appear, and disappear, or alter vastly as light and shadow change; and most of them we never really see at all until we take time to analyze. Look at the same scene on a sunny morning or by cloudy sunset light. It is not the same scene. The features are the same, but their effect has changed, and this means a new landscape, a novel picture. The mistake of too many modern painters, especially in England, is that they paint from analysis, not from sight. They paint the things they know are there, not the things they perceive just as they perceive them. This Corot never did. He studied

analytically and learned all he could about solid facts; but he painted synthetically — omitting many things that he knew about, and even many that he saw at the moment, in order to portray more clearly the general result. And this general result he found in the main lines of the scene before him and its dominant tone; in the broad relationships of one mass of color with all others; in the aspect of the sky, the character of the atmosphere, and the play of light; and in the palpitating incessant movement of sky and air and leaf.

Look at one of Corot's foregrounds and you will see whether it is soft or hard, wet with dew or dry in the sun: you will see its color, its mobility. Look at his trees, and you will see their mass, their diversities in denseness, their pliability and vital freshness. Look at his sky, and you will see its shimmering, pulsating quality: it has the softness of a blue which means vast depths of distance, or of a gray which means layer upon layer of imponderable mist, and the whiteness of clouds which shine as bright as pearls but would dissipate at a touch. And everywhere, over all, behind all, in all, you will see the enveloping air and the light which infiltrates this thing and transfigures that — the air and the light which make all things what they are, which create the landscape by creating its color, its expression, its effect; the air and the light which are the movement, the spirit, the very essence of nature. No man had ever perfectly painted the atmosphere till Corot did it, or the diffused, pervading quality of light; and for this reason no one had painted such delicate, infinite distances, such deep, luminous, palpitating skies.

See now how Corot managed to paint like this — to interpret the life, mood, and meaning of the scene he drew. It was just through that process of omission and suppression which the superficial misread as proof that he did not really "render" nature at all. Even the smallest, simplest natural fact cannot be "rendered" in the sense of being literally reproduced; and to attempt the literal imitation of large features is merely to sacrifice the whole in favor of what must remain but a partial rendering of a part. A leaf can be painted, but not a myriad leaves at once; we are soon forced to generalize, condense, suppress. And to try to paint too many leaves is to lose the tree; for the tree is not a congregation of countless individual leaves distinctly seen — it is a mass of leaves which are shot through and through with light and air, and always more or less merged together and moving. It is an entity, and a live one; and which is the more important — that we should see the living thing, or the items that compose it? What we ask the painter is, not just how his tree was

constructed, but just how it looked as a feature in the beauty and aliveness of the scene. What we want is its general effect and the way it harmonized with the effect of its surroundings.

Does it matter, then, if he omits many things, or even if he alters some things, to get this right result? Such altering is not falsifying. It is merely emphasis — a stress laid here and a blank left there that (since all facts cannot possibly be given) the accented fact shall at least be plain. The generalized structure of Corot's trees, their blurred contours and flying, feathery spray — these are not untruths. They are merely compromises with the stern necessities of paint — devices he employed, not because he was unable to draw trees with precision, but because, had he done this, his foliage would have been too solid and inert for truth. A twig is never long in one position. It cannot be painted in two positions at once. But a twig that is blurred to the eye because it is passing from one position to another — this can be painted, and this Corot preferred to paint rather than ramifications with exactness or leaf-outlines with a narrow care. So his trees are alive, and, as he loved to say, the light can reach their inmost leaves and the little birds can fly among their branches.

It is the same thing with color. The color schemes to which Corot kept were never as strong and vivid as those we find with some of his contemporaries and many of his successors. Browns and grays and pale greens predominate on his canvas with rarely an acuter accent, a louder note. But he fitted his themes to his brush, so that we feel no lack; or, in other words, he chose his color schemes in accordance with the character of the natural effects that he loved best. And within the scale he chose his coloring is perfect. His tone (the harmony, or, as used to be said, the "keeping" of his result) is admirable beyond praise. But it is gained at no sacrifice of truth in local color. There are cheap processes for securing tone which are indeed falsifications of nature — ways of carrying over into one object the color of another, throwing things out of their right relationships, harmonizing with some universal gauze of brown or gray. But Corot's was not a process like any of these. His power to harmonize and unify his colors sprung from the fact that he studied colors with a more careful and penetrating eye than ever before had been brought to bear, and never forgot their mutual relationships. Look at one of his pictures where the general effect, perhaps, is of soft delicious

greens. Everything in it is not greenish. The sky is pure blue and the clouds are purest white. The water is rightly related to the sky, and where things were gray in nature, or brown, or even black, they are so on canvas. Harmony does not mean monotony. Tone does not mean untruth. And this Corot could accomplish because he studied "values" as no painter before him had studied them.

This word — new in our language but indispensable — has been a little hard of comprehension to those who know nothing of the painter's problems and devices. But it means, as simply as I can say it, the difference between given colors as severally compared with the highest note in the scale (white) and the lowest (black); the difference between them as containing, so to speak, more light or more dark. This does not mean the same thing as the relative degrees of illumination and shadow which may fall upon them. The one quality may be involved in or dependent upon the other, but the two are distinct to the painter's eye.

It is not easy even to perceive differences in value. Given two shades of the same tint, as of a blue-green or a yellow-green, it is easy enough to say which is the darker; but it is more difficult when a yellow-green is compared with a blue-green, and still more when we set a brown beside a green or a blue beside a yellow. Yet the painter must not only learn to see values in nature but to transpose them correctly on canvas — for color can never be exactly copied on canvas; from the nature of paint there must always be transposition, adaptation, compromise. Corot mastered the difficulty as no one else had done; and this mastery has made him the guide and teacher of all the landscape painters who have since been born.¹

v.

"THERE are four things for a painter," Corot was wont to say. "These are: form, which he gets through drawing; color, which results from truth to values; sentiment, which is born of the received impression; and finally the execution, the rendering of the whole. As to myself, I think I have sentiment; that is, a little poetry in the soul which leads me to see, or to complete what I see, in a certain way. But I have not always color, and I possess only imperfect elements of the power to draw. In execution I also fail sometimes — which is the reason why I labor harder than ever, little though some people may imagine it."

¹ A conspicuous example of what is meant by the falsification of values may be seen in photographs taken by any of the usual processes. Chemical action deals differently with different colors, so that a light yellow, for instance, comes out darker than a dark blue. The

trouble has been obviated in some of the newer methods. But it is easy to see that this question is of vast importance in all translations into black and white. In nothing has the success of American wood-engravers been more remarkable than in this.

In accepting these words about himself we must make allowance for that spirit of aspiration which always leads a true artist to remember his ideal as better than the best possible rendering. It is natural that Corot should have thought he often failed to get his values right, although the world gradually saw that he had at least come nearer right than any one before him; and of course he knew that he had not even attempted many schemes and scales of color which he perceived in the actual world. As regards his power to draw he spoke with stricter verity. A lifetime of study in the woods and fields had enabled him to draw landscapes fully and exactly when he chose, and some of his portrait-heads are wonderfully true. But in our modern world schools alone can give scientific knowledge of the figure; and for the lack of this Corot's figures are weak in anatomy and loose in modeling, though often most delightful in color and sentiment.

It is the same with his execution. Born at a time when few painters painted really well, and trained almost wholly by his own efforts, he is not one of the supreme masters of the brush—one of those whose every line and touch delights the connoisseur in handling. But he painted well enough to express with charm as well as clearness the impressions he received; and as these were the impressions of a very great and individual artist, the verdict is still a high one. Had his growth been assisted by stronger outside influences he would doubtless have reached technical skill more quickly, and perhaps have conquered it more completely; but something of the personality of his manner might have perished. So we are content with his technical shortcomings, and after all they are far from serious. Although a few men have painted landscapes still more beautifully, Corot's surely satisfy the eye while delighting and moving the soul.

If but a single phrase of Corot's had been recorded I should wish it the one which says that sentiment in art is a poetic power to see things or *to complete* them in some personal way. Here the whole import of idealism in art lies crystallized in a word. Not to depart from nature, but to complete her, is the true idealization; not to conceive an ideal foreign to her own, but to perceive her own with so much sympathy that it can be more perfectly revealed than, on this imperfect earth, she herself is often able to reveal it; not to be untrue to fact, but to choose and arrange particular facts so that the type, the ideal, towards which they tend shall be most clearly shown.

The whole world prizes such work as this when it is the poet's or even the figure-painter's. Why is it so often disallowed when the landscape painter brings it? A drama of Shak-

speare's never happened, yet we feel it is truer than any literally reported scene of the police-court, or "realistic" stage-play or novel. The character of a man, we know, is a higher fact than any of his daily deeds; why, then, is not the aspect of a landscape a higher fact than any of its details? More significant than any individual character, again, is the essence of human nature; why, then, does not the essence of some kind or type of natural beauty mean more and purer truth than the aspect of any one actual spot? Must not an artist see broadly, synthetically, if he is to show us general aspects? And must he not see imaginatively, poetically,—must he not "complete" what he sees,—if he is to search out and render the ideal therein suggested? All his interpretations must be based on facts which he has observed in this place or that; but to make a good picture and a true one he need not confine himself to facts which he has chanced to see together. Very likely Corot never painted a scene without omitting some features and adding others; and in more than one of his works there are elements both of French and of Italian origin. But there is never disharmony in the result, for his knowledge was too great and his imagination too artistic—which means too logical and too sympathetic. He made no mere patchwork pictures. He created landscapes of his own out of the elements with which, in nature's presence, he had stored his sketch-books and his memory. He might alter a scene—he did not alter nature. He but completed the beautiful message she had been suggesting here and half revealing there.

It is easy to prove that Corot's painted poetry was true—much truer than the realist's painted prose. We have only to consult our own experience with him as an interpreter of nature. Here and there, at home or abroad, we may recognize some scene which some realist has faithfully portrayed; but Corot's scenes are everywhere—by the little lakes and brooks of France, in the forest glens of Italy, in the misty glades of England, and along the river borders of our own far western world. What he painted were not items from nature, but certain broad beauties and moods of nature; and though we may rarely be able to put a finger on documentary proof of his veracity, we carry it about with us in a new sensitiveness of eye, a new receptiveness of mood. Everywhere, I say, we see from time to time some beautiful living Corot; but should we see it so quickly or would it seem so beautiful had he not taught us how to value it? The commonplace painter shows us things that we had seen and felt in the same way ourselves. The true artist selects more delicate yet more general facts, explains

them with poetic stress, shows us things which probably we had not remarked before, and makes them forever ours. We may never possess a picture by Corot, but how immeasurably poorer we should be had he painted none! His message is our own if his canvases are not; and who shall say this of a painter unless he is as true as truth, yet personal, poetical, in that creative way which alone means the highest art?

The special character of Corot's idealism shows first of all in his choice of subject-matter. He was most attracted by the most idyllic scenes and moods of nature. Grandeur, force, terror, sadness, did not appeal to him. He had no taste for storms and rugged wildness; he loved high noon less than the glinting tender prophecies of morn or the mysterious grace of twilight; and if it was high noon he painted, still it was not prosaic clearness, but noon in a day of soft veiling mists and passing gleams and shadows. The peculiar broad softness of his touch—a softness which lacks neither delicacy nor nerve—fits well with the sentiment of these favorite themes. But to keep feeling and execution of this sort above mere sentimentality and vagueness, a painter needs the great gift of style. This gift Corot had in a very high degree—the power to give his pictures a quality which every one will understand when I call it classic. No one could be more thoroughly modern, more thoroughly Gallic, than Corot; but no one in modern art has been more classic in the fundamental meaning of the word. It was not because he often painted classic subjects—how many have done this and given us a breath from English firesides, a blast from the Parisian boulevard, in pictures which have perhaps all other virtues, but are conspicuously devoid of style! It was because he felt things with Greek simplicity, joy, and freshness, and saw them in a way which meant Greek dignity, harmony, and repose, and a real yet ideal grace. If his figures are often dreams of Hellas it was simply because he saw the landscape he was painting in such a way that it could be most fittingly peopled thus. The idyllic, classic note was in the voice of the man and would have rung out in his work whatever the themes he chose. It must have been his by birth, though it was happily fostered by the course of his student years. From Bertin and Aligny he imbibed sobriety in taste and that love for harmonious composition which more than any other single element means style in painting; and his long Italian months had enforced the lesson, showing him broad reposeful tones as well as lines. Yet had he not already dreamed of nymphs and fountains in his boyhood by the window at Ville d'Avray?

VI.

IF we can fix upon any one of Corot's pictures as the most famous it must be, I think, the "St. Sebastian" owned by Mr. Walters in Baltimore. Painted in 1851, it admirably represents Corot's art in that middle period which French critics have held to be his very best. His individuality had then fully developed—both his poetry in conception and his freedom in treatment; the difference from the "Forest of Fontainebleau," which he had painted only five years earlier, is immense. Yet a little of his early reserve of manner still clings about the "St. Sebastian," giving it more massiveness and grandeur than we find in pictures of a much later date. It seems to have been Corot's favorite work. He would never sell it, but in 1871 gave it to the lottery held for the benefit of the wounded defenders of France. Delacroix called it the most truly religious picture of modern times; and, indeed, to great external charm and purest poetry it adds a marvelous depth and solemnity of mood. It is the least idyllic, the most epic in sentiment, of all Corot's great works, yet instinct with a pathetic tenderness. The dying saint lies on the ground, cared for by two holy women, in a shadowy forest glen. On each side rise enormous trees, and between them, in far perspective, a little hill with horsemen silhouetted against the sky. Two baby angels float high above the saint, bearing the palms of martyrdom. The hour is twilight, and the shadows are dense beneath the trees; but there is a soft radiance still in the wonderful sky and the very breath of living nature in the atmosphere.

Not so grand, not so impressive, but still more beautiful, perhaps, is another work of this middle period, the "Orpheus Greeting the Morn," owned by Mr. Cottier in New York—another famous Corot and another that well deserves its fame. The upright shape of the large canvas (seen likewise in the "St. Sebastian") is characteristic of Corot, who loved a composition in which the dignity of vertical lines might be emphasized. In no picture is the very essence of morning more truthfully, exquisitely, portrayed: we are bathed in its air, steeped in its light; our ears are filled with the soft rustle of its wakening leaves; our souls are thrilled with its fresh and tender promise; and the infinite lovely distance draws us till we share the passionate poetic yearning of Orpheus himself. And in the execution what breadth combined with delicacy, what soft yet radiant color, what a sense of freedom, sincerity, inspiration! And what a delicious golden tone to compare with the darker yet silvery tone of the "St. Sebastian"! This, indeed, is the poetry of art—nature's poetry truthfully reported, yet

accented, explained, "completed" by a great artist's soul and sight and touch.

The "Orpheus" was painted in 1861, and in 1866 the splendid "Danse des Amours," which is also in New York, owned by Mr. Charles A. Dana—a surpassingly fine example of one of Corot's most characteristic themes. We need not ask whether this wood is of France or Italy, whether this little temple and these gracious, buoyant figures were painted from fact or fancy. It is the true ideal world—the world of actual nature, but seen in one of its most beautiful aspects, peopled by joyous figures, and with all its fair suggestions amplified and fulfilled.

The "Dante and Virgil" in the Boston Museum of Fine Arts is much less complete and magnificent than these, and it shows too clearly Corot's shortcomings as a draughtsman: the tigers crouching at the poet's feet were sketched in by Barye, but his outlines were lost in the painting. Nevertheless, the work is admirable as a whole and most interesting in sentiment—more strongly dramatic than any other Corot I have seen. Seldom has Dante been shown so nearly as he must have looked when, as the Florentine children said, he went down into hell.

The "Lake Nemi," the "Landscape with Cattle," and the "Wood-gatherers," here reproduced, were all in the Morgan collection. The "Nemi" seems to be a picture which, we are told, was painted at Ville d'Avray, but afterwards recast as a memory of the nymph-haunted southland. Its sky is a marvel. The "Wood-gatherers" is one of Corot's very latest works, shown at the last Salon held before his death. The tone is brown and rather dark and the handling very summary; but it has great strength and dignity, and impressive sentiment. In default of an "Orpheus," for example, it is a good Corot for the American public to possess. The placid, sunny little river landscape, with cattle, is a good type of many of Corot's smaller works. Its sky and its distance are its chief beauties, and no distance, no sky, could be lovelier. The "View of the Coliseum" is a much earlier work. It is deeper and stronger in tone, more solid in handling, more dignified in composition—an excellent example to set beside the delicate landscape and the poetic "Orpheus" as proof that Corot's range in art was not a narrow one.

Thus, it appears, there are Corots in America of the very highest quality; and, indeed, this list of them might be greatly lengthened. Mr. Jay Gould in New York owns a "Danse des Nymphes" only less admirable than the "Danse des Amours." In the collection of Mr. Quincy Shaw at Brookline, Massachusetts, are several perfect examples, representing different epochs

from almost the very earliest. And in a hundred other American galleries hang Corots of more or less distinction. With the best, of course, there are many not so good, and others, alas, which are Corot's only in name. A superficial eye is easily deceived by imitations of Corot's slighter works, and such have been foisted on the public, abroad as well as here, in considerable numbers. But a really fine Corot has qualities beyond the reach of any plagiarist—qualities of truth on the one hand, of feeling on the other. We run no risk of seeing a fictitious "St. Sebastian" or a "Danse des Amours" which shall deceive a true lover of Corot.

VII.

To understand Corot's influence on art and artists we must recall the times when his work began.

The formalizing, pseudo-classic tendencies of the school of David had just lost their sovereignty. The "romantic" reaction was in its lusty youth under the leadership of Géricault and Delacroix. The fetters of academic tradition were loosened; freedom in thought and practice was proclaimed for every painter; the modern spirit of inquiry and inventiveness, the modern gospel of individuality, were daily winning new disciples. Oddly enough, as it now seems to us, the first fresh impulse in the field of landscape came from across the Channel: certain pictures by Constable and Bonington, exhibited in Paris, gave the first hint that landscape, too, might be painted in free and varied fashions, and made the medium for expressing simple local beauties and personal ideas. But the fact is easily explained: in France landscape painting had meant for generations nothing but a memory of Claude and Poussin, while in England the old Dutch masters—so much more simple, naïve, yet modern in their feeling—had never been lost to sight. Now the hint from England led Frenchmen back to the art of Holland, and its fructifying influence soon showed in France as it has never yet shown in England. Almost instantly a new school was born, a new development began—a school and a development which we must call the noblest and completest that modern painting counts.

Georges Michel was one of the very first to feel the new impulse. But he seems a survivor of the old Dutch school rather than a leader in the school of France—a weaker brother of Ruysdael, not his modernized descendant; a forerunner, not a fellow of Rousseau, Corot, Troyon, Millet, and Dupré. Paul Huet was another innovator, but he is better known to us by the influence he had in his time than by his actual work. Rousseau was the first of the

really complete new masters in landscape, and almost on a line with Rousseau stands Corot.

It is difficult to say just in how far Corot was formed by this influence or by that. Bonington's spirit seems very near akin to his — Mr. Henry Adams in Washington owns a little Bonington which might almost pass for a comparatively early Corot. But there can be no question as of teacher and scholar in the case. Corot can have had no more than a mere glimpse of Bonington's work, and his own was at once immeasurably wider, deeper, and more subtle. For Rousseau he had an immense admiration; but their natures were wholly unlike, and the longer they lived the further apart grew the lines on which they labored. We can say no more of Corot than that the hint of naturalism he got from England, the draught of classicism he imbibed from his first teachers and from the air of Italy, and the Dutch lesson of simplicity and sobriety, germinated and grew together in his soul while eye and hand were training themselves outdoors.

It is impossible, again, to attempt any weighing of the intrinsic merits of Corot and his great contemporaries. Odious in most connections, a process of definite comparison is nowhere so detestable as when applied to mighty artists. It is a sin against the first law of computation we were taught at school — it is an effort to reckon with unrelated quantities. It is as though we took an apple from a pile of peaches and declared the number of peaches less, or compared an apple with a fig to explain its rank among apples, or gauged the breadth of one stream by the depth of another. We may like best the peach or the fig or the apple and confidently declare our liking. But when it comes to comparisons, they should be of figs with figs, of Corots with Corots. To be an artist means to be individual; and individuality can be tested only by its own standard. A Corot is none the worse whatever Rousseau or Troyon may have painted; and it would be none the better had its creator been the only man who ever painted landscapes.

But from the historical standpoint the case is different. If we may not rightly ask of two great contemporaries which was the greater, we may very rightly ask which was the more typical of his time, the more influential upon the world of art. From this point of view Corot seems to me the most significant figure in his generation. Personal, individual, as were all his brethren; boldly, beautifully, as they all preached the gospel of freedom and freshness in art, none except Millet was quite so personal, none quite so fresh as Corot; and to an individuality as strong as Millet's he added other qualities all his own. No art of the time is so complex as Corot's, and its complexity gives it

peculiar value to those who look deeper than the surface of paint. No one departed further from that mock classicism which means academic formality, bloodless self-suppression; yet no one then alive or now alive has done so much to prove the persistent value of true classicism. David tried for the form of ancient art and missed its spirit. Corot, the great apostle of modernness and personality, caught its spirit while casting utterly away its form. A Greek of the time of Pericles might easily prefer his paintings to any others we could show him: yet how thoroughly French they are; and yet, again, how close they lie to the heart of the American of to-day.

There is still another point in Corot's supremacy. The profound and accurate study of values — the knowledge how to keep tone perfect and yet keep color complete and true — is the greatest technical achievement of modern times. Here Corot led all his rivals, and therefore he has become the leader and teacher of all younger painters. In many ways they have carried his lesson further than he went himself. To paint things truthfully in the open air means to-day tasks of a variety and difficulty which Corot never essayed, results of a vividness and splendor he never achieved. But the whole development rests on his own. He was the first great "impressionist," and the modern impressionists are but his more daring sons. Sometimes we — and perhaps they themselves — forget the fact; for there is one great point of difference between him and most of his sons in art. He was a poet on canvas, and most of them are speakers of prose. It is their fashion to rave about "realism," to despise idealism — to exalt the mere facts they chance to see above the greater fact which Corot divined and gave. But, do what they will, the best among them are more idealistic than they think; and, say what they will, the world will never agree to rank the reporter above the poet. For the great body of lovers and students of art Corot's supreme merit is that he was the most poetic soul among those who have ever painted landscapes; and his chief value as a teacher is that he showed so well what poetry in painting means. Too many have thought it meant the effort to do with color the same thing that a writer does with words, and have lost the picture in the effort to paint a poem. But with Corot the picture is the first consideration — beautiful forms, beautiful tones, beautiful expression with the brush. The poetry is an infusion merely, an intangible essence breathed from the soul of the maker. Perhaps the time will come when Corot's teaching as regards this point will be more generally heeded than it is to-day. But, of course, conscious effort cannot determine the fact. Any painter can

learn much from Corot in the way of technical secrets; no one can learn from him how to idealize nature except a man who, like himself, chances to be born with a poet's heart; and we can do no more than hope that all new poets who may be born to paint shall be souls of Corot's sort. But we must indeed hope this; for what the world needs just now are not mournful temperaments, reading into nature the sorrow of the human race, but apostles of the joy and peace which those who seek can always find in her, valiant yet tender singers like Corot—happy singers of a glad new day.

VIII.

THE more we study Corot's art the more we love the man who stands behind it; and I have dwelt at some length on the record of his life because it completes the revelation of a strong and serious will, of perseverance, modesty, and self-reliance, of noble desires, unflinching courage, sincerity, and loving-kindness.

It is a little the fashion nowadays to think of artists as excusing themselves, on the strength of being artists, from the duties and virtues we demand of commoner clay. It is too much our way to think of them as eccentric, egotistic, nervously excitable or morbidly sensitive, at odds with a prosaic world and often at odds with themselves—pushed one way by the artistic impulse, pulled another by mere human loves and obligations. We think too often of them thus to pardon or condemn them accord-

ing as we value art or care little for it as a factor in the progress and aspiration of the world.

Corot's story is of priceless value as proving how far wrong are these ideas; and all the more because it is not an exceptional story. Men like Corot, in all the essentials of what even a pharisaical world would call good conduct, have never been rare among artists and are not rare to-day; nor men as courageous and persevering in disappointment, as simple, modest, and laborious in success. As was Corot, so, in a more or less marked degree, were almost all the great painters and sculptors of his great time. Not all of them could be so cheery and happy, but most of them were as single-minded in their devotion to art, as generous and sincere in their dealings with their fellows.

Let me make a good ending now with a few more words from Corot's lips: "Do we know how to render the sky, a tree, or water? No; we can only try to give its appearance, try to translate it by an artifice which we must always seek to perfect. For this reason, although I do not know my craft so very badly, I am always trying to go further. Sometimes some one says: 'You know your business and don't need to study more.' But none of that, I say; we always need to learn. . . . Try to conquer the qualities you do not possess, but above all obey your own instinct, your own way of seeing. This is what I call conscience and sincerity. Do not trouble yourself about anything else, and you will have a good chance of being happy and of doing well."

M. G. van Rensselaer.

GENERAL LEE AFTER THE WAR.

It would not be easy, for one who had not been in the midst of it, to realize the enthusiasm that existed among the Southern people for General Lee at the conclusion of the war. Nothing could exceed the veneration and love, the trust and absolute loyalty, which people and soldiery alike had manifested towards him through the struggle. But it was after the war had closed that the affection of the people seemed more than ever a consecrated one. The name given to him universally in the army, "Ole Mars' Robert," is an evidence of the peculiar tenderness with which he was regarded. But after defeat came, all this feeling was intensified by the added one of sympathy. Nowhere could he move abroad without being greeted with such demonstrations of love and interest as always touched his generous and gracious heart.

Living near General Lee as I did, from

1865 till his death, in 1870, I was cognizant of many little instances and scenes which illustrate this feeling, and also serve to bring out some of the finer points of his character in a way no stately biography would condescend to do. It may be worth while to focalize some of these minute side-lights, in order to indicate the less known characteristics of that inner life which shrunk from manifesting itself to the world at large.

A brief period only had passed after the surrender at Appomattox when offers of homes began to be pressed upon him. His family was originally English, and he had many relatives among titled people in the old country, who insisted upon his coming and sharing, for a time, the ease and luxury of their homes. But he positively declined to expatriate himself. "No," he said, "I will never forsake my people in their extremity; what they endure, I will endure, and I am ready to break my

last crust with them." And he refused to leave Virginia. Nothing ever gave him greater pleasure than to witness personal, strenuous effort to overcome the disasters of the war. To see a small farmer attempting to fence his fields with green saplings was to him a sight that made his eyes brighter.

Many homes were urged upon him in his native State; but as my sister, Mrs. E. R. Cocke, of Cumberland, said when he accepted her offer of a vacant plantation adjoining her own, which was a part of her estate, "He chose among these homes one of the most unpretending." With furniture from her own house, she fitted up for him and his family a comfortable abode at "Derwent," Powhatan County; and here he gathered together, for the first time since they had left Arlington, his wife and children around him. "Never shall I forget," she said, "his unaffected gratitude, and his gracious acceptance of this simple home I and my sons had prepared for him. The plantation of Derwent was only two miles from my own, and our great country gardens readily met the wants of the new residents. As I saw the beautiful simplicity with which these trifling supplies were received, it seemed impossible for me to realize that this was the man upon whom the fate of the South had hung; that this was the man for whom thousands were ready to rush to death; that this was the man before whom the hearts of all the Southern Confederacy bowed in reverence. One day, shortly after he came to Derwent, he rode over on Traveler¹ (his famous war-horse) to a neighboring country-store, which was also the post-office. The desire of the people, black as well as white, to see the General was intense, for this was but a few weeks after the surrender. He walked quietly into the store, and was engaged with its proprietor in talk about the prospects of the crops, and such like things, when the place began to be crowded by the country people, intent upon catching a glimpse of the great commander. He seemed not to observe them at first; but turning round, and noticing the press about him, he said, in an apologetic way, 'Ah, Mr. Palmer, pardon me for keeping you talking about corn and tobacco so long; for I see I am detaining you from your many customers.' There was nothing whatever to indicate the slightest consciousness that the crowd had pressed in to see him.

"Another incident," she went on to say, "I recall of General Lee, which seems to me worth relating. My head dining-room servant, who had occupied his post for twenty-five years, and whose ancestors for more than a hundred years had been born on the plantation, had

determined to avail himself of his sudden freedom. We were all sitting at dinner—for it was before the General and his family had taken possession of Derwent—when Shepherd, the man in question, all ready for departure, entered the dining-room, to take leave of the assembled family. I well remember the kindness with which the General rose from his seat, and, shaking the old servant cordially by the hand, gave him some good advice and asked Heaven to bless him. There was no feeling of bitterness towards him because he was leaving his mistress to much distraction and care from which he might have saved her; instead of this, a benediction and a Godspeed."

When homes were being offered to him, both abroad and from one end of the late Confederacy to the other, his eldest daughter, who was visiting in our neighborhood, said one day, in the hearing of a trustee of Washington College, "Why don't they propose to my father some place in which he can work? For he never will accept the *gratuity* of a home." The remark was caught up, and conveyed to the board of trustees. This college, situated in the very heart of Virginia, was founded before the American Revolution; and after it had received a large endowment from Washington himself its name was changed from Liberty Hall to Washington College—the first institution of any kind whatever that bore the name of the great patriot. Thenceforth this college was the educator of a large number of the prominent men of Virginia. Its buildings had been injured, its professors and students scattered, and its resources crippled by the war. An offer of its presidency was made to General Lee with scarcely a hope that he would accept it; but accept it he did, without hesitation, saying, "I may thus influence my young countrymen."

I once heard it said by Professor White, the professor of Greek in our college, who had himself been a Confederate officer: "The first appearance of the General in our streets was thoroughly characteristic. As I passed up our main street one day in the summer of 1865 I was suddenly confronted by General Lee on his fine war-horse Traveler, dressed in white linen from head to foot, wholly unattended, even by his black groom. Nobody in the town knew he was coming. This was as he wished it, for it was his desire to shun every demonstration. Here was the man who for four years had never moved abroad without being attended by a military staff composed of some of the most brilliant younger men of the South, and who never appeared anywhere without being received with enthusiastic shouts from all beholders—now with only one person to greet him, and an old Confederate to hold his

¹ For portrait of General Lee on Traveler, see THE CENTURY MAGAZINE for July, 1886.

stirrup! But as every man in the town had been a soldier, it was not long before the street rang with cheers."

I well remember the first visit I paid to Mrs. Lee on the General's taking possession of the house of the college president. There were many visitors present, who all came, with a sort of exalted reverence, to pay their formal respects to the General and Mrs. Lee. When we rose to take leave, my little son, who accompanied me, could not find his cap. What was my surprise to hear Mrs. Lee interrupt her husband in his animated talk with some distinguished gentlemen present—not to ask him to summon a servant to do her errand, but to say :

"Robert, Herbert Preston has lost his cap; will you go into the back parlor and see if he has left it there?"

We were not used then to hear the leader of our armies bidden to wait on a child!

At one of the first Commencements—I think the very first—at which General Lee presided after he became president of the college, the hall was filled with an immense crowd to whom he was the central object of interest. During the progress of the speeches, a little boy four years old became separated from his parents and went wandering up one of the aisles in frightened search of them. The General noticed the child's confusion, and, gaining his eye, beckoned him to come to him on the platform, where he sat surrounded by many of the brilliant officers of the late Confederacy. The tender signal was irresistible to the child. He instantly made his way to the feet of the General, sat down there, and leaned his head against his knee, looking up in his face with the utmost trust, apparently thoroughly comforted. Thus resting, he fell asleep, with his protector's arm around him, and when the time came for the General to take his part in the prescribed ceremonies we who were looking on were touched in no little degree as we saw him carefully rise from his seat and adjust the little head softly upon the sofa so as not to waken the confiding little sleeper.

His love for children was one of his most marked traits. He possessed the royal attribute of never forgetting faces or names; and not a boy in our streets ever took off his cap to salute him as he passed by on Traveler, nor a little girl courtesied to him on the sidewalk, that he did not for a moment check his rein to give an answering salute, invariably naming them, and perhaps the pleasure of a ride on the saddle before him. We found him early one Christmas morning at our door. He had come to bring some Christmas presents to my little boys; and I discovered that he had done the same for all the children of his friends. He told me once of an amusing scene he encountered, in which chil-

dren played a part, from which he laughingly said he retreated, ignominiously defeated. A few miles out of the town he was overtaken in his ride by a thunder-storm, and sought refuge in the house of a gentleman whom he knew. Mr. W—— and his wife were absent, but a group of children who were playing marbles on the parlor carpet came forward at once and made him welcome. But the attractions of the game were too powerful for their politeness and that of the little visitors they had with them; and as the General begged them not to stop their playing, they took him at his word and went on with their game. In a little while an altercation arose.

"Now, Mary," said Tom, "I call that cheating! You did n't do that thing fairly!"

"Take that back, Tom!" broke out Charlie. "You sha'n't say my sister cheats!"

"But she did," cried Tom, with sullen persistence, "and I'll say it again!" With that Charlie rose in his wrath and collared Tom; and Mary, trying to separate the combatants, burst into tears and cried out, "O General Lee, please don't let them fight!"

"My good fellows," said the General, grasping each boy by the shoulder, "there's some better way to settle your quarrels than with your fists." But in vain he tried to separate the little wrestlers. "I argued, I remonstrated, I commanded; but they were like two young mastiffs, and never in all my military service had I to own myself so perfectly powerless. I retired beaten from the field, and let the little fellows fight it out."

His ability to recall a name, after he had once heard it, was peculiar. One of the college professors told me that in riding out with him one day they passed an old mill, at the door of which stood the dusty German miller, with the most barbarous of German names, waiting with the hope of receiving a handshake from the leader under whom his sons had served. His wish was gratified, and the old man was made proud and happy. Not long after, the same professor was passing the same mill, when at the door the miller again presented himself. By no effort of memory could the queer German name be recalled by the professor; but before he had time to speak, the General rode straight to the door, and, with a cheerful "Good-morning," named the old man at once.

He had the gentlest way possible of giving counsel and administering rebuke. I remember hearing him say, in a presence where such testimony was worth more than a dozen temperance lectures: "Men need no stimulant; it is something, I am persuaded, that they can do without. When I went into the field, at the beginning of the war, a good lady

friend of mine gave me two sealed bottles of very superb French brandy. I carried them with me through the entire campaign; and when I met my friend again, after all was over, I gave her back both her bottles of brandy, with the seals unbroken. It may have been some comfort to me to know that I had them in case of sudden emergency, but the moment never came when I needed to use them."

His skill and wisdom in managing the young men who crowded to the college after his accession as president was extraordinary. Owing to the closing of so many of the Southern schools of learning, the number of students was very large, reaching five hundred in the earlier sessions; but a case of discipline rarely occurred. He was accustomed to say to the students when they presented themselves in his office, on their entrance at college, "Now, my friends, I have a way of estimating young men which does not often fail me. I cannot note the conduct of any one, for even a brief period, without finding out what sort of a mother he had. You all honor your mothers: need I tell you that I know you will have that honor in reverent keeping?" So tender an appeal as this went straight to the heart of many a youth as no formal advice could have done.

He told me that once at Arlington, when he was on a visit home from one of the frontier posts, he went out one wintry morning, after a slight fall of snow, and strolled down one of the graveled walks. Hearing some one behind him, he turned and saw his eldest son fitting his little feet into the distinct tracks he had left in the snow, and making great strides in order to do this effectually. "I learned a lesson, then and there," he said, "which I never afterwards forgot. My good man, I said to myself, you must be careful how you walk, and where you go, for there are those following you who will set their feet where you set yours." Something similar to this has been told of another, but I had this from General Lee himself.

Few men were more skilled in the avoidance of everything that could wound the feelings of others. On the occasion of General Lee's being summoned to Washington to give testimony, an incident occurred which illustrates this characteristic. A connection of my own, who attended him as one of his complimentary staff, told me that when in Washington there were multitudes of persons—and among them many of the most distinguished in the land, North and South—seeking audience with General Lee; evening after evening was occupied with these interviews. Again and again had my friend been beset by a person who had no claim to be presented, and as often had he been waived aside on the plea that the number of gentlemen coming to be

introduced was so great as to embarrass his provisional staff. But this persistent Confederate watched his opportunity and made the best of it. Coming up to Colonel M—— when he was a little off his guard he whispered, "Take me up now; there is nobody being introduced at this moment."

"But don't you see that the General is surrounded by a group of officers and congressmen, and that it won't do to break in upon their conversations?"

But the old soldier would not be shaken off. So Colonel M—— thought the best way to end the matter would be to lead him up to the General, and thus in a moment put a stop to his pertinacity. Taking him, accordingly, by the arm, he drew him forward. The large circle opened and allowed a pathway, and the man was presented in due form and received with as much courtesy as if he had been a prince of the blood. Colonel M—— was about to lead him instantly away, when he suddenly stepped into the open space where the group had made way for him, and in a rather loud voice said:

"General, I have always thought that if I ever had the honor of meeting you face to face, and there was an opportunity allowed me, I would like to ask you a question which nobody but you can answer. I seem to have that opportunity now. This is what I want to know: *What was the reason that you failed to gain the victory at the battle of Gettysburg?*"

To have such an ill-timed question dropped like a bomb-shell in such a presence was, to say the least of it, embarrassing, and some curt rejoinder would have been natural and to the purpose; but General Lee's kind-heartedness would not permit a rude dismissal even to so unwarrantable a questioner. Advancing and gently taking him by the hand, while all the listening group stood round amazed at the man's presumption, the General quietly said:

"My dear sir, that would be a long story, and would require more time than you see I can possibly command at present; so we will have to defer the matter to another occasion."

This same friend gave me an instance of a similar encounter that concerned Mrs. Lee, whose simplicity and kindness of heart rivaled that of her husband.

The General and his wife were at the Virginia White Sulphur Springs, occupying one of the pretty cottages that had been set apart for them. The crowd of visitors was great, and everybody who had the least show for so doing was asking for introductions, for the war had not long been over.

"I encountered a good-natured but absurd man from the far South," said Colonel M——, "whose enthusiasm for the Lee family was at

fever heat. His pompous way of talking was a constant amusement to me; and when he asked that I should intrude upon the gay group that always filled the piazza of the General's cottage and introduce him, I naturally hesitated somewhat, fearing lest he should overpower them by one of his magniloquent apostrophes. He joined me one evening just as we were passing the cottage door, where a party of visitors were being entertained by the General and his wife. 'Now is your time,' he whispered; and he forthwith drew me to the steps, where, as in duty bound, I presented him. Withdrawing a little, he assumed a Hamlet-like pose, and lifting his hand with a most dramatic air, he began:

"Do I behold the honored roof that shelters the head of him before whose name the luster of Napoleon's pales into a shadow? Do I see the walls within which sits the most adored of men? Dare I tread the floor which she who is a scion of the patriotic house of the revered Washington condescends to hallow with her presence? Is this the portico that trails its vines over the noble pair—"

"I stumbled back aghast," said Colonel M——, "at my own blunder, as I listened to this ridiculous speech, which I really believed was gotten up and conned for the occasion. But I was relieved in a moment when Mrs. Lee, quietly laying down her knitting and interrupting the rhetorical effort, with a kind look upon her face replied:

"Yes, this is our cabin; will you take a seat upon the bench?"

General Lee's considerate courtesy never failed him. He used to be overpowered with letters from every part of the South, on every imaginable subject, written by the wives and mothers of his old soldiers, asking questions which it was impossible for him to answer, and seeking aid which it was impossible for him to give. Indigent women would write, begging him to find places where their boys and girls might support themselves. Crippled soldiers by scores sought for help from him; and multitudes whose only claim was that they had fought for the Confederacy entreated his counsel and petitioned for his advice in every sort of emergency.

I once said to him, "I hope you do not feel obliged to reply to all these letters."

"I certainly do," was his reply. "Think of these poor people! It is a great deal of trouble for them to write: why should I not be willing to take the trouble to answer them? And as that is all I can give most of them, I give it ungrudgingly." And yet at this time he had five hundred young men under his management, and a corps of twenty-five professors; and this in a line of work totally novel to him.

His humility was as conspicuous as anything about him. His religious character was pronounced and openly shown. But he arrogated nothing to himself as a religious man. I was present once when my husband informed him of an effort just being made to supply our county with Bibles, of which it had been stripped to meet the wants of the army during the war. The Bible Society was being reorganized, and the General was pressed to accept the post of president—"For the sake of the cause; for the sake of the testimony his name would bear; for the sake of the example it would be to his five hundred students." My husband was called out before he had finished his plea, and I was left in the library for a few moments alone with the General. I shall not easily forget the expression of profound humility on his face, as with a subdued voice he turned to me and said:

"Ah, my dear madam, I feel myself such a poor sinner in the sight of God that I cannot consent to be set up as a Christian example to any one. This is the real reason why I decline to do what the colonel urges so strongly."

He was in the act of saying grace at his own dinner-table when the fatal stroke fell which terminated his life.

It was not in General Lee's nature to entertain feelings of bitterness against any human being. As was the case with Stonewall Jackson, he never used the word "Yankee"—the term so generally applied through the South to the soldiers of the Northern army. He always spoke of them as the "Federals" or the "enemy." On the occasion of Mr. Greeley, Mr. O'Connor, and others coming to Richmond to offer bail for ex-President Davis, I heard him, with something more approaching to acrimony than I had ever been witness of, speak of some of the expressions used by Southern editors. "I condemn," he said, "such bitterness wholly. Is it any wonder the Northern journals should retort upon us as they do, when we allow ourselves to use such language as I found in some of our papers yesterday?"

As to the immediate personality of the man, we people of the South naturally enough think that, take him for all in all, physically, intellectually, socially, and morally, we never saw his equal. He was a superb specimen of manly grace and elegance. He had escaped that preciseness of manner which a whole life spent in military service is apt to give. There was about him a stately dignity, calm poise, absolute self-possession, entire absence of self-consciousness, and gracious consideration for all about him that made a combination of character not to be surpassed. His tall, erect figure, his bright color, his brilliant hazel eyes, his perfect white teeth (for he had never used tobacco), his at-

tractive smile, his chivalry of bearing, the musical sweetness of his pure voice, were attributes never to be forgotten by those who had once met him.

His domestic life was idyllic in its beautiful simplicity. His devotion to his invalid wife, who for many years was a martyr to rheumatic gout, was pathetic to see. He had her often conveyed to our various medicinal springs in Virginia, himself riding on horseback beside her carriage. I recall one instance in which he preceded her by a few days in order that he might have an apparatus prepared, under his skillful engineering, by means of which her invalid-chair was placed upon a little platform and carefully lowered into the bath, in order that the descent and ascent of steps might be avoided. His tenderness to his children, especially his daughters, was mingled with a delicate courtesy which belonged to an older day than ours—a courtesy which recalls the *preux chevalier* of knightly times. He had a pretty way of addressing his daughters, in the presence of other people, with a prefix which would seem to belong to the age of lace ruffles and side-swords.

"Where is my little Miss Mildred?" he would say on coming in from his ride or walk at dusk. "She is my light-bearer; the house is never dark if she is in it."

He was passionately fond of nature, and never wearied of riding about on Traveler among our beautiful Virginia hills and mountains, with one of his daughters invariably at his side. His delight in the early flush of the spring, in the rich glow of the summer, and in the superb coloring of our autumn landscape, was wonderfully fine and keen. "No words can express," says one of his daughters, "the intense enjoyment he would get out of a brilliant sunset."

He was fond of literature, and indulged all his life in a wide range of reading quite apart from the bearings of his profession. When at home he was always in the habit of reading aloud to his family. "My first and most intimate acquaintance with Sir Walter Scott's metrical romances," one of his daughters says, "came through papa. He read them to us when we were children, till we almost knew them by heart, and the best English classics were always within reach of his hand. One of the last winters of his life he read aloud to the family group the latest translation of the *Iliad* and the *Odyssey*."

General Lee possessed one quality which only those who came into close intimacy with him were much aware of—he had a delicious sense of humor. Many a student was turned aside from some perilous course by a sly shaft, feathered with his keen wit, or by some humor-

ous question which conveyed a gentle reproof, of which only he for whom the reproof was intended could understand the bearings. He could be very stern when it was necessary, but somehow his sternness never embittered.

When he became president of the college he immediately had morning prayers established in the chapel; and never during his incumbency was he known to be absent from them, if he was well and at home. The only things with which he ever grew impatient were self-indulgence and failure in duty. The voice of duty was to him the voice of God. Under no circumstances was he willing to disobey it, nor could he understand how others could be. This was something he continually impressed upon his students. What is duty to God and man, and how to do that duty, were the two leading questions of his life. His persistent assiduity in giving himself up to every detail of college discipline and life was so scrupulous as sometimes to lead to the suggestion on the part of professors of a little more indulgence towards himself, but they never succeeded in getting him to relax the rigid rules by which he governed every action.

One of the last acts of his life was a filial one. Accompanied by his daughter Agnes he went to Florida to visit the grave of his father, "Light-Horse Harry Lee." This journey—his last earthly one—was a sort of sacred pilgrimage. As he returned from Florida he sought out, in North Carolina, the final resting-place of his lovely daughter Annie, who had died in that State in the early freshness of her beautiful girlhood, just at the moment when her father was winning his most brilliant successes. Agnes told me, when she came home, of her father's extreme unwillingness to be made a hero of anywhere, and of the reluctance he manifested, which it took many pleas to overcome, to show himself to the crowds assembled at every station along his route who pressed to catch a sight of him.

"Why should they care to see me," he would say, when urged to appear on the platform of the train—"why should they care to see me? I am only a poor old Confederate." This feeling he carried with him to the latest hour of his life.

One who had been a member of his staff, and who was present in the death-chamber most of the time during his last illness, told me how impressed he was with the General's unwillingness to give any expression to his thought. "Not," he said, "that he was incapable of speaking; but a supreme reticence, that was to me very noble, held him back. He seemed averse to any utterance of the sacred secrets of his soul, lest they should afterwards be spoken aloud in the ear of the world."

Margaret J. Preston.

CAN THE EMPEROR FORGET?

RUMBLE of drums in the flashing and crashing of battle,
Rushing of horses, with foam upon nostrils and flanks;
Clashing of bayonets, striking of swords, and the rattle
Of wrath in the standing, of death in the fast-falling ranks.

Trample the blood in the turf till the earth is afire,
Burning in gore: be it English or French, it is blood.
Profligate waste of it, spendthrift contempt of it! Dire
The flow of it, thus making crimson the Waterloo mud!

"Death to the enemy!" Children may suffer and languish;
Wives may speak softly of one who is baring his heart.
"Death to the enemy! Forward!" No thought of the anguish
Of wounds, with the cannon-wheels pressing their red sides apart.

What of the Emperor? Austerlitz, Jena, Marengo?
Can he foresee that the conquering eagle must fall,
Beating his wings on the traitor wind? Forward the men go—
"Viva Napoleon! Death to the enemy, all!"

Falling like rain come the bullets, and falling like flowers
Drop the French musketry, rising no more from the plain.
See the firm brow of Napoleon: massive it lowers.
Shout for his victory! Never, ah, never again!

Back from the mud that is crimson, and back from the corpses
That lie by the cannon with eyes that can stare at the sun
Without shrinking. "Awake! They are leaving you, dumb-gazing forces!"
Aye, shout in their ears, but they move not. Their battle is done.

Done. And the Emperor? Exiled. Napoleon defeated?
He who has conquered the world? Say that rather the sun
Fell from his course and was chained by the earth. Fate has meted
His portion. March back what is left of you, soldiers! 'T is done.

Far in that isle he is ceaselessly walking his prison,
As a lion his cage, who is thinking of night-dews that wet
His mane, and the servient sun that to dry it had risen.
Monarch then, prisoner now. Can the lion forget?

Hark to the guns, that are greeting with long detonation
Him who is back from the stranger; is home again—home!
"Vive l'Empereur!" Hush! What mean you, fool? This coronation
Is dust crowned with dust, and the sky is the Invalides' dome.

"Vive l'Empereur!" Will they cease in their idiot babble?
Never more "Vive l'Empereur!" Men, he lies on his shield,
Broad-browed and yellow. Those hands are so white; did they dabble
In men's blood? And hold,—did those thin lips cry "Fire!" on the field?

Hark to the resonant guns! Remember, my brothers,
Thundering Waterloo's cannon and bright bayonets!
Oh, how they rattled! To him they were once as a mother's
Lullaby. "Vive l'Empereur!" Silence. Ah, he forgets!

Louise Morgan Smith.

ABRAHAM LINCOLN: A HISTORY.¹

THE POMEROY CIRCULAR — THE CLEVELAND CONVENTION — THE RESIGNATION OF CHASE.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE POMEROY CIRCULAR.

BEFORE the close of the year 1863 the public mind became greatly preoccupied with the subject of the next presidential election. Though the general drift of opinion was altogether in favor of intrusting to Mr. Lincoln the continuation of the work which he had thus far so well conducted, this feeling was by no means unanimous. It will seem strange to future students of the events of this time that the opposition in the Republican party to Mr. Lincoln, whose name will stand in history as the liberator of the slaves, came almost entirely from the radical antislavery element. The origins of this opposition have been so fully stated in other portions of this work, that it is not worth while to set them forth at any length in this place. They were principally the action of the President in regard to the administration of affairs in Missouri; the conflict between General Frémont and the Missouri conservatives, and between General Schofield and the Missouri radicals; the retention in command of various generals, who, from the radical point of view, had "no heart in the cause"; the deliberation with which the great antislavery acts of the President were performed; and, in general, the dissatisfaction with the slow progress of the war, of eager and ardent spirits imperfectly informed as to the processes of the Government and the facts of the situation. At the end of the year 1863 and the beginning of the following year all these elements of discord were seeking a rallying-point. This it was not easy to find. Every one sufficiently acquainted with practical politics to note the drift of public opinion saw the hopelessness of contending against the popularity of the President. There was not a Republican general in the field, of sufficient prominence to be thought of, who would give the least encouragement for the use of his name against Mr. Lincoln. In neither House of Congress was there a statesman who for a moment would enter into such a contest; and in the higher circles of the Administration there was only one man so short-sighted as not to perceive the expediency of the President's

renomination and the impossibility of preventing it. Mr. Chase alone had the indiscretion to encourage the overtures of the malcontents, and the folly to imagine that he could lead them to success. Pure and disinterested as he was, and devoted with all his energies and powers to the cause of the country, he was always singularly ignorant of the current of public thought and absolutely incapable of judging men in their true relations. He was surrounded by sycophants who constantly assured him of his own strength with the people, and who convinced him at last that all manifestations to the contrary were the result of mystifications set on foot by his enemies. He regarded himself as the friend of Mr. Lincoln; to him and to others he made strong protestations of friendly feeling, which he undoubtedly thought were sincere; but he held so poor an opinion of the President's intellect and character in comparison with his own, that he could not believe the people so blind as deliberately to prefer the President to himself. In November, 1863, he wrote to his son-in-law, Governor Sprague: "If I were controlled by merely personal sentiments, I should prefer the reelection of Mr. Lincoln to that of any other man; but I doubt the expediency of reëlecting anybody, and I think a man of different qualities from those the President has will be needed for the next four years." Of course, he adds, "I am not anxious to be regarded as that man; and I am quite willing to leave that question to the decision of those who agree in thinking that some such man should be chosen." To another he wrote early in December: "I have not the slightest wish to press any claims upon the consideration of friends or the public. There is certainly a purpose, however, to use my name, and I do not feel bound to object to it."² He never admitted to himself that he had any personal desire for the place, and in this letter he continued: "Were the post in which these friends desire to place me as low as it is high, I should feel bound to render in it all the service possible to our common country." Yet he always felt that he could render better service in the higher places than in the lower, and when it was once in contemplation

to offer him a seat on the Supreme Bench he distinctly intimated he would accept no place there but that of Chief-Justice. There never was a man who found it so easy to delude himself. He believed that he was indifferent to advancement and anxious only for the public good; yet in the midst of his enormous labors he found time to write interminable letters to every part of the country, all protesting his indifference to the Presidency but indicating his willingness to accept it, and painting pictures so dark of the chaotic state of affairs among his colleagues that the irresistible inference was that only he could save the country. For instance, he wrote to the editor of a religious newspaper, saying:

Had there been here an Administration in the true sense of the word — a President conferring with his Cabinet and taking their united judgments, and with their aid enforcing activity, economy, and energy in all departments of public service—we could have spoken boldly and defied the world. But our condition here has always been very different. I preside over the funnel; everybody else, and especially the Secretaries of War and the Navy, over the spigots—and keep them well open, too. Mr. Seward conducts the foreign relations with very little let or help from anybody. There is no unity and no system, except so far as it is departmental. There is progress, but it is slow and involuntary; just what is coerced by the irresistible pressure of the vast force of the people. How, under such circumstances, can anybody announce a policy which can only be made respectable by union, wisdom, and courage?¹

A few days later he wrote to another:

The Administration cannot be continued as it is. There is, in fact, no Administration, properly speaking. There are departments and there is a President. The latter leaves administration substantially to the heads of the former, deciding himself comparatively few questions. These heads act with almost absolute independence of each other.²

He could not bring himself to feel that the universal demonstrations in favor of the reelection of Mr. Lincoln were genuine. He regarded himself all the while as the serious candidate, and the opposition to him as knavish and insincere. To one of his adherents he wrote:

It is impossible to reform and investigate without stirring up slanderers and revilers, both among those whose wrong-doings are exposed and unrighteous profits taken away, and among those, too, who think they see a good chance to take advantage of clamor to the injury of a public man, who, they fear, stands too well with the people.³

To another adherent in Ohio he wrote:

I cannot help being gratified by the preference expressed for me in some quarters, for those who express it are generally men of great weight, and high character, and independent judgment. . . . They think there will be a change in the current, which, so far as it is not spontaneous, is chiefly managed by the Blairs.⁴

He said that he should be glad to have Ohio decidedly on his side, and that if Ohio should express a preference for any other person he would not allow his name to be used. This was quite an unnecessary engagement, as no candidate could possibly be nominated without the support of his own State.

Indifferent as he claimed to be in regard to his personal prospects, he yet wrote on the 6th of February⁵ promising to try to find a place for a man recommended by the editor of the "Evening Post," and complaining with some bitterness that that paper had not uttered a kind word in reference to him for some months past. There was, in fact, no limit to these overtures of the Secretary in every direction which he thought might be serviceable to him. A few days after the death of Archbishop Hughes, we find him writing to Archbishop Purcell of Cincinnati, reporting the efforts which he is making in every quarter to have the Western prelate appointed the successor of the dead archbishop.⁶ On the 18th of January he wrote to a friend of his in Toledo, Ohio, Mr. James C. Hall, formally announcing his candidacy for the Presidency. He told him that a committee of prominent senators, representatives, and citizens had been organized to promote his election; that a sub-committee had conferred with him, and he had consented to their wishes. He then went on to say:

If I know my own heart, I desire nothing so much as the suppression of this rebellion and the establishment of union, order, and prosperity on sure and safe foundations; and I should despise myself if I felt capable of allowing any personal objects to influence me to any action which would affect, by one jot or tittle, injuriously, the accomplishment of those objects. And it is a source of real gratification to believe that those who desire my nomination desire it on public grounds alone, and will not hesitate in any matter which may concern me to act upon such grounds and on such grounds only.

He added that he desired the support of Ohio, and that if he did not receive it he would cheerfully acquiesce.

All through the winter this quasi-candidacy continued. It seemed of the utmost importance to the Secretary and his few adherents, though

it really formed an imperceptible eddy beside the vast current in which the will of the people was sweeping forward to its purpose. Being confined exclusively to politicians, it had, of course, its principal manifestation in the city of Washington. It played its little part in the election of Speaker of the House of Representatives. An attempt was made to identify Mr. Colfax, the most popular candidate for that office, with the adherents of Mr. Chase; but upon hearing of this he at once sought an audience with the President and positively repudiated any such connection. When Congress had organized, the message of the President was received with an enthusiasm which for the moment swept out of sight every trace of opposing opinion. From that moment there was no further question in regard to the Republican nomination.

There was at one time an effort on the part of some of the leading spirits in the Union League, a secret Republican organization which had been very zealous and effective in political work throughout the Union, to commit it to some measure hostile to Mr. Lincoln. This had alarmed even so experienced and astute an observer as Thurlow Weed, who sent to Mr. Seward in the autumn of 1863 a warning that "loyal leagues, into which Odd Fellows and Know Nothings rush, are fixing to control delegate appointments for Mr. Chase."¹ Mr. Seward accepted this warning somewhat too readily, induced by his inveterate anti-masonic prejudices; these fears had no substantial foundation. Some of the leaders of the League, sympathizing strongly with the radicals of Missouri, had indeed from time to time made efforts to commit the order against the President; but such attempts failed there, as elsewhere, on account of the overwhelming tide of contrary opinion, and when the principal chapter of the order met in Washington on the 10th of December, they elected a list of officers who were almost all either friends of Mr. Lincoln or men of sufficient sagacity not to oppose him.

From the beginning Mr. Lincoln had been fully aware of Mr. Chase's candidacy and of everything that was done for its promotion. It was impossible for him to remain unconscious of it; and although he discouraged all conversation on the subject and refused to read letters relating to it, he could not entirely shut the matter out from his cognizance. He had his own opinion of the taste and judgment displayed by Mr. Chase in his criticisms of himself and of his colleagues in the Cabinet; but he took no notice of them.

I have determined [he said] to shut my eyes, so far as possible, to everything of the sort. Mr. Chase

makes a good Secretary, and I shall keep him where he is. If he becomes President, all right. I hope we may never have a worse man. I have observed with regret his plan of strengthening himself. Whenever he sees that an important matter is troubling me, if I am compelled to decide in a way to give offense to a man of some influence, he always ranges himself in opposition to me and persuades the victim that he has been hardly dealt with, and that he would have arranged it very differently. It was so with General Frémont, with General Hunter when I annulled his hasty proclamation, with General Butler when he was recalled from New Orleans, with these Missouri people when they called the other day. I am entirely indifferent as to his success or failure in these schemes so long as he does his duty at the head of the Treasury Department.²

When Rosecrans was removed from the command of the Army of the Cumberland, Mr. Chase pursued the same course. His spiteful comments on that act were reported to the President, who simply laughed at the zealous friend who brought him the news. When told that such tactics might give Mr. Chase the nomination, he said he hoped the country would never do worse. He regretted, however, that the thing had begun, because although it did not annoy him, his friends thought it ought to. He went on appointing by the dozen Mr. Chase's partisans and adherents to places in the Government. He knew perfectly what he was doing, and allowed himself the luxury of a quiet smile as he signed their commissions. He heard more of such gossip than was amusing or agreeable to him. He said on one occasion, "I wish they would stop thrusting that subject of the Presidency into my face. I do not want to hear anything about it."

Of course one reason for the magnanimity with which Mr. Lincoln endured this rivalry of his able and ambitious minister of finance was his consciousness of the inequality of the match between them. Although his renomination was a matter in regard to which he refused to converse much, even with intimate friends, he was perfectly aware of the drift of things. In capacity of appreciating popular currents and in judgment of individual character Mr. Chase was as a child beside him; and he allowed the opposition to himself in his own Cabinet to continue, without question or remark, with all the more patience and forbearance because he knew how feeble it was.

The movement in favor of Mr. Chase culminated in the month of February in a secret circular signed by Senator Pomeroy of Kansas, and widely circulated through the Union. It is admitted by Mr. Chase's sincerest admirers that the weak point of his character was the incapacity shown in his judgment of men and

¹ MS.

² J. H., Diary, Oct. 16, 1863.

his choice of intimates; and in no instance was this defect more glaringly exhibited than in the selection of such a man as Senator Pomeroy to conduct his canvass for the Presidency. The two Kansas senators, Lane and Pomeroy, hated each other intensely, and as long as they were in office together wrangled persistently over the patronage of their State. The President once wrote to Pomeroy, after declining an interview with him :

I wish you and Lane would make a sincere effort to get out of the mood you are in. It does neither of you any good; it gives you the means of tormenting my life out of me, and nothing else.¹

Each thought the other got the advantage of him, each abused the President roundly behind his back; but Lane, being the more subtle and adroit politician of the two, never allowed himself to be put in an attitude of open hostility to the Administration. Pomeroy's resentment drove him at last into a mood of sullen animosity towards the President, and it was under his weak leadership that the elements of opposition to Mr. Lincoln at last came together. As the confidential circular issued by the committee of which Pomeroy was the head was the most considerable effort made within the Republican party to defeat the renomination of Mr. Lincoln, we give the document, to show upon how slender a foundation this opposition was based.

The movements recently made throughout the country to secure the renomination of President Lincoln render necessary counter-action on the part of those unconditional friends of the Union who differ from the policy of the Administration.

So long as no efforts were made to forestall the political action of the people, it was both wise and patriotic for all true friends of the Government to devote their influence to the suppression of the rebellion; but when it becomes evident that party and the machinery of official influence are being used to secure the perpetuation of the present Administration, those who conscientiously believe that the interests of the country and of freedom demand a change in favor of vigor and purity and nationality, have no choice but to appeal at once to the people before it is too late to secure a fair discussion of principles.

Those in behalf of whom this appeal is made have thoughtfully surveyed the political field, and have arrived at the following conclusions: *First*, that even were the reelection of Mr. Lincoln desirable, it is practically impossible against the union of influences which will oppose him. *Second*, that should he be reelected, his manifest tendency towards compromises and temporary expedients of policy will become stronger during a second term than it has been in the first, and the cause of human liberty, and the dignity of the nation, suffer proportionately, while the war may continue to languish

¹ Lincoln to Pomeroy, May 12, 1864. MS.

during his whole Administration, till the public debt shall become a burden too great to be borne. *Third*, that the patronage of the Government through the necessities of the war has been so rapidly increased, and to such an enormous extent, and so loosely placed, as to render the application of the one-term principle absolutely essential to the certain safety of our republican institutions. *Fourth*, that we find united in Hon. Salmon P. Chase more of the qualities needed in a President during the next four years than are combined in any other available candidate. His record is clear and unimpeachable, showing him to be a statesman of rare ability and an administrator of the highest order, while his private character furnishes the surest available guarantee of economy and purity in the management of public affairs. *Fifth*, that the discussion of the Presidential question, already commenced by the friends of Mr. Lincoln, has developed a popularity and strength in Mr. Chase unexpected even to his warmest admirers; and while we are aware that its strength is at present unorganized, and in no condition to manifest its real magnitude, we are satisfied that it only needs a systematic and faithful effort to develop it to an extent sufficient to overcome all opposing obstacles. For these reasons the friends of Mr. Chase have determined on measures which shall present his claims fairly and at once to the country. A central organization has been effected, which already has its connections in all the States, and the object of which is to enable his friends everywhere most effectually to promote his elevation to the Presidency. We wish the hearty coöperation of all those who are in favor of the speedy restoration of the Union on the basis of universal freedom, and who desire an administration of the Government during the first period of its new life which shall to the fullest extent develop the capacity of free institutions, enlarge the resources of the country, diminish the burdens of taxation, elevate the standard of public and private morality, vindicate the honor of the Republic before the world, and in all things make our American nationality the fairest example for imitation which human progress has ever achieved. If these objects meet your approval, you can render efficient aid by exerting yourself at once to organize your section of the country, and by corresponding with the chairman of the National Executive Committee for the purpose either of receiving or imparting information.

Of this circular, sent broadcast over the country, many copies of course fell into the hands of the President's friends, and they soon began to come to the Executive Mansion. The President, who was absolutely without curiosity in regard to attacks upon himself, refused to look at them, and they accumulated unread in the desk of his secretary. At last, however, the circular got into print, and it appeared in the "National Intelligencer" of Washington on the morning of the 22d of February. Mr. Chase at once wrote to the President to assure him that he had no knowledge of the existence of the letter before seeing it in print. He gave a brief account of the solicitations of his friends, in compliance with which he had

consented to be a candidate for the Presidency, adding, with his usual nobility of phrase :

I have never wished that my name should have a moment's thought in comparison with the common cause of enfranchisement and restoration, or be continued before the public a moment after the indication of a preference by the friends of that cause for another. I have thought this explanation due to you as well as to myself. If there is anything in my action or position which in your judgment will prejudice the public interests under my charge, I beg you to say so. I do not wish to administer the Treasury Department one day without your entire confidence. For yourself I cherish sincere respect and esteem, and, permit me to add, affection. Differences of opinion as to administrative action have not changed these sentiments, nor have they been changed by assaults upon me by persons who profess themselves the special representatives of your views and policy. You are not responsible for acts not your own ; nor will you hold me responsible except for what I do or say myself. Great numbers now desire your reelection. Should their wishes be fulfilled by the suffrage of the people, I hope to carry with me into private life the sentiments I now cherish, whole and unimpaired.

The President next day acknowledged the receipt of this letter, and promised to answer it more fully when he could find time to do so. The next week he wrote at greater length :¹

I would have taken time to answer yours of the 22d sooner, only that I did not suppose any evil could result from the delay, especially as, by a note, I promptly acknowledged the receipt of yours, and promised a fuller answer. Now, on consideration I find there is really very little to say. My knowledge of Mr. Pomeroy's letter having been made public came to me only the day you wrote, but I had, in spite of myself, known of its existence several days before. I have not yet read it, and I think I shall not. I was not shocked or surprised by the appearance of the letter, because I had had knowledge of Mr. Pomeroy's committee and of secret issues which, I supposed, came from it and of secret agents who, I supposed, were sent out by it, for several weeks. I have known just as little of these things as my friends have allowed me to know. They bring the documents to me, but I do not read them ; they tell me what they think fit to tell me, but I do not inquire for more. I fully concur with you that neither of us can be justly held responsible for what our respective friends may do without our instigation or countenance ; and I assure you, as you have assured me, that no assault has been made upon you by my instigation or with my countenance. Whether you shall remain at the head of the Treasury Department is a question which I do not allow myself to consider from any standpoint other than my judgment of the public service, and, in that view, I do not perceive occasion for a change.²

¹ Lincoln to Chase, Feb. 29, 1864. MS.

² After this correspondence had passed, Mr. Pomeroy, who, whatever his defects of character, did not lack courage, rose in his place in the Senate (March 10), reiterated with added energy his criticisms of the

Before the President wrote this letter the candidacy of Mr. Chase had already passed completely out of sight. In fact, it never could have been said to exist except in the imagination of Mr. Chase and a narrow circle of adherents. He was by no means the choice even of the great body of the radicals who were discontented with Mr. Lincoln. So early as the 17th of December, 1863, Mr. Medill, the editor of the "Chicago Tribune," who represented the most vehement Republican sentiment of the North-west, wrote :

I presume it is true that Mr. Chase's friends are working for his nomination, but it is all lost labor ; Old Abe has the inside track so completely that he will be nominated by acclamation when the convention meets. . . . The people will say to Chase : "You stick to finance and be content until after 1868" ; and to Grant, "Give the rebels no rest ; put them through ; your reward will come in due time" ; but Uncle Abe must be allowed to boss the reconstruction of the Union.

And from the opening of the year 1864 the feeling in favor of the renomination of Lincoln grew so ardent and so restless that it was almost impossible for the most discreet of the Republican leaders to hold the manifestations of the popular preference in check. An attempt was made by the Treasury officials in Indiana to prevent the State convention which met in February from declaring for Lincoln, but it was all in vain. Wherever any assembly of Republicans came together fresh from the people the only struggle was as to who should get first on the floor to demand the President's renomination. Mr. Chase's principal hope was, of course, founded upon the adhesion of his friends in Ohio ; but the result there, as elsewhere, proved how blind he was to the course of politics. The governor of the State wrote to the President³ that he was mortified to hear that he had been set down as a Chase man.

The fact that Mr. Chase has been laboring, for the past year at least, with an eye single to promoting his own selfish purposes, totally regardless of the consequences to the Government, as I believe has been the case, is alone sufficient to induce me to oppose him ; but aside from this, the policy inaugurated under your lead must be maintained, and it would be suicidal to change leaders in the midst of the contest.

This is only a specimen of dozens of letters which came from the leading men of the State, who had been relied upon by Mr. Chase to promote his canvass ; and finally the feeling grew so strong in Ohio that although no au-

President and his eulogy of Mr. Chase, and claimed that the latter had nothing to do with the circular, but had been "drafted into the service" without his consent.

³ Tod to Lincoln, Feb. 24, 1864.

thorized convention of Republicans was to meet at that time, the Union members of the legislature took the matter in hand and gave, on the 25th of February, the *coup de grâce* to the Secretary's candidacy. They held a full caucus, and nominated Mr. Lincoln for reelection, at the demand, as they said, of the people and the soldiers of Ohio. The State of Rhode Island, which Mr. Chase had expected the personal influence of his son-in-law, Governor Sprague, to secure for him, also made haste to range itself with the other States of the North; and as more than a month before the great State of Pennsylvania had by the unanimous expression of the Union members of its legislature declared for Lincoln, the Secretary at last concluded that the contest was hopeless, and wrote another letter to Mr. Hall, referring to his former statement that should his friends in Ohio manifest a preference for another he would acquiesce in that decision, and adding:

The recent action of the Union members of our legislature indicates such a preference. It becomes my duty, therefore,—and I count it more a privilege than a duty,—to ask that no further consideration be given to my name. It was never more important than now that all our efforts and all our energies should be devoted to the suppression of the rebellion, and to the restoration of order and prosperity, on solid and sure foundations of union, freedom, and impartial justice; and I earnestly urge all with whom my counsels may have weight to allow nothing to divide them while this great work, in comparison with which persons and even parties are nothing, remains unaccomplished.

In the closing line of this letter occurs the first intimation of that feeling of revolt against the Republican party which afterwards led Mr. Chase to seek the nomination of the Democrats. In numerous letters written during the spring he reiterated his absolute withdrawal from the contest, but indulged in sneers and insinuations against the President, which show how deeply he was wounded by his discomfiture.¹

THE CLEVELAND CONVENTION.

BEFORE the snows melted, it had become evident to the most narrow and malignant of Mr. Lincoln's opponents that nothing could

prevent his renomination by the Republican convention which was to meet at Baltimore in June. There was no voice of opposition to him in any organized Republican assembly, except in Missouri, and even there the large majority of radical Republicans were willing to accept the universal verdict of their party; but there were a few earnest spirits scattered throughout the country to whom opposition to the Administration had become the habit of a lifetime. There were others not so honest, who had personal reasons for disliking the President. To these it was impossible to stand quietly by and see Mr. Lincoln made his own successor without one last effort to prevent it. The result of informal consultations among them was the publication of a number of independent calls for a mass convention of the people to meet at Cleveland, Ohio, on the 31st of May, a week before the assembling of the Republican convention at Baltimore.

The two centers of this disaffection were in St. Louis and New York. In the former city it was composed of a small fraction of a faction. The large majority of those radical politicians who had been for two years engaged in the bitter struggle with Blair and his associates still retained their connection with the Republican party, and had no intention of breaking off their relations with the Union party of the nation. It was a small fraction of their number which issued its call to the disaffected throughout the nation. Harking back to the original cause of quarrel, they had attached themselves blindly to the personal fortunes of General Frémont; they now put themselves in communication with a small club of like-minded enthusiasts in New York called the "Central Frémont Club," and invited their radical fellow-citizens to meet them in convention at Cleveland. They made no pretense of any purpose of consultation or of independent individual action. The object stated in their call was "in order then and there to recommend the nomination of John C. Frémont for the Presidency of the United States, and to assist in organizing for his election." They denounced "the imbecile and vacillating policy of the present Administration in the con-

¹ In an article published in "The Galaxy," July, 1873, by Mr. J. M. Winchell, whom Mr. Schuckers in his "Life of Chase" calls the author of the Pomeroy circular (see Schuckers' "Life of Chase," p. 500), occurs this singular passage: "The movement in favor of the Secretary of the Treasury, Mr. Chase, had culminated in disaster; that gentleman's chief supporters, including his senatorial son-in-law, having manifested a plentiful lack of nerve or zeal, when the critical question became public, of arraying him against his official chief, and made haste to take him at his word of declination, diplomatically spoken, in order to rouse their flagging

spirits." In a letter of the 7th of May (Chase to Riddle, Warden, p. 576) Mr. Chase said: "I am trying to keep all Presidential aspiration out of my head. I fancy that as President I could take care of the Treasury better with the help of a Secretary than I can as Secretary without the help of a President. But our Ohio folks don't want me enough, if they want me at all, to make it proper for me to allow my name to be used. I hope the time is not distant when I can honorably separate myself from political affairs altogether, leaving the new era to the new men whom God may raise up for it."

duct of the war, . . . its treachery to justice, freedom, and genuine democratic principles in its plan of reconstruction, whereby the honor and dignity of the nation have been sacrificed to conciliate the still existing and arrogant slave power and to further the ends of an unscrupulous partisan ambition"; they demanded the immediate extinction of slavery throughout the whole United States by congressional action, the absolute equality of all men before the law, and a vigorous execution of the laws confiscating the property of the rebels. This circular was stronger in its epithets than in its signatures; the names of the signers were, as a rule, unknown to fame. One column was headed by the name of the Rev. George B. Cheever, another by the apparently farcical signature of "Pantaleon Candidus." Perhaps the most important name affixed to this document was that of Mrs. Elizabeth Cady Stanton, who wrote desiring to sign her name to the call, "taking it for granted," she said, "that you use 'men' in its largest sense." She informed the committee that they had "lifted politics into the sphere of morals and religion, and made it the duty of all true men and women to unite with them in building up the New Nation." She spelled "new nation" with capital letters, and gave occasion for a malicious accusation that her letter was merely an advertisement of a radical Frémont paper of that name which was then leading a precarious existence in New York. Mr. Samuel Bowles inferred from her letter that the convention was to be composed of "the gentler sex of both genders."

Another call was issued by the People's Committee of St. Louis, though signed by individuals from several other States. These gentlemen felt themselves

impelled on their own responsibility to declare to the people that the time had come for all independent men, jealous of their liberties and of the national greatness, to confer together and unite to resist the swelling invasion of an open, shameless, and unrestrained patronage which threatens to engulf under its destructive wave the rights of the people, the liberty and dignity of the nation;

declaring that they did not recognize in the Baltimore convention the essential conditions of a truly national convention: it was to be held, they thought, too near Washington and too far from the center of the country, its mode of convocation giving no guarantee of wise or honest deliberation. This circular was signed by B. Gratz Brown of Missouri and by a number of old-time abolitionists in the East, though its principal signers were from the ranks of the most vehement German radicals of St. Louis. Still another call was drawn up and issued by Lucius Robinson, Controller of the

State of New York. The terms of this address were properly applicable to all the Administration Republicans. It called upon the

citizens of the United States who mean to uphold the Union, who believe that the rebellion can be suppressed without infringing the rights of individuals or of States, who regard the extinction of slavery as among the practical effects of the war for the Union, and favor an amendment of the Federal Constitution for the exclusion of slavery, and who demand integrity and economy in the administration of government.

The signers of this call approached the question from an entirely different point of view from that of the radical Germans of St. Louis. In their view Mr. Lincoln, instead of being a craven and a laggard, was going entirely too fast and too far. Their favorite candidate was General Grant. Mr. Wendell Phillips, the stormy petrel of all our political disturbances, found enjoyment even in this teapot tempest. He strongly approved the convention at Cleveland, and constructed beforehand a brief platform for it.

Subdue the South as rapidly as possible. The moment territory comes under our flag reconstruct States thus: confiscate and divide the lands of rebels; extend the right of suffrage broadly as possible to whites and blacks; let the Federal Constitution prohibit slavery throughout the Union, and forbid the States to make any distinction among their citizens on account of color or race.¹

He also advised the nomination "for the Presidency of a statesman and a patriot"; by which terms he intended to exclude Mr. Lincoln.

The convention might have met, deliberated, and adjourned for all the people of the United States cared about it, had it not been for the violent and enthusiastic admiration it excited in Democratic newspapers and the wide publicity they gave to its proceedings. They described it as a gathering of the utmost dignity and importance; they pretended to discern in it a distinct line of cleavage through the middle of the Republican party. For several days before it assembled they published imaginary dispatches from Cleveland representing the streets and hotels as crowded with a throng of earnest patriots determined on the destruction of the tyrant Lincoln. The papers of Cleveland tell another story. There was no sign of political upheaval in the streets or hotels of that beautiful and thriving city. Up to the very day of the meeting of the convention there was no place provided for it, and when the first stragglers began to arrive they found no preparation made to receive them. All the public halls of any consequence were

¹ Phillips to Stallo, April 21.

engaged, and the convention at last took shelter in a small room called "Chapin's Hall." Its utmost capacity was five or six hundred persons, and it was much too large for the convention; delegates and spectators together were never numerous enough to fill it. The delegates were for the most part Germans from St. Louis. They held a preliminary meeting the night before the convention opened, and passed vigorous and loyal resolutions of the usual character. To the resolution that the rebellion must be put down, some one moved to amend by adding the words, "with God's assistance," which was voted down with boisterous demonstrations. *Non tali auxilio* was the sentiment of these materialist Missourians.

The convention met at 10 o'clock in a hall only half filled. Hoping for later arrivals, they delayed organization until nearly noon. The leaders who had been expected to give character and direction to the movement did not appear. It was hoped until the last moment that Mr. Greeley would be present, though he had never given any authority for such an expectation. He said, in answer to an inquiry, that "the only convention he took any interest in was that one Grant was holding before Richmond." Mr. Gratz Brown, the real head of the movement, was also absent. Emil Pretorius and Mr. Cheever, who, from the two extremities of the country, had talked most loudly in favor of the convention, staid away. The only persons present whose names were at all known were General John Cochrane of New York; Colonel Moss, a noisy politician from Missouri; Caspar Butz of Illinois; two or three of the old-school abolitionists; and several (not the weightiest) members of the staff of General Frémont. The delegates from the German Workingmen's Union of Chicago were discredited in advance by the publication of a card from the majority of the association they pretended to represent, declaring their intention to support the nominees of the Baltimore convention. Some one moved, as usual, the appointment of a committee on credentials; but as no one had any valid credentials, it was resolved instead to appoint a committee to enroll the names of the delegates. No action was taken even upon this proposition, because the act of enrollment would have been too fatal a confession of weakness. The committee on organization reported the name of General Cochrane for president of the convention, who made a discreet and moderate speech. He was a man of too much native amiability of character to feel personal bitterness towards any one, and too adroit and experienced a politician to commit himself irrevocably against any contingency. He had, in fact, thrown an anchor to windward by visiting the President

before the convention met and assuring him of his continued friendship. A delegate from Iowa, who seemed to have taken the convention seriously, then offered a resolution that no member of it should hold, or apply for, office under the next Administration—a proposition which was incontinently smothered. While waiting for the report of the committee on the platform, speeches were made by several delegates. Mr. Plumb attacked Mr. Lincoln as a pro-slavery politician. Colonel Moss of Missouri denounced him as the principal obstacle to freedom in America. A debate now arose on the proposition of the committee on rules that in voting for President the vote should be by States according to their representation in Congress. This was in the interest of the Grant delegates and was violently opposed by the Missourians, who formed a large majority of the convention, and had come for no purpose but to nominate Frémont. In the course of this debate the somewhat dreary proceedings were enlivened by a comic incident. A middle-aged man, who gave his name as Carr, addressed the chair, saying that he had come from Illinois as a delegate under the last call and did not want to be favored "a single mite." His ideas not flowing readily, he repeated this declaration three times in a voice continually rising in shrillness with his excitement. Something in his tone stirred the risibles of the convention, and loud laughter saluted the Illinoisan. As soon as he could make himself heard he cried out, "These are solemn times." This statement was greeted with another laugh, and the delegate now shouted at the top of his voice, "I believe there is a God who holds the universe in his hands as you would hold an egg." This comprehensive scheme of theocracy was too much for the Missouri agnostics, and the convention broke out in a tumult of jeers and roars. The rural delegate, amazed at the reception of his confession of faith, and apparently in doubt whether he had not stumbled by accident into a lunatic asylum, paused, and asked the chairman in a tone of great seriousness whether he believed in a God. The wildest merriment now took possession of the assembly, in the midst of which the Illinois theist solemnly marched down the aisle and out of the house, shaking from his feet the dust of that unbelieving convention. As soon as the laughing died away the committee on resolutions reported a set of judicious and, on the whole, undeniable propositions, such as, the Union must and shall be preserved, the constitutional laws of the United States must be obeyed, the rebellion must be suppressed by force of arms and without compromise. The platform did not greatly differ from that of Baltimore, except that it spoke in favor of one

Presidential term, declared that to Congress instead of the President belonged the question of reconstruction, and advocated the confiscation of the property of the rebels and its distribution among the soldiers.

The platform was adopted after brief debate, and a letter from Mr. Wendell Phillips was read to the convention, full of the vehement unreason which distinguished all the attempts of this matchless orator to apply his mind to the practical affairs of life. He predicted the direst results from four more years of Lincoln's administration.

Unless the South is recognized [which he apparently thought not improbable under Lincoln's nerveless policy], the war will continue; the taxation needed to sustain our immense debt, doubled by that time, will grind the laboring man of the North down to the level of the pauper labor of Europe; and we shall have a government accustomed to despotic power for eight years—a fearful peril to democratic institutions.

He denounced Mr. Lincoln's plan of reconstruction, and drew this comical parallel between him and Frémont:

The Administration, therefore, I regard as a civil and military failure, and its avowed policy ruinous to the North in every point of view. Mr. Lincoln may wish the end peace and freedom, but he is wholly unwilling to use the means which can secure that end. If Mr. Lincoln is reelected I do not expect to see the Union reconstructed in my day, unless on terms more disastrous to liberty than even disunion would be. If I turn to General Frémont, I see a man whose first act was to use the freedom of the negro as his weapon; I see one whose thorough loyalty to democratic institutions, without regard to race, whose earnest and decisive character, whose clear-sighted statesmanship and rare military ability, justify my confidence that in his hands all will be done to save the state that foresight, skill, decision, and statesmanship can do.

With characteristic reliance on his own freedom from prejudice, he continued:

This is an hour of such peril to the Republic that I think men should surrender all party and personal partiality, and support any man able and willing to save the state.

This was, in fact, the attitude of mind of the vast majority of the people of the country; but all it meant in Mr. Phillips's case was that he was willing to vote for either Frémont or Butler to defeat Lincoln.

A feeble attempt was now made by the delegates from New York, who called themselves "War Democrats," to induce the convention to nominate General Grant. Mr. Colvin read a letter from Mr. Lucius Robinson of New York—afterwards governor of that State—attacking the errors and blunders "of the weak Executive and Cabinet," and claiming that the

hope of the people throughout the country rested upon General Grant as a candidate. Although Mr. Colvin supplemented the reading of this letter by promising a majority of one hundred thousand for Grant in the State of New York, the Missourians cheered only the louder for Frémont; and when a last effort was made by Mr. Demers of Albany to nominate Grant, he was promptly denounced as a Lincoln hireling. Colonel Moss, in the uniform of a general of the Missouri militia, arose and put a stop to the profitless discussion by moving in a stentorian voice the nomination of General Frémont by acclamation, which was at once done; and the assembly completed its work by placing John Cochrane on the ticket as its candidate for Vice-President. No one present seemed to have any recollection of the provision of the Constitution which forbids both of these officers being taken from the same State.

The convention met again in the evening and listened to dispirited and discouraging speeches of ratification. The committee appointed in the afternoon to give a name to the new party brought in that of the "Radical Democracy," and in this style it was formally christened. An executive committee was appointed, of men destitute of executive capacity, and the convention adjourned.

Its work met with no response from the country. On the day of its meeting the German press of Cleveland expressed its profound disappointment at the smallness and insignificance of the gathering, and with a few unimportant exceptions the newspapers of the country greeted the work of the convention with an unbroken chorus of ridicule. Its absurdities and inconsistencies were indeed too glaring for serious consideration. Its movers had denounced the Baltimore convention as being held too early for an expression of the deliberate judgment of the people, and now they had made their own nominations a week earlier; they had claimed that Baltimore was not sufficiently central in situation, and they had held their convention on the northern frontier of the country; they had claimed that the Baltimore delegates were not properly elected, and they had assumed to make nominations by delegates not elected at all; they had denounced the Baltimore convention as a close corporation and invited the people to assemble in mass, and when they came together they were so few they never dared to count themselves; they had pretended to desire a stronger candidate than Mr. Lincoln, and had selected the most conspicuous failure of the war; they clamored loudly against corruption in office, and one of the leading personages in the convention was a member of Frémont's staff who had been

dismissed the service for dishonesty in Government contracts.

The whole proceeding, though it excited some indignation among the friends of Mr. Lincoln, was regarded by the President himself only with amusement. On the morning after the convention a friend, giving him an account of it, said that, instead of the many thousands who had been expected, there were present at no time more than four hundred men. The President, struck by the number mentioned, reached for the Bible which commonly lay on his desk, and after a moment's search, read these words:

And every one that was in distress, and every one that was in debt, and every one that was discontented, gathered themselves unto him; and he became a captain over them: and there were with him about four hundred men.¹

It was only among the Democratic papers that the Cleveland convention met with any support or applause. They gave it solemn and unmeasured eulogies for its independence, its patriotism, its sagacity, and even its numbers. The Copperhead papers in New York urged the radicals not to give up their attitude of uncompromising hostility to Lincoln, and predicted a formidable schism in the Republican party as a consequence of their action. But the motive of this support was so evident that it deceived nobody; and it was compared by a sarcastic observer to the conduct of the Spanish urchins accompanying a condemned Jew to an *auto-da-fé*, and shouting, in the fear that he might recant and rob them of their holiday, "Stand fast, Moses." The ticket of the two New Yorkers met with a gust of ridicule which would have destroyed more robust chances than theirs. "The New York Major-General John C. and the New York Brigadier-General John C." formed a matched ticket fated to laughter.

But if no one else took them seriously, the two generals at least saw in the circumstances no occasion for smiling. General Frémont promptly accepted his nomination.² He said:

This is not an ordinary election. It is a contest for the right even to have candidates, and not merely, as usual, for the choice among them. . . . The ordinary rights secured under the Constitution and the laws of the country have been violated, and extraordinary powers have been usurped by the Executive. It is directly before the people now to say whether or not the principles established by the Revolution are worth maintaining. . . . To-day we have in the country the abuses of a military dictation without its unity of action and vigor of execution—an Administration marked at home by disregard of constitutional rights, by its violation of

personal liberty and the liberty of the press, and, as a crowning shame, by its abandonment of the right of asylum.

The feebleness and want of principle of the Administration, its incapacity and selfishness, were roundly denounced by General Frémont, but he repudiated the cry of the Cleveland convention for confiscating the property of rebels. In conclusion he said:

If the convention at Baltimore will nominate any man whose past life justifies a well-grounded confidence in his fidelity to our cardinal principles, there is no reason why there should be any division among the really patriotic men of the country. To any such I shall be most happy to give a cordial and active support. . . . But if Mr. Lincoln should be nominated—as I believe it would be fatal to the country to indorse a policy and renew a power which has cost us the lives of thousands of men, and needlessly put the country on the road to bankruptcy—there will remain no other alternative but to organize against him every element of conscientious opposition with the view to prevent the misfortune of his reelection.

He therefore accepted the nomination, and informed the committee that he had resigned his commission in the army. General Cochrane accepted in briefer and more judicious language, holding the same views as his chief on the subject of confiscation. Later in the summer some of the partisans of Frémont, seeing that there was positively no response in the country to his candidacy, wrote to him suggesting that the candidates nominated at Cleveland and Baltimore should withdraw, and leave the field entirely free for a united effort for "a new convention which should represent the patriotism of all parties." They asked him whether in case Mr. Lincoln would withdraw he would do so.³ Although the contingency referred to was more than sufficiently remote, General Frémont with unbroken dignity refused to accede to this proposition.

Having now definitely accepted the Cleveland nomination [he said], I have not the right to act independently of the truly patriotic and earnest party who conferred that honor upon me. . . . It might, beside, have only the effect still further to unsettle the public mind and defeat the object you have in view if we should disorganize before first proceeding to organize something better.⁴

But a month later⁵ he seemed to have regarded the public mind as beyond the risk of unsettling, and he then wrote to his committee, withdrawing his name from the list of candidates. He could not, however, withhold a parting demonstration against the President.

¹ This, it will be remembered, was several years in advance of the famous reference to the Cave of Adulam in the British Parliament.

³ August 20.

⁴ August 25.

⁵ September 21.

In respect to Mr. Lincoln [he said] I continue to hold exactly the sentiments contained in my letter of acceptance. I consider that his administration has been politically, militarily, and financially a failure, and that its necessary continuance is a cause of regret for the country. There never was a greater unanimity in a country than was exhibited here at the fall of Sumter, and the South was powerless in the face of it; but Mr. Lincoln completely paralyzed this generous feeling. He destroyed the strength of the position and divided the North when he declared to the South that slavery should be protected. He has built up for the South a strength which otherwise they could have never attained, and this has given them an advocate on the Chicago platform.

With a final denunciation of the leading men whose reticence had "established for Mr. Lincoln a character among the people which leaves now no choice," General Frémont at last subsided into silence. General Cochrane on the same day withdrew his name from the Cleveland ticket, which had already passed into swift oblivion. His letter had none of the asperity which characterized that of his chief. He genially attacked the Chicago resolutions, and, while regretting the omissions of the Baltimore platform, he approved it in substance.

We stand within view [he said] of a rebellion suppressed, within hail of a country reunited and saved. War lifts the curtain and discloses the prospect. War has given to us Atlanta, and war offers to us Richmond. . . . Peace and division, or war and the Union. Other alternative there is none.

Two incidents which occurred in the spring of 1864 caused unusual excitement among both wings of the opposition to Mr. Lincoln. The one was the delivery of Arguelles to the Spanish authorities; the other was the seizure of two New York newspapers for publishing a forged proclamation. It was altogether natural that the pro-slavery Democrats and peace men should have objected to these acts, as one of the injured parties was a slave trader, and the others opponents of the war; but it was not the least of the absurdities of the Cleveland protestants that they also, in their anxiety to find a weapon against the President, at the very moment that they were assailing him for not overriding all law and precedent in obedience to their demand, still belabored him for these instances of energetic action in the very direction in which they demanded that he should proceed.

The case of Arguelles was a perfectly clear one; and if the surrender of a criminal is ever justified as an exercise of international comity in the absence of treaty stipulations, no objections could reasonably be made in this instance. He was a colonel in the Spanish army and lieutenant-governor of the district of Colon in Cuba. He had captured a cargo of African slaves in his official capacity, and had received

much credit for his efficiency and a considerable sum of money as his share of the prize. He went to New York immediately afterwards and purchased a Spanish newspaper which was published there; but after his departure from Cuba it was ascertained that in beginning so expensive a business in New York he did not rely exclusively upon the money he had received from the Government, but that in concert with a curate of Colon he had sold one hundred and forty-one of the recaptured Africans, had put the money in his own pocket, and had officially reported them as having died of small-pox. The Cuban Government laid these facts before the State Department at Washington, and represented that the return of this miscreant to Cuba was necessary to secure the liberation of the unfortunate victims of his cruelty and greed. It was impossible to bring the matter before the courts, as no extradition treaty existed at that period between Spain and the United States, and the American authorities could not by any legal procedure take cognizance of the crime. The President and Mr. Seward at once assumed the responsibility of acting in the only way indicated by the laws of common humanity and international courtesy. Arguelles was arrested in New York by the United States marshal, put in charge of a Spanish officer commissioned for the purpose, and by him taken to Havana. The action of the Government was furiously attacked by all the pro-slavery organs. A resolution was introduced by Mr. Johnson in the Senate demanding an explanation of the circumstances.¹ Mr. Seward answered,² basing the action of the Government upon the stipulations of the ninth article of the treaty of 1842 with Great Britain, by which the two countries agreed to use all the measures in their power to close the market for slaves throughout the world, and added:

Although there is a conflict of authorities concerning the expediency of exercising comity towards a foreign government by surrendering, at its request, one of its own subjects charged with the commission of crime within its territory, and although it may be conceded that there is no obligation to make such a surrender upon a demand therefor, unless it is acknowledged by treaty or by statute law, yet a nation is never bound to furnish asylum to dangerous criminals who are offenders against the human race; and it is believed that if in any case the comity could with propriety be practiced, the one which is understood to have called forth the resolution furnished a just occasion for its exercise.

The Captain-General of Cuba, on the arrival of Arguelles, sent his thanks to Mr. Seward³

¹ "Congressional Globe," May 26, 1864.

³ McPherson, "History of the Rebellion," p. 335.

for the service which he had rendered to humanity by furnishing the medium through which a great number of human beings will obtain their freedom whom the desertion of the person referred to would have reduced to slavery. His presence alone in this island a very few hours has given liberty to eighty-six.

The grand jury of New York nevertheless indicted Marshal Murray for the arrest of Arguelles on the charge of kidnapping. The marshal pleaded the orders of the President as the authority for his action, and based upon this a petition that the case be transferred to the United States court; and although the judges before whom he was taken, who happened to be Democrats, denied this petition, the indictment was finally quashed, and the only result of the President's action was the denunciation which he received in the Democratic newspapers, combined with the shrill treble of the clamor from the Cleveland convention.

The momentary suppression of the two New York newspapers, of which mention has been made, was a less defensible act, and arose from an error which was, after all, sufficiently natural on the part of the Secretary of War. On the 19th of May the "*Journal of Commerce*" and the "*World*," two newspapers which had especially distinguished themselves by the violence of their opposition to the Administration, published a forged proclamation signed with the President's name calling in terms of exaggerated depression not far from desperation for four hundred thousand troops. It was a scheme devised by two young Bohemians of the press, probably with no other purpose than that of making money by stock-jobbing. In the tremulous state of the public mind which then prevailed, in the midst of the terrible slaughter of Grant's opening campaign, the country was painfully sensitive to such news, and the forged proclamation, telegraphed far and wide, accomplished for the moment the purpose for which it was doubtless intended. It excited everywhere a feeling of consternation; the price of gold rose rapidly during the morning hours, and the Stock Exchange was thrown into violent fever. The details of the mystification were managed with some skill, the paper on which the document was written being that employed by the Associated Press in delivering its news to the journals, and it was left at all the newspaper offices in New York just before the moment of going to press. If all the newspapers had printed it the guiltlessness of each would have been equally evident; but unfortunately for the victims of the trick, the only two papers which published the forgery were those whose previous conduct had rendered them liable to the suspicion of bad faith. The fiery Secretary

of War immediately issued orders for the suppression of the "*World*" and "*Journal of Commerce*," and the arrest of their editors. The editors were never incarcerated; after a short detention, they were released. The publication of the papers was resumed after two days of interruption. These prompt measures and the announcement of the imposture sent over the country by telegraph soon quieted the excitement, and the quick detection of the guilty persons reduced the incident to its true rank in the annals of vulgar misdemeanors.

But in the memories of the Democrats of New York the incident survived, and was vigorously employed during the summer months as a means of attack upon the Administration. Governor Seymour interested himself in the matter and wrote a long and vehement letter to the district attorney of New York, denouncing the action of the Government. "These things," he said in his exclamatory style, "are more hurtful to the national honor and strength than the loss of battles. The world will confound such acts with the principles of our Government, and the folly and crimes of officials will be looked upon as the natural results of the spirit of our institutions. Our State and local authorities must repel this ruinous inference." He predicted the most dreadful consequences to the city of New York if this were not done. The harbor would be sealed up, the commerce of New York paralyzed, the world would withdraw from the keeping of New York merchants its treasures and its commerce if they did not unite in this demand for the security of persons and of property. In obedience to these frantic orders Mr. Oakey Hall, the district attorney, did his best, and was energetically seconded by Judge Russell, who charged the grand jury that the officers who took possession of these newspaper establishments were "liable as for riot"; but the grand jury, who seem to have kept their heads more successfully than either the governor or the judge, resolved that it was "inexpedient to examine into the subject." The governor could not rest quiet under this contemptuous refusal of the grand jury to do his bidding. He wrote again to the district attorney, saying, "As the grand jury have refused to do their duty, the subject of the seizure of these journals should at once be brought before some proper magistrate." He promised him all the assistance he required in the prosecution of the investigations. Thus egged on by the chief executive of the State, Mr. Hall proceeded to do the work required of him. Upon warrants issued at his instance by City Judge Russell, General Dix and several officers of his staff were arrested.¹ They

¹ July 1.

submitted with perfect courtesy to the behest of the civil authorities, and appeared before Judge Russell to answer for their acts. The judge held them over on their own recognizance to await the action of another grand jury, which, it was hoped, might be more subservient to the wishes of the governor than the last; but no further action was ever taken in the matter.

During the same week which witnessed the radical fiasco at Cleveland, an attempt was made in New York to put General Grant before the country as a Presidential candidate. The committee having the matter in charge made no public avowal of their intentions; they merely called a meeting to express the gratitude of the country to the general for his signal services. They even invited the President to take part in the proceedings, an invitation which he said it was impossible for him to accept.

I approve [he wrote], nevertheless, whatever may tend to strengthen and sustain General Grant and the noble armies now under his direction. My previous high estimate of General Grant has been maintained and heightened by what has occurred in the remarkable campaign he is now conducting, while the magnitude and difficulty of the task before him do not prove less than I expected. He and his brave soldiers are now in the midst of their great trial, and I trust that at your meeting you will so shape your good words that they may turn to men and guns, moving to his and their support.¹

With such a gracious approval of the movement, the meeting naturally fell into the hands of the Lincoln men. General Grant, neither at this time nor at any other, gave the least countenance to the efforts which were made to array him in political opposition to the President.

THE RESIGNATION OF MR. CHASE.

AFTER Mr. Chase's withdrawal from his hopeless contest for the Presidency, his sentiments toward Mr. Lincoln, as exhibited in his letters and his diary, took on a tinge of bitterness which gradually increased until their friendly association in the public service became no longer possible. There was something almost comic in the sudden collapse of his candidacy; and the American people, who are quick to detect the ludicrous in any event, could not help smiling when the States of Rhode Island and Ohio ranged themselves among the first on the side of the President. This was intolerable to Mr. Chase, who, with all his great and noble qualities, was deficient in humor. His wounded self-love could find

no balm in these circumstances except in the preposterous fiction which he constructed for himself, that through "the systematic operations of the Postmaster-General and those holding office under him a preference for the reelection of Mr. Lincoln was created."² Absurd as this fancy was, he appears firmly to have believed it; and the Blairs, whom he never liked, now appeared to him in the light of powerful enemies. An incident which occurred in Congress in April increased this impression to a degree which was almost maddening to the Secretary. The quarrel between General Frank Blair and the radicals in Missouri had been transferred to Washington; and one of the Missouri members having made charges against him of corrupt operations in trade permits, he demanded an investigation, which resulted, of course, in his complete exoneration from such imputations. It was a striking instance of the bewildering power of factious hatred that such charges should ever have been brought. Any one who knew Blair, however slightly, should have known that personal dishonesty could never have offered him the least temptation. In defending himself on the floor of Congress the natural pugnacity of his disposition led him to what soldiers call an offensive return,—in fact, Frank Blair always preferred to do his fighting within the enemy's lines,—and believing the Secretary of the Treasury to be in sympathy, at least, with the assault which had been made upon his character, he attacked him with equal vigor and injustice by way of retaliation. As we have seen in another chapter, before this investigation was begun the President had promised when Blair should resign his seat in the House to restore him to the command in the Western army which he had relinquished on coming to Washington. Although he greatly disapproved of General Blair's attack upon Mr. Chase, the President did not think that he was justified on this account in breaking his word; and doubtless reasoned that sending Blair back to the army would not only enable him to do good service in the field, but would quiet an element of discord in Congress. The result, however, was most unfortunate in its effect on the feelings of Mr. Chase. He was stung to the bitterest resentment by the attack of Blair; and he held that restoring Blair to his command made the President an accomplice in his offense. From that time he took a continually darkened view both of the President's character and of his chances for reelection. "No good could come," he said, "of the probable identification of the next Administration with the Blair family." His first thought was to resign his place in the Cabinet; but on consulting his friends and finding them unani-

² Chase to General Blunt, May 4, 1864. Warden, "Life of S. P. Chase," p. 583.

mous against such a course, he gave it up.¹ But his letters during this month are full of ill-will to the President. To his niece he wrote: "If Congress gives me the measures I want, and Uncle Abe will stop spendings so fast," he, Chase, would bring about resumption within a year. To another, he blamed the President for the slaughter at Fort Pillow.² To Governor Buckingham, who had written him a sympathetic note, he said:³ "My chief concern in the attacks made on me springs from the conviction that the influence of the men who make them must necessarily divide the friends of the Union and freedom, unless the President shall cast it off, of which I have little hope. I am willing to be myself its victim, but grieve to think our country may be also"; and adds this compliment to his correspondent at the expense of his colleagues in the Government: "How strikingly the economy and prudence shown by the narration of your excellent message contrasts with the extravagance and recklessness which mark the disbursement of national treasure." Writing to another friend, he indulges in this lumbering pleasantry: "It seems as if there were no limit to expense. . . . The spigot in Uncle Abe's barrel is made twice as big as the bung-hole. He may have been a good flatboatman and rail-splitter, but he certainly never learned the true science of cooping." This was a dark month to him; his only fortress of refuge was his self-esteem: secure in this, he lavished on every side his criticisms and his animadversions upon his associates. "Congress," he said,⁴ "is unwilling to take the decisive steps which are indispensable to the highest degree of public credit; and the Executive does not, I fear, sufficiently realize the importance of an energetic and comprehensive policy in all departments of administration." Smarting as he did under the attack of the Blairs, he pretended to treat them with contempt. "Do not trouble yourself about the Blairs," he wrote to an adherent. "Dogs will bark at the moon, but I have never heard that the moon stopped on that account." By constantly dwelling on the imaginary coalition of Lincoln with the Blairs against him, he began at last to take heart again and to think that against adversaries so weak and so wicked there might still be a chance of victory. Only a fortnight before the gathering of the Republican convention at Baltimore he began to look beyond the already certain event of that convention, and to contemplate the possibility of defeating Mr. Lincoln after he should be nominated.

It has become quite apparent now [he said] that the importunity of Mr. Lincoln's special friends for an early convention, in order to make his nomination sure, was a mistake both for him and for the country. The convention will not be regarded as a Union convention, but simply as a Blair-Lincoln convention, by a great body of citizens whose support is essential to success. Few except those already committed to Mr. Lincoln will consider themselves bound by a predetermined nomination. Very many who may ultimately vote for Mr. Lincoln will wait the course of events hoping that some popular movement for Grant, or some other successful general, will offer a better hope of saving the country. Others, and the number seems to be increasing, will not support his nomination in any event; believing that our ill-success thus far in the suppression of the rebellion is due mainly to his course of action and inaction, and that no change can be for the worse. But these are speculations merely from my standpoint.⁵

The Secretary's relations with the President and his colleagues while he was in this frame of mind were naturally subject to much friction, and this frame of mind had lasted with little variation for more than a year. It was impossible to get on with him except by constant agreement to all his demands. He chose in his letters and his diaries to represent himself as the one just and patriotic man in the Government, who was striving with desperate energy, but with little hope, to preserve the Administration from corrupt influences. It cannot be doubted that his motives were pure, his ability and industry unusual, his integrity, of course, beyond question. He held, and justly held, that, being responsible for the proper conduct of affairs in his department, he should not be compelled to make appointments contrary to his convictions of duty. He was unquestionably right in insisting that appointments should be made on public grounds, and that only men of ability and character should be chosen to fill them; but he had an exasperating habit of assuming that nobody agreed with him in this view, and that all differences of opinion in regard to persons necessarily sprung from corrupt or improper motives on the part of those who differed with him. At the slightest word of disagreement he immediately put on his full armor of noble sentiments and phrases, appealed to Heaven for the rectitude of his intentions, and threatened to resign his commission if thwarted in his purpose. When he was not opposed he made his recommendations, as his colleagues did, on grounds of political expediency as well as of personal fitness. One day, for instance, he recommended the appointment of Rheinhold Solger as Assistant Register of

the Treasury on the ground that "the German supporters of the Administration have had no considerable appointment in the department." He frequently gave in support of his nominees the recommendation of senators and representatives of the States where the appointments were to be made. But he always sturdily resented any suggestions from the President that an appointment proposed by him would have a bad effect politically. He had the faculty of making himself believe that his obstinacy in such matters arose purely from devotion to principle. He would not only weary the President with unending oral discussions, but, returning to the department, would write him letters filled with high and irrelevant morality, and at evening would enter in his diary meditations upon his own purity and the perversity of those he chose to call his enemies. It would hardly be wise for the ablest man of affairs to assume such an attitude. To justify it at all one should be infallible in his judgment of men. With the Secretary of the Treasury this was far from being the case. He was not a good judge of character; he gave his confidence freely to any one who came flattering him and criticizing the President, and after having given it, it was almost impossible to make him believe that the man who talked so judiciously could be a knave. His chosen biographer, Judge Warden, says: "He was indeed sought less by strong men and by good men than by weak men and by bad men."¹ A much better authority, Mr. Whitelaw Reid, while giving him unmeasured praise for other qualities calls him "profoundly ignorant of men," and says, "The baldest charlatan might deceive him into trusting his personal worth."²

Early in the year 1864 the Federal appointments in New York City began to be the subject of frequent conversation between the President and the Secretary of the Treasury. So many complaints of irregularity and inefficiency in the conduct of affairs in the New York custom house had reached Mr. Lincoln that he began to think a change in the officers there would be of advantage to the public service. Every suggestion of this sort, however, was met by Mr. Chase with passionate opposition. Mr. Lincoln had not lost confidence in the integrity or the high character of Mr. Barney, the collector of customs; he was even willing to give him an important appointment abroad in testimony of his continued esteem; but he was not satisfied with what he heard of the conduct of his office. Several of his subordinates had been detected in improper and corrupt practices, and after being defended by Mr. Chase until defense was impossible, they had been

dismissed, and in some cases punished. In the month of February, while the conduct of the custom house was under investigation in Congress, a special agent of the Treasury Department named Joshua F. Bailey came to Washington, having been summoned as a witness to testify before the committee of the House of Representatives in charge of the matter. He called on the chairman in advance, and endeavored to smother the investigation by saying, among other things, that, whatever might be developed, the President would in no case take any action. The chairman of the committee reported this impudent statement to the President, who at once communicated the fact to the Secretary of the Treasury, saying, "The public interest cannot fail to suffer in the hands of this irresponsible and unscrupulous man"; and he proposed at the same time to send Mr. Barney as minister to Portugal.³ Mr. Chase defended Bailey, and resisted with such energy the displacement of Mr. Barney that midsummer came with matters in the custom house unchanged. Mr. Chase, in his diary, gives a full account of a conversation between himself and the President⁴ in regard to this matter, in which the Secretary reiterates his assurances of confidence in the conduct of the custom house, and gives especially warm expression to his regard for Bailey, meeting the positive assertion of the chairman of the committee of the House of Representatives by saying, "I think Mr. Bailey is not the fool to have made such a suggestion." So long as he remained in office he gave this blind confidence to Bailey, who finally showed how ill he deserved it by the embezzlement of a large sum of public money, and by his flight in ruin and disgrace from the country.

In February, 1863, the Senate rejected the nomination of Mr. Mark Howard as collector of internal revenue for the district of Connecticut. Mr. Chase, hearing that this rejection was made at the instance of Senator Dixon, immediately wrote a letter demanding the renomination of Howard; or, if the President should not agree with him in this, of some one not recommended by Senator Dixon. A few days later the President wrote to Mr. Chase that after much reflection and with a great deal of pain that it was adverse to his wish, he had concluded that it was not best to renominate Mr. Howard. He recognized the constitutional right of the Senate to reject his nominations without being called to account; and to take the ground in advance that he would nominate no one for the vacant place who was favored by a senator so eminent in character and ability as Mr. Dixon seemed to him pre-

¹ Warden, "Life of S. P. Chase," p. 530.

² Reid, "Ohio in the War," Vol. I., p. 18.

³ Lincoln to Chase, Feb. 12, 1864.

⁴ June 6.

posterior. The only person from Connecticut recommended for the vacancy was Mr. Goodman, in favor of whom Senator Dixon and Mr. Loomis, the Representative in the House, cordially united. The President therefore asked Mr. Chase to send him a nomination for Goodman.¹ Immediately on the receipt of this letter Mr. Chase wrote out his resignation as Secretary of the Treasury in these words:

Finding myself unable to approve the manner in which selections for appointment to important trusts in this department have been recently made, and being unwilling to remain responsible for its administration, under existing circumstances, I respectfully resign the office of Secretary of the Treasury.²

This letter, however, never reached the President, as Senator Dixon came in before it was dispatched and discussed the matter in a spirit so entirely different from that of the Secretary that no quarrel was possible with him; and after he left, Mr. Chase wrote a letter to the President, in which he said:

I do not insist on the renomination of Mr. Howard; and Mr. Dixon and Mr. Loomis, as I understand, do not claim the nomination of his successor. . . . My only object—and I think you so understand it—is to secure fit men for responsible places, without admitting the rights of senators or representatives to control appointments, for which the President, and the Secretary, as his presumed adviser, must be responsible. Unless this principle can be practically established, I feel that I cannot be useful to you or the country in my present position.³

It is possible that the Secretary may have thought that this implied threat to resign brought both the President and the senator to reason, for the matter ended at this time by their allowing him to have absolutely his own way. Mr. Dixon wrote to the President,⁴ saying that he “preferred to leave the whole matter to the Secretary of the Treasury, believing his choice would be such as to advance the interests of the country and the Administration”; and the President, who heartily detested these squabbles over office, was glad of this arrangement. There was not a shade of difference between him and Mr. Chase as to the duty of the Administration to appoint only fit men to office, but the President always preferred to effect this object without needlessly offending the men upon whom the Government depended for its support in the war.

A few months later Mr. Lincoln was subjected to great trouble and inconvenience by the constant complaints which came to him by every mail from Puget Sound against the collector for that district, one Victor Smith, from Ohio, a friend and appointee of Mr. Chase. This Smith is described by Schuckers⁵ as

a man not very likely to become popular on the Pacific coast—or anywhere else. He believed in spirit rappings and was an avowed abolitionist; he whined a great deal about “progress”; was somewhat arrogant in manner and intolerant in speech, and speedily made himself thoroughly unpopular in his office.

No attention was paid by the Secretary to these complaints, which were from time to time referred to him by the President; but at last the clamor by letter and by deputations from across the continent became intolerable, and the President, during a somewhat protracted absence of the Secretary from Washington, ordered a change to be made in the office. In a private note to Mr. Chase, wishing to avoid giving him personal offense, he said:

My mind is made up to remove Victor Smith as collector of the customs at the Puget Sound district. Yet in doing this I do not decide that the charges against him are true. I only decide that the degree of dissatisfaction with him there is too great for him to be retained. But I believe he is your personal acquaintance and friend, and if you desire it, I will try to find some other place for him.⁶

Three days later the Secretary, having returned to Washington, answered in his usual manner, protesting once more his ardent desire to serve the country faithfully, and claiming that he had a right to be consulted in matters of appointment. He sent a blank commission for the person whom the President had concluded to appoint, but protested against the precedent, and tendered his resignation. This time again the President gave way. He drove to the Secretary's house, handed his petulant letter back to him, and begged him to think no more of the matter.⁷ Two days afterward, in a letter assenting to other recommendations for office which had come to him from the Treasury Department, he said, “Please send me over the commission for Louis C. Gunn, as you recommend, for collector of customs at Puget Sound.”⁸

⁷ Mr. Maunsell B. Field, in his “Memories of Many Men and Some Women,” p. 303, quotes Mr. Lincoln as saying: “I went directly up to him with the resignation in my hand, and, putting my arm around his neck, said to him, ‘Chase, here is a paper with which I wish to have nothing to do; take it back and be reasonable.’ It was difficult to bring him to terms. I had to plead with him a long time; but I finally succeeded, and heard nothing more of that resignation.”

⁸ Warden, “Life of S. P. Chase,” p. 528.

would have hesitated before repeating this identical proceeding; but, as we have said, Mr. Chase was deficient in this saving sense, and he apparently saw no reason why it should not be repeated indefinitely.

Mr. John J. Cisco, the assistant treasurer at New York, who had served the Government with remarkable ability and efficiency through three administrations, resigned his commission in May, to take effect at the close of the fiscal year, the 30th of June, 1864. It was a post of great importance in a financial point of view, and not insignificant in the way of political influence. Up to this time, Mr. Chase had made all the important appointments in New York from his own wing of the supporters of the Union—the men who had formerly been connected with the Democratic party, and who now belonged to what was called the radical wing of the Republican. This matter was the source of constant complaint from those who were sometimes called the Conservative Republicans of New York, or those who had in great part formerly belonged to the Whig party, and who in later years acknowledged the leadership of Mr. Seward. The President was anxious that in an appointment so important as that which was now about to be made both sections of the party in New York should, if possible, be satisfied; and especially that no nominations should be made which should be positively objectionable to Senator Morgan, who was considered to represent more especially the city of New York and its great commercial interests. To this Mr. Chase at first interposed no objection; and it was upon full and friendly consultation and conference between him and Senator Morgan that the appointment was offered successively to Mr. Denning Duer and to Mr. John A. Stewart, both of them gentlemen of the highest standing. But both declined the office tendered them; upon which Mr. Chase suddenly resolved to appoint Mr. Maunsell B. Field, who was at that time an assistant secretary of the Treasury. Mr. Field was a gentleman of excellent social position, of fine literary culture, to whom the Secretary was sincerely attached, but who was entirely destitute of such standing in either the political or the financial circles of New York as was required by so important a place. Senator Morgan at once protested vigorously against such an appointment, which only served to confirm the Secretary in his insistence upon it. Besides his objections to Mr. Field, whom he thought in no way competent to hold such a place, Mr. Morgan urged that the political result of his appointment would be extremely unfavorable to the Union party in New York. He became thoroughly alarmed, and begged the Secretary and the President successively to make their

choice among three of the most eminent citizens of New York whose names he presented; but the Secretary's mind was made up. Without further consultation with the President, he sent him the nomination for Mr. Field on the 27th of June. The next day the President replied:

I cannot, without much embarrassment, make this appointment; principally, because of Senator Morgan's very firm opposition to it. Senator Harris has not yet spoken to me on the subject, though I understand he is not averse to the appointment of Mr. Field, nor yet to any one of the three named by Senator Morgan. . . . Governor Morgan tells me he has mentioned three names to you, to wit: R. M. Blatchford, Dudley S. Gregory, and Thomas Hillhouse. It will really oblige me if you will make choice among those three, or any other man that Senators Morgan and Harris will be satisfied with, and send me a nomination for him.¹

There have been few ministers who would have refused so reasonable and considerate a request as this, but it did not for a moment shake Mr. Chase's determination to have his own way in the matter. He sent a note to the President asking for an interview, and telegraphed to Mr. Cisco,² begging him most earnestly to withdraw his resignation and give the country the benefit of his services at least one quarter longer. He was determined, in one way or another, that neither the President nor the senators of New York should have anything to say in regard to this appointment; and conscious of his own blamelessness in all the controversy, he went home and wrote in his diary: "Oh, for more faith and clearer sight! How stable is the city of God! How disordered is the city of man!" Later in the day the President wrote him:

When I received your note this forenoon suggesting a conversation—a verbal conversation—in relation to the appointment of a successor to Mr. Cisco, I hesitated, because the difference does not, in the main part, lie within the range of a conversation between you and me. As the proverb goes, no man knows so well where the shoe pinches as he who wears it. I do not think Mr. Field a very proper man for the place, but I would trust your judgment and forego this were the greater difficulty out of the way. Much as I personally like Mr. Barney, it has been a great burden to me to retain him in his place when nearly all our friends in New York were directly or indirectly urging his removal. Then the appointment of Hogeboom to be general appraiser brought me to, and has ever since kept me at, the verge of open revolt. Now the appointment of Mr. Field would precipitate it, unless Senator Morgan, and those feeling as he does, could be brought to concur in it. Strained as I

¹ Lincoln to Chase, June 28, 1864. Warden, "Life of S. P. Chase," p. 611.

² Schuckers, "Life of S. P. Chase," p. 506.

already am at this point, I do not think that I can make this appointment in the direction of still greater strain.¹

In the evening the extremely tense situation was relieved by a telegram from Mr. Cisco complying with the request of the Secretary to remain another quarter. But it was not in the nature of Mr. Chase to accept this simple *dénouement*. He felt that the President had acted badly, and must be subjected to some discipline; and he naturally resorted to those measures which had hitherto proved so effective. He wrote to him:

The withdrawal of Mr. Cisco's resignation, which I inclose, relieves the present difficulty; but I cannot help feeling that my position here is not altogether agreeable to you, and it is certainly too full of embarrassment and difficulty and painful responsibility to allow in me the least desire to retain it. I think it my duty, therefore, to inclose to you my resignation. I shall regard it as a real relief if you think proper to accept it, and will most cheerfully render to my successor any aid he may find useful in entering upon his duties.²

In this letter Mr. Chase inclosed his formal resignation. The President received this note while very much occupied with other affairs. The first paper which met his eye was the telegram from Mr. Cisco withdrawing his resignation. Glad that the affair was so happily terminated, he laid the packet aside for some hours, without looking at the other papers contained in it. The next morning, wishing to write a congratulatory note to Mr. Chase upon this welcome termination of the crisis, he found, to his bitter chagrin and disappointment, that the Secretary had once more tendered his resignation. He took it to mean precisely what the Secretary had intended—that if he were to retain Mr. Chase as Secretary of the Treasury, it should not be hereafter as a subordinate; to refuse this resignation, to go once more to the Secretary and urge him to remain, would amount to an abdication of his constitutional powers. He therefore, without hesitation, sent him this letter:

Your resignation of the office of Secretary of the Treasury, sent me yesterday, is accepted. Of all I have said in commendation of your ability and fidelity I have nothing to unsay, and yet you and I have reached a point of mutual embarrassment in our official relations which it seems cannot be overcome or longer sustained consistently with the public service.³

At the same time he sent to the Senate the nomination of David Tod of Ohio as Secretary of the Treasury. Most people have chosen to consider this a singular selection. Yet

David Tod was by no means an unknown man. He had gained an honorable position at the bar; had been the Democratic candidate for governor in 1843; had served with credit as minister to Brazil; was first vice-president of the Charleston convention and became its president at Baltimore on the secession of Caleb Cushing; was one of the most prominent men in Ohio in railroad and mining enterprises; had been the most eminent and efficient of the war Democrats of the State; and as governor had shown executive capacity of high order.⁴ There were some superficial points of resemblance between Mr. Chase and Governor Tod that doubtless caught the attention of the President in choosing a successor to the former in such haste. Tod was a citizen of the same State with Chase, of which both had been governor; he had come into the Union party from the Democrats; he was a man of unusually dignified and impressive presence; but it is safe to say that no one had ever thought of him for the place now vacant. The nomination was presented to the Senate at its opening and was received with amazement. Not the least surprised of the statesmen in the Capitol was Mr. Chase himself, who was busy at the moment in one of the committee rooms of the Senate arranging some legislation which he needed for his department. There are many indications which go to show that his resignation of the evening before was intended, like those which had preceded it, as a means of discipline for the President. After sending it he wrote to Mr. Cisco expressing his thanks for the withdrawal of his resignation, and saying:

It relieves me from a very painful embarrassment. . . . I could not remain here and see your office made parcel of the machinery of party, or even feel serious apprehension that it might be.

Even on the morning of the 30th of June, Mr. Chase wrote to the President recommending a considerable increase of taxation, saying that there would be a deficit by existing laws of about eighty millions.

On the other hand, there is nothing to show, up to the instant that he was informed of the nomination of Tod, that he expected his official career to end on that day. The news for that moment created something like consternation in political circles at the capital. Mr. Washburne hurried to the White House, saying the change was disastrous; that at this time of military unsuccess, financial weakness, congressional hesitation on questions of conscription, and imminent famine in the West, it was

⁴ Reid, "Ohio in the War."

ruinous. The Senate Committee on Finance, to which the nomination of Tod had been referred, came down in a body to talk with the President about it. The President gave this account of the interview: "Fessenden was frightened, Conness was angry, Sherman thought we could not have gotten on together much longer anyhow, Cowan and Van Winkle were indifferent."¹ They not only objected to any change, but specially protested against the nomination of Tod as too little known and too inexperienced for the place. The President replied that he had little personal acquaintance with Tod, that he had nominated him on account of the high opinion he had formed of him as governor of Ohio; but that the Senate had the duty and responsibility of passing upon the question of fitness, in which it must be entirely untrammelled; he could not, in justice to himself or to Tod, withdraw the nomination. The impression of the undesirability of the change rather deepened during the day. Mr. Hooper of Massachusetts, an intimate friend of both the President and Mr. Chase, and the man upon whom both principally relied for the conduct of financial legislation in the House, spoke of the crisis in deep depression. He said he had been for some time of the opinion that Mr. Chase did not see his way entirely clear to raising the funds which were necessary; that his supplementary demand for money sent in at the close of the session after everything had been granted which he asked, looked like an intention to throw an anchor to windward in case he was refused. Mr. Hooper said he had waked this morning feeling a little vexed that Chase had done this, that he thought it was an attempt to throw an unfair responsibility upon Congress; but now this resignation came to relieve him of all responsibility; his successor would have an enormous work to do; the future was troubled; there remained the great practical problem, regularly recurring, to raise one hundred millions a month.

I do not clearly see [he said] how it is to be done; the talent of finance in its national aspect is something entirely different from banking. Most bankers criticize Mr. Chase, but he has a faculty of using the knowledge and experience of others to the best advantage; that has sufficed him hitherto; a point has been reached where he does not clearly see what comes next, and at this point the President allows him to step from under his load.¹

This view of the case has a color of confirmation in a passage of the diary of Mr. Chase of the 30th of June, which goes to show at least a mixed motive in his resignation. After his resignation had been accepted, Mr. Hooper

had called upon him and, evidently hoping that some reconciliation was still possible, told him that, several days before, the President had spoken to him in terms of high esteem, indicating his purpose of making him Chief Justice in the event of a vacancy, a post which Mr. Chase had long before told the President was the one he most desired. Mr. Chase answered that had such expression of good-will reached him in time it might have prevented the present misunderstanding, but that now he could not change his position. "Besides," he adds, "I did not see how I could carry on the department without more means than Congress was likely to supply, and amid the embarrassment created by factious hostility within, and both factious and party hostility without the department."²

At night the President received a dispatch from Mr. Tod declining the appointment on the ground of ill-health. The President's secretary went immediately to the Capitol to communicate this information to the senators, so that no vote might be taken on the nomination. Early the next morning the President sent to the Senate the nomination of William Pitt Fessenden, senator from Maine. When he gave the nomination to his secretary, the latter informed him that Mr. Fessenden was then in the ante-room waiting to see him. He answered, "Start at once for the Senate, and then let Fessenden come in." The senator, who was chairman of the Senate Committee on Finance, began immediately to discuss the question of the vacant place in the Treasury, suggesting the name of Mr. McCulloch. The President listened to him for a moment with a smile of amusement, and then told him that he had already sent *his* nomination to the Senate. Fessenden leaped to his feet, exclaiming, "You must withdraw it. I cannot accept." "If you decline," said the President, "you must do it in open day, for I shall not recall the nomination." "We talked about it for some time," said the President, "and he went away less decided in his refusal."

The nomination was instantly confirmed, the executive session lasting no more than a minute. It gave immediate and widespread satisfaction. There seemed to be no difference of opinion in regard to Mr. Fessenden; the only fear was that he would not accept. His first impulse was to decline; but being besieged all day by the flattering solicitations of his friends, it was impossible for him to persist in refusing. The President was equally surprised and gratified at the enthusiastic and general approval the nomination had met with. He said:¹

It is very singular, considering that this appointment is so popular when made, that no one ever

WILLIAM PITT FESSENDEN.
(AFTER A PHOTOGRAPH BY BRADY.)

mentioned his name to me for that place. Thinking over the matter, two or three points occurred to me : first, his thorough acquaintance with the business ; as chairman of the Senate Committee of Finance he knows as much of this special subject as Mr. Chase ; he possesses a national reputation and the confidence of the country ; he is a radical without the petulant and vicious fretfulness of many radicals. There are reasons why this appointment ought to be very agreeable to him. For some time past he has been running in rather a pocket of bad luck ; the failure to renominate Mr. Hamlin makes possible a contest between him and the Vice-President, the most popular man in Maine, for the election which is now imminent. A little while ago in the Senate you know Trumbull told him his ill-temper had left him no friends, but this sudden and most gratifying manifestation of good feeling over his appointment, his instantaneous confirmation, the earnest entreaties of everybody that he should accept, cannot but be very grateful to his feelings.

Mr. Chase left a full record in his diaries and letters of the sense of injury and wrong done him by the President. He especially resented the President's reference to the "embarrassment in our official relations." "I had found a good deal of embarrassment from him," he said ; "but what he had found from me I could not imagine, unless it has been caused by my unwillingness to have offices distributed as spoils or benefits. . . . He has never given me the active and earnest support I was entitled to." After Mr. Fessenden was appointed, the ex-Secretary entered in his diary his approval of the selection :

He has the confidence of the country, and many who have become inimical to me will give their

confidence to him and their support. Perhaps they will do more than they otherwise would to sustain him, in order to show how much better a Secretary he is than I was.

Before Mr. Fessenden accepted his appointment he called on Mr. Chase and conversed fully with him on the subject. Mr. Chase frankly and cordially advised him to accept, telling him that all the great work of the Department was now fairly blocked out and in progress, that the organization was all planned and in many ways complete, and all in a state which admitted of completion. His most difficult task would be to provide money. "But he would have advantages," said Mr. Chase, "which I had not. Those to whom I had given offense would have no cause of ill-will against my successor, and would very probably come to his support with zeal increased by their ill-will to me ; so that my damage would be to his advantage, especially with a certain class of capitalists and bankers."

The entries in Mr. Chase's diary continue for several days in the same strain. He congratulates himself on his own integrity ; he speaks with severity of the machinations of imaginary enemies. On the 2d of July he remarks the passage of the bill giving the Secretary of the Treasury control over trade in the rebel States and authority to lease abandoned property and to care for the freedmen, and adds : "How much good I expected to accomplish under this bill ! Will my successor do this work ? I fear not. He had not the same heart for this measure that I had." On the Fourth of July the ringing of bells, the firing of cannon, and the snapping of crackers awoke him to the reflection that "if the Government had been willing to do justice, and had used its vast powers with equal energy and wisdom, the struggle might have been happily terminated long ago." Later in the same day Mr. Fessenden came to see him, and informed him that he had been discussing with the President the subject of appointments in the Treasury Department, and that Mr. Lincoln had requested him not to remove any friends of Governor Chase unless there should be a real necessity for it. Mr. Chase persuaded himself that if the President had spoken to him in that tone he would have withdrawn his resignation.

Why did he not ? [he mused.] I can see but one reason—that I am too earnest, too antislavery, and say too radical, to make him willing to have me connected with the Administration : just as my opinion that he is not earnest enough, not antislavery enough, not radical enough, but goes naturally with those hostile to me, rather than with me, makes me willing and glad to be disconnected from it.

How far his animosity against the President had misled this able, honest, pure, and otherwise sagacious man may be seen in one single phrase. Referring to the President's refusal to sign the reconstruction bill, he put down his deliberate opinion that neither the President nor his chief advisers had abandoned the idea of possible reconstruction with slavery; and this in spite of the President's categorical statement, "While I remain in my present position I shall not attempt to retract or modify the Emancipation Proclamation, nor shall I return to slavery any person who is free by the terms of that proclamation or by any of the acts of Congress," and of his declaration that such action

would be "a cruel and an astounding breach of faith." But after all these expressions of that petulant injustice which was only a foible in a noble character, the greatest financial Secretary which the country had known since Hamilton had a perfect right, in laying down the high office he had borne with such integrity and such signal success, to indulge in the meditation which we find in his diary of June 30:

So my official life closes. I have laid broad foundations. Nothing but wise legislation and especially bold yet judicious provision of taxes, with fair economy in administration, and energetic yet prudent military action, . . . seems necessary to insure complete success.

THE WATER-SEEKER.

WHO makes a road through regions rough and lone,
Who plants and rears a tree where shade is none,
Who scores the furrow in a soil untamed,
Is fit in song heroic to be named.

Nor scanter praise be his whose patient force
Gives to an arid land a water-course,
Gradual, but grateful as the jet that broke
From forth the ledge that felt the prophet's stroke.

Behold a toiler in far Idaho,
'Mid foothills where, in summer's steady glow,
The slender-shafted cottonwood looks dim,
The swarthy dust-cloud veils the horizon's rim.

As day by day his toil the stream extends,
Sometimes the grasses harsh a footfall bends—
His wife and child, the genii of the stream,
Before him rise as in a lovely dream!

Edith M. Thomas.

THE IRRIGATING DITCH.

PICTURES OF THE FAR WEST.—VII.

HE word "desert" is used, in the West, to describe alike lands in which the principle of life, if it ever existed, is totally extinct, and those other lands which are merely "thirsty."

West of the Missouri there are immense, sad provinces devoted to drought. They lie beneath skies that are pitilessly clear. The great snow-fields, the treasury of waters, are far away, and the streams which should convey the treasure are often many days' journeys apart. These wild water-courses are

Nature's commissaries sent from the mountains to the relief of the plains; but they scamper like pickpockets. They make away with the stores they were charged to distribute. They hurry along, making the only sound to be heard for miles in those vacant lands which they have defrauded. Year by year, or century by century, they plow out their barren channels: gradually they sink, beyond any possibility of fulfilling their mission. Now and then one will dig for itself a grave in the desert, bury its mouth in the sand, and be known as a "lost" river.

Meantime the long-repressed soil vents itself in extravagant, contorted growths of sage-brush. Where the sage grows rank and covers the ground like a dwarfed forest the settler chooses his location. But the prospector usually comes before the settler; he takes the greater risks which go with the higher chances. He has found, or fought, his way into the mountains, whence rumors of rich strikes quickly breed the mining fever. Hard upon the news of the first "boom" comes the settler, sure of his market. He ventures into the nearest valley, taps the runaway river, makes a hole in its pocket, and a little of the wrested treasure leaks out and fertilizes his wild acres. The new crops are miracles of abundance: mining-camp markets, while they last, are the romance of farming; very soon the primitive irrigator can afford to enlarge his ditches and improve his "system." New locators crowd into the narrow valley; the ranches lock fences side by side. Small ventures in stock are cast, like bread upon the waters, far forth into the hills, which are the granaries of the arid belt.

The river and its green dependencies strike a new and shriller color-note, which quavers through the dun landscape like the note of a willow-whistle on warm spring days—clear, sweet, but languid with the oppression of the bare, unshaded fields around. It is the human note, familiar in its crudeness, but dearly wel-

come to the traveler after days of nothing but sky and sage-brush, sun and silence.

The new settlement is but an outpost of the frontier: if the mines hold out, if the railroads presently remember that it is there, its young fields need not wither nor its ditches be choked with dust. Twenty years, if it should survive, will have brought it beauty as well as comfort and security. The older ranches will show signs of prosperous tenantry in their tree-defended barns and long lines of ditches, dividing, with a still sheen, the varied greens of the springing crops. Each freshly plowed field that encroaches upon the aboriginal sage-brush is a new stitch taken in the pattern of civilization which runs, a slender, bright border, along the skirt of the desert's dusty garment.

Faces, too, will soften, and forms grow more lovely as the conditions of life improve. The men and women who took the brunt of the siege and capture of those first square miles of desert will carry in their countenances something of the record of that achievement. The second generation may seek to forget that its fathers and mothers "walked in" behind a plains' wagon; but in the third, the story will be proudly revived, with all the honors of tradition; and in the fourth generation from the sage-brush the ancestral irrigator will be no less a personage, in the eyes of his descendants, than the Pilgrim Father, the Dutch Patroon, or the Virginia Cavalier.

* * *

AN AMERICAN AMATEUR ASTRONOMER.¹

FOR years Mr. S. W. Burnham occupied a seat alongside Judge Drummond of the United States Circuit Court in Chicago as stenographer, or shorthand reporter, to the court.

"What!" exclaimed the United States district attorney who practiced daily in Judge Drummond's court, "our Burnham the Chicago astronomer! Why, I have known him for these twelve years past, and knew there was a noted astronomer in the city by the name of Burnham, but never suspected our quiet,

modest friend was the man. Why, I have never heard him utter a word about astronomy."

"Very likely," replied his friend, "and if you had known him for a hundred years it might have been the same; for, except to intimate friends and men of similar tastes, he never alludes to his scientific investigations."

It is of this amateur astronomer, whose name is better known in St. Petersburg, London, Berlin, Paris, and Rome than in the city in which he has spent the best twenty years of his life, that I now wish to write.

Sherburne Wesley Burnham was born about

¹ We make the following extract from the letter of a correspondent at Chicago: "Mr. S. W. Burnham is now chief assistant of Professor Edward S. Holden, Director of the Lick Observatory in California. For several years Mr. Burnham has been perfecting himself in the art of photography with the purpose of applying it to astronomical observations, and in this work he has been very successful. Astronomical

photography of late years has come to be regarded as one of the most interesting departments of the science, and the great equatorial of the Lick Observatory has been fitted up with every needed photographic appliance."

Mr. Burnham has therefore been keeping up his scientific studies since this article was written in 1884.—EDITOR.

SHERBURNE WESLEY BURNHAM. (FROM A PHOTOGRAPH BY GENTILE & CO.)

the year 1840 at Thetford, Vermont, and at the Thetford Academy, then and, for aught I know to the contrary, still noted for its educational excellences, he received a good English education. As to his youthful predilections and pursuits, we only know that they were not especially in the direction of scientific subjects. Indeed, it was not until he had grown up and adopted stenography as a profession that Mr. Burnham had his attention directed to astronomy, and in a way sufficiently curious to warrant recital. During the late civil war Mr. Burnham was stationed with the army in New Orleans, holding the position of shorthand reporter at headquarters. One afternoon as he was strolling along the street his eye was attracted by the notice of a book auction. He entered as the auctioneer was

crying Burritt's "Geography of the Heavens" — the well-known work by a brother of the more famous Elihu Burritt. The subject was one in which Mr. Burnham had at that time no special interest, but he bid for the book, which was knocked down to him. On examining it he found it contained charts of the sidereal heavens. In these he soon became interested, and took advantage of the first clear night to study the heavens for himself, and to trace out the various constellations and principal stars described on Mr. Burritt's charts. Further study of the work served to deepen his interest, and he bought a small, cheap telescope. This after some time, and before leaving New Orleans, he exchanged for a better instrument, which he took with him to Chicago, somewhere about the year 1866. He also became inter-

ested in microscopy, and carried on his study of both subjects simultaneously. Up to this time he had not read much about astronomy, and it was the coming into possession of the Rev. T. W. Webb's "Celestial Objects for Common Telescopes" that determined his future line of study and caused him to devote his entire energies to astronomical investigations during his leisure hours. Meanwhile he kept on reading the best books on physical and mathematical astronomy, and mastered the general features and principles of the science.

Engaged in these quiet studies and in his shorthand reporting, nothing important occurred until Messrs. Alvan Clark & Sons of Cambridge, Massachusetts, the most famous telescope makers in the world, went to Chicago to set up the great telescope in the Dearborn Observatory in the University of Chicago, of which instrument the Chicago Astronomical Society came into possession, and in this way: At the time of the organization of that society, in 1862, the Clarks had in their possession an object glass of $18\frac{1}{2}$ inches, which they had made for the University of Mississippi, and which had been left on their hands in consequence of the breaking out of the war of the Rebellion. Steps were at once taken to secure what was then the largest, as it now is the sixth or seventh largest, object glass in the world. Negotiations for its purchase were pending with other parties, but by the prompt and decisive action of the Hon. Thomas Hoyne of Chicago the glass was secured and a contract made for a complete mounting at a cost of \$18,000. This sum was raised by subscription, the subscribers thereby becoming members of the Astronomical Society. A massive tower, about ninety feet high and attached to the building of the university, was erected and the instrument put in position early in 1864. The tower alone cost \$30,000, the entire expense of which was defrayed by one Chicago citizen, the Hon. J. Young Scammon, who has been president of the Astronomical Society of that city since its organization.

The setting up of this telescope in his immediate neighborhood suggested to Mr. Burnham the advisability of getting a larger one for himself. Accordingly when the Clarks were in Chicago on their way home from making observations of the total eclipse of the sun the path of which passed through Iowa and southern Illinois in January, 1869, he sought and made their acquaintance. It was in the Dearborn Observatory that they met, and after some conversation he asked them for what they would make him a telescope with six-inch object glass as good as could be made. The reply was \$800. "Well," said Mr. Burnham, "I

think I shall order one," which he did by mail a short time later, telling them to "go ahead, but to take all the time necessary to turn out their very best work."

And so they went ahead, taking the time they needed. The result was that our amateur astronomer became the happy possessor of the new instrument, which proved to be one of the finest the Clarks had ever made. But the problem still remained of having his telescope permanently mounted. In this—for he liked to do things as simply and cheaply as possible—he had recourse to mother wit. Procuring a large piece of timber he sunk it deep in the ground in the back yard of his little house on Vincennes Avenue, near Ellis Park, and about two blocks from the Dearborn Observatory. Around this timber he built what his friends used laughingly to call a "cheese-box," on the top of which he placed a dome that could be turned around easily at will. Most of the work he did with his own hands; and it was with this little telescope, thus rudely mounted, that the modest, quiet shorthand reporter made his first important discoveries of double stars—discoveries which a few years later attracted the attention and commanded the admiration of the leading scientific men in Europe.

All this time he went on with his regular work, was at his place in court every day, working the usual business hours. In the evening he went into his "cheese-box" and studied the heavens till daylight drove him to his bed. No wonder that when a visitor, perhaps from Europe, went in search of this sleepless, sharp-sighted astronomer to pay his respects and make a visit to his observatory he was told by the street children that Mr. Burnham was a "queer man, who lived nights in that cheese-box." His neighbors generally knew but little about him, and did not know what to make of the odd-looking structure in his back yard; and younger people associated the star-gazer with vague ideas of necromancy, fortune-telling, and magical incantations. But his observatory as yet was far from being complete. He had now an excellent telescope, equatorially mounted, but he had no micrometer, and lacked besides several other instruments necessary for the measurement of the stars he had discovered. Even if he had possessed them he did not know how to make the measurements. In this emergency he bethought him of the great Italian astronomer, Baron Dembowski, then the most distinguished star measurer living. To the baron Mr. Burnham sent a list of a few of his latest discoveries of close double stars, with a respectful suggestion to the great man that he might like to verify and measure them. This the baron was only too glad and proud to do; and more than that, it led to an intimacy and

a charming correspondence which terminated only with the baron's death in January, 1881.

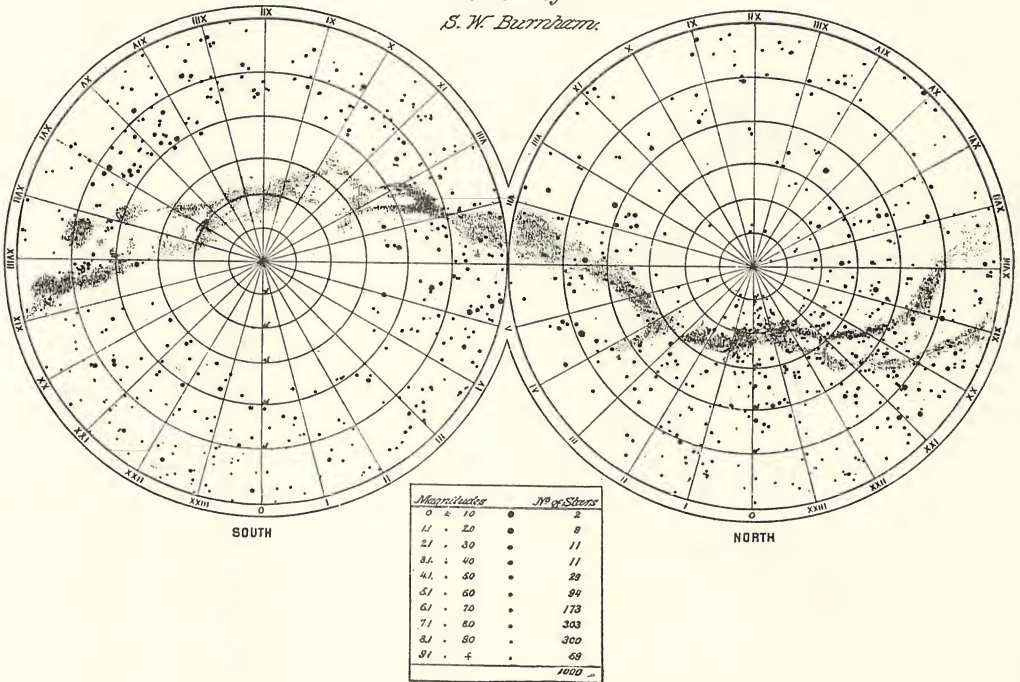

These measurements, by the way, it may be interesting to know, have since been published in Milan. About this time Mr. Webb of England, the author of the book which had so much interested Mr. Burnham, made his acquaintance and began to correspond with him frequently. The friendship had also a direct effect on Mr. Burnham's career, for Mr. Webb

astronomers in less than two years, and all of them discovered by means of a six-inch telescope in a back yard in Chicago. It caused a veritable sensation among European astronomers, for during the previous twenty years, all the observers in the world had not made such a contribution of new doubles to this department of astronomy.

Here, at the risk of boring some readers who may be proficient in astronomy, it may be as

Map showing the distribution of the double stars

*discovered by
S. W. Burnham.*

was so much impressed with his friend's discoveries and attainments that in 1874 he nominated him as Fellow of the Royal Astronomical Society and secured his election. Mr. Burnham's reputation went on increasing rapidly in every country except his own, where the subject of double stars had never attracted much attention. Early in 1873 he sent his first catalogue, of eighty-one new double stars discovered by himself and subsequently measured by Baron Dembowski, to England for publication, and it was printed in the "Monthly Notices of the Royal Astronomical Society," in March, 1873. A second list, of 25 more new doubles, appeared in the same publication in May, 1873; a third, of 76, in December, 1873; a fourth, of 74, in June, 1874; and a fifth, of 71, in November, 1874. Here were three hundred new double stars, all of them close and difficult, brought to the notice of European

well to explain what is meant by a "double" star. All the stars we see in the heavens with the naked eye appear to be single—one sharp point of light. Some of them, however, are double, and when seen through a good telescope this sharp point of light turns into two sharp points, sometimes into three, and in a few instances into four. The last is called a quadruple star. One instance of a wide quadruple star any of my readers can see for himself, if he have a chance to look through a good telescope; but if he have only a good opera-glass, he can see it as a double. It is the star called Epsilon Lyrae; that is, the fifth star in size in the constellation Lyra. In the summer this constellation is very nearly overhead about 9 o'clock in the evening. It may be known by its great star Vega, the largest and brightest star in that part of the heavens. Two smaller stars near Vega make with it an equilateral

triangle. The northern of the two smaller stars is Epsilon Lyrae, a quadruple star. Mr. Burnham and a few other sharp-sighted people can see with the naked eyes that it is a double star, which with the help of an opera-glass almost anybody can do. Through a good telescope each of these doubles becomes itself a double, making four stars in the group—a beautiful sight to look upon. Astronomers, however, take little interest in such a star as this, because it is what they call a “wide double,” and is so easily seen. What they are interested in are “close doubles,” which are generally found to

OBSERVED POSITIONS OF THE COMPONENTS OF THE DOUBLE STAR δ DELPHINI, PERIOD 26 YEARS.

have physical relations; that is, the smaller star revolves round the larger one as the planets go round the sun in our solar system. The closer the doubles the more likely they are to be physically related. The distance between the two pairs in Epsilon Lyrae is 3 minutes 27 seconds of arc, or 207 seconds, whereas in the 1000 new doubles discovered by Mr. Burnham 743 of them are, on an average, only $1\frac{5.8}{10.0}$ seconds apart, or 131 times as close as in Epsilon Lyrae, while many do not exceed one-fifth of that distance. Such close doubles as some of these not one person in a thousand would be likely to see, even if he looked through the best and largest telescope.

One of the most interesting double stars is Sirius, or the Dog Star, the brightest star in the heavens. During the winter months one

may see Sirius in the southern sky, south and east of the beautiful constellation Orion, which everybody knows. In the course of some observations of this star the illustrious Bessel, one of the greatest astronomers of the century, suspected the existence of a satellite, the mass of which, acting on the central star, produced certain variations in its movements that had long excited the curiosity of observers. Of this satellite nothing was known, and Bessel's suggestion provoked search for it. Other astronomers studied on the same problem, and one of them, M. Peters, calculated for the orbit of the unknown companion a period of fifty years. Several European astronomers looked for it and could not find it. Such was the state of things until the 31st of January, 1862, when Mr. Alvan G. Clark, one of the makers of the unfinished Chicago telescope then at Cambridge, set it up rudely in the yard of his factory, and turning it upon Sirius discovered the companion which Bessel had foretold and whose position M. Peters had so nicely calculated. Although very difficult to see, being almost in the blaze of the bright star, this satellite or companion has been watched and measured very carefully ever since, and during the twenty-two years that have elapsed it has made a circuit of nearly one hundred and fifty degrees round the large star, and is likely to make a complete revolution in about the time predicted by the French astronomer. For making this discovery the French Academy gave Mr. Clark the Lalande gold medal. The shortest period of revolution now known among double stars is eleven years, and the star is Delta Equulei, the distance of its companion being only two-tenths of one second.

Mr. Burnham's discoveries attracted much attention in Europe because the double stars he discovered were the closest and most difficult known to astronomers, and many of them have since been found to be in rapid motion like the companion of Sirius. To them it seemed amazing that such difficult doubles could have been discovered by a self-instructed amateur using so small an instrument as one of six inches aperture.

The result was that by this time Mr. Burnham's name was well known abroad, and he himself was in correspondence with many of the leading astronomers of Europe. Two years later M. Angot, one of the French astronomers sent to the islands of the Pacific Ocean to observe the transit of Venus, returned through the United States, under instructions from his government to visit and report on the appliances and work of American observatories. One of the places which he visited was Chicago, and the person in whom he was most interested was our amateur astronomer on Vin-

cennes Avenue. In Mr. Burnham's little observatory M. Angot was greatly interested, and said he had never seen one where such important results had been accomplished with such simple and inexpensive appliances. He found no sidereal clock, no transit instrument—nothing, in short, but a six-inch telescope mounted equatorially on a stout piece of timber sunk in the ground. The telescope was even without the usual clockwork to keep its motion in correspondence with the rotation of the earth. For this, of course, Mr. Burnham had a substitute, and a very ingenious one too, as M. Angot's description of it will show. It was simply a long, vertical tube filled with sand, with an orifice at the bottom through which the sand could escape, after the manner of an old-fashioned hour-glass. A lead plunger following the descent of the sand through the tube gave the proper motion to the telescope, and held it as firmly on a star as could be done by clockwork. He describes also Mr. Burnham's ingenious mode of construction and reading off his circles, by which much saving of time is secured. The discoveries and work done with this little telescope tested at the time the sight of the best observers in Europe and the resources of much larger and better equipped instruments. Otto Struve, the distinguished Russian astronomer, in a letter addressed to Mr. Burnham in 1876 said he had devoted forty years of his life to the zealous observation and study of double stars. "But when," he went on to say, "I think of what you have done in so short a time, I am almost ashamed of my own labors." How great these labors of Struve were may be judged from Mr. Burnham's own words, as given in his "Double Star Observations," in the "Memoirs of the Royal Astronomical Society," Vol. XLIV.: "Omit the observations [meaning measures, not discoveries] of Dembowsky and Otto Struve and our knowledge of nine-tenths of the double stars would not be materially advanced in the last thirty years." This was written in 1879, and Mr. Burnham's own measures and discoveries since would render the insertion of his own name necessary to preserve at the present time the truth of the statement.

As soon as Mr. Burnham was allowed access to the great 18½ inch telescope of the Dearborn Observatory, he applied himself to the measurement of double stars, and became as noted an expert in this difficult work as Baron Dembowsky or Otto Struve, as his publications in the "Memoirs of the Royal Astronomical Society" sufficiently attest. He never having had instruction from any practical astronomer, his methods of work were original and showed great ingenuity and inventive genius. The form of the micrometer in

general use not suiting him, he invented one which has been almost universally adopted, and which the Clarks now attach to all their best telescopes.

In 1877 M. Flammarion of Paris, France, sent to Mr. Burnham a mass of printed proofs and a letter, stating that he had completed and had put in type his "Catalogue of Double Stars which had shown Orbital or other Motion." "But," he continued, "before I publish it I beg to submit the proofs to you for correction and revision—you, whom the scientific world now places at the head of this department of sidereal astronomy." The proofs were corrected and a large number of new measures and new systems in motion were added, which called forth enthusiastic acknowledgments and compliments from the great French astronomer. These facts are mentioned to show in what estimation this man, of whom his own countrymen now know so little, was held by the greatest of European astronomers so far back as 1877. Not only this, but besides his election as Fellow of the Royal Astronomical Society of England he has been made a member of the German Astronomical Society and has received from Yale University the honorary degree of M. A. When a dispute in astronomy involving acuteness of vision has arisen in Europe, which could be determined only by a series of the closest and most delicate observations, Mr. R. A. Proctor has repeatedly called in Mr. Burnham as umpire, and his modest statement has always settled the question.

At the date of which we are writing, 1876 and 1877, Mr. Burnham had been for four years a regular contributor to "Monthly Notices of the Royal Astronomical Society" of London, "Astronomische Nachrichten" of Germany, and other European journals, and had published nine catalogues, embracing nearly five hundred of his own new double stars. When at this time it was suggested to give him the use of the great telescope in the Dearborn Observatory—absolutely unused till then—the president of the Chicago Astronomical Society asked, "Who is Mr. Burnham?" On September 20, 1876, however, he was appointed acting director of the observatory, which honorary position he held until April 11, 1877, when, through local personal jealousies into which we need not enter, this order was rescinded, the doors of the observatory were closed upon him, the locks even were changed, and he returned to his back yard and his "cheese-box." It was too late, however, to consign such a man to obscurity. His name had begun to be known in this country, and a war-cry was sounded in the leading daily papers of New York, Boston, Cincinnati, and

Chicago; the "American Journal of Science," at New Haven, took up the matter, and in a short time the directors of the observatory were very glad to stop these indignant protests and restore to Mr. Burnham the use of the great equatorial. Since then, happy in the cordial and active coöperation of the present genial director, Professor George W. Hough, he has gone steadily on with his observations, until his friends can say he has discovered more double stars,—over one thousand,—and measured them, than any other man, living or dead. To Volume XLIV. of the "Memoirs of the Royal Astronomical Society" he contributed 167 quarto pages of double-star observations, taken during 1877-78, and comprising his tenth catalogue, of 251 new double stars, with measures, and micrometrical measures of 500 double stars. In Volume XLVII. of the same great work (1882-83) will be found 160 more pages of similar observations made by him, comprising his thirteenth catalogue, of 151 new double stars, with measures, and micrometrical measures of 707 double stars. But his great work is yet to be published—a complete catalogue of all the double stars ever discovered, with their right ascension and declination, the names of the several discoverers, and all the measures taken by them. This all-important work and tabulated record of all that is known of double stars the United States Government, through the Naval Observatory at Washington, undertook to publish some years ago; but in the press of its regular publications gave up the task after printing some fifty or sixty pages. It is a matter for satisfaction, however, to learn that in all probability the Smithsonian Institution at Washington will complete the work, in which case Mr. Burnham will bring his catalogue down to the date of publication.

This immense catalogue in manuscript, which the author has made for his own use, has greatly contributed to his own success in this department of astronomy. It is the only work of the kind ever made, and double-star observers all over the world send to Mr. Burnham to have their observations verified and to ascertain whether the stars are new. The research and literary labor spent upon it have been simply enormous. His astronomical library of some two thousand volumes contains nearly every star catalogue which has been printed, and the works of every observer in this specialty, some of them in manuscript. Though not in the possession of large means, he buys every book he needs to make his catalogue complete. The rapidity and facility with which he does his literary work are as marked as that with which he uses the telescope.

In 1879 the trustees of the Lick Observatory in California selected Mount Hamilton, situ-

ated about seventy-five miles south-east of San Francisco, as the site of the observatory, and wrote to Professor Simon Newcomb of the Naval Observatory in Washington requesting him to make a series of observations on Mount Hamilton for the purpose of testing the atmospheric and other conditions of the locality for an observatory. Professor Newcomb replied that the most competent person in the country for making this examination was Mr. Burnham of Chicago, and recommended him for that duty. Mr. Burnham accepted the appointment and took his six-inch telescope, made by the Clarks, with him to California, and resided on Mount Hamilton for six weeks and made the observations needed. His full and interesting report on the subject was printed by the trustees in 1880. In October, 1881, with Professor Holden, he went out to Mount Hamilton again, by request of the trustees, to observe the transit of Mercury. On both of these occasions he discovered a large number of double stars, chiefly in the southern sky, which at northern observatories are too low to be well seen.

In connection with the observation of double stars it may be remarked that the extreme acuteness of vision which enables one to prosecute such research with the highest success is a very rare gift; and the discovery of close doubles is its severest test. To measure a star—that is, to ascertain by means of the micrometer the distance and position angle of the companion with reference to the principal star—is one thing, and to find new and close doubles is a very different thing. Baron Dembowski, the most noted measurer of double stars, who received for this work the highest gold medal from the Royal Astronomical Society of London in 1879, had no success as a discoverer, and confessed his inability to find new doubles. When, however, a new double had been found by another observer, and the distance and position angle of the companion approximately estimated, he could readily find and accurately measure it. When Mr. Asaph Hall, in 1877, had found the two satellites of Mars and described their positions, it was not difficult for any astronomer who had access to a large Clark telescope to find them and see all that Mr. Hall had seen. The whole difficulty was in seeing them for the first time. Besides the ability to see a difficult object, there is required an intelligence and an experimental knowledge of the subject, which are as rare as the visual faculty itself. Some of the lower orders of animals have more acute vision than human beings; but they do not know all they see, or understand relations to other facts. They have plenty of sight, but are lacking *insight*. Mr. Burnham's extraordinary powers in both these respects have made him the most

successful discoverer of close double stars who ever lived.

The five great names in this department of astronomy are the two Herschels, Sir William and Sir John (father and son), the two Struves, Wilhelm and Otto (father and son again), and S. W. Burnham. In science a double star always retains the name of its discoverer and his catalogue number; and, for brevity, a Greek letter is used to express his name, or, in the case of the younger Herschel and the younger Struve, two Greek letters. The Greek letter Beta is the designation of Burnham. In a star list, "B 999" means Burnham's double star, numbered 999 in his catalogue; " Σ 318," Wilhelm Struve's star, number 318; and " $O\Sigma$ 413," Otto Struve's star, number 413. Each star is described in the catalogues of their discoverers by right ascension, declination, magnitude, position angle, and distance, so that no astronomer in the future can lay claim to it. Mr. Burnham knows his thousand stars by name,—that is, by number,—and can speak of the peculiarities of each without referring to his catalogue.

The known doubles are regularly and carefully observed by many astronomers, and their measures, each with a recorded date, will after a time show whether the supposed companion has physical relations with the principal star. If there be no change in the position angle or distance, they are strangers to each other. If there be a change, the rate of orbital motion may be estimated when enough measures are collected. It is possible that two or more stars very distant from each other may fall in nearly the same line of sight, and have the appearance of a double or a triple star. In case, however, of very close doubles, the chance of such a coincidence—one in many thousands—is so remote that there is almost a certainty that such doubles have physical relations and belong to the same system. Measures extending over a series of years will determine the fact.

Perhaps our readers may wish to know some-

thing of the personal characteristics of our amateur astronomer, and would inquire whether such incessant day and night work affects unfavorably his health and social habits. Does it make him a recluse? Is he a martyr to science? Has he time for social intercourse, and a taste for any of the recreations and amusements which interest other persons? In reply it may be said briefly that few persons have such uniformly good and robust health as he; few love better the social intercourse of their friends, or are more sportive and entertaining in their conversation. Few play so many games, or play them so rapidly and so well as he. He carries with him no indications of a recluse or a martyr. Why should he?—for his scientific pursuits come within the scope of his amusements. With strangers he has but little conversation, and rather avoids making new acquaintances. He never speaks of astronomy except the subject be introduced by others, and he never poses as a scientific man. Hence persons who have known him intimately for years have never suspected that he was anything more than a bright, agreeable companion, and a good shorthand reporter. He loves nature; and nothing delights him more than to tramp and camp for weeks in the woods of Michigan, around Lake Superior, or among the Rocky Mountains, with a few genial friends, his trusty rifle,—for he is a noted rifle-shot,—and his photographic outfit. In the matter of instantaneous photography he has few rivals, and with his portable camera he has traveled through Europe shooting pictures from steamboats and railroad trains. A competitive prize was offered in England for the best instantaneous photograph. In a spirit of fun he sent some pictures, and a first prize was awarded him. The subject was a cat in the act of springing upon a bird. In late years he has studied photography in its application to astronomy. Few men have a more interesting family, a happier temperament, or get more enjoyment from life than our Amateur Astronomer.

John Fraser.

[SINCE writing the above, Professor Fraser has died. The article has been revised for the press by a friend of the author, who coöperated with him in the preparation of the original paper.—EDITOR.]

MEMORANDA ON THE CIVIL WAR.

The Canal at Island No. 10.

A REPLY FROM GENERAL SCHUYLER HAMILTON.

To the EDITOR OF THE CENTURY MAGAZINE.

SIR: THE CENTURY MAGAZINE for February, 1889, contains a letter from Colonel George A. Williams, United States Army, speaking quite dogmatically of the origin of the canal above New Madrid which led to the capture of Island No. 10, and rather contemptuously of the honor of suggesting the canal. Colonel Williams alleges the "correct history" to be that the canal was suggested by a saw-mill refugee named Morrison, who was taken from a raft.

I regret that I was not afforded a hearing upon *this* subject before Colonel Williams's letter appeared.

Its publication forces me to say that I never saw nor heard of the raft refugee Morrison, mentioned by Colonel Williams, and that the suggestion for a canal which I made to General Pope was original with me. I did not receive the idea, directly or indirectly, wholly or partly, from Colonel Williams, saw-mill Morrison, or from any one else.

As part of the history of the canal incident, I beg space for the following extract from a letter written by me to B. J. Lossing, Esq., on the 7th of June, 1863:

The following record of a conversation of Mr. Solomon Sturgis of Chicago, who contributed very liberally to the equipment of the Sturgis rifles, I find in one of my letters dated March 31, 1862. It may not be uninteresting in this connection. It was said to be characteristic. He said, addressing General Pope: "General Pope, who suggested that plan? Tell the truth, the whole truth, and nothing but the truth; do not rob any man of the credit due him." General Pope replied with a smile, "General Hamilton suggested it, sir." Turning to me, he said, "General Hamilton, was it honestly your own conception? Did no one hint it to you — no private, no corporal, no sergeant, no one?" On my replying, "No one, sir," he said: "Sir, give me both your hands, I honor you for it; and, General Pope," said he, "you deserve high honor for adopting so wise a suggestion."

That is the record as I made it at the time, and it is true.

Schuyler Hamilton,

Late Maj.-Gen'l Vols., U. S. Army.

NEW YORK CITY, March 31, 1889.

[Colonel Williams died at Newburg, N. Y., April 2, 1889.—EDITOR.]

An Early Suggestion to Arm Negroes for the Confederacy.¹

AS THERE has been a variety of opinion in relation to the status of negro slaves under the late Confederate States Government during the civil war, I transmit for your consideration, from an official letter-book, a copy of my official letter to Hon. C. W. Harper, chairman of a sub-committee of the Mississippi legislature, then in session at Jackson, Miss., expressing in brief my views as to the employment of slaves in the construction of the military defenses of the State. It is per-

¹ See also the correspondence on this topic between General R. E. Lee and the Hon. Andrew Hunter printed in THE CENTURY for August, 1888. The present article was written before that correspondence appeared.—EDITOR.

haps expedient to note that in the construction of the defenses at Port Hudson, which I had established during the month of August, soon after the battle of Baton Rouge, I found it necessary to impress slave laborers for the prosecution of the work; and to repair the defenses at Vicksburg, and in some measure extend them, I found it necessary to impress several hundred negro slaves.

It was then a critical period with owners of slaves along the Mississippi River border, particularly above Vicksburg, where they were constantly menaced by predatory gunboats carrying off slaves, cotton, and supplies, without effective resistance. Under these circumstances, in my preliminary orders it was necessary to restrict, or limit, the field for impressment to the Mississippi border, to which little or no opposition was manifested by planters, especially as this public service was supposed to give some degree of protection to their individual interests.

In connection with the practical operation of this policy the legislative committee requested explicit official information as to my views on this subject, a summary of which I embodied in a letter as follows:

HEADQUARTERS FIRST DISTRICT,
DEPARTMENT MISS. & EAST LOUISIANA,
JACKSON, Dec. 16, 1862.

To Hon. C. W. Harper.

SIR: In reply to your communication of the 14th inst., requesting information as to the number of slaves who might be advantageously used in connection with our military defenses in this State, will say that my own views on the subject go very much beyond what is thought to be politic by most gentlemen, but will in response confine myself within such limits of seeming propriety as may commend the subject to the good common sense of those who are to be affected by it.

At this time, and until they shall be completed, one thousand negro men can and ought to be employed constantly on each of the works at Vicksburg, Port Hudson, and Columbus, and two thousand more could be used in the supply and transportation departments; perhaps a thousand more — part women — could be employed for hospital purposes.

Our railroads are in great need of repairs; a thousand negro laborers should be put upon them immediately and continuously employed. The construction and repairs of rolling stock, too, need much attention, and half the negro carpenters and blacksmiths in the State might be well employed upon it, and in the erection of buildings needed for many purposes.

In this way, and by the employment of other servants as teamsters, laborers, cooks, nurses, watchmen, etc., with our armies in the field, the fighting strength of these armies might certainly be increased one-tenth, and although laborers in the field of the husbandman are as necessary as soldiers in the army, to enable them to prosecute the war waged against us, I yet believe that ten thousand negroes might be spared from the former service in this State, without danger of too great reduction in agricultural supplies, and made almost if not quite as useful in the army and other public service as an equal number of white men. As a system, I think it would be well to introduce into the service, as cooks, one negro for every ten soldiers. These servants, when the troops were absent from camp, could be made available as watchmen for camp and police duty, thus relieving so many soldiers for service in the field.

Negroes thus employed should be organized in detachments and placed under the direction and control of per-

sons of well-known character, experienced in their management, and whose management and care should conform as nearly as might be to that of a prudent owner of slaves upon his own plantation. Without this, and unless much attention was given to the proper care and treatment of the slaves, great dissatisfaction would necessarily ensue amongst the owners, who, as a class, are always supposed to take great interest in everything pertaining to the comfort and welfare of their servants.

The slaves, for the purposes mentioned, should, of course, be drawn according to some fixed rule from the entire body of slave owners in the State, and not taken from some small neighborhood or county locality. As the war in which we are now engaged was brought about, in a measure, for the protection of rights connected with slave property, I take for granted that those who own slaves are not only quite willing to render every personal service which the country may require, but will gladly show to those who own no slaves, and who so patriotically swell the ranks of our armies, the greatest willingness to relieve them in every possible way from hardships incident to the service in which they are engaged by the substitution of slave labor when it can be done. This will be but their reasonable duty.

These last remarks, though not called for by your special inquiries, are nevertheless given as reflections not entirely irrelevant. In truth, sir, did it not seem to excuse to some extent the avowed purpose of the Federal Government to use the negro against us, if in their power, a small percentage of our male slaves should be made to act with their masters in the field against the common enemy of both. I am quite sure that such an exhibition of confidence on our part would have a salutary effect in preventing the alienation and demoralization of that class of our people. . . .

Very respectfully, your obedient servant,
(Signed) DANIEL RUGGLES,
Brigadier-General, P. A. C. S.

Within a brief period the legislature of the State of Mississippi authorized Governor Pettus to hold ten thousand slaves subject to the requisition of the President of the Confederate States, to be employed upon the military defenses of the State of Mississippi. During this period I was commanding the Department of Mississippi, as the successor of Major-General Earl Van Dorn, who had marched with an army, then recently organized, to attack the Federal enemy at Corinth.

In the meantime, and in anticipation of summary action of the legislature of Mississippi, I had occasion to send dispatches to Richmond by a distinguished volunteer aide-de-camp, to whom I confided my views in relation to the employment of slaves for manual labor in connection with our military defenses, and with the view of the gradual enrollment of selected slaves for bearing arms for service with armies in the field.

It was contemplated that exemplary conduct by the slave, and faithful service in the field, would entitle him to a well-defined and liberal personal reward.

On his return, my aide-de-camp informed me that no member of the Confederate cabinet appeared to give the subject favorable consideration.

Thus our earliest effort systematically to utilize and enroll negro slaves in the Confederate armies for service in the field proved abortive.

FREDERICKSBURG, VA.

Daniel Ruggles.

Strength of the Confederate Army at Gettysburg.

THE ARMY OF NORTHERN VIRGINIA by its return of May 31, 1863, numbered present for duty, officers and men:

General Lee and staff	17
Infantry	59,467
Cavalry	10,292
Artillery, 206 pieces	4,702
	74,478

Alexander's and Garnett's battalions of artillery are not included in this return. Alexander's battalion had twenty-six guns, Garnett's fifteen. Estimating them at the same number of men per gun as in the battalions reporting gives 935 to add to the total, making the line-of-battle strength of the army, 31st May, 75,413, with 247 pieces of artillery.

Early in June the army was reënforced by the infantry brigade of General J. J. Pettigrew from the Department of Richmond, with 3685 officers and men for duty, and the brigade of General Joseph R. Davis, from the Department of North Carolina, with 2577 for duty. The strength of these brigades is taken from the return of the Department of Richmond and of North Carolina for May 31, 1863. Corse's brigade of Pickett's division and one of Pettigrew's regiments, about 2200 in all, were left at Hanover Junction. Three of General Early's regiments, numbering, according to an article by that officer in Vol. V. of the Southern Historical Society papers, 919 for duty, were detached at Winchester to guard prisoners and garrison that place. The 25th Virginia of Johnson's division, and the 31st Virginia of Early's division, which had been on detached service since April 20, rejoined their commands near Winchester with 700 men for duty, and at the same place the 2d Maryland battalion was added to Johnson's division. Major Goldsborough, in his history of the "Maryland Line," says it took 500 men into action at Gettysburg. The Confederate infantry that crossed the Potomac, assuming that the gain by recruits, conscripts, and return of convalescent, furloughed, and detached men was offset by the small loss at Winchester and by sickness and desertion, was 64,000.

The cavalry was reënforced at Winchester by the 1st Maryland battalion, 300 strong, and by the brigade of General A. G. Jenkins, 1800 for duty. General Imboden, with a force which, in an article in "The Galaxy" for April, 1871, he states as "about 2100 effective mounted men and a six-gun battery," joined the army at Chambersburg. The commands of Mosby and Gilmore were also attached to the cavalry.

Two batteries of six guns each were added to the artillery: one, the Baltimore Light Artillery, at Winchester; one came with Imboden.

The Confederate army in the Gettysburg campaign had for duty in round numbers at least

Infantry	64,000
Cavalry	14,500
Artillery, 259 pieces	5,900
	84,400

and on the field of Gettysburg *eighty thousand men.*

The loss of the army is incompletely given in the report of its Medical Director, printed in the Appendix to the Comte de Paris's history of the battle as 20,448. In Pettigrew's brigade, and probably in other brigades of Hill's corps, the losses for the first day only are given. The reports of the corps commanders, which can be found in Vols. II. and X. of the Southern Historical Society papers, give the casualties as follows:

	Killed.	Wounded.	Missing.	Total.
Longstreet's corps	933	4,453	2,273	
Ewell's " "	930	4,076	1,350	
A. P. Hill's " "	849	4,289	3,844	
	2,712	12,818	7,467	22,997

The loss of the cavalry is nowhere accurately given. From Beverly Ford to Upperville inclusive it was 995.

At Gettysburg four brigades report losses aggregating 240. There was not a day from July 1 to July 20 when some portion of the cavalry was not engaged. Three thousand is not an overestimate of its loss in the campaign.

The total loss of Lee's army in June and July, 1863, was not less than 26,000.

CINCINNATI, O.

E. C. Dawes.

"Stonewall Jackson's Intentions at Harper's Ferry."

IN an article which appeared in your magazine in June, 1886, written by General John G. Walker, late of the Confederate army, entitled "Harper's Ferry and Sharpsburg," the statement is made by the author that he received a signal order from General Stonewall Jackson not to open fire on Harper's Ferry unless forced to do so, as he (Jackson) designed to summon the Federal commander to surrender, and, should he refuse, to give him time to remove non-combatants and then carry the place by assault. This statement, I am told, has been questioned by General Bradley T. Johnson and Colonel H. Kyd Douglas, and the object of this note is to confirm General Walker's statement.¹ I was at the time assistant adjutant-general of the division commanded by General Walker, and was present on Loudoun Heights when the order in question was received; and I recollect that in consequence of its receipt the fire of our guns, which had

been in position from an early hour in the morning, was withheld until the afternoon, and was not then opened until the Federal batteries on Bolivar Heights opened on the infantry force of General Walker, under the command of Colonel (now Senator) Ransom.

My three years' daily intercourse with General Jackson at the Virginia Military Institute makes me confident that, in giving his signal orders, he would neither consult with his subordinates near him nor inform them what orders he had given or would give under the circumstances; therefore it is not surprising that the orders sent to General Walker were not known. The knowledge of the contradiction of General Walker's statement has just reached me. Hence the tardiness of my confirmation of its substantial accuracy.

William A. Smith.

"A Question of Command at Franklin."

WE have received from General D. S. Stanley a letter in reply to General Cox's statement in THE CENTURY for February, 1889 (page 630). In this letter General Stanley denies that he retired from the field of Franklin after he had been wounded, or that General Cox was the senior officer of the line from the time Wagner's troops were driven back until the battle was entirely ended. General Cox, however, does not recede from his position on these points. The details of the controversy cannot be given here.—EDITOR.

TOPICS OF THE TIME.

John Bright.

SOME of us still have vivid recollections of that agony of blood and sweat through which the great North American Republic vindicated its right and title to nationality. It had fixed its boundaries and defended them successfully against assaults from abroad; now it was to prove to the world that those boundaries were not to be broken down by any force from within. Though a new generation has come into being since then, twenty-five years are too few to make us forget how the scales, which had been so long in dubious balance, began to settle slowly towards the side of the maintenance of the Union; nor can they make us forget how the waiting-time was broken again and again by the ring of good cheer in the words of the dead leader whose thoroughly English name heads this article.

The American people will not remember John Bright best as the opponent of the Corn Laws, as the uncompromising free trader, as the friend of oppressed nationalities everywhere, or as the man who dared denounce the Crimean war, though it cost him his seat in the House of Commons; they will remember him better as men remember him who stands their friend when most they need a friend. There was a time when, in Bright's own words at Birmingham, "nearly 500,000 persons — men, women, and children — at this

moment are saved from the utmost extremes of famine, not a few of them from death, by the contributions which they are receiving from all parts of the country." There was but one barrier — the blockade — between this hungry people and the prosperity which abundant cotton would bring them; and there were voices in plenty to urge them to bid their Government attempt to break the blockade. No one can say that it was John Bright's eloquence which held Lancashire to the conviction that its permanent interest was in the success of the American experiment; but it is certain that John Bright's eloquence lost nothing in effectiveness from the fact that he had given up his income, and allowed his six cotton-mills to stand idle rather than say one word which would even embarrass the American people in the throes of their struggle for national existence.

John Bright was as absolutely destitute of fear as John Knox. He was not to be moved by any social pressure from telling workingmen the truth, as he understood it, about the hopes which filled many English high places for the downfall of the American Republic. "Privilege," said he to them in 1863, "thinks it has a great interest in it, and every morning, with blatant voice, it comes into your streets and curses the American Republic. Privilege has beheld an afflicting spectacle for many years past. It has beheld thirty million men, happy and prosperous, without emperor, without king, without the surroundings of a court, without great armies and great navies, without great debt, and without great taxes. And Privilege has shud-

¹ For the comments by General Johnson and Colonel Douglas see The Century War Book, "Battles and Leaders of the Civil War," Vol. II., p. 615 *et seq.*

dered at what might happen to old Europe if this grand experiment should succeed." All his arguments to English workmen might be summed up in one of his pregnant sentences: "My countrymen who work for your living—remember this: there will be one wild shriek of freedom to startle all mankind if that American Republic should be overthrown."

It is not as the mere friend of America that Americans should remember John Bright; he was the advocate of his own country, and of all mankind, when he supported the principle for which the war for the Union was waged. If the "federation of the world," which was to put an end to wars and hereditary warriors and privileged classes everywhere, was not yet possible, it was to the interest of peace that one nationality should control central North America and banish war from its jurisdiction. And so John Bright, the man of peace, was the vigorous champion of the most devastating war of his time. His work was even bolder than this, more consistent beneath an apparent inconsistency: it was from the sternest sense of duty that he, the typical Englishman, brought his indictment against the English Government, the English blockade-runners, and a part at least of the English Liberal party. It was a greater crime in his eyes to condone attacks upon the republican idea than even to imagine the death of the king; and he did not stop to measure his words when he spoke of it. "We supply the ships; we supply the arms, the munitions of war; we give aid and comfort to this foulest of all crimes. Englishmen only do it. They are English Liberal newspapers only which support this stupendous iniquity. They are English statesmen only, who profess to be Liberal, who have said a word in favor of the authors of this now enacting revolution in America." And the English Liberals have come to see clearly that John Bright's denunciation of his Government and party was only a wise preference of his country's highest good to her temporary and short-sighted whim.

His own countrymen may well regret that in his later years he lagged so far behind his pupils; that the veneering of surface dignity, which he had so often stripped from others, was so quick to take fire from the criticisms of Irish members; and that, among the leaders in the last great revolution in English public opinion, the picture of John Bright should be turned to the wall. But, after all, his name is even more the property of the world than of England; and the world, and especially the American quarter of it, has had no reason to veil the face of him who loved and served God and man first, and his own country afterwards. It can only take the long list of great names that the English stock has given it, Alfred and Sir Simon of Montfort, More, Latimer, and Bunyan, Eliot, Hampden, Cromwell, and Blake, Pitt, Wellington, and Nelson, Clarkson, Wilberforce, and Cobden, and add to it a name which shall not be least in the list, that of John Bright.

The New States.

ONE of the acts of the Fiftieth Congress, almost in its closing hours, was the passage of a comprehensive Enabling Act, granting permission, on certain nominal conditions, for the formation of the four new States of North Dakota, South Dakota, Montana, and Washington. There can be no doubt whatever that the con-

ditions will be punctually fulfilled, that the privileges and responsibilities of State-hood will be very gladly accepted, and that the "new constellation," which began its course with thirteen States, will number forty-two during the first year of its second century under the Constitution.

It is easy enough to misunderstand the sense in which this increase of States is mentioned by Americans. The numerical increase is itself indicative of a far larger increase in other forms. When there were but thirteen States, they hugged the Atlantic coast so closely that every one of them might have been called a salt-water State. As the roll of States has grown longer, it has meant that the center of population was moving westward, that orderly government and all the forces of civilization were creeping along the Gulf of Mexico and the shore of the Great Lakes, across the Mississippi, and beyond the Rocky Mountains to the Golden Gate. Each successive admission of a new State has been a milestone in the march of the American people towards the dominion of the continent. Now the system of States, which once only fringed the Atlantic, extends with but a single break across the continent. The increase of the number of States is so evidently parallel with the country's growth from a population of three millions to one of sixty millions, from poverty to wealth, from insignificance to respect, that a foreigner may be pardoned for thinking that the ideas were meant to be equivalent. He is apt to say, like Mr. Arnold: What of it? Are numbers the *summum bonum*? Was not your country happier when it was poorer, and more respectable when it was less respected? Better wish for a reduction in the number of your States, if there is any hope that such a reduction will bring you back your Washingtons, Jays, and Marshalls.

The Arnold interpretation may be a natural one, but it is exceedingly discreditable to the intelligence either of those to whom it is addressed or of him who makes it. The first of the alternative conclusions is improbable: the American has not usually been found guilty in other matters of such stupidity as would be implied necessarily in a glorification of mere numbers or size. He does not rate the Chinese Empire above Switzerland for intelligence, or the Russian Empire above the British for freedom. He cannot mean that he has any overweening pride in the number forty-two, as intrinsically superior to the number thirteen. The first business of an acute critic should have been to seek out the American's real reason for satisfaction in the growth of his country; and, as regards the number of States, the real reason is not far to seek.

It is a cardinal article of belief among peoples of European stock that the dark ages are over in their case. And yet medievalism is still most powerful with most of them in the intense belief of the governing or influential classes that it is better for the mass of the people to be governed than to govern themselves. "Constitutionalism" is represented at most in the dealings of the hereditary element with the legislative body at the capital: the peasant's advanced liberty consists rather in his share in the choice of the legislative body than in the development of his local government. Is there no value in that privilege of local self-government for which men are willing in Russia to brave the terrors of the bastion and of Siberia?—for which in France they seem to be willing to

surrender the shadow, if not the substance, of the national republic? — for which, in every country, the awakening human mind longs as a higher privilege than any national system can give? This privilege has been extended by the American system of self-governing States, without a struggle, without the repression of a single revolutionary throes of humankind, with the very minimum of human unhappiness, from the Atlantic to the Pacific, over all central North America. Surely no political result has ever furnished more conclusive evidence of the advisability of leaving a people to work out their own natural solution of their own political problems. It is this crowning success of the American system, in some respects the crowning success of the century, which is summed up and embodied in the growth from thirteen to forty-two States. And Americans have a right to be proud of it.

There is, perhaps, a technical question whether the admission of the new States is so far accomplished by the mere Enabling Act that their representative stars may properly be placed on the flag for the approaching Fourth of July. It is not probable, however, that the question will ever assume any practical importance. The older States of the Union will not be apt to cavil on points of etiquette in the welcome with which they meet their new sisters, or to stickle on the exact location of the threshold. The field of forty-two stars may not be legal for Federal agencies until next year, but there is assuredly nothing illegal in the prior recognition by States and private persons of the practical relations of the new States to the remainder of the Union. Such a recognition would be at the worst but a brief and passing irregularity; and that is hardly to be placed in the scale opposite to the comity of States. The fortunate design of our national flag enables the older States to signalize at once the cordiality with which they add to the roll of their sisterhood the names of North Dakota, South Dakota, Montana, and Washington.

How to Preserve the Forests.

A PLAN for the conservation of the forests on the lands which belong to the nation has recently been presented by "Garden and Forest." Almost the only forests remaining on the public lands are those of the mountain region of the Pacific States, and these forests have a special interest and value because of their relation to the agricultural capacity of a vast extent of country lying along the streams which have their sources in these mountain woods. These regions adjacent to the streams, or near enough to be irrigated from them, are not fertile in their present arid condition, but they are capable of great productiveness. All the elements of fertility are in the soil in abundant proportions, except water. This can be supplied only by irrigation. It does not come to these thirsty lands naturally, by rainfall, but must be assisted by the ingenious devices of man on its way to thousands of fields which will thus be made to blossom as the rose, where nature, unhelped, leaves wide expanses desert and unproductive. This water, which is the magical element by which this wilderness is transformed into a fruitful and populous country, is stored in the everlasting hills, where the rivers have their springs, and the forests are its natural

custodians and distributors. The water supply is abundant, and while the forests stand guard around the sources of the rivers, their flow is as everlasting as the hills themselves.

A mountain forest has more functions than most people have considered. It covers the hills with a vast mat or net-work of living root-fibers, and holds in place the ever-accumulating mass of mold and decomposing vegetable matter, which absorbs and retains the water of the rainfall and the melting snows. Such a forest is a great sponge, which receives all the water that falls on the mountains, and allows it to escape gradually, so as to maintain the steady flow of the rivers which it feeds. A forest is thus a natural reservoir for the storage and distribution of the water which falls upon it; and it is far more efficient, as well as far more economical, than any system of artificial storage reservoirs that can be substituted for it. If the forest is removed, this mighty sponge is destroyed, and there is then nothing to perform its function of holding back the water, which will rush down in overwhelming floods and torrents.

The first thing to be noted is that the water will thus all run away at once, at a time when but little of it is wanted, and there will be little or none of it left for the season when it is most needed. The rivers which have been fed by the mountain springs will soon be dry a great part of the year.

The next thing to be observed is that when the forests are destroyed the hills themselves are not everlasting. When the great sponge-like mass or cap of living root-fibers, mold, and decaying vegetation which the forest held in place as a crown for the hills is destroyed, the mountains themselves begin to crumble and melt away. The soil which for thousands of years has been meshed and matted along the steep slopes and around the shoulders of the hills has now nothing to keep it in place, and it begins to slip and sink away. When it is heaviest with accumulated water whole hillsides are dislodged from their supporting framework of rocks, and descend with resistless force to the plain below, carrying ruin in their path, and leaving the once beautiful face of the mountain seamed and scarred. The rivers are choked, their channels silted up, and the valleys and adjacent plains are buried irrecoverably beneath the vast accumulations of sand, gravel, and *débris* which the resistless annual floods bring down from the dissolving hills.

All this has been tried in every part of the civilized world, with the same unvarying result. There appears to be serious danger that these disastrous and fatal experiments will be repeated in our treatment of the mountain forests of the western part of our country; but as the forests now belong to the nation they should be effectively guarded against the short-sighted selfishness which would thus ruin them, and, by destroying them, forever prevent the development of the regions along the course of the streams below.

The plan proposed by "Garden and Forest" for the protection of these important forests embraces three essential features.

The first is the immediate withdrawal from sale of all forest lands belonging to the nation.

The second step is to commit to the United States army the care and guardianship of the nation's forests. It is shown in the article referred to that there is in

time of peace no other work of national defense or protection so valuable as this which the army can perform, and that the national forests cannot be adequately guarded and protected by any other means. It is obvious that the measures which have been tried, including those now in operation, or nominally in operation, have proved almost entirely ineffective. The officers of the army are picked men, educated at the expense of the nation, and already in its paid service.

The third step in this plan is the appointment by the President of "a commission to make a thorough examination of the condition of the forests belonging to the nation, and of their relation to the agricultural interests of the regions through which the streams flow which have their sources in these forests, and to report with the facts observed a comprehensive plan for the preservation and management of the public forests, including a system for the training, by the Government, of a sufficient number of foresters for the national forest service. . . . A National School of Forestry should be established at a suitable place in one of the great mountain forests on the public lands, and its equipment should be as thorough and adequate for its purpose as is that of the National Military Academy at West Point."

The plan thus proposed has the merit of being practical, and of providing the means and instruments for its own effective and successful administration.

Nothing else at once so direct and efficient, and so thoroughly adapted to accomplish these most important objects, has hitherto been presented for the consideration and action of the American people in connection with this department of our national interests. It should be adopted and put in operation as soon as possible.

The Dark Continent.

FROM the beginning of time, men have been accustomed to associate with the name of Africa only such conceptions as darkness, ignorance, helplessness, and the opportunity of oppression. Sir John Hawkins and the Roman conqueror of centuries before may have had little else in common, but they agreed in their belief that Africa and the Africans were fair game, the storehouse from which were to be drawn supplies of slaves, and in which Rob Roy's was the only law.

Since the Pharaohs' kingdom, with its supplies of grain to the Mediterranean region, and Carthage, with its more universal commercial intercourse, international relations have for centuries felt hardly any disturbing influences from the side of Africa, with the exception of the den of pirates so long permitted to exist in the Barbary States. Lord Salisbury's recent invidious speech about "black men" and their implied incapacity for national or international affairs, though applied to Hindus, was merely another curious survival of the feeling of absolute contempt bred from centuries of supreme international indifference to everything African except the plunder of Africa. This indifference was the product of the feeling that international interests and the balance of power were purely European affairs, a feeling which does not really date from the struggles of William and Louis, but from time immemorial,—from that time, at least, when the headlong retreat of the Persian from the shores of Greece

gave the first great shock to rudimentary international relations. From that time international law has virtually been founded on the notion that international rights were confined to the nations of Europe, while the nations of other continents had at best only international privileges.

One may well fancy the rudeness of the shock that would have been given to this notion by the appearance and geometrical increase of the great American Republic but for the self-control of the latter power. Silas Deane's wish for three thousand miles of fire between Europe and America has been pretty fairly fulfilled so far as international law is concerned; and diplomacy has been permitted to assume that the center and circumference of all its real rights and interests are in Europe. It has often been wondered that American diplomacy should have been so constantly successful; perhaps the wonder would be less if one could weigh exactly the natural desire of the diplomacy of the old school to maintain the *status quo* in order to neutralize its American rival by granting all the latter's reasonable demands, and thus to retain to itself the appearance of its ancient exclusiveness.

Circumstances seem to be forming new combinations to shock the solidity of the *status quo*. Not only are torpedo-boats, iron-clads, and perfected weapons and munitions at the service of any government that has money to buy them, but some governments, once accounted only barbarous, have come to know and value these tools of destruction and to use them as a defense. The Japanese army and navy must now be reckoned with by Russia and England in any general war in which these two rivals take part. China, which once relied on junks, gingals, and stink-pots for the extermination of the foreign devils, now patrols her own seas with well-appointed squadrons of iron-clads, and doubtless will not wait for European permission to take advantage of the earliest opportunity to settle up several long-standing accounts. Cases of the kind are numerous and striking, though those who talk so glibly of a "general European war" seem to ignore them and to imagine that international circumstances have not changed since the general European peace was made in 1815.

The share of the Dark Continent in the new circumstances thus far has been mainly commercial. He who can teach the black man to want and wear one shirt where none was worn before brings a wide and welcome increase to the markets of European producers; and it is shameful to be compelled to add that Christian nations have found a still richer mine in fastening upon Africa the love for distilled liquors. Under such auspices the Congo State has been born; but is it certain or probable that this is to be the end of all for Africa? Everything seems to portend an epoch of European colonization in the Dark Continent, modeled on the Congo State; but there are some considerations to the contrary.

Africa, like every other continent, has races of every type. It has its races of cowards, and its militant, conquering peoples. In the natural process, the former should go down and the latter come to the surface of things. We are apt to judge all Africans by the former type. But Lord Wolseley should know the black man as a fighter, if any one does; and he has recently

put on record¹ his testimony to the courage and determination with which the really military black races face any odds in battle. Our own civil war moreover has borne testimony to the superb fighting qualities of the African. In the very month in which Wolseley's testimony appeared, it received striking confirmation in the affair at Suakin, in which the negro allies of the English forces did so unfairly large a proportion of the fighting; and there are further confirmatory cases in the African warfare of the past, familiar enough to show that the Dark Continent has an abundance of the raw material for organized armies. And it is more than probable that the militant African will be as competent as our American Indian to handle modern weapons and munitions.

Why, then, when educated leaders shall be developed, should not Africa, in her turn, evolve governments as capable as China or Japan of throwing some weight into any general disturbance of the international balance? The possible wealth of Africa is immeasurably beyond that from which the far eastern powers have armed themselves. When we hear of Chinese and Japanese war fleets now, the conception of them has gradually become familiar; but the conception of them would have seemed about as strange thirty years ago as that of a Zulu squadron of iron-clads would seem to us now. It is certain that if any African power should come to have ambition enough to

form such a fleet, no European power would have any more scruple in seeking its aid by alliance than the Roman emperor had in accepting the tax from an unsavory source, and for the same reason.

It may be, of course, that all such speculations are less than idle; that the African is hopelessly a child or a slave; that the destiny of the Dark Continent is only to be exploited for the benefit of the other continents; and that the relations between Europe and Africa are always to be commercial only, and never in any wise international. It is well to notice, however, that this last hypothesis has already been relied upon in the case of China and Japan, and that it already seems to be proving somewhat delusive. One cannot feel certain that the other hypotheses above stated are not equally or more delusive. Certainly Africa shows no signs of supine acquiescence in a commercial fate. Englishmen, Frenchmen, Germans, and Italians are still chipping at the edges of the Dark Continent, and seem to find advance into the interior unexpectedly difficult. There may yet be the seeds of stirring international episodes in the Basuto, the Zulu, or the Ashanti, as Wolseley describes them; or in the men of whom he uses these astonishingly strong words: "I am certain our men would much prefer to fight the best European troops rather than the same number of African warriors who were under the influence of Mohammedan fanaticism."

OPEN LETTERS.

American Literature.²

WHSOEVER will read through this big work, of which seven volumes are now issued, will have gained a knowledge of American history, not so connected, but much more vivid than he can get from Bancroft or Hildreth. And the best way to study history is in the documents. The editors have given a liberal interpretation to the word literature; indeed, they have been forced to do so, for it is not much more than half a century that literature as a fine art has been practiced in this country with any success.

The first two volumes cover the colonial period and follow the time division adopted by Tyler in his unfinished "History of American Literature," being devoted respectively to the years 1607-1675, and 1676-1764 (Tyler makes it 1607-1676 and 1677-1765). The dividing line between the first and second colonial period is Bacon's Rebellion in Virginia and King Philip's War in New England. These volumes, in fact, make an excellent supplement to Professor Tyler's work without in the least taking its place, since they consist merely of selections from colonial writers with no comment, and no biographical matter beyond the dates and places of birth and death. In this respect the "Library" differs from such standard collections as Duyckinck's and Griswold's. It is not a cyclopedia;

it gives, in general, longer extracts, and its material is chosen with a nicer taste and from a more modern point of view.

A glance at the contents of the successive volumes in the series will enable the reader to follow the growth of the American mind and the development of a native society and a civilization which, if in the main derived from Europe, is also in a degree original. In the first volume, as was to be expected, the place of honor is given to that delightful soldier of fortune, Captain John Smith, of the Virginia Adventurers; and the greater part of the book is allotted to narratives of voyages, reports of life in the New World sent back to England, journals like Bradford's and Winthrop's, the sermons and theological writings of New England divines such as Hooker and Cotton, and descriptions of the Indians. This was the age of settlement and discovery, and the authors represented in this volume were all born in England and in great part reared there. Perhaps the most important names after those already mentioned are Roger Williams and John Eliot, the apostle to the Indians. In New England, theology seems to have formed the sole intellectual interest of the people and almost the daily business of their lives. The Cambridge platform; the letters of persecuted Quakers, "written in the common gaol in the bloody town of Boston"; the punning epitaphs composed upon deceased ministers by their survivors; and the metrical horrors of the famous "Bay Psalm Book" (1640), the first book printed in America, round out the picture of early colonial life in New England and deepen one's thank-

¹ "Fortnightly Review," December, 1888.

² A Library of American Literature, from the Earliest Settlement to the Present Time. Compiled and Edited by Edmund Clarence Stedman and Ellen Mackay Hutchinson. In ten volumes. New York: Charles L. Webster & Co. 1888.

fulness that one is only a *descendant* of the Puritans. But the great interest of their subject-matter and the earnestness of their spirit redeem the work of these ancient annalists and preachers from absolute dullness. Now and then there is a touch of quaintness, of simplicity or grave humor, or a bit of graphic narrative which seems like a concession to worldly-mindedness and engages the modern reader. Mistress Anne Bradstreet, "The Tenth Muse," our first if not really our worst poet, is not so amusing as the Sweet Singer of Michigan. Nathaniel Ward, "The Simple Cobbler of Agawam," is a humorist of that distressing variety which abounded in the generation of Thomas Fuller, and is not to be compared with Artemus the Delicous. But Captain John Underhill is a pleasant soul, and Thomas Morton of Merrymount has some contemporaneous human interest as a foil to the Puritans, and, if for no other reason, then because Hawthorne has made such good use of him in his "Maypole of Merrymount." There is, in truth, a legendary and almost mythological air about this Merrymount episode.

In the second volume we reach the first native American writers. The Calvinistic gloom of the Puritans takes a still deeper tinge, and we are met on the threshold with Michael Wigglesworth's "Day of Doom"—that strange New English *Inferno* which once made thousands of readers shudder and now makes an occasional one laugh, or would make him laugh were it not for a certain intensity and sincerity, amounting almost to poetic imagination, under its hard, literal diction and doggerel verse.

Thirty years later and this Calvinistic blackness gets a streak of blood across it, and we come to the Salem witch-killings—the internal, as Indian massacres were the external, tragedy of colonial New England. Increase and Cotton Mather—what Tyler calls "the dynasty of the Mathers"—are the prominent figures in the literature of this period. The "Magnalia" is the great book of old New England. Its author was pedantic, vain, bigoted, and superstitious. His book is crabbed enough in style, but it is full of meat, and may be relished to-day by readers with a strong stomach. The editors have done well in giving among their other selections from Cotton Mather his account of Captain Phips's adventure in raising the wreck of a Spanish treasure ship from a reef near Hispaniola. The whole life of Phips, as told in the "Magnalia," reads like a romance. Judge Sewall's confession of his guilt in the witchcraft matter is given, and also the indignant exposure of the whole business of Mather's "Invisible World," by Robert Calef, a Boston merchant, whose sanity, in contrast with the wretched credulity of the ministers and magistrates, imports a little of the eighteenth-century *éclaircissement* into the darkness of the seventeenth. The editors, for some reason, have not included the fine passage from Sewall's "Phænomena" which Whittier has versified and which Professor Tyler quotes in his "History." Room might have been made, too, for an extract from Higginson's "Attestation to Cotton Mather's Magnalia," which contains some really eloquent writing.

Narratives of captivity among the Indians, and ballads of Lovewell's Fight and of the French and Indian War, continue, in this volume, the history of the gradual extinction of the aborigines begun in the first. Although the Indians had ceased to be a serious

menace to the advance of the English settlements, they were in some respects more formidable to outlying towns, like Deerfield, than they had been in the days of the Pequot and King Philip's wars, being organized and supplied with fire-arms by their French allies. The opening up of the Carolinas and the survey of the Dismal Swamp furnish new fields to the literature of exploration and wild adventure. In the eighteenth century Puritanism finds its most spiritual and most logical expression in Jonathan Edwards, who must be pronounced, upon the whole, the greatest name in our strictly colonial period. Edwards's limpid style and "that inward sweetness" in his "sense of divine things" give a beauty to some of his pages which makes them the nearest approach to pure literature in the writings of American theologians before Channing. Copious and judicious selections are given from Hubbard's "History of New England" and from the Virginia historians Beverly and Stith, whose more formal works now began to take the place of contemporary journals like Bradford's and Winthrop's. Finally, towards the end of the volume, we reach the first American dramatist, Thomas Godfrey of Philadelphia, whose tragedy "The Prince of Parthia" (1765) has nothing to recommend it to curiosity except its date.

The third volume is devoted to the literature of the Revolution (1765-1787). Politics now takes the first place, hitherto occupied by theology, and even the sermons of the time have a strong tinge of patriotism. Franklin is the great figure of the volume. He was the first American man of letters who gained a European reputation, except, possibly, Edwards; the first intellectual product of the New World that could be measured against those of the old by the same standards without allowances or qualifications. The selections from Franklin are fairly representative of his many-sided activity. They include several of his papers on electricity, letters on public questions and private opinions, amusing trifles like "The Whistler," and the "Dialogue between Franklin and the Gout," and passages from "Poor Richard's Almanac," and from the still popular "Autobiography," the most humanly interesting American book of the last century. The spirit of Franklin and of his age was very different from that of Mather or of Jonathan Edwards. He was *émancipé*—a deist and a utilitarian, distinctly secular and unspiritual. In his inventiveness, thrift, common sense, and practicality he stands out as the "primal Yankee." Matthew Arnold, who praised the crystal clearness of his English, thought him the most characteristic American in literature.

The eighteenth-century rebound from the religious tension of the seventeenth is seen also in the writings of other American deists, like Jefferson, "Tom" Paine, and Ethan Allen. The political writings and speeches of these and other patriots, such as Otis, Washington, the Adamses, Patrick Henry, Jay, Josiah Quincy, etc., make up the bulk of the volume. Revolutionary songs and ballads, both Whig and Tory, and documents like the Declaration of Independence, give fullness to the historic view of the period. The Loyalist side is represented by extracts from Governor Hutchinson, James Rivington, the official Tory printer of the "Gazette," and the famous "History of Connecticut," by Rev. Samuel Peters, the source of unnumbered slanders on the land of steady habits. There are eight pages from

the diary of John Woolman, that ancient New Jersey Friend and abolitionist, whose quaint sweetness of spirit made Charles Lamb fall in love with the early Quakers. In the prose and verse of Francis Hopkinson of Philadelphia, in Trumbull's "M'Fingal" and the pasquinades of the other "Hartford wits," we encounter satire and humor not entirely devoid of point even at this distance of time. And in Philip Freneau we reach the first real American poet. The editors would have done well, perhaps, to include among their selections from Hopkinson the description of a salt-box in his "College Examination," which is better known than anything of his except the "Battle of the Kegs." The selections from Freneau are good, but "The Indian Student" is more deserving of a place in the volume than any of the author's political or satirical verses, which are all worthless, except "Eutaw Springs."

In this volume, as in the latter part of the second and throughout the fourth, the changes in style keep pace with the advancing literary fashions of the mother country. There is the same difference between the prose of Cotton Mather and that of Jonathan Edwards as between the prose of Burton and that of Locke. Dryden and Butler, a little later Addison and Pope, a little later still Johnson and Goldsmith, become the models of our lighter literature in prose and verse. "M'Fingal" imitates Hudibras; William Livingston, afterwards governor of New Jersey, in his poem "Philosophical Solitude" (1747), tells in the manner of the "Rape of the Lock" of the coquetries of "nymphs" like Sylvia and Chloe:

Then parrots, lapdogs, monkeys, squirrels, beaux,
Fans, ribbons, tuckers, patches, furbelows,
In quick succession through their fancies run,
And dance incessant on the flippant tongue.

In President Dwight's "Triumph of Infidelity" (1788) and Mercy Warren's poems (1790), Pope continues to give the law, though Dwight's "Greenfield Hill" shows some influence of Goldsmith and Cowper. Franklin's "Busybody" (1729) was an imitation of the "Spectator." Freneau shows distinct traces of Gray's and Collins's elegiac verse. There was little or nothing as yet of original value in our polite literature.

The literature of the Republic begins with the fourth volume (1788-1820). This was the era of constitution-making and constitutional interpretation in American political history, and here the important names are those of Hamilton, Marshall, Gallatin (in finance), Fisher Ames, and later, as the points at issue between the Federalists and the States-Rights party developed and the slavery question loomed ominous, John Quincy Adams, Josiah Quincy, and that line of great orators, Randolph, Clay, Webster, and Calhoun. It was the golden age of American eloquence, and the most imposing figure in the volume is that of Daniel Webster. Theology retires more and more into the background, and general literature, though still imitative, puts forth brave attempts. The forms of our first comedian, Royall Tyler, our first lexicographer, Noah Webster, and our first professional novelist, Charles Brockden Brown, come into view. Tyler was, in his day, a versatile and even brilliant figure, though his work has not worn well. His "Contrast," the first American comedy regularly produced, was acted at the John Street Theater in New York in 1786, and is somewhat after the manner—as to the dialogue—of Sheridan's plays.

Tyler's novel, "The Algerine Captive," suggests Smollett and Le Sage, and a passage given from his "The Yankee in London" (1809) shows that the differentiation between English English and American English (as in the use of *guess* and *clever*), which forms so large a part of the stock in trade of our "international" novelists, had already become noticeable. Brown's uncanny romances have recently been republished entire. He was not without genius, and faintly foretokens Hawthorne. Shelley, as is well known, fed upon his novels, and contributed to the same school of fiction his youthful performances, "Zastrozzi" and "St. Irvyne, or the Rosicrucian." There is a native touch in such anonymous ballads as "The Country School" and "Sleighting Song," the latter slightly reminding one of a very popular sleighing idyl by one of the editors of this "Library." Under John Quincy Adams we miss the clever and rather well-known verses entitled "The Wants of Man," which are a sort of anticipation of Dr. Holmes's "Contentment," as Thomas Green Fessenden's ballad "The Country Lovers," here given, is of Lowell's "The Courtin'." The beginnings of Knickerbocker literature are illustrated by passages from William Irving and J. K. Paulding; and the approach of a finer culture in New England by specimens from the novels, lectures, and poems of Washington Allston. Of pieces still current and generally familiar we may note, as falling within this period, Hopkinson's "Hail, Columbia," Moore's "Visit from St. Nicholas," and Key's "Star-Spangled Banner." A feature of this volume, repeated in some of the later ones, is a collection of "Noted Sayings," such as Commodore Perry's "We have met the enemy, and they are ours," and Pinckney's "Millions for defence, but not one cent for tribute." (What he really did say was, "Not a penny, not a penny!")

With volume five (1821-1834) we enter upon the beginning of American literature in the stricter sense of the word. There was little or nothing before this in the nature of creative or imaginative work of any permanent importance. But now we come upon the names of Irving and Cooper; of historians like Prescott; naturalists like Audubon; poets like Pierpont, Dana, Halleck, Bryant, Percival, and Drake; orators and lecturers like Everett and Choate. None of these is quite forgotten, and several of them are as fresh in interest as ever. And though the volume is in general a depository of faded reputations, it holds many single pieces which are still retained in the anthologies and preserved in popular recollection. Such are "The Old Oaken Bucket" of Samuel Woodworth, Mrs. Willard's "Rocked in the Cradle of the Deep," Wilde's "My Life is like the Summer Rose," Payne's "Home, Sweet Home!" Dr. Muhlenberg's "I Would not Live Away," and others, less known but equally worthy of remembrance, like Lavinia Stoddard's "The Soul's Defiance," the spirited anonymous ballad entitled "The Yankee Man-of-War," and Grenville Mellen's fine poem, "The Bugle." Mellen's battle-piece, with its noble closing line:

High over all the lonely bugle grieves,

which Emerson admired and inserted in his "Par-nassus," is not given here. The volume opens fittingly with the name of Dr. Channing, whose "Remarks on National Literature" (1823) was the first formal

declaration of our intellectual independence of England. It shows how young our genuinely American literature still is, that some of the writers represented in this volume have died within the last decade. Bryant, *e. g.*, died in 1878; R. H. Dana and General Dix in 1879; Palfrey, the historian of New England, in 1881; Dr. Orville Dewey and Thurlow Weed in 1882.

The sixth volume (1835-1860) covers what still remains the great period of American literature — the generation that preceded the civil war. This is crowded with names of the first importance: Emerson, Hawthorne, Longfellow, Whittier, Poe, and Bancroft, whose works still form our favorite and daily reading; and with others, whose writings, though less familiar, are yet significant, and in part, at least, survive: Alcott, Pinkney, Prentice, Willis, Simms, and Margaret Fuller. Although the period was rich in pure literature, the selections continue to take in a wide range and to illustrate American thought on many sides. The speeches and political writings of public men, such as Lincoln, Seward, Garrison, Chase, John Brown, Jefferson Davis, Robert Toombs, and Caleb Cushing; the work of theologians, like Horace Bushnell, Theodore Parker, Mark Hopkins, and Orestes Brownson; of scholars in many departments, such as Lieber, Woolsey, Marsh, Hedge, Felton, Barnard, and Peirce; of literary critics, like Ripley and Hillard; and of historians, like Gayarré and Hildreth — all these are amply presented. In this period the national mind seems first to reach maturity. The authors above named are distinguished, in general, from their predecessors: in *belles lettres*, by a stronger and finer art, a greater native impulse, and a freedom from the influence of foreign and especially of English models; in the literature of knowledge, by a wider learning and a nicer scholarship, which testify to the improvements in American education; in divinity, by a more liberal spirit and a disposition to attend more to religious philosophy and less to dogmatic theology, which shows the influence of Unitarian dissent in New England and the growth of a more cosmopolitan population in the country at large; and in political literature, by a plainer style, a more earnest and sincere conviction, and a higher moral tone in the discussion of party issues, particularly of the slavery question.

The seventh volume continues the literary history of the same generation (1835-1860) and adds the names of Mrs. Stowe, Holmes, Motley, Thoreau, Lowell, Walt Whitman, and of their less famous contemporaries, many of whom are still living and writing. Politics and political journalism — the latter not ignored in previous volumes — are represented mainly by passages from the writings of Charles Sumner, Wendell Phillips, Horace Greeley, Alexander H. Stephens, Henry J. Raymond, and Generals Grant and Sherman; and liberal extracts are given from Beecher's sermons, lectures, and public addresses, and several pages of characteristic sentences and paragraphs from his extemporaneous discourses. One hundred and thirty-eight authors are drawn upon in this seventh volume, whose contents exhibit a greater variety than any one of the preceding. The majority of these are fairly well known, but now and then a selection occurs which will strike the general reader as something of a rarity or a literary curiosity. Such is the passage from Delia Bacon, the originator of the "Baconian theory" of Shakspeare. Such the "Table-Talk" of Thomas Gold Appleton, who

said so many good things and wrote so little. Such also the two poems from the little known volume of Sam Ward, the King of the Lobby, prince of good fellows, most accomplished of talkers and of diners. It was over the mahogany, indeed, that we first heard from his own lips his little poem "Edelweiss," and a few stanzas of his clever French translation of "Locksley Hall,"

C'est bien toi, manoir de Locksley,

either one of which would have graced a page in volume seven.

Mr. Stedman and Miss Hutchinson have performed their task with excellent judgment, knowledge, and care. We do not see how any student of American history or literature — unless he has a very full library of Americana of his own — can afford to be without this collection.

Henry A. Beers.

Buchanan, Lincoln, and Duff Green.

IN December, 1860, President Buchanan sent to President-elect Lincoln, by General Duff Green, an urgent invitation to come immediately to Washington, with assurances that he would be received and treated with all due courtesy; the object of the invitation being that they might consult and act in concert to "save the Union without bloodshed," if possible. In *THE CENTURY* for November, 1887, page 87, the authors of the *Life of Lincoln* say:

Whether this proposition came by authority or not, Lincoln could not publicly either question the truth of the envoy or the motive of the mission. In either case the appeal was most adroitly laid. Of course it was impossible to accept or even to entertain it. . . . His [General Green's] whole aim had been to induce Lincoln tacitly to assume responsibility for the Southern revolt.

Mrs. Green's nephew, Ninian W. Edwards, and Mr. Lincoln married sisters. This family alliance led to a warm personal friendship between Mr. Lincoln and General Green, which continued down to their last meeting, on board the *Malvern*, at Richmond, Virginia, April 5, 1865, when Mr. Lincoln sprung forward to greet General Green with the exclamation, "My dear old friend, can I do anything for you?"

When Mr. Lincoln came to Washington as a member of Congress he took lodgings in Carroll Place, then more commonly called "Green's Row," that he might be near General Green, and his wife near Mrs. Green. The following, which is one of many letters to General Green, illustrates their friendly and confidential relations. This letter was "confidential" in 1849, but the lapse of time, the death of both parties, and the reference to General Green in the *Life of Lincoln* justify its publication now:

SPRINGFIELD, ILLS., May 18, 1849.

DEAR GENERAL:

I learn from Washington that a man by the name of Butterfield¹ will probably be appointed Commissioner of the General Land Office. This ought not to be. That is about the only crumb of patronage which Illinois expects; and I am sure the mass of General Taylor's friends here would quite as lief see it go east of the Alleghanies, or west of the Rocky Mountains, as into that man's hands. They are already sore on the subject of his

¹ Justin Butterfield, who was appointed. — EDITOR.

getting office. In the great contest of '40 he was not seen or heard of; but when the victory came, three or four old drones, including him, got all the valuable offices, through what influence no one has yet been able to tell. I believe the only time he has been very active was last spring a year, in opposition to General Taylor's nomination.

Now cannot you get the ear of General Taylor? Ewing is for B., and therefore he must be avoided. Preston I think will favor you. Mr. Edwards has written me offering to decline, but I advised him not to do so. Some kind friends think I ought to be an applicant; but I am for Mr. Edwards. Try to defeat B., and in doing so use Mr. Edwards, J. L. D. Morrison, or myself, whichever you can to best advantage. Write me, and let this be confidential.

Yours truly,

A. LINCOLN.

Mr. Buchanan knew of these friendly relations, and therefore chose General Green as his "envoy." When the proposition was submitted to Mr. Lincoln, he not only expressed his willingness to accept it, but manifested an eagerness to start at once for Washington. He regretted being detained by an appointment with Senator Ben. Wade, whom he was expecting by every train, and said that he would start for Washington as soon as he had met that appointment. Senator Wade came and opposed the proposition successfully. Mr. Lincoln changed his mind and declined Mr. Buchanan's invitation.

Failing in this, General Green then sought to obtain from Mr. Lincoln a letter which could be used at the South as an antidote to his Cooper Institute speech and his speech of the 16th of June, 1858, before the State convention at Springfield, Illinois (see *THE CENTURY* for July, 1887, p. 386), in which he took the ground that "this Government cannot endure permanently, half slave and half free," and which had led the South to believe that he and his party would be satisfied with nothing short of the "extinction" of slavery. So far from his "whole aim" being to throw on Mr. Lincoln the "responsibility for the Southern revolt," General Green's only aim was to relieve him of that responsibility by satisfying the South that they had no reason to fear that he would make or countenance in others any attempt to emancipate their slaves. In this he also failed. The letter sent by Mr. Lincoln to Senator Trumbull, to be delivered "if, on consultation, our friends, including yourself, think it can do no harm," never reached General Green.

General Green's own account of his mission to Springfield and of his interview with Mr. Lincoln in Richmond after its occupation by the Federal troops may be found in "Facts and Suggestions," by Duff Green, published in 1866 by Richardson & Co., New York, and Lippincott & Co., Philadelphia.

At Richmond, Mr. Lincoln told General Green that Mr. Corwin's resolution, prohibiting Congress from any interference with slavery in the slaveholding States, was passed on the last night of the session at his (Lincoln's) request. Commenting on this, General Green wrote as follows:

This resolution was unanimously adopted on the 3d March, 1861, by both houses of Congress, and, as it now appears, upon the recommendation of Mr. Lincoln, as a means of arresting the secession movement. Who can doubt that, if he had come to Washington in December, 1860, as I urged him to do, and had then exerted a like influence, it . . . would have prevented the war.

DALTON, GEORGIA.

Ben. E. Green.

Sea-Coast and Lake Defenses.

GLANCING through the great four-volume report of the Chief of Engineers, United States Army, with which I have just been favored through the courtesy of that officer, I find *one page*, out of its three thousand pages, of business-like statements of work done during the year reported upon, which, if none other, ought to interest and impress every patriotic citizen.

Describing the condition of our so-called "sea-coast and lake frontier defenses," this officer remarks, "The wisdom of providing for the public defense in time of peace and while the Government is in a condition of financial prosperity would appear to be too evident to need further demonstration." The matter has been repeatedly reported upon, and the result has been the annual expenditure, years ago, of about \$100,000 per annum, until 1885; since which date absolutely nothing has been done. The consequence of this miserable state of affairs is thus graphically stated by the Chief of Engineers; and could anything be more pitiful?

Neglect of any structure, however massive or well built, results in more or less rapid deterioration, and we find to-day everything connected with our permanent defenses, which are dependent upon annual appropriations for the maintenance and repair, going to rack and ruin: slopes overgrown with grass and weeds and gullied by the rain; walks and roads ragged and untrimmed and full of holes and breaks; ditches and drains filled up or fallen in, and pools of stagnant water on the parades and in the casemates; the sewers in bad order with the consequent evils; mortar and cement fall from the joints of masonry for the want of repointing; timber gun and ammunition platforms rotten or decayed; and permanent concrete or masonry platforms settling or out of plumb, thus preventing the proper service of the guns; casemates and quarters leaky, unhealthy, and uninhabitable; magazines damp and useless; revetment walls and water fronts falling down, and waves making serious and rapid encroachments on valuable land, thus impairing eligible sites for future works; and generally about the ungarrisoned forts an appearance of total abandonment and decay; and from the commanders of garrisoned forts continued and urgent appeals to keep the works in order for the comfort and convenience of the garrison and the efficient use of the armaments.

Was there ever a more extraordinary picture of the inefficiency of our legislative body or of the shiftlessness that may sometimes characterize the administration of such trusts? What facts or what circumstances could give the enemies of the republican system of government a better argument against government by representatives chosen by the people? A great nation like ours permits every material guarantee of the permanence of its institutions to be absolutely neglected; pays not the slightest attention to its most important defensive armaments; allows its army and navy to become weakened, demoralized, and incapable of doing the work assigned, and placidly sees the smallest of those nations with which it is liable at any time, through the fault of the stranger or the incapacity of its own administrations, to be forced into conflict, providing itself with fleets and armies such as give the enemy the power to inflict incalculable and irremediable damage on our coasts before we can even make a fair beginning in the work of rehabilitating our defenses. Great Britain, France, Germany, Italy, Spain, even the smallest of the South American republics, in case of the sudden outbreak of such hostilities as may result from any folly of the least among our foreign representatives, of the pettiest consul, could to-day bombard New York

City more easily than Gillmore bombarded Charleston during our own civil war, and would do more injury in six months than could be repaired in years.

The work now in progress on our navy is a mere drop in the bucket in comparison with that constantly in progress in the dock-yards of every respectable naval power in the world. But this neglect of duty and common prudence on the part of a great nation is hardly greater as a crime than is its folly in turning a deaf ear to its own monitors, the older and wiser officers of its army and its navy,—those who know best what are the dangers of the situation,—and in plodding on after the mighty dollar while risking national life.

R. H. Thurston.

SIBLEY COLLEGE, CORNELL UNIVERSITY.

"The Place Called Calvary."

IT has come to my knowledge that surprise has been expressed in some quarters that Mr. Fisher Howe did not know what the German author Otto Thenius had once said concerning the place of our Lord's crucifixion. I suppose my own words, in the article "Where was 'the Place called Calvary'?" published in THE CENTURY for November, 1888, may have given such an intimation. I said that Mr. Howe "did not know that any one had ever spoken even casually about such a thing." This occurs in the midst of my reference to the conversation between Dr. Rufus Anderson and Dr. Eli Smith. A part of this conversation

as I quoted it was necessarily left out in the article, and so the point of my remark was lost. On page 34 of Mr. Howe's "True Site of Calvary" he has given a long paragraph concerning Thenius's testimony to the correctness of the theory which he was advocating. His language is: "While preparing this paper, we have been much interested in finding that a German author, Otto Thenius, arrived, several years ago, at the same conclusion in regard to the place of crucifixion which we are aiming to establish." Thence he hastens to couple with this the indorsement of Ritter, whose volume was evidently before him at the moment. Ritter's language is: "Thenius has endeavored to show, and has displayed great learning and acuteness in the effort, that the situation of Golgotha was separated some distance from the burial-place, and that it was in front of the Damascus Gate upon the skull-shaped hill alluded to in which the Cave of Jeremiah is found." Mr. Howe was apparently delighted to discover a hint of corroboration anywhere, for his heart was in the work he was trying then to accomplish; because he soon remarks, as if in disappointment at not finding some valuable help, "It is to be regretted that the views expressed by Thenius on this interesting topic have not been reproduced by Ritter, or his translator." It is plain that Mr. Howe had constructed his entire argument, and was already putting it into readiness for printing, with no aid from anything which Ritter had thought it worth while to quote.

Charles S. Robinson.

BRIC-À-BRAC.

A Villanelle.

(With a copy of Jean Passerat's
"J'ay perdu ma tourterelle; . . .
Je veux aller après elle.")

JEAN PASSERAT, thy tourterelle,
The dove that from thy bosom flew,
Does not with any mortal dwell:

And with it went the villanelle —
The art is, like thy dove, "perdu!"
Jean Passerat, thy tourterelle

Eludes the modern poet's spell;
To reproduce thy ring-dove's coo
Does not with any mortal dwell.

Once from the skies a clear note fell,
A purple pinion cleft the blue:
Jean Passerat, thy tourterelle

It was not, though it mocked thee well —
But thy sweet song to wake anew
Does not with any mortal dwell:

And since thyself went "après elle" —
Went after her the white gates through —
Jean Passerat, thy tourterelle
Does not with any mortal dwell!

Charles Henry Webb.

Reflections.

STILTS are no better in conversation than in a foot-race.

FOLLY must hold its tongue while wearing the wig of wisdom.

IT is the foolish aim of the atheist to scan infinitude with a microscope.

WHEN poverty comes in at the cottage door, true love goes at it with an ax.

A VEIN of humor should be made visible without the help of a reduction mill.

THE reformer becomes a fanatic when he begins to use his emotions as a substitute for his reasoning faculty.

MANY an object in life must be attained by flank movements; it is the zigzag road that leads to the mountain-top.

ALL the paths of life lead to the grave, and the utmost that we can do is to avoid the short cuts.

THE office should seek the man, but it should inspect him thoroughly before taking him.

HUMILITY is most serviceable as an undergarment, and should never be worn as an overcoat.

THE Good Samaritan helps the unfortunate wayfarer without asking how he intends to vote.

J. A. Macon.

A May Idyl.

WITH rake and hoe doth Gladys go
 A-gardening this sunny weather,
 Sweet peas about her porch to sow
 Midst hollyhocks and prince's feather.
 She sends me here, she sends me there,
 And loving aid I gladly lend her —
 My Gladys, oh, how passing fair,
 With violet eyes so softly tender!

How bright the day; the air of May,
 How sweet with breath of blossoms laden!
 And can you wonder that I stay —
 The tempting scene, the lovely maiden?
 What reck I though we ne'er may wed?
 I kiss her cheek — who could resist her?
 Through pearly portals cherry red
 She whispers, "Phyllis, dearest sister!"

M. L. Murdock.

Neighbors.

YOUR name is Helen: are you dark or fair?
 Deep blue your eyes, or black as shadows are
 That lie in woods at midnight? Tell me, sweet,
 What form you wear — large, medium, or petite?
 I never saw you, nor you me, I ween,
 And yet our verses on the self-same sheet
 Are printed in the last new magazine.

I fain would know, fair neighbor, if your song
 Came from the woodlands, or the city's throng,
 From mountain fastness, or beside the sea?
 Breathed it in chambered solitude, or free
 As birds on wing, amidst some sylvan scene?
 I pray you grow acquainted, and let us be
 Neighbors in thought as in the magazine.

So may I ask if you are deeply blue
 (As to the hose, I mean), or just a true,
 Bright little woman, — nothing Bostonese, —
 Whose song is sung without a thought to please
 Aught but the singer? May I read between
 The lines, and ask such things as these,
 Hoping they'll print them in the magazine?

Did hope deferred — that is the weary time
 Betwixt acceptance and the printed rhyme —
 Make your sweet heart, like my old battered soul,
 Endure long agonies, and curse the whole
 Confounded tribe of editors whose keen,
 Cool, business sense would not at once enroll
 Our burning thoughts in their next magazine?

And did you anxiously each month e'er track,
 From leading articles to Bric-à-Brac,
 Each page, lest haply they had hid your verse
 Between some dreary kind of prose? — or, worse,
 Lopped off a line to pad a page, and then
 Misspelt your name, the tender poet's curse?
 Alas, for poets in a magazine!

I question idly. Chance, and chance alone,
 Upon one page my verse and yours has thrown.
 But, let me whisper e'er I drop my pen,
 I am the steadiest of all married men,
 And write these lines — oh, may they yet be seen
 By your bright eyes! — in hopes they'll bring me ten
 Or twenty dollars from some magazine.

R. T. W. Duke, Jr.

A l'Empire.

ROSINA, they say, is but just seventeen,
 Yet she crushed at a blow all the fops of the town
 The very first time she appeared on the scene
 In something she calls a Directory gown.

It is cut in the picturesque fashion of old,
 With a limp, clinging skirt and the scantiest waist,
 And wandering over its soft silken fold
 Are garlands of roses enchantingly traced.

They have faded, perhaps, since the wonderful night
 When Grandmamma danced at the Emperor's ball —
 A dimpled young beauty who laughed with delight
 To hear herself whispered the fairest of all,

And fingered her pink-flowered frock as she stepped
 Through gigue and gavotte with a gay cavalier,
 Whose passionate vows, never meant to be kept,
 Fell now and again on her innocent ear.

There 's a tiny spot still on the ancient brocade,
 Where the posy she gave him had lain at her breast,
 And there at one side where the satin is frayed
 The thick-jeweled hilt of his sword may have pressed.

But the Prince — ah! Rosina, revenge is so sweet,
 That, for Grandmamma's sake, I am glad you look
 down
 With scorn on the dandies who sigh at your feet
 Whenever you wear that Directory gown!

M. E. W.

My Muse.

SHE came but once, my radiant Muse —
 Once, and uncalled for, smiling, fair,
 Filled for an hour my room with light,
 Sat in my battered office-chair;

Watched while I wrote with trembling hand
 My first, my last, my only rhyme,
 Then rose and with one backward glance
 Swept from my sight, and since that time

I've watched and hoped for her in vain —
 Peered through the window, left the door
 Ajar, that I might coax her in,
 But, ah! she comes to me no more.

Often I hear her mocking voice,
 And feel the rush of flying feet;
 Alas! before I reach the door,
 She 's turned the corner of the street.

"If thou hadst held me fast," she cries,
 "Perchance I had been with thee yet.
 I'm but a woman; such a slight
 I can forgive but not forget."

Annie D. Hanks.

Shortest and Longest.

THE longest day is in June, they say;
 The shortest in December.
 They did not come to me that way:
 The shortest I remember
 You came a day with me to stay,
 And filled my heart with laughter;
 The longest day — you were away —
 The very next day after.

George Birdseye.

DETAIL FROM THE "ADORATION OF THE KINGS," BY GENTILE DA FABRIANO.

(IN THE ACADEMY OF FINE ARTS, FLORENCE.)

THE CENTURY MAGAZINE.

VOL. XXXVIII.

JULY, 1889.

No. 3.

WINCHESTER CATHEDRAL.

WINCHESTER Cathedral is the longest medieval church in Europe now that old St. Paul's of London has perished, yet no other makes so poor a showing in the English landscape. As depressed and monotonous in outline as Peterborough, it lacks that splendor of façade which gives Peterborough grandeur from a western point of view; nor has it an equal stretch of open square and verdant close about it. Seen from the neighboring hills its enormous bulk is of course imposing, but on lower ground the eye cannot often isolate it from the encircling houses. Especially is this true of the place whence strangers see it first. It stands near the railroad, yet the traveler may easily fail to realize that he is approaching one of the mightiest, most famous, and most interesting of English cathedrals. He must carefully make the circuit of its walls to appreciate their extent, and must enter its portals to comprehend its majesty and charm.

I.

At Winchester, as at Lincoln and at York, we have a town that the Romans knew. They called it Venta Belgarum, but its still earlier British name is more often recollected — Caer Gwent, familiar to the lovers of Arthurian legend. Tradition says that British-Roman Christians worshiped here in a church of unparalleled size and beauty, which, after the West-Saxon conquest, was turned into a "temple of Dagon." But the real importance of the city dates from this conquest. When Cerdic was crowned Caer Gwent lay in ruins; but restored with an Anglicized name, Wintceaster, it grew beneath the rule of his offspring

to be the capital of united England; and, though London gradually usurped its place, the imagination still looks back to it as back to Canterbury. Winchester politically and Canterbury spiritually are the mother cities of the English-speaking race.

Christianity came late among the fierce West-Saxons. Only in the year 633 did Birinus, a bishop sent from Rome, convert King Kynegils and his people, helped in the work by Oswald, king of Northumbria, friend of St. Cuthbert, hero of Durham, who had come southward to seek the hand of a West-Saxon princess. Although Winchester was the royal seat, Dorchester (now Abingdon) was the first center of the new diocese. But a great church at once replaced the old one that Dagon had desecrated, and hither, after various other changes, the bishop's chair was removed about the year 700, in the reign of the famous King Ina.

Winchester's importance steadily grew with the growth of West-Saxon supremacy. Here reigned Egbert, the first king of all England, and his successors until just before the Norman conquest. After its desolation by the Danes, Alfred the Great restored the town to prosperity and peace, and, that harried Wessex might no longer deserve the reproach of being the most ignorant province in England, founded, close to the cathedral or Old Minster, a New Minster as a home for scholars. Swithun, who had been his tutor, was bishop just before his time. When Ethelwold filled the chair a century later he repaired, or probably rebuilt, the Old Minster. The towers of his church, says an ancient chronicler in rhyme, "have lofty peaks capped with pointed roofs, and are adorned with various and sinuous vaults curved with well-skilled

contrivance. . . . Above these stands a rod with golden balls, and at the top a mighty golden cock, which boldly turns its face to every wind that blows."

The translation of St. Swithun's body into the new building in the year 980 was delayed by forty days of rain, and in consequence this festival (July 15) still predicts the next forty days of weather for the English peasant. The original church had been dedicated to the Holy Trinity. The new one was dedicated to Sts. Peter and Paul. But St. Swithun was revered as its real patron, and medieval writers call it the Old Minster, or St. Swithun's Abbey. The chapter had originally been a secular one, but Ethelwold offered the canons, many of whom were married men, their choice between a monkish cowl and the loss of their seats; and when all but three refused the cowl, he filled the vacant stalls with Benedictine monks from Abingdon.

During the days of the threatened and accomplished Danish dominion, national existence still centered at Winchester. In its cathedral Canute was crowned, and here he placed his golden crown on the head of the crucified Christ, refusing to wear it again after his courtiers' blasphemous adulation on the borders of Southampton Water. Here, too, the legend runs, his widow Emma—widow also of Ethelred the Unready and mother of the Confessor—was forced by her pious, weakly son to walk upon hot plowshares in refutation of a charge of too close friendship with Bishop Aldwin. The great Godwin died suddenly at a royal feast at Winchester and was buried in the cathedral while all the people of England mourned aloud. William the Conqueror respected the town as the dower city of the Confessor's widow, Edith, and it quietly submitted to his rule. Stigand was bishop of Winchester as well as archbishop of Canterbury at this time, and he too died here and was buried in the cathedral. And on a neighboring hill-top Waltheof (whose birthplace we saw at York), the "last English Earl," was beheaded by the Conqueror and "meanly buried on the place of his martyrdom."

The first Norman bishop was Walkelin, a relative of the Conqueror's. He rebuilt the cathedral from the foundations up, on a site that was far more cramped than it remains to-day, the New Minster standing so close to its northern side that the chanting in one church could be heard in the other, and William's great castle crowding close upon its western front.

II.

ALTHOUGH the Confessor had been crowned at the old capital his love for Westminster and

the development of commercial life started London in its successful rivalry with Winchester. But it was generations still ere Winchester lost its rank. It was William's English capital, where he was crowned for the second time with Matilda. Domesday Book was called the "Book of Winton," probably because it was here presented to the king; and here, where it first rang out by his hated order, the curfew-bell still tolls night after night. William Rufus too was crowned here, and, shot near by in the New Forest which his father had watered with the tears of its dispossessed peasants, was buried without religious rites in the center of St. Swithun's church. Seven years later Walkelin's massive tower fell down, as though "ashamed to shelter the Red King's corpse." On the day of his burial the witan at Winchester elected Henry to the throne; and in a neighboring cloister he found his wife, Edith,—afterwards, as Norman tongues could not pronounce her name, called Matilda or Maud,—the daughter of Margaret of Scotland and niece of Edgar the Atheling, last scion of Cerdic's stock. In Henry's reign the New Minster was removed to another site and became Hyde Abbey, while the ground it left vacant was used for the city cemetery and now forms part of the cathedral close.

Henry of Blois, a grandson of the Conqueror, Bishop of Winchester from 1129 to 1171, was not only the most powerful prelate but the most powerful man in England. A prime favorite with his uncle, King Henry, to whom he owed his bishopric, neither gratitude nor oaths guided his course in the war which followed Henry's death. Siding now with his cousin Matilda and now with his brother Stephen, he worse confounded the confusion of his time, but at last was the chief promoter of the settlement which put Stephen on the throne. His political acts may be variously judged. His private life was pure, and he labored steadily for the good of his diocese. Becket was consecrated by his hands. He was legate of the pope, a great warrior in deed as well as counsel, and the builder of the beautiful and famous Hospital of St. Cross, which still stands in its old usefulness a mile away from the cathedral. But in his latter days, in the reign of Stephen, Winchester's rank as the capital of the realm finally passed away. It is true that Henry spent much time at Winchester, married his daughter there to the Duke of Saxony, and there kept the enormous treasure, which, when he died, Richard eagerly came to seize. It is true, as well, that Richard's second coronation, after his captivity, took place at Winchester. But he was first crowned at Westminster, as had been the case with Stephen and with Henry II., when Winchester

WINCHESTER FROM THE EASTERN HILLS.

lay almost in ruins after the long war, and indeed, years before, with Henry I.; and no subsequent English king has thought of Wessex as the political heart of his realm.

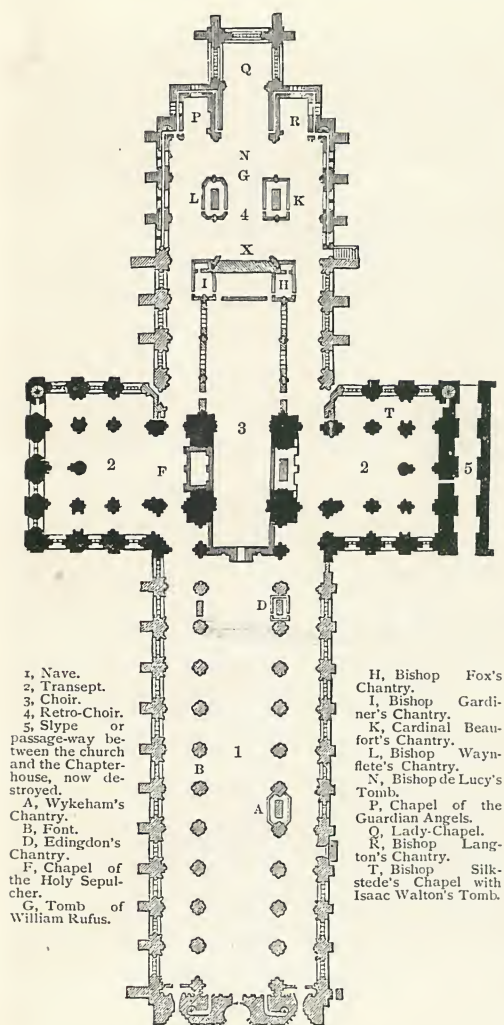

In 1189 Godfrey de Lucy was made bishop, and rebuilt the east end of the cathedral while King John was beginning his reign. Bishop Peter de Roches, a Poitevin by birth, and one of the first of those haughty foreign prelates who troubled the realm so sorely, stood fast by John while he struggled with his people,

and frequent monkish quarrels with the townsfolk. But a happy day came at last to Winchester, when, at the parliament held there in 1268, Henry made his peace with his son and with the memory of Simon de Montfort. Ethelmar, or Aylmar, de Valence, Henry's half-brother, had finally been chosen bishop through his insistence. After this name came a few of small significance, and then Bishop Edingdon's in 1346. The Black Death all but depopulated England in Edingdon's time and left Winchester with only two thousand inhabitants, yet his architectural works were many and ambitious, both within and without his cathedral. From 1367 to 1486 (a period of 119 years) the chair was filled by three prelates only, and each was a man of exceptional note, even for a bishop of Winchester — William of Wykeham, Cardinal Beaufort, and William Waynflete. Before I speak of them, however, it will be best to glance at the fabric of the cathedral church upon which Wykeham imperishably set his seal.

III.

THE ambiguous words of early writers led, even in mediæval times, to a belief that Walkelin the Norman did not entirely renew Ethelwold's cathedral, built only a hundred years before. It was long argued that its tower at least remained and fell upon the grave of Rufus, and that the new tower was called by Walkelin's name because it was raised with moneys he had bequeathed. But it is certain now that a new site was chosen for the Norman church, the Saxon church standing close beside it till it was complete; that Walkelin's tower did fall,—as two centuries later fell the one which his brother, Bishop Simeon, erected at Ely,—and was promptly rebuilt as we see it to-day.

Walkelin's church was begun in 1076 and dedicated, with infinite pomp, in 1093. The purely Norman character of the crypt helps to prove the change of site, and its plan shows that the shape of the east-end of the church above must have been more complex than that of other Anglo-Norman churches. The "ritual choir" projected as usual across the intersection of nave and transept, and it has never been withdrawn within the eastern limb—the architectural choir—as it has in many other cases. The presbytery beyond it ended, at about the point marked X on our plan, in the customary semicircular apse. But around this apse a wide aisle was carried, flanked by a pair of towers; and a great doorway in the center of the curve admitted to a narrower Lady-Chapel, which extended past the point marked N on the plan. Modern excavations have shown that the nave extended forty feet farther west than

PLAN OF WINCHESTER CATHEDRAL. (FROM MURRAY'S "HANDBOOK TO THE CATHEDRALS OF ENGLAND.")

and after his death remained Grand Justiciar of England and was guardian of the new king, little Henry III. The reign of this Henry of Winchester was a troublous one for his natal town, what with the Baron's war eddying close about it, the king's wranglings with the cathedral chapter over the election of its bishops,

the line of its present front and had two enormous towers.¹ Except the transept no part of this vast church — five hundred feet in length — now stands intact; and the gradual process by which the whole greater limb was reconstructed is perhaps the most curious on record.

In the year 1202 Bishop de Lucy began, in the Early-English style, a new retro-choir and Lady-Chapel, starting at the fourth pier to the eastward of the crossing. His exterior walls were constructed first and carried past the narrow Norman Lady-Chapel without disturbing it. Later this chapel, together with the aisle around the apse, was torn down and new pier-arcades and vaults were built. The old apse stood inside this newer work until 1320, when the present termination of the presbytery was built in the Decorated style, with a great window in the gable rising close behind the high-altar, far above the lower roofs of De Lucy's retro-choir. In 1350, in the time of Bishop Edingdon, the central alley of the four choir-bays next the crossing was rebuilt in an Early-Perpendicular style, while their Norman aisles were still suffered to remain. Then Edingdon tore down the west-end of the church with its towers, rebuilt it forty feet farther east, and began to rebuild the nave. William of Wykeham continued his work, but he did not rebuild; he merely transformed a great part of the nave, leaving it at his death, in 1404, to be finished by his successors. About 1470 the Lady-Chapel was lengthened towards the east, where three chapels of equal depth had hitherto stood side by side. After the year 1500, the Norman aisles of the choir were at last rebuilt in a style like that of Wykeham's work. For fifty years longer splendid tombs and chantries were erected in Late-Perpendicular ways, and Renaissance architects then added their quota in the shape of minor decorative features. So there is no style or period later than the Conquest which does not reveal itself in this remarkably handled church.

Not much need be said about the transept — we have seen Norman work of the same character in the great Eastern cathedrals. It has an aisle on each side, and across each end runs another which rises only to the level of

DIAGRAM SHOWING WYKEHAM'S TRANSFORMATION OF THE NAVE.
(FROM MURRAY'S HANDBOOK.)

the springing of the arches, where it bears a narrow gallery. The tower was once open as a lantern to its full height, but was ceiled lower down in the time of Charles I. The four piers that support it are extraordinarily massive, and their masonry is distinctly of two different dates, while the four piers next them in the transept are stronger than those beyond and likewise show marks of alteration. Yet all the work is Norman, and thus structural as well as historical voices witness that Walkelin's great tower fell and that his successors were frightened into sturdier building.

Striking indeed is the contrast between these stern and massive transept-arms and the rich perspectives which stretch out east and west. The picture on page 328 puts the spectator upon the raised floor of the south aisle of the choir. A vast Norman arch curves above him. To the right he sees the wall which incloses the ritual choir, still extending in the Norman fashion beneath the tower; and if he bends forward and looks to the left, the bald majesty of the transept is relieved by few touches of carven decoration. But the wall of the ritual choir is adorned with the work of a much later age; behind him extends the late-built Per-

¹ The nave-aisles seem to have ended where they do to-day, and the extension probably consisted of a wide vestibule flanked by the towers, or a sort of western transept.

FROM THE SOUTH AISLE OF THE CHOIR, LOOKING WEST.

pendicular choir-aisle, with the simpler yet light and graceful Lancet-pointed work of De Lucy beyond it, flanked by luxuriant Perpendicular chantries; and opposite him, under the tall slim arch which Wykeham designed, stretches the long south aisle of the nave — sharply pointed, richly vaulted, looking like the work not only of another age but of another race than that which built the massive stilted semicircle above his head.

IV.

CROSSING the transept now and turning into the nave we see one of the most singular and interesting architectural works in the world. In many other churches there are major or minor parts which have been changed by the touch of later ages into marked unlikeness to their former selves. But nowhere else in England was such a transformation effected on so vast a scale, yet nowhere did it leave so little patent evidence of change behind it.

When Edingdon, as I have told, saw fit to take the nave in hand he pulled down the western end. The west-front is entirely his

work, inside and out, except for the turrets and gable, which were added by Wykeham; and so are the outer walls and windows of one bay on the southern and two on the northern side of the nave. But when Wykeham took up his task he showed a more economical yet a bolder spirit. He tore down only a portion of the fabric and then added what was lacking to define the proportions and complete the features of a Perpendicular design. Just how he went to work is clearly shown in the illustration on page 327, which was first printed with Professor Willis's admirable account of the cathedral. The right-hand compartment shows the original design of the nave (similar to the design we still see in the transept), with its pier-arcade, triforium, and clerestory of almost equal height; the left-hand compartment shows what Wykeham took away — the pier-arch, the sub-arches of the triforium, and the whole front of the clerestory stage; and the middle compartment shows what he added — a pier-arch much loftier and slighter than its predecessor, and a tall clerestory, the lower part of which, with its blank traceries on the solid wall and its projecting parapet, simulates a triforium, and, indeed, incloses a passage which opens into the nave through small undecorated windows. On the outside of the building only two stories show — the outer wall of the aisle being carried as high as the base of the glazed clerestory lights. The elaborate vaults of nave and aisles — with their main ribs grouped in the characteristic English way¹ but connected by minor ribs in star-like patterns — are part of Wykeham's design, and were finished by Beaufort and Waynflete. In the first portion of the work that Wykeham himself accomplished he allowed many of the Norman surface stones to remain, shaping the piers to the proper form by cutting Perpendicular moldings upon them. But he found this process too troublesome or too costly, for the portions afterwards built are entirely cased with stone-work of his time, behind which, however, the sturdy Norman core remains.

A fine Norman font stands on the north side of the nave, and on the south side, fittingly placed amid the work of their hands, are the sumptuous oratory-tombs of Edingdon and Wykeham. Wykeham's chantry is an especially beautiful piece of work — a tall rectangular structure, with sides that are open above a wall some ten feet in height, and a canopy roof supported on slender shafts and faced with graceful gables. Within it, on an altar tomb, lies the effigy of the great architect in full canonicals, two angels bearing his pillow and three monks praying at his feet. A great square

¹ See "Lincoln Cathedral," *CENTURY MAGAZINE*, August, 1888, p. 587.

minstrel-gallery fills the west end of the north aisle, and in both aisles, as in those of the transept, are many monuments of many dates. Only two need be noted as bringing a breath of warmer feeling, of closer kinship, among the vague, impersonal memories which haunt us in a church like this. On two simple slabs in the pavement we read the names of Jane Austen and of Isaac Walton; and, for my part, I have found such names far more touching, more im-

No part of the cathedral is more interesting than the triforium passage in the nave. Although it extends over the whole width of the aisle, one must keep carefully to a narrow central path lest a slip be made in the thick gloom into hollows which yawn, several feet in depth, between the vaulting-compartments of the aisle ceiling. Yet the openings into the nave can be gingerly approached and the view is well worth getting, while over these openings, built into

WINCHESTER CATHEDRAL FROM THE FIELDS.

pressive, read in places where the dead of whom they witness must oft have knelt in life, than huddled with a hundred others on the pavement of the great half-church, half-museum at Westminster.

The two eastern bays of the central alley of the nave are filled with the steps and platform which lead to the choir-screen. Above them in old times there stretched a rood-loft on which stood a great silver crucifix, built by Stigand with Queen Emma's money and transferred from the Saxon church; and on the head of the Christ was long preserved King Canute's crown of gold. Norman capitals and moldings, which were once concealed by the rood-loft, still remain on the two flanking piers, in proof that Wykeham did not disturb it. Doubtless it perished in the great desecration of the church that came about in the time of Edward VI. The screen which shuts in the choir is not the mediæval one nor the Renaissance one which Inigo Jones designed, but a recent construction of oak.

Wykeham's wall, we can trace the great semi-circular arches of the old Norman triforium.

v.

ONLY in the aisles can a view of the whole length of Winchester Cathedral be gained. From the nave the choir-screen breaks the perspective, and though it is low and does not, as so often, bear the organ, and the eye can therefore follow above it the reach of the choir-arcades and ceiling, yet just back of the high-altar comes the end wall of the presbytery. And even when we enter the presbytery, whence, under its eastern pier-arcade, a view into the retro-choir and Lady-Chapel might be had, we find it blocked by a tall reredos, so that it almost seems as though the church ended here.¹

¹ The picture on page 330 shows the interior effect of the presbytery window and the reredos, while the exterior view on page 340 shows the relative height of presbytery and retro-choir.

THE CHOIR AND PRESBYTERY, LOOKING EAST.

But it is doubtful whether the vast length is not thus made doubly effective. From the west door to the end of the presbytery is a stretch of 390 feet; and when our steps have covered this, and we find another wide, long, lower space beyond, we realize indeed the meaning of a church which is now 556 feet in length.

The choir proper is extremely rich and beau-

tiful, keeping still its carven stalls of the Decorated period, the oldest in the country except the Early-English stalls at Exeter. The pulpit dates from about 1500, but the episcopal throne is modern.

The presbytery end is slightly polygonal instead of rectangular in shape—a fact that is hardly appreciated at first sight, for the reredos,

cutting across it, rises above the level of the triforium gallery. This reredos was built about the year 1500 and, when its whiteness was hid with color and its many niches bore each a statue of considerable size, must have been magnificently effective. But magnificent is not the word to use of a picture which now hangs against it just above the altar — America's only gift to this mother city of our race. It was painted by Benjamin West — we console ourselves with the thought that he did pretty well for the times when he lived.

From pier to pier between the presbytery and its aisles run screens of stone tracery built by Bishop Fox about 1525, when Renaissance fashions were making their way in England. Upon these screens six mortuary chests are placed bearing a series of names unsystematically written — those of Canute and Queen Emma and Rufus, and of various early bishops and West-Saxon kings. Pre-Norman interments were made, of course, in the crypt of the Saxon cathedral. Here the bones which now fill these chests remained until the time of Bishop Henry of Blois. Wishing to bring them into the Norman church, he found neither name nor date on any tomb, so mingled the relics together and inclosed them in leaden coffins. Later these chests were built to hold them, but as they were opened by the soldiers of Cromwell, it is trebly difficult to guess whose scant remains may lie beneath their lids. In a certain continental gallery there hangs a big old picture of the Resurrection, where sit busy angels making whole and homogeneous skeletons with the bones they take from the earth at their feet. Their fellows who may be assigned to service in St. Swithun's Abbey will have a task for the cleverest. Not only in these chests, but in many tombs and chantries, time and human curiosity have sadly muddled the record of the genesis of their contents. A plain coped tomb, for instance, is assigned to William Rufus. But is his name not on one of the chests? And is there not some evidence to prove that the body of Henry of Blois, superbest bishop of them all, really fills this poor letterless grave?

Between the back of the reredos and the piers which bear the end wall of the presbytery and divide it from the retro-choir is a small, open space that once was the "feretory" or relic-chamber of the church, and, before the reredos was built, must have been visible even from the western doorway of the nave. It held the shrines of St. Swithun and St. Birinus in the holy neighborhood of the high-altar. Now it is a relic-chamber of art filled with pitiful sculptured fragments and bits of architectural decoration. Its floor is considerably higher than that of the retro-choir and its back thus forms a wall which was beautifully worked,

in the Decorated period, into canopied niches. A glimpse of these niches, bare now of the royal memorials which filled them, is given in the picture on page 332, where we look between the splendid oratory-tombs of Bishops Beaufort and Fox. The other side of Beaufort's chantry is partly shown in the illustration on page 333, where we stand, facing east, in the central alley of the retro-choir — with this

THE WEST-FRONT.

chantry on our right and Waynflete's on our left — and look into the Lady-Chapel over its open screen. The simplest of the three tombs on the floor is said to be De Lucy's, and the next is the one attributed to the Red King. The whole effect of the retro-choir is very splendid, and although grandeur lacks through the lowness of the roof, we do not miss it in a place like this — an adjunct to the main body of the church and impressive most of all as the home of the mighty dead. De Lucy's Early-English piers are exquisitely wrought — many-shafted and crowned with curling rows of leaves from which the vaulting-ribs diverge close over the crowded, sheaf-like pinnacles of the great Perpendicular tombs.

North of the Lady-Chapel is a beautiful one called the "Guardian Angels," from the thirteenth-century carvings on the vault. It has been sadly hurt, however, by the intrusion of a huge seventeenth-century tomb. Its mate to the southward was fitted as a chantry for himself by Bishop Langton, who died in 1500,

IN THE SOUTH AISLE OF THE RETRO-CHOIR.

and shows his Perpendicular work mixed with De Lucy's Lancet-pointed.

The Lady-Chapel itself is a picturesque intermingling of features of many dates. The original look of De Lucy's walls is suggested above the screen, in the picture on page 333; but they have been faced below with Perpendicular paneling, and the eastern part of the chapel is entirely in this style, with great windows to the north and east and south, and a singularly complex and charming pattern in the vault. Priors Hunton and Silkstede did this work, and added the screens and seats and desks not long before their successor was ousted, with all his monks, by the order of Henry VIII. Some of the original stained glass still remains in this chapel; much of its carving shows traces of gay color; and it

is filled, moreover, with the ghosts of a very distinguished company.

To Winchester in the year 1554 came Queen Mary to meet her Spanish bridegroom, and they were married in the Lady-Chapel. Gorgeous indeed must have been the scene, the crowd of "blonde English and swarthy Spaniards" overflowing the little chapel and even the retro-choir into the church itself, bright silks and dusky velvets finding a good background in the lace-like sides of screens and chantries. And what a meeting-place of memories and portents! The kingdom of England had been born here where gray Arthurian legends lingered, and its first dynasty lay at rest within these walls. Norman England had built them, and Angevin England, whose kings were still aliens from their people, had likewise left its

record on many a solemn stone. The days of Lancaster and of York, when, with all the quarreling, king and people were again English in heart as well as name — these too were interpreted by a thousand memories which spoke, for instance, of another royal wedding, when, in front of the high-altar, Wykeham had married Henry IV. to Joan of Navarre. Tudor England had its memorials in the Lady-Chapel itself — among them a shield with the names of Henry VII., his wife, and his first son, Arthur, who had been born by Henry's desire at Winchester and named for the legendary British king. The England which his grandchild governed seemed, just now, to be giving itself into the hands of aliens again. But the new England, Protestant England, the England that was to be great and glorious abroad and free too at home, was predicted by the ax and hammer strokes of the henchmen of Edward VI. — fresh scars when his sister married — and must have muttered in the bosoms of a hundred knights, loyal to England, half disloyal therefore to the luckless, fanatic, Spaniard-loving queen. Of all the strange conjunctions of this strange day none seems so curious in the light of later facts as the one which brought the Marquis of Alva and the Count of Egmont — the "devil of Spain" and the martyr of Flanders — side by side among the courtiers of Philip. The velvet chair on which Queen Mary sat may still be seen in the chapel, and Bishop Gardiner — *malleus hæreticorum*, who had crowned her at Westminster and plighted her at Winchester — lies buried in the splendid Renaissance chantry he had built for himself to the north of the high-altar of his church.

VI.

OFTEN we are told that some bishop, prior, or other high-placed functionary "built" this or that portion of his cathedral church. As such words are commonly written and accepted, they are cruel to the memory of the nameless architect who was paid from the ecclesiastic's purse or worked under his nominal control. But it is strictly just to speak of Wykeham as

IN THE RETRO-CHOIR, LOOKING EAST.

his own architect. The record of his life is clear and full, and it puts him high among those who vitally influenced the course of medieval art. In imaginative power many others rank above him, known or unknown to us by name. For example, he never grasped so new and fortunate a structural idea as that which Alan of Walsingham expressed in the lantern of Ely. He never conceived so individual, beautiful, and daring, if irrational, a

THE "LONG WALK" IN SUMMER.

feature as did the forgotten man who built the portico of Peterborough; nor were any of his works so aspiring and poetic as was his who raised the apse of Amiens. But talents are largely limited by times. The style in which, by the tendencies of his period, Wykeham was forced to labor was intrinsically less imaginative, aspiring, poetic than those which had gone before, while the fundamental problems of Gothic architecture had been fully worked out and it remained but to drape the solution in a novel garment. Yet when we see how admirably he met the needs and employed the resources of his period, we can believe that, born in a different period, he would still have stood a head above his fellows.

It has often been said that Wykeham "invented" the Perpendicular style. Edingdon, of course, used it before him in Winchester Cathedral; but Wykeham had long been occupied with architecture when he followed Edingdon as bishop, and undoubtedly had contributed much to the development of the fashion which he then so ably used. But no one man can ever have created a style. Someone individual, of course, must first have used in the new way each of the elements that were to grow together

into a new style; but these elements are many; only the development of them all creates the novel manner; and many men must work for many years, through a period we call transitional, before it is definitely "invented." Look, for instance, at a single element—the window. No type of window is more distinctly marked than the Perpendicular, yet it is impossible to say just when it "originated." We must retrace half a dozen successive steps to unite its perfect type with the perfect type of the flowing-Decorated window; and when its characteristic features first appear they show but a far-off hint of its eventual aspect.

Yet William of Wykeham has honor enough. He took a nascent style in hand and, helped by unparalleled opportunities, worked it out with masterly skill. Other men carried it further after his death, making it still more radically unlike preceding styles. But it was a complete and individual style when Wykeham left it, and he was seldom equaled in certain important matters of treatment. Few architects of the Perpendicular period had so keen a feeling as he for the value of beautiful proportions or for the right relative importance of all constructional features, while his decorative work is singularly pure and charming.

Compare, for instance, his nave at Winchester with the nave of Canterbury. This was in progress at the same time and its architect had a better chance, working from the foundations up—not, like Wykeham, molding Norman walls and piers into an alien scheme. Yet as a structural conception Winchester is much more beautiful. Here an admirable balance is preserved between the importance of the pier-arcade and the importance of the vaulting-shafts; but at Canterbury the vaulting-shafts and those which rise from the floor to encircle the clerestory lights are all in all—the shafts which bear the pier-arches and the moldings which define their curve are much too weakly emphasized. At Winchester the proportions are more happy between pier-arcade and clerestory—the former is not unduly tall as it is at Canterbury. At Winchester the clerestory stage itself is far better managed. The relative height of the windows is greater; the difference between their glazed lights and the blank panels on each hand is emphasized; the lower portion, simulating a triforium, is more agreeably patterned; and the parapet gives the design a finish and completeness which we miss

at Canterbury. And in general effect the two results are very different. There is no more color now on the stones of Winchester than of Canterbury, yet Winchester seems far less barren, cold, and thin. The severe and solid strength of Norman architecture has been replaced by a nervous, graceful vigor; but there is as logical and satisfying a relationship between the solids and the voids which make up the design, and dignity, of a new and more refined and delicate type, is just as clearly voiced. At

man, one of the purest, brightest stars that shine in the crown of the Catholic Church. He was born in 1324 of humble parents at the little village of Wykeham, in the diocese where he afterwards ruled. At the age of twenty-three he was presented by a local patron to Bishop Edingdon and by him to King Edward III., recommending himself by a "comely" presence and a tested skill in architecture. Before his years had doubled he was Bishop of Winchester and Lord High Chancellor of

THE "LONG WALK" IN WINTER.

Canterbury the excessive height of the pier-arcade gives the nave an empty air when we note its general expression, a weak and attenuated look when we examine its constructional forms. It is interesting, too, to look at the outer wall of the north aisle of Winchester and see how much better, in proportion and in tracery-design, are Wykeham's windows than those of his predecessor, Bishop Edingdon.

If we could follow Wykeham through the many other buildings which he wrought we should see how great indeed was his talent and how it revealed itself in harmony with the new needs and the characteristic temper of his time. Above all he was a great planner—one who could meet novel practical requirements in novel ways yet give his result a truly homogeneous and artistic air.

Of course one rejoices to find that this great artist was a great man as well—statesman, philanthropist, good Christian, model gentle-

England, and before he died he was famous throughout the world as one who both designed and paid for the most splendid buildings of his land and day. In the year 1356—when he must already have served in other places—he was given charge of all the king's works at Windsor. The new ward of the castle, with its chapel for the Order of the Garter, was built by him, and its plan is still his today, although in style and effect his walls have been often altered. This success vastly helped his fortunes, and, says Froissart, "he now reigned at court, everything being done by him and nothing without him." He was a favored courtier, a trusted political adviser and commissioner, a judge, a high dignitary of the Church, and a civil and military architect; yet withal, though a *novus homo*, he was simple-hearted, modest, and unselfish. Many of the king's castles were put in good order by his hand, and the new fortress of Queenborough,

near the mouth of the Medway, was his in design and construction. While Dean of St. Martin's-in-the-Fields in London he rebuilt his church — where the Post Office now stands — at great personal expense. While bishop he repaired at his own cost the highroad from Winchester to London, renewed the beauty of all the episcopal palaces, gave £200,000 (at its present value) to the work on his cathedral, and built and endowed the New College at Oxford. And yet his most famous enterprise remains to tell — the founding and endowment of that college to prepare young men for a university education which still flourishes at Winchester and was the first of those secular establishments that have grown into the great public-schools of England. A devoted churchman, he had thus the sense to see that the time was past when the Church

in his behavior and as distinguished from the accidents of birth and wealth. His motto is but a variant of the Scottish poet's "gold" and "guinea's stamp."

Wykeham died in 1404, at the age of eighty. His tomb was placed in the chantry he had himself constructed on the spot where, as a child, he had loved to pray. "Length of days," quotes, aptly, one of his biographers, "was in his right hand, and in his left riches and honor." Yet, it is pathetic to tell, once at least his reputation had been assailed by jealous tongues. Not even a Wykeham could escape calumny of the sort which has saddened so many devoted artists from Phidias's day to ours. While John of Gaunt was in power

WINCHESTER HIGH CROSS, AT THE ENTRANCE TO THE CLOSE.

could do all the intellectual work of the world. A man of lowly birth, he developed, I repeat, without loss of wisdom or humility, into a typical courtier — prompt in counsel, gracious in demeanor, sumptuous in hospitality, yet above all cavil in the purity of his private life and in devotion to his priestly duties. The poor were lavishly fed at his gates. He preached without ceasing, labored amid the sick and miserable, disciplined his clergy, and constantly visited all parts of his see. The motto he adopted has long been famous — "Manners makyth Man." We are not to read it as implying reverence for mere superficial graces. "Manners" must have meant to Wykeham the essence of man's heart and soul as shown

he was impeached "on eight articles of mal-administration" — accused of embezzling the king's revenues, taking bribes, and so forth. But he was never brought to trial. Old King Edward repented him ere he died and made what amends he could; his successors greatly honored the wise and faithful prelate; even Henry IV., the son of his old enemy, John of Gaunt, chose to be married in Wykeham's cathedral, simply, it seems, because it was Wykeham's; he was revered by the people above all other Englishmen, and posterity sees no blot on his shining record. Its glory — formed in equal parts of lavish charity, noble art, and patient wisdom — burns with double luster against the background of a time like his. It was the time,

A GATEWAY IN THE CLOSE.

we should remember, of Chaucer, Gower, and Wycliffe, when, as a rule, the priests of England were ignorant and vicious, and her nobles chiefly used their power to serve the devil and the flesh.

VII.

IN an elbow of the High street of Winchester stands the City Cross, an elaborate work of the fifteenth century. Few of its original features remain, nor are the restorations very satisfying; yet it proudly takes the eye from a considerable distance while the adjacent entrance to the cathedral close might easily be overlooked, being but a dusky passage underneath the quaint and crowding shops. From this entrance the Long Walk—not very long, but beautifully shaded by elms and lindens—leads to the western door across the ancient burial-ground, where the hand of the gardener has not disturbed the picturesque confusion of old headstones and luxuriant grass.

The west-front shows us the last type of façade which England offers, and a type that is more characteristically English than any of its forerunners. In Germany we sometimes find high sham western walls, out of all proportion with the nave and aisles behind them, which, remotely at least, recall such fronts as Salisbury's and Lincoln's. But out of England we never find anything like this Winchester type as regards not merely the Perpendicular fashion of its features but also its general aim and scheme. Here the architect definitely abandoned all

phasized a transept-end. It is a question whether, in so doing, he was not supremely wise. Certainly he was more logical than any earlier architect had been; and in architecture, to be logical is the first and longest step towards being artistically right. Of course, where a church fronts on a city square, stretching out its long western limb towards the chief approach, the English Perpendicular façade would seem inappropriate. But in such a position the English scheme as a whole, with its accentuation of the central tower, is less appropriate than the French. And as Winchester stands, for example, facing only its verdant close, we do not feel the lack of a nobler western front.

The burial-ground extends all along the northern side until we pass the transept; but narrow streets and houses press about the east-

THE DEANERY.

IN THE CLOSE.

ern limb, and its southern face overlooks the high-walled gardens of the canons' homes. From one of these gardens (see page 340) the finest near view of the church may be had. Here the varied altitudes of presbytery, retro-choir, and Lady-Chapel may be clearly appreciated, building themselves up, with their wide, lightly traceried windows, behind the branching cedars of Lebanon. The presbytery window splendidly dominates the group, and if there were only a tower such as we have seen at Canterbury and shall see again at Gloucester—a superb construction of Perpendicular design—the picture would be unsurpassed in England. It seems odd, indeed, that Winchester's tower should never have been carried higher than we see it now—the diocese was so wealthy and the list of its prelates shows, until the very latest building period, so unparalleled a succession of ambitious spirits.

Of course, the canons' houses standing as they do, one cannot make the circuit of the church without trespassing on private grounds. To see the south side of the nave we must retrace our steps and approach it from the west. Here once lay the cloisters and other monastic buildings, with Wykeham's beautiful chapter-house opposite the transept-end. They were almost totally destroyed by Bishop Horne in 1563, but a few Norman arches still remain near the site of the chapter-house, and an Early-English entrance which once admitted to the dormitory. The Prior's House is to-day the

Deanery and keeps its porch with three graceful arches, and its hall—with an admirable roof and windows—now divided into smaller rooms. At a little distance to the southward stands a large, low, half-timbered structure of the Decorated period, now the dean's stable, but once, most likely, the hall where monkish hospitality lodged its humbler guests. The whole precinct is verdurous, picturesque, and charming. English Protestantism is fortunate indeed—it has so prettily disguised its outdoor devastations that we half forgive the sinning of its covetous or fanatical youth.

But if we now visit, in the southward quarter of the town, Wykeham's famous school, and then retrace our steps near the pretty banks of the Itchen,—haunted by memories of the prince of anglers,—we find ourselves all at once in a spot the beauty of which makes even the close seem commonplace. Here, protected like a garden by ponderous walls, stand great masses of ruin thickly overgrown with ivy and “bosomed high in tufted trees”—the ruins of Wolvesey, the episcopal palace founded by Henry of Blois, where so many regal bishops lived and so many royal guests were entertained. Cromwell besieged the city in 1645, and when it surrendered the palace was pulled down. In the second half of the seventeenth century Bishop Morley founded, close at hand, another palace, which was finished by Bishop Trelawney about the year 1710. It is a pleasant but not imposing residence, and is no longer occupied by the bishop.

VIII.

THE days of the saints had long gone by when William of Wykeham was born, yet the Church itself need not hesitate to place his figure beside a Cuthbert or a Chad. For the new needs of his day, in the new temper of a more complex society, he too worked his best towards the enlightenment of man. And how strongly his virtues are thrown into relief by the history of his successor! Truly, Cardinal Beaufort was

firm friend of Wolsey and then of Henry VIII., he was imprisoned in the Tower of London while young Edward reigned, but was exalted by Mary to be her right hand in Church and State. He was called "the hammer of heretics," and Fuller writes that "his malice was like what is commonly said of white powder, which surely discharged the bullet yet made no report, being secret in all his acts of cruelty." Many are the stories, doubtless largely false, that record his bitter hatred of reformers; yet there

THE NAVE OF WINCHESTER.

not the monster of wickedness, going impenitent to sure damnation, whom Shakspeare has portrayed. Yet he was typically a churchman of his time and a statesman of his time, and this means something very different from a Wykeham. But a second Wykeham, almost, followed in Bishop Waynflete, who in his youth was first a pupil and then head-master at Winchester school. He too was erudite and pious and a noteworthy builder and patron of learning. His chief monument is Magdalen College at Oxford — and even Wykeham's New College was not built or endowed more splendidly. Fox was bishop in the time of Henry VII., and was godfather to Henry VIII. He was Cardinal Wolsey's first patron at court, and Wolsey succeeded him at Winchester, holding the see for a year before his death in conjunction with the archbishopric of York. Then came Stephen Gardiner, of whom we have already heard. A

are some voices to declare that, at least in his latter days, he was "half a Protestant at heart." It was in the time of Elizabeth that Bishop Horne pulled down the monastic buildings — more through cupidity, I may explain, than through religious zeal. Milton has embalmed the virtues of Bishop Andrewes, a famous preacher, who ruled while James I. was king and helped translate his Bible. Brian Duppa was a friend of Charles I., who made him Bishop of Salisbury, and was translated to Winchester at the Restoration. George Morley followed him, — another devoted friend of the unhappy Charles, — who, while the Puritans prevailed, had ministered to the royalist exiles in Belgium. Few sees have had, in Protestant times, so many distinguished prelates as Winchester. Even those who were not politically conspicuous tilted, as a rule, the field of literature with some success, as witness Bishop

Hoadley, who started the "Bangorian controversy," and whose pompous rhetoric was ridiculed by Pope:

Swift for closer style,
But Hoadley for a period of a mile.

much else was hewn and hacked to bits. Then came Bishop Horne, pulling down the monastic buildings and selling the lead from the cathedral roofs. And then came the soldiers of the Commonwealth, bribed to spare the town of Winchester by getting free play in the cathedral. In they marched, horse and foot together, with smoking muskets, sounding drums,

THE CATHEDRAL FROM THE SOUTH-EAST.

And the name of Samuel Wilberforce adds another star to those which were not only bright but beneficent in their brightness.

Not even the Puritan bore more heavily on Winchester than the earlier reformer, who called himself a churchman still. No cathedral in the kingdom was more richly furnished. What would we not give to see it to-day with all its glass and carvings and colors intact, and with the gifts of Egbert, Emma, and Canute beginning an endless list of sumptuous works of art, bestowed, during seven hundred years, by royal visitor and lordly prelate and a host of pilgrims to St. Swithun's shrine. But in the time of Edward VI. the church was systematically despoiled. Many treasures vanished in the smoke of the melting-pot, where everything fusible was cast for the mere value of its metal; and

and flaring flags, and after breaking the tombs and pelting the glass with the bones of the saints, out they marched again to parade the streets in the sacred vestments, and burn the altar-table in an ale-house. Waller was their commander, who once had been a boy at Wykeham's school; and he stopped the devastation at last and perhaps protected the effigy of his far-off benefactor while so many others were beheaded and spat upon. Modern devotion has done what it could to hide the myriad scars which disgrace the memory of the Anglican and the Puritan alike. But the art of to-day is not the art of old England, nor does the Church of to-day sanction the magnificence of Rome. Protestantism can never redeem its ravages indoors as outside the walls it may, with the help of mother nature's pacifying touch.

PICTURES OF THE FAR WEST.—VIII.

THE teamster, as one of the types of the frontier, is seldom introduced in print without allusions to his ingenious and picturesque profanity; whereas it is his silence, rather than his utterances, that gives him among his brethren of the way almost the distinction of a species.

The sailor has his "chanty," the negro boatman his rude refrain; we read of the Cossack's wild marching chorus, of the "begging-song" of the Russian exiles on the great Siberian road, of the Persian minstrel in the midst of the caravan, reciting, in a high, singing voice, tales of battle and love and magic to beguile the way. For years the parlor vocalist has rung the changes upon barcarolles and Canadian boat-songs, but not the most fanciful of popular composers has ventured to dedicate a note to the dusty-throated voyageur of the overland trail.

He is not unpicturesque; he has every claim that hardship can give to popular sympathy; yet, even to the most inexperienced imagination, he pursues his way in silence along those fateful roads, the names of which will soon be legendary. As a type he was evolved by these roads to meet their exigencies. He was known on the great Santa Fe trail, on the old Oregon trail, on all the historic pathways that have carried westward the story of a restless and a determined people. The railroads have driven him from the main lines of travel; he is now merely the link between them and scattered settlements difficult of access. When the systems of "feeders" to the main track are completed, his work will be done. He will have left no record among songs of the people or lyrics of the way, and in fiction, oddly enough, this most enduring and silent of beings will survive—through the immortal rhetoric of his biographers—as one whose breath is heavy with curses.

The teamster is usually a man of varied experience, acquainted with life through its misfortunes. His philosophy easily condenses itself into the phrase, "It's dogged that does it." He is a fatalist, but he has not ceased to plan. In this, whatever his nationality, he is always American. It is a big country, and though he gets over it but slowly, he has all

the more time to collect his faculties, and his chance is as good as another's, should luck take a turn.

As he plods along he nurses a passive discontent. The future does not press him. It is the season of summer travel; the sun is hot upon the road; from two to three miles an hour is his average rate of progress. The monotonous shuffle of feet, the clanking of bits and chain-traces, the creak and roll of the heavy wagons as they trundle along, the wind that bellies the wagon-sheet and carries the dust before him, are opiates that might dull a livelier fancy than his. But the cadence in his brain does not make itself audible in musical phrases; his is the silence of solitude and latent resistance.

The teamster either has or affects a great contempt for his calling—unlike the stage-driver, who is always, figuratively speaking, on the box. He calls himself, and submits to be called, by derogatory epithets allusive to the animals he is driving. He will tell you that he is a "bull-puncher" or a "mule-skinner," but he says it with more of ostentation than humility. It is part of that ironical acceptance of fortune's latest freak so characteristic of the Western man, who never apologizes for his circumstances but by making sport of them.

The teamster is a man of simple habits. In a life of rough passages he has "lightened ship" by dispensing with all useless wants and conventions that tend to complicate existence. He has forgotten the use of a bed. When he arrives he sleeps in his blankets in the corral, which is his hotel. On the journey he spreads his bedding in the dust or the mud or the snow, at the hind wheels of his wagon. When he makes camp for the night he barely "hauls out" of the road, his inertia being equal to that of "Brer Tarrypin" when the man set the field on fire, and his philosophy much the same. The harness belonging to each mule of the string, 14, 16, or 20, as the case may be, is dropped in the animal's tracks on the spot where he came to a halt. When that proud society man and aristocrat of the road, the stage-driver, comes spanking along about nightfall, six-in-hand, and the pick of his passengers on the box beside him, he encounters the freighter's outfit distributed in heaps along the road. If he be a placable man he will

THE LAST TRIP IN.

ENGRAVED BY J. H. E. WHITNEY.

submit to swing his team out, contenting himself with cursing the slumbering teamster in his blankets; but should he have wrongs in the past to avenge, or happen to be in a grim, joking humor, he will, as likely as not, drive straight on, smashing hames and grinding collars into the dust. On his return trip next day he meets the freighter where he has crawled, scarcely a mile from his last camp, his crippled harness tied up with "balin' rope," and the two men will pass each other without a word; but a counter-grudge is saving up in the heart of the teamster, to be worked out by degrees on the road.

Relatively the teamster is but a small figure in that imposing procession of the forces of

civilization on its march westward. But upon his humble chances of one sort or another, his luck as regards the weather, his personal influence with his team,—perhaps upon some incantation of sounds with which he conjures those mysterious brute natures in their spellbound moments,—as well as upon his endurance and dogged resolution, the fate of many of the bravest experiments has rested. And as the season advances and the question presses, in some doubtful foothold of men in the wilderness, "Can we hold out till spring?" the arrival of the last freighter "in" is looked for as, on the verge of winter, on the Atlantic coast the colonists watched for the promised ship-load of supplies from the mother country.

* * *

SAN ANTONIO OF THE GARDENS.

He who goes westward from the City of Mexico goes out by the gate of the Tlaxpana, and so along the causeway to Tacuba, the very path over which the Spaniards passed, leaving many killed and of the living nearly all being sore wounded, when they fled from the city that dismal night more than three hundred and fifty years ago.

But this now is a very pleasant path; for on the right and on the left of it are fertile fields and trimly kept gardens, and shading it are many great green trees. And only a little way out upon it is the village of San Antonio, built of gray-brown adobe on the level land beside the causeway, and peopled by certain ragged, uncared-for, easy-going descendants of the race that now serves where once it ruled.

The wayfaring stranger who loves a dish of friendly talk with chance acquaintances—and the wayfaring stranger not thus socially disposed will find all lands barren, and will come again to his own land not one whit the wiser of the world than when he left home

—will rest awhile in this village to chat with whomsoever it may please Heaven to send him to hold converse with. Nor need he fear that Heaven will not provide him with a talking-mate. Let him but seat himself beneath one of the great trees beside the roadway, and presently a stray old man will pause to pass a greeting with him; then a vendor of earthen pots, coming in from some outlying village to the city to sell his wares, will halt his donkey—on whose patient back the great red pots are high heaped up—and will ask in a gentle voice for a light for his corn-husk cigarito; an old woman will hobble up and say a friendly word or two; a young woman with a baby in her arms will edge out shyly from a near-by doorway, and so stand modestly aside, but ready to add her contribution to the conversation when it shall become a little more general and when amicable relations with the stranger shall become a little more assured; then another old man or two will join the group, accepting with a grave courtesy the offered cigarito; a lazy young fellow with baskets to sell, but with no apparent desire to sell them, will seat himself near; and outside of all will be a light fringe of pernicious ragged little

FRAY INOCENCIO AND FLOJO.

boys. And all of these simple-hearted folk presently will be as frank and as friendly as though they had known their chance acquaintance all their lives.

It will be in such wayside talk as this that the stranger alone will learn—for in books he will look for it in vain—the story of the little church that once stood hereabouts; of the very little convent there was adjoining it; of the two Franciscan friars who ministered in the church, dwelling in the convent, and whose earthly possessions (and these but held in trust from Heaven) were a little garden, and the doves which had built nests in a corner of the convent, and a certain grave, black cat, and a lame and very lazy ass.

It was all in the far-back time when the Spanish viceroys were the rulers of Mexico; when the fleet sailed once a year from Cadiz westward, and once a year sailed eastward again from Vera Cruz laden deep with silver from the mines; when hushed voices still told in horror of great cruelties done by the fierce Chichimecas to frontier adventurers into the region north of Queretaro; and when the good fathers, setting death and torture at defiance that God's work might be done by them, still were busy sending out their holy missions for the saving of heathen souls. The viceroy in those days was the illustrious Don Antonio Sebastian de Toledo, Marqués de Mancera; who came into the capital of his vice-kingdom and there assumed the duties of his high office in the month of October in the year 1664.

About this time it was that in the convent of San Antonio de Padua—that in a little time came to be known only as San Antonio of the Gardens, because hereabouts, then as now, the fertile land was laid out in many little gardens

which the Indians tilled—there dwelt the two brothers Antonio and Inocencio. Fray Inocencio was a short and round and plump-cheeked, ruddy little man; and Fray Antonio was very tall and thin and pale. These brothers were vowed to the rule of St. Francis, and until ordered hither for the cure of Indians' souls the great convent of San Francisco in the City of Mexico had been their home. A wonderful change it was for them when they came out from that "vast bee-hive of holiness"—as the convent of San Francisco is called by a chronicler of the time—to dwell in a convent whereof they were the only inhabitants, and the extent of which, not counting the tiny sacristy of their tiny church, was just a little refectory, that also was a kitchen, and two cells. Yet, had it been the size of a city, they scarcely could have been more elated by their translation; for whereas in the great convent they were but two brothers among hundreds, with many above them in degree, here they were everything themselves—free to divide between them the whole range of the conventual offices, from that of Portero up to that of Guardian.

As they stood for the first time alone together in the little garden, the door behind them that opened upon the causeway being closed and barred, and as the knowledge of the absolute power that was theirs in this their kingdom came into their hearts, Fray Inocencio, who was of a lively disposition and very quick to give animated expression to his thoughts, skipped in a most carnal fashion; and still more carnally stood for an appreciable length of time upon one leg while he held the other leg in the air.

Fray Antonio, whose mind was of a graver

and more temperate cast, looked upon this exhibition of worldly pride sorrowfully, but not reproachfully. Weakness of the flesh was Fray Inocencio's besetting sin; but he knew his weakness, and when he failed to overcome it he expiated it by penance and sought remission of it in prayer. This was known to Fray Antonio, and so was his loving, gentle soul the less disposed to manifest by outward sign his inward sorrow when, as now, his brother lapsed from grace.

In the darkness that night Fray Antonio heard the sound of scourging in Fray Inocencio's cell, and in the morning the usually ruddy cheeks of the little round brother were pale and his eyes were dull; but peace rested on him, for he felt that through the sacrifice of the flesh the sin of the flesh had been expiated, and so his spirit was at rest.

When the mass which they celebrated together was ended, and they had come into the refectory to make and to drink their chocolate, he said simply, as he stood beside the fireplace, stirring the chocolate in its earthen pot: "God brings the least deserving of us, brother, into the high places of the earth; but he loves best those who, though thus exalted, still serve him humbly. We have only to seek his aid, and of his strength he will so arm our weakness that we may prevail over the sin that shows itself in carnal pride."

The gentle eyes of Fray Antonio rested lovingly upon Fray Inocencio, and in them shone the light of a comforting and sustaining trust as he answered: "Brother, the grace of God ever is greater than our sins." Nor did the thought at all enter his simple soul—as assuredly it would have entered a soul in which there had been even the very least of worldly guile—that other than a serious meaning could attach to Fray Inocencio's reference to the exaltation of their estate. Thus ever did Fray Antonio help and strengthen Fray Inocencio with a sweet and holy love: and many needs had Fray Inocencio of such comforting, for, the flesh proverbially being weak in little round and ruddy men, the seasons were sadly short in which he had not some misdeed of his unruly nature to bemoan.

In all seasons a heavy burden rested upon Fray Inocencio's soul because he was so ruddy and so fat. This corporal affliction, sadly unseemly in one vowed to the austerities of the religious life, was of such a nature that abstinence had no effect upon it, and for the removal of it even prayer was without avail; so that what little solace his case allowed him was to be got by regarding his fatness as a cross put upon him for his soul's sake, warning him to eat little and so to mortify the flesh that good might come to him in the end. Yet was this

a hard cross for Fray Inocencio to bear; for he had a very eager natural love, as strong as it was sinful, for all manner of toothsome things. Especially had he a most passionate fondness for beans which after being well boiled were fried delicately in lard—which dish was not less delicious than it was damnably fattening. Most pathetic was his look of resignation when beans thus cooked were served in the refectory of the great convent of San Francisco, as he resisted their succulent temptation and ate instead the little dry cakes of corn-meal.

In the convent of San Antonio of the Gardens Fray Inocencio was spared the temptation of fried beans, for Fray Antonio, that his brother might not be led into sin, declared that he preferred his beans boiled. And more than this did Fray Antonio do for his brother's comforting. Being himself a most abstemious man naturally, with no liking for food save as a means of sustaining his life and strength in God's service, he deliberately set himself to eating in private great quantities of all manner of fattening things; and this he did to the end that by rounding out his own leanness he might make the plumpness of Fray Inocencio easier for him to bear. But beyond throwing into disorder by such unwonted quantities of rich food the functions of his liver, the stuffing that Fray Antonio gave himself produced no results. Therefore, being as yellow as an orange, he gladly gave over his strange discipline. And this was wise of him: for the simple truth of the matter was that it had pleased God that one of these brothers should be fat and that the other should be thin; and neither of them, howsoever he might strive, the one by eating too little and the other by eating too much, could change that which God had decreed.

Though thus tried in flesh and in spirit, these brothers were very happy in their life in the little convent and in their ministrations of the sacred offices in the little church. In their garden they tilled the earth lovingly, taking great pleasure in its sweet, fresh smell, and in the bounteous return that it yielded them. Fray Inocencio had a rare knowledge of the gardener's craft, and especially had he a relish for growing such vegetables as were good to eat. In this previcarious form of gluttony, as it might be called, he did not deny himself; for, setting a stout guard upon the cravings of his own stomach, he carried on his back the best of all the good things which he grew to the great convent, where the brothers, less scrupulous than himself, ate them all with a prompt avidity. Fray Antonio, though he did his share of work in the kitchen-garden, found his pleasure in the growing of beautiful and sweet-smelling flowers, which each day he set before the sacred image of

the great San Antonio that the little church enshrined. Sometimes Fray Antonio fancied that as he placed upon the altar dedicated to his holy namesake these sweet offerings there shone upon the gentle face of the saint a loving smile. Nor would such miracle have been surprising, for this very image — as the chronicler Vetancurt tells — had raised a dead child to life! In that good time faith was a living principle in the hearts of men, and the blessed saints graciously requited the trust that was placed in them by working many miracles. It is not so in these evil later days.

In the holy work that was set them of saving heathen souls the brothers ever were instant and zealous. Fray Inocencio assailed the devil at all times and in all places with a stout energy that was in keeping with the sturdiness of his body and mind. Indeed, such pictures as this plump little friar drew of the entire devilishness of a very personal devil, and of the blazing horrors of a most real hell, sufficed to scare many an Indian, though through all his life set firmly in the wicked courses of idolatry, into the saving ways of Christian righteousness. Fray Antonio was less successful as an exorciser, but his gentle words and great tenderness of heart and spirit enabled him to make, perhaps, more lasting converts. Through the ministrations of this good brother many a troubled heathen soul was set at rest in Christian holiness, being brought happily to grace through love.

In the first springtime that the brothers dwelt in the little convent there came to build in a nook of the wall above the garden a pair of doves. These Fray Inocencio took under his especial care, giving them grain to eat, and placing for them in the garden an earthen vessel full of water wherefrom they could drink. And they, recognizing his friendliness, soon grew so tame that they would come and eat from his hand and would perch upon his shoulders, and even would nestle in the hood of his blue gown. From year to year the doves increased in number, and at last there came to be so many of them that Fray Inocencio almost would be hidden by the cloud of birds surrounding him. The trust which these little creatures placed in him made him the more earnestly try to stifle a sinful thought that at times would come into his soul — how good they would taste in a pie. Once in his unregenerate youth, before he took upon him the vows of his order, he had eaten a pie made of doves; and although he never yielded to the temptation that assailed him, the smell and the taste of that pie lingered in his memory and cruelly tormented him to his dying day.

For Fray Antonio dove-pie had no temptations, and the doves were a source of constant

pleasure to him, for all of God's creatures he loved. In the quiet of the hot noontime there was a restfulness and friendliness in their sweet cooings that refreshed him as he sat meditating in the dusky coolness of his cell; and he found not less pleasure in listening as they rustled and cooed softly to each other in their nests, after the curious fashion of these birds, in the watches of the night. But Fray Antonio loved the doves less for themselves than because they were the beautiful creatures of a Creator who did all things well.

A source of constant solicitude to Fray Inocencio in this connection was the possible misconduct of another dependent of the little convent — a certain black cat that Fray Inocencio dearly loved. The official name of this cat was *Timoteo*; bestowed upon him for the reason that this is a name well suited to a cat, and also in derisive reprobation of that schismatic Monophysite of Egypt, who in the fifth century usurped the Patriarchate, and was known popularly as "Timothy the Cat." It was the fancy of Fray Antonio to bestow this name upon the black kitten which wandered one day into the convent, and which, after making a sniffing exploration of the whole of the small establishment, signified his approval of it and of its inhabitants by accepting Fray Inocencio's offering of milk, and by thereafter settling himself to sleep in a comfortable fold of Fray Inocencio's blue gown.

Fray Antonio, the friend and intimate of the scholarly Fray Agustin de Vetancurt, who at that very time was writing his chronicle "*El Teatro Americano*," that has given him a world-wide fame, was himself a learned student of the Fathers of the Church, and he explained, at what Fray Inocencio, whose tastes were not scholarly, considered a most unnecessary length, the schism that the false Patriarch known as "Timothy the Cat" upheld, and that the General Council of Chalcedon condemned. Nor did Fray Inocencio, in his heart of hearts, approve of saddling upon a kitten of obviously amiable qualities and presumably excellent parts the name of a bogus Patriarch, who, according to Fray Antonio's own showing, was an outlaw from the Church, a usurper, and a murderer. Therefore was Fray Inocencio well pleased when the kitten developed a power of purring so thunderously (relatively speaking) that Fray Antonio fell into the way of speaking of him as *Susurro*, which word, in the Spanish tongue, signifies the Purrer, and thus himself provided an acceptable substitute for what any self-respecting cat could not but regard as a highly objectionable name.

Of a certainty Fray Inocencio never knew that *Susurro* ate doves; but he had painful

suspicions. There were times and seasons when Susurro would retire to the roof of the convent as though for the purpose of sunning himself. Yet with such ostentation was this purpose manifested, that not unreasonably doubts as to the purity of his motives and intentions might be entertained. As he would lie basking in the sunshine, his fore-paws tucked comfortably beneath his breast, and his long black tail stretching out straight behind him, Fray Inocencio more than once was pained by observing a swaying of that same tail and a twitching of his black ears, and also a certain look of eagerness that in unguarded moments would come into his half-closed great yellow eyes — all of which seemed to betray the existence in some dark corner of his mind of thoughts the like of which no honest cat should have.

Fray Inocencio sorely was pained by these suggestions on Susurro's part of a tendency towards what, under the circumstances, would be nothing short of mortal sin. In the simplicity of his nature he made especial prayer to the miracle-working image of San Antonio that Susurro might be given strength to resist the temptation that beset him, and that so the doves might go unharmed. And to Fray Antonio he told that he had made this prayer.

Now in the gentle nature of Fray Antonio there was a strain of kindly whimsicalness,—the same that had led him to bestow upon the stranger kitten the name of the Egyptian Patriarch,—and this now moved him to take the case of the cat and the doves into his own hands. Therefore it was that when a convenient season occurred — Fray Inocencio having gone with a back-load of vegetables to the great convent — he sought Susurro in the garden, and found him there, slumbering. Fray Antonio awakened him gently, and although a mild resentment shone in his yellow eyes because his slumbers were cut short, he seated himself gravely upon his haunches, around which his tail was trimly drawn, yawned slowly, and then seriously looked up at Fray Antonio as though awaiting the communication to hear which he had been aroused from sleep. Fray Antonio, leaning a little forward as he sat upon a bench in a shady corner of the garden, looked not less seriously upon Susurro's face and thus addressed him:

"It hath come to my knowledge, Timoteo, whom we call also Susurro, because of thy mighty purr, that the devil hath put into thy heart evil thoughts concerning these friends of ours, the doves. Harken well, therefore, to that which I shall say unto thee; for as thou heedest it or slightest it so will thy name among cats be honored or condemned. Thy instinct, truly, is to catch doves and to eat them. With this instinct I will not quarrel, for God hath

given it to thee. But God's gifts, O Susurro, may be abused; and a sore abuse of this dove-eating instinct of thine would it be shouldst thou kill and eat these birds which have no fear of thee and which dwell with thee here in thine own home. Rather shouldst thou strive to divert into worthy ways the less worthy of thy natural tendencies, that so, by exalting to good purposes thy baser passions, thou mayst achieve righteousness. Thus did the Holy Cat of Zempoala, whose memory still is revered although the brief term of his earthly life ended more than a century ago. Harken well, Susurro, while I read to thee what my friend the chronicler Father Vetancurt hath written concerning the part which this cat was permitted to take in manifesting God's will that a great and worthy work should be done."

So speaking, Fray Antonio drew from the bosom of his habit a roll of manuscript that he opened out and smoothed upon his knee, while Susurro sunk from his erect posture to one of greater ease, tucked away his paws beneath his breast, and at his spiritual instructor solemnly blinked his golden eyes. Fray Antonio, with a grave emphasis, read to him these words:

It was about the year 1540 that the Reverend Father Friar Francisco de Tembleque felt stirring in his heart a good desire (that assuredly God put there) to build an aqueduct by which the towns of Otumba and Zempoala should be supplied abundantly with water wholesome to drink — which at that time the people of these towns were compelled to bring from springs seven leagues away. And his plan was to make an aqueduct over all that distance, carrying it across three wide valleys on no less than 136 arches, and making over the deepest of the valleys one arch so great that beneath it might pass (had there been any such thereabouts) a ship under full sail. And to this work the servant of God — for so Father Tembleque well was called — set himself with a stout heart; and the Indians worked for him joyfully. And at the spot where the great arch was to be, in what then was a tangle of wooded wild land, he built a little chapel to the glory of Our Lady of Belen; and close beside the chapel he made for himself a cell so narrow that scarcely was there room within it for him to lie down to sleep.

And God showed his love for his servant by giving to dwell with him a gray cat, which every day from the wild woodland round about brought quails for his master's sustenance; and in the season of rabbits, a rabbit. And between the servant of God and this cat there was much love.

To Father Tembleque there came one day a stranger, who courteously, yet with a curious particularity, questioned him about the progress of the great work that he had in hand. For certain persons of the baser sort had said in the ear of the viceroy that Father Tembleque was wasting his time and the substance of the Church in striving to do an impossible thing; and this stranger really was an alcalde of the court, whom, that he might know the truth, the Viceroy had sent thus secretly

to ask searching questions and to see for himself how the work went on. And as the two communed together, behold the cat came out from the wood to where they stood in talk and laid a rabbit at his master's feet!

When said the servant of God: "Brother Cat, a guest hath come to us, and therefore is it necessary that thou shalt bring me this day not one rabbit, but two."

Hearing these words, the cat in due obedience betook himself once more to the thicket. But the alcalde, thinking that this might be a trick that was put upon him, sent after the cat to spy upon him one of his own servants. And the servant presently beheld a greater wonder. For in a moment the cat met with another rabbit, which he caught without any resistance at all on the creature's part and with it returned to his master again, thus plainly showing that all had been disposed thus by God.

And the Señor Alcalde, being so substantially assured of the miracle, returned to the viceroy and said: "Though it seems to be impossible to bring the water by the way that Father Tembleque hath chosen, and though the work that he hath set himself to do seems to be beyond the power of man to accomplish, yet assuredly will he succeed; for I have seen that which proves beyond a peradventure that God hath vouchsafed to him his all-powerful aid": and he told to the Viceroy the whole of the miracle which through the cat had been wrought. Therefore did the Viceroy encourage Father Tembleque in his great work; and, God's blessing continuing upon it, in seventeen years' time the aqueduct was finished—the very aqueduct through which the water comes to the towns of Otumba and Zempoala at this present day!¹

"And dost thou believe, Susurro," asked Fray Antonio, with a brisk vehemence, "that this Holy Cat of Zempoala would have played the dastard part towards these doves, our home-mates, that possibly thou contemplatest? Never! Assuredly, never! Therefore lay to thy heart the story of his worthy life, and call upon our father St. Francis—who loved all animals and trusted them—to aid thee in setting so strict a guard upon thy sharp teeth, and upon the sharp claws wherewith thy paws are armed, that through the fleshly temptation that is in these members of thine thou fallest not into sin!"

As he spoke these words, Fray Antonio arose from his seat and signified by a gesture of his hand that the sermon was at an end. Whereupon Susurro also arose, but slowly and languidly. In front of him he extended his paws as far as ever they would go, and erecting his hinder parts and bending his fore-shoulders downward he spread out all his claws and dragged backward upon them so

that they made little furrows in the earth. Then he drew together his front and his hind feet, and so humped his back in a great bow. After all of which he seated himself upon his haunches, looked straight into Fray's Antonio's kindly face, blinked at the good brother his golden eyes, and gave a most prodigious yawn. That these were the outward signs of a spirit meet for repentance Fray Antonio seriously doubted; yet did he stoop down and stroke gently the jowls of the disciple whom he had sought to lead into the way of righteousness; and to this friendly act Susurro responded by breaking at once into the great purring whence came his name.

Fray Inocencio, coming quietly through the church, and standing just within the door of the sacristy that opened upon the garden, had been an unobserved addition to Fray Antonio's congregation, that otherwise had been composed of Susurro, to whom the sermon directly was addressed, and the doves, in whose interest it was preached. Now, coming forward from the shadow of the doorway into the sunlight, he spoke with grave approval of the edifying nature of the discourse to which he had been privileged to listen, and commended his brother for thus emulating the goodness of their father St. Francis, who had preached to the birds, and of his own blessed namesake, St. Anthony of Padua, who had preached to the fishes—neither of whom, Fray Inocencio declared seriously, saints though they were, could have addressed to Susurro a more moving or a more excellent discourse. Fray Inocencio attributed the obvious confusion into which Fray Antonio was thrown by this commendation, notably marked by a flush of unwonted color in his pale cheeks, to a sudden flying to arms of his modesty upon being surprised in the commission of a good deed.

Fray Antonio found himself beset by reason of his brother's praises by a curious case of conscience, most difficult to deal with. In preaching his sermon to Susurro he had but given play to a certain delicate and quaint fancy that was natural to him; possibly—for so may a man of fine temperament be affected by his surroundings and by the tendencies of the times in which he lives—there was an underlying vein of seriousness in his discourse: certainly there was no thought in it of irreverence. But he knew that it was far from being the grave utterance that Fray Inocencio considered it to be, and for which Fray Inocencio gave him a serious credit that was far from

¹ To the still greater glory of the Holy Cat of Zempoala, whose honorable history the chronicler Fray Agustín de Vetancurt has set forth as above in the *Menologio Franciscano*, October 1, of his "Teatro

Mexicano" (City of Mexico, 1698; folio), the fact may be added that the aqueduct of Zempoala still fulfills, in part at least, the useful purpose for which Father Tembleque built it more than three centuries ago.

being his due; and he knew also that to try to explain the subtle qualities which composed his mood when—as he now perceived—the devil had instigated him to address Susurro would be only to confuse with unavailing doubts the simple faith that was in his brother's soul. Therefore, as the smaller of two evils, he accepted silently the undeserved commendation that was bestowed upon him. That night—although Fray Inocencio heard it not, for his slumber was of the substantial sort that is the portion of little fat men whose consciences are at rest—there was a sound of scourging in Fray Antonio's cell.

So far as this was possible in one whose heart was full of love and charity, Fray Inocencio at times envied Fray Antonio because he was superior to the many temptations which made his own life burdensome; but he knew nothing of the temptations of the spirit which beset his finer-natured companion, which sometimes, as in the present yielding to a too whimsical humor,—that yet was as much a part of his natural being as of Fray Inocencio's natural being were his stoutness and his ruddy cheeks,—begot evil results which caused him heart-bitterness and much distress of soul.

Doubtless, being more sublimate, the pains of conscience which attend upon waywardness of the spirit are more searching than those which attend upon waywardness of the flesh; yet because of their gross and tangible nature the fleshly sins are more instantly appalling. Thus Fray Inocencio probably would have reasoned, had he possessed a mind disposed towards such abstract considerations, together with a knowledge of the spiritual suffering which Fray Antonio at times endured; but as neither of these possessions was his, he simply bemoaned very heartily his own frequent lapses from grace. And greatly did he lament one especially great sin, the doing of which came about in this wise:

One day, while Fray Inocencio was gathering lettuces, and while Fray Antonio was tending lovingly his flowers, there came over the top of the garden wall the sound of angry words, and then of heavy blows, and then of a cry that was something like the bray of an ass, and—being a very great cry and terrible—something like the shriek of a giant in pain. With the promptness that was customary with him Fray Inocencio unbarred the door and ran out upon the causeway to see what was the meaning of this commotion; and as beside the door stood a stout staff, that he carried with him for support when he walked to the great convent with a back-load of vegetables, he seized it that he might not affront the danger, if danger there were, unarmed. More deliberately came out also through the

doorway Fray Antonio. And very pitiable was the sight that met their eyes.

Upon the ground lay a poor ass, laden with great earthen pots, and the two Indians with him were beating him with their sticks to make him rise, the while shouting at him all manner of coarse abuse. The ass, with so agonized a look that a heart of stone would have been melted by it with pity, was crying aloud in pain; for one of his legs—as the brothers saw, though the Indians seemed to perceive it not—had broken under him as he fell beneath his too-heavy load. He was but a small ass, and his lading of pots would have been overheavy for a strong mule.

Then was the wrath of Fray Inocencio so kindled within him that every fiber of his little round person tingled with rage. Forgetting all the teachings of gentleness of the blessed saints, and the example of long-suffering set him by the good father St. Francis, and his own vow to a life of peace and holiness—forgetting all this, Fray Inocencio in an instant had gathered up and tucked into his girdle the skirts of his blue gown, that he might have the free use of his short stout legs, and most carnally had fallen afool of the backs and shoulders of those cruel Indians with his staff.

As for the Indians, this visible outbreak of the wrath of God took them so sharply by surprise, while such pain penetrated their brown hides with the blows which Fray Inocencio rained down upon them, that without pausing for thought or consideration they incontinently took to their heels. In an instant they had plunged through the slimy water of the *acéquia* beside the causeway, and were fleeing away across the meadow land beyond as though their assailant had been not a little stout friar, but the devil himself.

Then Fray Inocencio, puffing greatly,—for at the best of times he was but a short-winded man,—knelt down beside the ass with Fray Antonio and aided him to loose the cords which bound the pots upon its back, and so set it free of its grievous load. Together, very tenderly, they lifted the maimed creature and carried it into the convent garden; and while Fray Inocencio gave it water to drink—and this before he had quenched his own thirst—Fray Antonio, who had a good knowledge of the surgeon's craft, set himself to binding up the broken leg in a splint. And the poor ass, seeming to understand that it was being dealt with by friends who meant well by it, suffered them to do with it what they would.

It was not until their labors were ended—the broken leg well set, and the ass straitly fastened in a little stall that they made for him that he might not stir the leg in its setting—

that Fray Inocencio had time to think of the sin which he had fallen into in giving his righteous anger such unrighteous vent. He was the more distressed in spirit because, for the very life of him, he could not create in his heart a sincere repentance of having given to those Indians so sound a beating. Strive however much he might to crush it, the thought would assert itself that they richly deserved not only every blow that they received, but also the great many more blows which they escaped by running away. And with this thought most persistently came a carnal longing to get at them again and finish the work that he had so vigorously begun. To Fray Inocencio's dying day this sin remained with him; and while the prickings of it were hard to bear, he had of it, at least, the compensating advantage that it always was with him as a wholesome reminder to keep his too-ready anger within due bounds.

Fortunately—for it is to be feared that he could not have resisted it—the temptation to finish the beating was not put in his way. That the Indians returned and carried off their earthen pots was inferred by the brothers when, having ended their surgical and other ministrations to the ass's comfort, they looked out upon the causeway and found that the pots were gone. And they believed that from the Indians came the rather mysterious old man who presented himself the next day at the convent with a confused request for medicine for a sick child; and who contrived, while the apothecary-work was in progress, to get into the garden where the hurt ass was and make an examination of its state. But from this old man they could learn nothing of the owners of the ass; nor were their many inquiries among the Indians round about better rewarded. That the owners thus modestly veiled their identity, and that they made no effort to reclaim their property, on the whole was not surprising. No doubt they held, and wisely, that a broken-legged ass was not worth adventuring for within the dangerous range of the little friar's staff.

Chiefly, as Fray Inocencio very firmly believed, because of the many prayers to this end that he addressed to the miracle-working image of San Antonio that was in the little church, the ass in due season got well. But as, through some mischance, the broken bone had gone awry in the splint, it healed crookedly; so that that leg was shorter than the other legs. From this fresh misfortune the ass suffered no pain, but thenceforward he was very lame.

Being thus healed, and, after a fashion, a serviceable ass once more, the question what they should do with him perplexed the brothers sadly. Of other valuable property, being strictly vowed to poverty, they had none.

The cat Timoteo, called Susurro, and the doves, were wild things of nature; of no use to man save in so far as they were a source of happiness through the love in them and for them that God inspired. But the case of the ass, an animal both useful and valuable, was different. Fray Inocencio, into whose heart the devil put the thought that the ass very well might bear to the great convent the loads which he himself was wont to carry thither on his back, reasoned that, inasmuch as the ass in truth was not their own, but only in their ward until his rightful owners should be found, they might use him in all conscionable work without falling into sin. But Fray Antonio, seeing more clearly, pointed out that they had striven earnestly but vainly to find the ass's owner, and that now there was small chance that the owner ever would be found at all; and he showed, further, that no matter in whom might vest his actual ownership, to them would belong, should they elect to avail themselves of it, his usufruct; which possession was a thing of value inconsistent with the poverty to which they were vowed. Yet, since the ass was not truly their own, he admitted, they had no right to sell him and to give the money to the poor—supposing the somewhat improbable case of any one being found willing to buy an ass that in addition to great natural laziness was hopelessly lame; nor were they free to give him away. Giving him in trust, to be surrendered should his owner ever be found, was the only solution of the matter that they could arrive at; and this failed because they could find no one who would accept the ass on these—or, indeed, on any other—terms. Yet to support an ass in absolute idleness, as Fray Antonio was forced to own, would be to violate the law of his being under which a beneficent Creator had placed him in the world for the good of man.

Altogether this case of conscience was so nice a one, and so beset by difficulties, that after the brothers had debated it for a long while together fruitlessly, and had prayed for guidance without receiving light upon their path in answer to their prayer, they determined to relegate its decision, through Fray Agustin de Vetancurt,—to whom, their little church being adjunct to the parish church of San José in San Francisco, they were directly responsible,—to the Very Reverend Father Friar Juan Gutierrez, who then governed the province of the Santo Evangelio, to which their convent pertained, and who was the Senior Provincial of the Franciscan order in New Spain.

This high resolve they executed. Driving before them the cause of their spiritual tribulation, and accommodating their steps to the halting slowness of his gait, and even stop-

ping when he turned aside to crop in a meditative fashion at some especially tempting bunch of grass, they went together along the causeway, past the church of San Cosme, the convent of San Diego, the burning-place of the Inquisition, and the Alameda, and so through the outskirts of the city to the great convent. They entered by the gate from the Zuleta, and fastened the ass in the courtyard beneath the windows of the building set apart for the use of the commissioners-general of the order—the same building that now profanely has been changed into a hotel.

There was not a little merriment among the brothers when the purpose for which Fray Antonio and Fray Inocencio had come thither with the ass was known; for already the brothers within this convent, being grown rich and lustful of earthly pleasures, had so fallen from grace that conscientious scruples in regard to the ownership of a lame, wretched ass seemed to them laughable. But the Father Vetancurt, who was a holy man, and who had chosen Fray Antonio and Fray Inocencio for the missionary work that they had in charge because in the midst of much that was evil and corrupt they had remained pure, treated with a due seriousness the case of conscience that they had come to have resolved. That he smiled a little as he exhibited the matter to the Father Provincial is true; and this great dignitary smiled also on hearing what a quaint cause of perplexity beset the souls of the two brothers and had been brought by them, in their rare simplicity, to him for resolution and adjustment. But the smiles of these two good men had in them nothing of derision, and, in truth, were not far removed from tears.

"It is the spirit of our father St. Francis alive again," said the Provincial, reverently; and in all humility they thanked God that innocence so excellent should be found remaining pure amid so much of earthly corruption and spiritual guile.

Then came the brothers before the Father Provincial, and by his grace told him the whole of the matter that filled with anxious doubts their souls. Fray Antonio, who feared nothing but evil and the doing thereof, said what he had to say reverently, as became him in such a case, yet plainly and at his ease: telling how the ass came into their possession, yet touching but lightly upon the fiery part that Fray Inocencio had played; how they had sought earnestly but had failed to find his lawful owner, and therefore had no right either to sell him or to give him away; how no one could be found willing to accept him as a trust; and how, being thus forced to keep him themselves, they feared that the use of him was a valuable possession that their vow of poverty forbade.

Fray Inocencio, who was terribly frightened at speaking to so great a personage, grew pale and stumbled in his speech; but by God's help he told truly how he had beaten those cruel Indians; how his repentance of this act was not complete, since he could not banish from his heart the wish to finish the punishment that he had begun; and how the devil had put into his heart the desire to keep the ass, that in bringing vegetables to the great convent his own back might be spared. Having thus said to the end what he felt it to be his duty to say, he drew a long breath, wiped with the sleeve of his gown the beads of sweat from his forehead, and was still. That the case might be complete, the Father Provincial looked from the window and saw the ass fastened in the court below, and the brothers pointed to his crooked leg and told how in its healing the bone had gone awry; and the ass, hearing the voices of his friends, looked up towards them with affection and brayed a mighty bray.

With a full heart answered to them the Father Provincial:

"It is God himself, my brothers, who hath given this ass to you in reward for your tenderness and goodness of heart, and to accept a gift from him surely is no infraction of your vow. Go in peace to your convent again, and keep for your service this poor beast that you have saved from a life of misery, and in whose brute heart I perceive that there is for you such well-deserved love. Take you also my blessing—though, in truth, rather should I ask your blessing than thus give you mine."

And the brothers, very grateful for the dispensation in their favor, but not at all understanding the full meaning of the Father Provincial's words, made proper reverence to him and went their way homeward; being full of happiness because of the glad consciousness, untroubled by doubt or misgiving, that the ass now really was their very own.

Thereafter so often as it was necessary that vegetables should be brought from the little convent to the great one the bearer of the load was the lame ass, and behind him or beside him Fray Inocencio walked. As they slowly journeyed, these two held pleasant converse together; for Fray Inocencio maintained that the ass understood the meaning of human speech as well as he himself understood the meaning of the glances which the ass gave him, and the various twitchings of his scraggy tail, and the shakings of his head, and, above all, the whole vocabulary that was in the waggings of his ample ears.

It was, indeed, a cheery sight to see these friends upon the road together. At his best

the ass hobbled along at a pace that a tortoise would have scorned for its slowness; and at times he would stop wholly and would gaze around him with a look of thoughtful inquiry; or he would step aside to crop a bit of grass that pleased his fancy; and ever and anon he would edge up to his friend and rub his long nose gently against the friar's side, and then would look into his face with a glance so movingly tender that nothing more could have been added to it for the expression of his love. For his part, Fray Inocencio patiently accommodated the naturally brisk movements of his own stout little legs to the ass's infinite slowness: when the ass would stop, he would stop also; when by any chance the ass missed sight of a choice bunch of grass, he would lead him to it and would wait by him until he had cropped it to the very last blade; and when the ass by his nose-rubbings would manifest his love, he would gather the ass's long, shaggy head in his arms against his breast and would lavish upon him all manner of terms of endearment as he gently stroked his fuzzy ears.

So the fame of these two went through all the city; and upon the ass, who truly was as lazy as he was lame, the common people bestowed the name of Flojo, which word, in

the Spanish tongue, signifies "the lazy one." In this wise came the proverb that is spoken of any one who greatly loves a useless beast or person: he loves him as Fray Inocencio loved Flojo, the lame ass.

Over the brothers, dwelling peacefully in their little convent, and serving God by loving his creatures and by ministering faithfully to the welfare of the souls of their fellow-men, the years drifted happily. Unharméd by Timoteo, called Susurro, who waxed fat and sluggish as age stole upon him, yet lost nothing of the sweetness of his nature nor of the thunderousness of his purr, the doves increased and multiplied; the little garden yielded ever freshly its substance of fresh food and sweet-smelling flowers; the ass, Flojo, tenderly cherished by his masters, developed yet greater prodigies of laziness as his years advanced; and the brothers themselves, happy in leading a life in all ways innocent and very excellent in the sight of Heaven, knew not what it was to grow old, because their hearts ever remained young.

And in the fullness of their years, their good lives ended, Fray Antonio and Fray Inocencio passed out gently from time into eternity, and were gathered home to God.

Thomas A. Janvier.

VAPOR AND BLUE.

DOMED with the azure of heaven,
Floored with a pavement of pearl,
Clothed all about with a brightness
Soft as the eyes of a girl,

Girt with a magical girdle,
Rimmed with a vapor of rest —
These are the inland waters,
These are the lakes of the West.

Voices of slumberous music,
Spirits of mist and of flame,
Moonlit memories left here
By gods who long ago came,

And, vanishing, left but an echo
In silence of moon-dim caves,
Where, haze-wrapt, the August night slumbers,
Or the wild heart of October raves.

Here, where the jewels of nature
Are set in the light of God's smile,
Far from the world's wild throbbing,
I will stay me and rest me awhile,

And store in my heart old music,
Melodies gathered and sung
By the genies of love and of beauty
When the heart of the world was young.

William Wilfred Campbell.

INLAND NAVIGATION OF THE UNITED STATES.

HERE appeared a few years ago in one of the illustrated papers three curious pictures. The first represented fifty men carrying a large block of stone. The men were arranged in four files and each file carried on their shoulders a stout pole. By means of other poles and ropes the block of stone was suspended in the middle of the group of men, and with terrible strain and labor they were staggering along with their tremendous load. The picture showed how unaided brute force could be used in transporting a weight—or, as we might say to-day, in moving freight.

The second picture represented the same block of stone placed in a rude cart and drawn by a pair of oxen with great difficulty over a very soft and sandy road. The third picture represented the same block placed on a hand-car and easily pushed along a track by one man.

The first picture was an illustration of simple animal power used in the most wasteful and expensive manner. In the second picture the principles of mechanics were applied in a rude way to assist the oxen. The oxen could not carry the stone or even lift it from the ground; but when attached to the cart they were able to haul it a much greater distance than the fifty men. In the third picture the mechanical advantage was used to the utmost by employing a better vehicle and placing it on a smooth, hard track. So great was the gain that one man could do the work of fifty without such mechanical aid or the work of a pair of oxen aided by a cart.

The three pictures were instructive, but the series was clearly incomplete. There should have been a picture representing five blocks of stone, of the same size as the one shown, placed in a boat and easily drawn or poled along a shallow river or canal by one man. The friction would here be so much reduced that one man walking on the bank of the canal could by means of a tow-line do the work of five times fifty men. The four pictures would then tell far more than the first three, and together they would make a graphic statement of some of

the factors of one of the most important commercial questions of the day.

The four pictures could be arranged in another way, and might then serve to show the evolution of the business of moving freight and passengers. No doubt the most primitive method of moving either people or things was to pick them up and carry them. The first passenger was an infant in its mother's arms. The chief of a tribe in prehistoric woods may have envied the babies, and compelled two of his followers to lock arms and carry him over a stream or rough place in the trail. Processions of slaves were the first lines of through freight.

If placed in their historical order the suggested picture of the boat would stand second, for the floating log, the raft, the dug-out, and the canoe probably antedated by hundreds, perhaps thousands, of years any form of wheeled vehicle. The third picture would be the ox-cart, and the last picture would be the hand-car, for this idea of an improved car and a smooth track is essentially modern.

It may be suggested that such a series of pictures, to be fair, should contain a fifth, representing a locomotive dragging fifty blocks of stone along a track and only employing a crew of six men. Such a picture would be suggestive, but could be offset by an equally pertinent picture representing two horses drawing a canal-boat containing a freight equal to the entire load of an ordinary freight train and guided by a crew of one man and a boy—in one case an expenditure of two horse-power and in the other a steam-power equal to, say, one hundred horses.

The instincts of men led them to the water because it meant a road, and this meant contact with others, the gaining of knowledge, and the beginning of trade and civilization. Even to-day the great cities are by the waterways, because they are the oldest and cheapest roads. The great cities of the future will be just what they are now—great ports.

Edward Eggleston, writing upon the commerce of the colonies (see *THE CENTURY* for June, 1884), gives a graphic picture of the great water traffic that grew up between the settle-

ments in Massachusetts and Connecticut, the Dutch towns along the Hudson, the settlements on the Delaware, and the scattered plantations on the Chesapeake, the Virginia rivers, and the sounds and inlets of the Carolinas and Georgia. With the exception of a small district about Philadelphia and another in Georgia there were no good roads in all the colonies. In the province of New York there were only twelve miles of land carriage. Villages, and even churches and court-houses, in Maryland and Virginia were always placed on the shore, for it was only by boat that the people could go to meeting or attend court. The traffic that grew up between the colonies was almost wholly by water, and the great wagon roads that finally stretched westward from Philadelphia aimed only to touch the Ohio. It was down this river that the first emigrants set out for the West. One hundred and one years ago Marietta, Ohio, became the port of departure for the entire North-west. Settlements beyond Buffalo in like manner followed the shores of the great lakes. The freight and passenger traffic between Canada and New York was by way of the Hudson, Lake George, and Lake Champlain, and it was to maintain this highway that one of the great battles of the Revolution was fought.

At the time of Washington's inauguration the President-elect traveled by horse to Elizabethport, New Jersey, and then selected a better route by taking a boat through the Kill von Kull to New York; and the messenger sent by Congress to Boston to inform Adams of his election to the vice-presidency took ship on the East River "with a fair wind for the Sound." Still later the early railroads were designed to be feeders for water routes, and to get to Philadelphia from New York you first took boat to Perth Amboy and then passed by rail along the old post route to Camden. To reach New York from Boston you took rail for Providence to meet a boat on the Sound. Until the railroad came we had no good country roads except in Pennsylvania, because both passengers and freight went by water. To this day the good people of the old State of Ohio complain that they have poor roads, forgetting that the Ohio and the lakes were their great roads until the railways invaded the interior of the State and created a demand for country roads.

From the very first the colonies began to build boats for their waterways, and in time an immense fleet of vessels of all kinds covered our coast, sounds, and rivers. The canoes were the first passenger boats, and from them sprung the flatboats that were poled along the rivers, the Dutch pirogues, the catamaran canoes, the sloops and schooners, and the passenger

canal-boats that made the limited trains on the early Erie. If the colonists rapidly grew rich, it was not alone because of the wealth of fish and lumber they found here, but also because of the wonderful facilities for water traffic they found waiting the enterprising prow of their ships.

Then came Fulton's first voyage on the Hudson. The times were ripe when he launched the *Clermont*. We had skillful and inventive mechanics, the finest boat-builders, and the best wood and iron in the world. Better than all, our mechanics and ship-builders had scant respect for precedent or the traditions of their trades. Fulton had struck the key-note—steam-power afloat. At once appeared an entirely novel system of moving freight and passengers, and by a rapid evolution the modern American steamboat appeared and became, like the American locomotive, a model, and one on which nearly all vessels of its class are built throughout the world. Before Fulton's first voyage the Ohio was only available for flat-boats drifting with the current. The *Clermont* practically created the Mississippi States and opened the West to the immigrant. Naturally enough the first steamboats after the *Clermont* plied on the Hudson, on the Sound, and on the Delaware and the Chesapeake. The steamer *Orleans* was the first boat built for the Western rivers, and was launched at Pittsburg, October 11, 1811. In August, 1818, the first steam vessel was launched on the lakes.

The people seem to have grasped Fulton's idea quickly, for his boat was immediately followed by others. In 1812 we built four steamboats, the next year seven, in 1814 two, in 1815 five, and in the next year seven. In the first ten years we built 131 steam vessels, and by 1832, twenty years after the first boat, we had built 474 steam craft, one hundred being launched that year. In the next three years the building of steamers fell off slightly; then it started up again, 145 being built in 1836 and 158 in 1837. Business depressions appear to have checked building again, and fewer were built each year till 1846, when 225 steam vessels were launched. Through the early fifties, before the railroads interfered with the river traffic of the West, the business increased wonderfully, and we find that in 1853 and 1854 more than 280 steamers were launched each year. The unsettled times before the war again reduced the number; but in 1863 and 1864 great numbers of boats were built, no fewer than 520 steam vessels of all kinds being launched in 1864. After the war the number built each year rapidly decreased for a few years and then slowly increased to 1874, when 404 boats were built. In 1882 we built 502, and since that time the number built has once

more rapidly decreased to 1886. Since that year the business has revived, and it is now active on the coasts and lakes and slowly increasing on the rivers. In all, since we began to build, we have launched, up to 1886, 14,214 steam vessels of all kinds, including naval vessels and a great number of small river steamers exported to South America and other places.

Taking the report of the Bureau of Navigation for the year ending June 30, 1886, we find that 230 steamers with a gross tonnage of 37,080 tons were built that year, distributed through the four great districts as follows: Atlantic and gulf coasts, 95; Pacific coast, 18; Northern lakes, 47; and Western rivers, 70. The chief States interested in building these vessels were Maine and Massachusetts, 6 each; Connecticut, 9; New York, 41; Pennsylvania, 29; Ohio and Michigan, 14 each; Tennessee, 12; Kentucky, 13; West Virginia and Florida, 8 each; Oregon, 9; California, 5, and other States a less number each. Dividing these vessels according to their motive power into three classes, we find that 17 were side-wheel boats, 80 were stern-wheel boats, and 133 were propellers. On the Atlantic and gulf waters, 7 were side-wheel boats, 11 were stern-wheelers (probably for Southern waters), and 77 were propellers. On the Pacific, 8 were propellers and 10 had stern-wheels. On the lakes the majority were propellers, there being 44 of these and only one stern-wheel and 2 side-wheel boats. On the Western rivers there were 8 side-wheel boats, 58 stern-wheelers, and only 4 propellers.

In that year there were 5467 steamers in use on our coasts, rivers, and lakes, distributed as follows: Atlantic and gulf coasts, 2662; Pacific coast, 425; Northern lakes, 1280; Western rivers, 1105; aggregating over 1,522,983 tons burden. Though there have been many wrecks on all our waters in the past two years, there is to-day probably a somewhat greater number of steamers in commission, this being notably the case on the lakes. When does this great fleet sail, for what ports does it steer, and where can we travel by these five thousand boats?

It is well now and then to take account of stock of our heritage. It is estimated that we have over twenty thousand miles of navigable waters traversed for the whole or for a part of each year by regular lines of steamboats and steamships. We have several great routes on which one can travel for a week without changing his stateroom. There are hundreds of towns where the only means of communication is by water, and probably a million of our people receive their mail by steamboat. It is difficult to make a mental picture of the enormous extent of our available waterways. Were they

improved and made useful to their full capacity in all seasons they would probably far exceed in value our entire railroad system.

Get out your atlas and trace the magnificent lines on which our heritage is planned. It will repay the study if it leads to a right understanding of the splendid opportunities we have for pleasure travel in every climate, in all waters, through all variations of scenery, and in hundreds of boats all flying our flag. No man can fairly be said to know this country until he has seen it from the deck of a Sound or coastwise steamer or from the guards of a Western river boat; until he has looked over the waters of the great Northern lakes, steamed through the Golden Gate, or gazed from his stateroom window upon Alaska glaciers.

Travel is called the great educator. How can it teach at forty miles an hour? No man ever learned much from a car window. He may have a vague notion of trees and farms, squalid suburbs, and union depots, and yet know nothing of great States and great cities. You can enter and leave Baltimore or Cincinnati, Buffalo or Cleveland, by rail and see no more of those notable and beautiful cities than the Boston man reported of a Connecticut town. He had been there a hundred times, yet had "seen only the cellar of New Haven." It is quite possible to ride from New York to Albany and by sitting on the right-hand side of the car not see the Hudson. By taking the wrong chair in the drawing-room car a man may skirt the glorious Sound for a hundred miles and not know that it exists. People are advised to "take the picturesque Baltimore and Ohio," and then engage a sleeper on account of cut rates.

It is not all of life "to get there." Wherein does it profit a man to arrive on time, if he loses all sight of his own country? Who is the happier or wiser or morally better to-day by reason of more speed? Let the drummer and the fugitive from justice take the limited train. Flight is their only aim or salvation. The man who travels to see that he may learn, the wiser people among those who travel for pleasure, go by boat. For the Western man there is all the charm and novelty of salt water. For the Eastern man the great rivers offer new and strange voyages of delight. For the Southern man, eager that his boys and girls learn something of their country, there are the great Northern seas where they may breathe new and bracing airs, spend days and nights in voyages past strange headlands and great cities, and see the sun set behind fresh-water horizons.

Where can we go? Which of all our twenty thousand miles of waterways are the most attractive and convenient, and which afford the

greatest variety of scenery and climate? Not all are equally interesting, and it is not difficult to select from 3000 to 6000 miles of pleasure travel that will not require a "portage," or land travel, of over eight hours at any one time. A vacation of a month will be ample time to travel three thousand miles by water and see something of the three great divisions of our water system—the coast, the lakes, and the Western rivers. On such a trip a man, if he is so minded, can really see the country, travel at ease, sleep in comfort, and dine sumptuously. In place of the dreadful roar of the train by night he will be lulled by the musical swash of the waves; in place of the ill-smelling, diphtheritic car he can have the broad deck, the life-giving breath of the sea, fragrant airs from farms along the banks, and the bracing winds of the lakes. Besides all this, there would be at the end of the trip a comforting sense of economy in expense.

First and most attractive on our Eastern coast is the grand gulf of Maine. The cold arctic current that slips in through the Straits of Belle Isle circles round this noble sea between Nova Scotia and Cape Cod, making a great ice-water cup for the cooling of the nation. The breeze is always chill; but it is an arctic wind, instinct with life, and he who can stand before its cold wins red blood and length of days from its salty winds. From Boston steamboats and steamships skirt the rocky shores, creep up the shining rivers, or invade the inlets of wooded Maine. Here lies Mount Desert, and Thatcher's Island light-house points the way to summer homes on Appledore. Picturesque old Halifax is 'cross seas due north-east, and Plymouth Bay invites towards the south. For the Western man short voyages out of Boston or Portland might fill a month of most picturesque and delightful travel, with many pleasant stops along the way. For one trip, to include several points, take steamer from Boston direct to Halifax, and then a few hours by rail through Evangeline's land will bring you by boat across the Bay of Fundy to St. John. From St. John a boat can be taken direct to Portland, past Grand Manan, Mount Desert, and along the shores of Maine. From Portland there is a steamer direct to New York, crossing the beautiful Massachusetts Bay, skirting the whole of Cape Cod, and steering west through the Vineyard, past the summer cities of the islands, and on through Long Island Sound to the East River. Such a trip would take about fourteen days, and would touch three of our most picturesque cities and two Canadian towns well worth seeing, and would include a very remarkable change of climate from the cold winds over the misty hills of Bluenose

Land to the soft airs of drowsy Cottage City. Should you venture farther into foreign seas, there is a boat at Halifax for Newfoundland—a trip of a week along strange coasts.

When we come south of Cape Cod we enter a new climate and warmer waters. We leave the arctic current and feel the influence of the Gulf Stream. The climate of the Vineyard and the two bays which make up into Rhode Island and Massachusetts is quite different from that of Boston, and as a result these splendid waters are lined with pleasure cities. Steamboats from Providence traverse the whole of Narragansett Bay, down to Newport and Block Island. Nantucket and Martha's Vineyard both offer short voyages full of interest, and to the west opens the splendid Sound, perhaps the finest yachting ground in the world. Along Long Island Sound lie the oldest water-travel routes in this country, and to-day are traversed by the finest and largest passenger steamboats in the world. Every Englishman who visits this country includes a trip on the Sound boats as one of the things that must be done, however short his stay. There are several boats for Boston and the East from New York every day, the longest and most famous route being the Fall River one. Another interesting route is by the way of Providence, as that includes, in the summer, a trip up Narragansett Bay by daylight.

It is a pity that we are, as a people, in such a hurry. Were we more leisurely in our pleasures there would be a daylight line through the Sound. Some day there may be a canal across Cape Cod, and then we shall have one of the most beautiful short voyages in the world—by day boat from New York direct to Boston. There is now an outside line of fast freight boats between Boston and New York, but only the happy friends of the owners can take this charming trip. If the line were wise it would open its staterooms to the public in the summer months.

Before leaving the Eastern coast it may be noted that there are several short sea voyages in good steamers sailing from Boston. Steamers leave once or twice a week for Philadelphia and Baltimore, and include a fine sail across Massachusetts Bay, a run down the coast to the capes, and pleasant trips up the Delaware or the Chesapeake. A longer voyage is by fine, large steamers from Boston by the way of Cape Cod, through the Vineyard, and past the gaudy banks of Gay Head across seas to Savannah. To those worn out with city life and business cares such short voyages would be worth a dozen doctors.

From the earliest times New York has been the port of departure for packets steering for our Southern ports, and to-day we find

sailing every week the finest steamships in the world. Not so large as European steamers, they are quite as sumptuous, quite as elegant in point of decoration, and far more comfortable, because better ventilated, cleaner, and lighter. These boats offer fine voyages along our coast to Norfolk, Wilmington, Charleston, Savannah, Jacksonville, New Orleans and Galveston. For a touch of foreign shores and voyages over tropic seas there are fine boats for Cuba, Mexico, and Central America. All these tours, both long and short, are worth the taking for a summer trip, and the longer voyages make splendid winter trips that in twenty-four hours out of New York exchange winter weather for spring or summer. The Florida boats connect with small boats on the waters of our great winter pleasure State, and suggest charming inland voyages past orange groves and along the dreamy Indian River.

From New York there are many shorter water trips well worth the taking for those who cannot travel far from home. Through the excursion season there are probably a hundred thousand people afloat every day on the waters about New York. For two millions of our people these are the only voyages they can take, the only chance for a taste of the sweet breath of the sea. It is said that since Coney Island was discovered the infant mortality of New York has materially decreased. It is not the wretched island that has saved the lives of our babies, but the voyage down the bay. Among these shorter trips the steamers to Sound ports offer very charming afternoon excursions; and by taking the boats for Stamford, Bridgeport, or New Haven, and returning by rail, a breath of salt air and a restful afternoon can be gained that is well worth the cost. Of course the ride home by rail is a serious objection, and a better plan is to stay over night at New Haven or return by the night boat. Among other trips is the excursion to Sandy Hook and back, as it includes an afternoon on the bay in one of the finest passenger steamers in the world. It was this water route that made Long Branch, for were we obliged to go by rail there never would have been any Long Branch.

There are people who wonder why it was that New York became our chief city. The answer is plain enough—the Hudson. From Albany to Sandy Hook the river, or arm of the sea, made the first grand highway of the country. It opened the back door to New England, and by easy portages carried our infant trade to Vermont and Canada. It joined the sea to our first great wheatfield in the valley of the Mohawk. To-day the money value of the Hudson is probably twenty times

greater than that of the two railroads on its banks.

Before we leave the coast it may be noticed that the Delaware and the Chesapeake both offer short voyages from Philadelphia and Baltimore. The sounds of the Carolinas will some day be fine pleasure seas. To-day they are practically unknown waters to the tourist. The inland waters farther south will also some day be pleasure routes and share the business that is beginning to flow through Florida waters. It may be noted in passing that a very pleasant sea voyage from New York may be taken by boat to Portland, Maine, and then by boat to Boston, or by steamer and rail direct to Boston, and then by steamer to Baltimore or Philadelphia, and home by rail.

The shortest portage, or run, across the Appalachian backbone to the rivers is from Philadelphia to Pittsburg. There is no intimation of what is to come till you have left the depot at Pittsburg and crossed the town to the bridge opposite the Monongahela House. If you arrive in the evening, go to the bridge as soon as you are settled in your hotel; or, should you choose the Monongahela House, ask for a room on the river side of the house. Draw the curtain and look out. For the Eastern traveler going west for the first time it is perhaps the most remarkable sight in this country. Immediately beneath is the broad, sloping levee, or landing. The wide space of blackness beyond is the river, running swiftly in the darkness and reflecting the glare of miles of furnaces on the opposite shore. Their flames and streaming fires light up the steep wall of rock that seems to blot out half the sky. Those long constellations are the street lights of the town on the top of the mountain. The arched constellation to the left is the great bridge. The blackness of the left is the entrance to this the eastern port of our great river system. Suddenly a white gleam of light sweeps across the immense scene. It is the search-light of some steamer picking out a landing. The deep, discordant boom of her whistle echoes from the rocky hills, and the strange craft starts out vividly in the glare of the electric lights as she pushes her flat nose against the bank.

It is here that the Ohio is born. Here the Monongahela and the Allegheny, both navigable rivers, meet and send their waters westward for a thousand miles till they mingle with the yellow flood that comes down from the Big Muddy. It was here that the founders of States took boat; it was here that the West began; and it is here to-day that an immense trade starts for the great West and the greater South. Fourteen States can be reached by boat from this port. You can sail from this landing in regular passenger steamboats over thirteen thou-

sand miles of river water. We have only to turn to the reports of the Lighthouse Board to see that this is not a mere guess at figures. Here we find that from Pittsburg to the mouth of the Ohio, a measured distance of 968 miles, there are 448 lights serving as aids to navigation. On the Big Kanawha—not by any means a well-lighted river—there are 27 lights on the first 73 miles from its mouth. The Tennessee has 37 lights on the lower 223 miles. The Mississippi, from St. Paul to Cairo, 933 miles, has 364 lights, and from Cairo to the jetties, about 1000 miles, shows 390 lights. The Missouri, from Kansas City to its mouth, has 38 lights for 386 miles. Here is a total of 3582 miles already lighted by 1299 lights. Yet the work of lighting is very recent, as none of the rivers were lighted a few years ago, and the work is still very far from being complete. If we count the unlighted rivers, we find that the Ohio and its branches are estimated by good authorities to give navigable waters for 3275 miles for a part of each year. The Mississippi valley can be reached by steamboats for over 10,000 miles, and, if we include the valley of the Red River of the North, for 500 miles more, making a grand total of nearly 13,800 miles of steam navigation. Even Pittsburg is not by any means the head of navigation, for in good stages of the water steamers ascend the Monongahela for 140 miles and the Allegheny for 110 miles.

The view of Pittsburg by daylight, if not so impressive as by night, is full of curious interest. To eyes accustomed to blue water the ranks of boats with bows turned upstream against the bank seem just a trifle disheartening. Are these the famous river boats of the West? Where are the sharp bows, the beautiful lines, the graceful stern of a real boat? The tall funnels and the naked stern wheels certainly suggest business, but very queer business. The boats seem like great dirty white houses set on flat scows only a few inches above the water. Appearances are deceitful. They lack indeed the brilliant white paint of our anthracite-burning boats, yet they are seaworthy, safe, fast, and comfortable. This Western boat is the evolution of science, Yankee ingenuity, and the most peculiar navigation in the world, and it is undoubtedly the most perfect marine racing and carrying machine ever designed. It is certainly the model for the river world, and floats to-day on the great rivers of Europe, Asia, and South America. It is the shoal water triumph of marine architecture, for it will carry enormous burdens with speed and safety over the slightest suggestion of water—or, as Lincoln is reported to have said, “will sail wherever there is an extra heavy dew.” Before examining the river boat

in detail let us see for what ports we may sail from this harbor in the mountains.

Before steering down the Ohio it will be well, if time can be spared, to take a short trip up the Monongahela. By inquiring of the clerks on the afternoon boats you can find how far the boat will go before dark, and as they stop at ports along the way it is easy to find a train back to Pittsburg in the evening. In summer this will give a trip of thirty or forty miles through the hill country above Pittsburg, and will enable you to see a slack-water navigation system. To salt-water navigators the handling of the boats and the tows through the locks and the long pools of slack water are full of interest and are well worth studying, because it is by this system of slack water that our shallow Western rivers are made available. Ultimately it must be extended to the Ohio and other large rivers in order to make them useful through all seasons and stages of water. Unless something of the kind is done we shall some day see a great traffic greatly injured or left defenseless against the greed and selfishness of railroad corporations. At one time the port of Pittsburg was practically valueless during every season of low water; but since the Davis Island dam was built there is a good harbor at all times. Such a slack water system does not mean that boats must always stop at the locks, as on the Monongahela, for at Davis Island boats pass directly over the dam during high water.

From Pittsburg steamers sail three times a week for Cincinnati, a voyage of 467 miles, through a picturesque and curious country bordering four great States,—Pennsylvania, Ohio, West Virginia, and Kentucky,—and passing 23 large towns and cities and many more villages and smaller places. The boats start late in the afternoon and reach Cincinnati about 11 o'clock of the third night. During the first evening the boat passes through the manufacturing district below Pittsburg, with its wonderful pictures of flaming furnaces and the strange fires of natural gas. The gas and soft coal belt, the great tile and pottery country, the Ohio iron districts, the farming lands of southern Ohio and Kentucky, and the coke country, with its long rows of fiery eyes, each in turn presents strange sights to Eastern observers. The West Virginia hills, forest-clad, rocky, and abrupt, give a curious and romantic aspect to the river scenery, and both by day and night cities, towns, and lonely farms seem to drift by in picturesque procession. If no more time can be spared from your vacation, for once leave speed and the greed of time to those who travel because they must, and make the portage to Pittsburg. One day or one night will bring you to the river, and three days after you are landed at Cincinnati, only twenty-four hours

from New York, with the memory of a quiet, restful voyage over almost unknown waters through four great States. The best season for a trip on the upper Ohio is in spring or early summer, when the water is high and the country is at its vernal best.

At Cincinnati the river still invites to the West. Steamers sail every night from this port for Louisville, giving a night voyage on the river resembling that on the night boats between New York and Albany. This is, however, only a short trip, and there are longer voyages stretching westward before the Ohio meets the Mississippi. One of the best voyages from Cincinnati is by the boats of the Memphis and Cincinnati Packet Company to Memphis, a journey on the Ohio and Mississippi of 738 miles, including calls at a dozen large cities along the way. By adding this trip to the voyage down from Pittsburg, a journey of 1200 miles can be made in less than ten days, and still leave 800 miles more of unexplored waters towards the far South. By changing boats at Memphis this voyage may be continued to New Orleans, or the trip may be reversed by taking a boat going north to St. Louis. Another and shorter voyage can be made by leaving the boat at Cairo, five hundred miles below Cincinnati, and taking an up-river boat to St. Louis.

From St. Louis a long and notable voyage can be made by taking one of the Anchor Line boats direct to New Orleans, a trip of twelve hundred miles, which gives six days in one boat on our grandest river. It is a popular trip in the West, and a round trip of from twelve to fourteen days is often made by travelers in search of a restful water journey through the South. Far to the South other trips invite the hunter and the fisherman to wonderful voyages up semi-tropic rivers hundreds of miles beyond the well-beaten tracks of timid tourists.

St. Louis is also the port of departure for one of the finest river voyages on the continent. By taking the boats of the St. Louis and St. Paul Packet Company a voyage of 729 miles can be made on the upper Mississippi. This is the "Hudson of the West," a river offering days and nights of varied and attractive scenery that is often beautiful and is in many places full of curious interest to those who have never seen the West except from a car window. If no other trip is convenient, a trip either up or down should certainly be taken. The voyage takes about four days, and can be made as much shorter as may be wished by leaving the boat at any of the cities along the way. The entire trip includes stops at twenty-two cities of note in five of the north central States.

This gives in outline four of our most popular water routes in the West. The shortest trip

from Pittsburg to Cincinnati takes three days, and costs \$7. The trip from Cincinnati to Memphis, four days, costs \$10. The longest trip in one boat is from St. Louis to New Orleans, a voyage of six days, and costs \$20. The trip up the Mississippi to St. Paul is made in four days, and costs \$16. By changing boats once or twice down the river the voyage may be extended from Pittsburg to the gulf; a journey of nearly 2000 miles can be made with close connections in about two weeks. From St. Paul, by changing boats once at St. Louis, a voyage of about 2000 miles may be made in from ten to twelve days. The voyage upstream is always slower, and more time must be allowed when round trips are made. The four trips already described, giving a journey of 2134 miles, can be made for \$53, or about 2½ cents a mile. These are first-class fares and include staterooms and meals free, though there is a disposition on some of the river lines to charge less for fare and to serve meals on the European plan. The first-class fare on the railroads is usually three cents a mile, with not less than two dollars for berth or sleeper, one dollar for a meal in the dining-car, and waiters and porters always anxious about fees.

Shorter voyages than these can be made by taking the boats at points along the routes, particularly on the upper Ohio and Mississippi, where the larger towns are close together on each shore. For instance, from Pittsburg to Wheeling, 90 miles; Marietta to Cincinnati, 296 miles; St. Paul to La Crosse, 173 miles; St. Paul to Rock Island, 397 miles; Burlington to St. Louis, 249 miles; and St. Louis to Grafton, 39 miles. Beyond these well-worn water paths there are at least one thousand miles more of "unknown rivers" dear to the fisherman, the hunter, and the explorer who dares escape the palace boats and voyage in "tramp steamers" on the less familiar streams towards the south or the north-west.

Thirty years ago these water routes were the only lines of traffic in the West and South. Then the rivers were crowded with fast boats, and all the world went by water. The boats won a world-wide fame for speed, capacity, and elegance, and were uniformly regarded as extremely valuable property. Any man who could build a boat was at liberty to sail these thousands of miles of fresh water, and was certain to find his decks crowded with freight and every stateroom full. To-day the railroads follow each bank for nearly the whole length of the Ohio and the Mississippi, and have absorbed the larger part of the once great river traffic. At one time St. Louis was the port of departure for the far West by way of the Big Muddy. Kansas City could only be reached by boat, and was itself a great port for river

crafts going still farther west. To-day the Missouri is practically a deserted river. The race of fine old river captains, who owned and steered their racing-palaces, is dying out, and there are people to-day in all the river towns who look backward with regret to the great and notable days of river boating in the fifties and solemnly assert that the entire traffic will some day disappear, devoured by greedy railroad corporations.

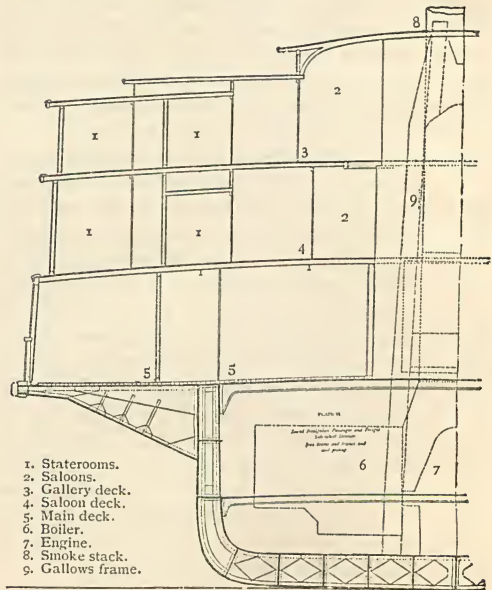

It is perfectly true that the Western steamboat interest has been seriously impaired by competition with the railroads and that the number of fast boats has greatly decreased. For the position of steamboat property in the past was peculiar. Large numbers of the boats were

owned by the captains or their families, and in case of hard times or a cut rate war with the railroads the boats could be seized for debt and the traffic stopped. The competing railroad, on the other hand, might be equally in debt, but in the hands of a receiver it went on doing business while the poor boat owner was tied up with his boat.

This is the common and the darker view taken of the steamboat interest on our great rivers. To offset this is the fact that the larger rivers are now well lighted, and more lights are added every year. The millions spent on the rivers have wonderfully improved navigation, and there are fewer wrecks than ever before. The slack water navigation, as on the Kanawha and the Monongahela, has greatly extended the season in which boats can run, and has thus extended the earning time of every boat on these waters. The ownership of the boats has also changed, and in place of single "tramp" steamers there are now regular incorporated companies owning large fleets of boats and having abundant capital. These companies are enabled to furnish better, cheaper, and more regular service, with less danger of ruinous competition with the railroads. Formerly the

steamboat service was extravagant and costly in management, while rates were high and profits large. The companies now conduct their business with more economy and seek to attract business by regular departures and arrivals, more comfortable boats, and better table and stateroom service. The lines now more nearly approach the Eastern lines both in equipment and management, and while the old racing captains, who threw their freight into the furnaces rather than be beaten by a rival boat, are passing away, the new men are real captains of safe and comfortable boats. The romantic days have gone from the rivers forever, but the travel is safer, and, in a way, more civilized. The last of the famous racing machines, the *Natchez*, was wrecked only a few months ago. The competition with the railroads has demanded a wholly different class of boats, and the tourists will compel a better passenger service on all the lines in the future.

In the opinion of those competent to speak on the matter, the prospects for the passenger traffic on the rivers is far from discouraging. Once all the world had to go by boat or stay at home. Now the larger number take the cars, and in order to retain any traffic at all the boat lines must offer superior inducements in the way of price, comfort, and attendance. This they seem prepared to do; and it is safe to say that the time will come when many of the river routes of the West will be as popular as the Hudson River or Long Island Sound, and a trip on these great waterways will be regarded as quite as important to a right understanding of the country as a day on the North River.

CROSS SECTION OF THE SOUND STEAMER "PURITAN."

From the east a single portage from the Hudson brings us to another grand water route—the lakes. These splendid inland seas are just opening new and magnificent voyages over strange northern waters. The freight traffic of the lakes is already very great, and is carried on by large steamers equal in every respect to the best salt-water freighters. The passenger traffic is as yet comparatively small and has been largely confined in the past to freight-boats having a few staterooms for passengers.

The boat touches at eleven large cities, and at all the landings along the way are excellent hotels and attractive pleasure resorts and fishing and hunting grounds. Besides this long trip there are many shorter voyages, each full of curious interest to the Eastern and the Southern tourist. From Cleveland very fine large boats that are almost literal copies of the Sound boats run every night to Detroit, making a voyage quite as interesting in its way as the trip by Fall River. The boats of the Detroit and

WESTERN RIVER BOAT.

Within a few years regular passenger boats, both side-wheel and propellers, have been placed on the lakes, and now every port on our inland seas can be easily reached by passenger steamers from Buffalo, Cleveland, and Chicago.

On the St. Lawrence we share with our Canadian friends one of the most charming water-parks in the world, and countless little voyages of pleasure may be taken in both great and small boats along placid waters among a thousand islands of summer idleness. Nowhere can be found better short water trips than along this wonderful river and on the waters of Lake Ontario. The shortest portage from salt water is across New York to Buffalo. From this port the steamers of the Lake Superior Transit Company sail west through Lake Erie, past Detroit and through St. Clair lake and river, across Lake Huron, and northward through the "Soo" to Lake Superior, or by the Straits of Mackinac west and south through Lake Michigan. The longest voyage without change of boat is from Buffalo to Duluth, and takes about five days. It is perhaps the most notable and picturesque fresh water voyage in the world, and includes the passage of two rivers and three of the

Cleveland Navigation Company connect with steamers for ports on Lake Huron, with boats for Milwaukee and Chicago and other Lake Michigan ports, and also for ports on Lake Superior.

The steamships of the Lake Superior Transit Company have their eastern point of departure at Buffalo and go direct to Lake Superior and as far west as Duluth, giving a number of voyages over these unsalted seas, where the sea gull seems at home and the tingling breath of the plains sweeps over icy waters. So far this pleasure travel seems to have been confined to the people of Ohio, Pennsylvania, western New York, and Indiana. Lake Superior is only a geographical term to millions of our people, and the idea that there are splendid voyages in the Northwest will be new to thousands who travel west by rail. The shipyards at Cleveland and Buffalo turn out every year larger and larger steamers, which are in every respect sea-going crafts and as well adapted to their waters as any that steer along our coasts. The traffic through the ship canal at Sault Ste. Marie during the last season of seven months amounted to 6,419,273 tons, valued at

A LAKE BOAT.

\$92,293,000, a tonnage exceeding that of the Suez Canal for a whole year. There is now a disposition to put on larger and finer boats for passenger service, and as facilities for business create business, there is reason to believe that there will be every year a larger number who voyage upon our great inland waters. If any man wishes to see a peculiar and interesting part of the country, and can for once forego this miserable desire to "get on," let him steer west from Buffalo or Cleveland for any of the lake ports beyond Detroit. The voyage can be made long or short, for one day or for five, for there are railroad connections at every large port, and one may return to the cars and discomfort at almost every hour of the longest voyage. If wise he will stay by the ship and

learn more of the country than ever can be learned from a car window.

Westward, on the Pacific coast, notable voyages can be made both south and north that will give a great variety of climate and coast scenery. Steamers now make excursions from Tacoma, Washington Territory, to Alaska, giving a round trip of eleven days past a coast rivaling in scenery anything in Norway and making it possible to see the glaciers meet the sea in Alaska fiords.

The writer in visiting London for the first time, many years ago, took an early opportunity to try a voyage by the penny boats on the Thames. The experience was discouraging. The boats were simply long decked canoes of iron, with a little engine in the middle, and with

ALBANY DAY BOAT "NEW YORK."

no shelter whatever for the passengers packed like sheep on the bare deck. Several years after, a visit was again made to these boats to see if there had been any improvement. There was none. The same burly captains stood on the paddle-boxes waving their hands to the helmsmen, who stood where they could see nothing ahead; the same boys screamed to the engineers to "stop 'er, back 'er"; the same uncomfortable seats for but a fifth of the passengers; the same wretched crowds on the cheerless deck suffocated by the smoke and pelted by the rain. On asking one of the captains why his company did not put on better boats when they built new ones, a singular answer was given: "What 's the good o' improvin' the boats when we 've got the old patterns?"

Here is just the difference between the American and the European boat-builder. The patterns make the smallest item in the cost of an iron vessel, yet to save a fraction of a penny in the pound the English builders sometimes forego all attempts at improvements. It is safe to say that in this country the cost of patterns is seldom considered, for sister ships are not by any means common. The aim is always to make something better—to make every new boat faster, safer, more comfortable, or in some way better adapted to the waters it is to traverse or the traffic it is to serve. This independence of tradition, this continual seeking after improvement, is particularly noticeable just now, for within the past year or two a number of boats have been launched that for speed, capacity, and comfort, and for novelty and beauty of design, are worthy of careful attention. The older routes on the Sound are employing larger and finer boats, and the famous boats of the Hudson have increased in speed and comfort. A number of new and very large ferry-boats and transfer steamers have been built on the Atlantic and Pacific coasts and on the lakes, and many new and very fine steam-

ships have been recently added to our coast-wise fleets, while in the West some excellent new boats have been placed on the more popular river routes.

In considering these boats, the Western river boats deserve attention because they are the most distinctively American and because they surmount more difficulties of navigation than are ever encountered by deep water crafts. On another page is an ideal section of a river boat showing the proportions of the hull to the "top-hamper." The waters are always shoal, particularly on the upper Ohio and Mississippi,

CABIN OF FERRY-BOAT "BERGEN."

and the problem is to carry a great burden at good speed over these quiet yet treacherous waters. The boat must be broad, shallow, and flat. It sprung originally from a flatboat, and, like such a boat, its weights must be evenly distributed so that all parts may have an equal duty. The depth of hold, six to ten feet, seems very small for such a lofty structure; but the waters are smooth and the hull may be submerged with safety close up to the deck. In the stern-wheel boats the amount of overhang given to the deck is small because the aim seems to be to make a long and narrow boat in preference to a wide one. The section shows the position of the two engines, which are placed one on each side, at the extreme edge of the boat. If the boat has side-wheels, each wheel is independent, and is moved by a separate engine, so that the wheels can be used in steering. This is essential in our very crooked rivers and

SOUND STEAMER "PURITAN."

in handling the boat at landings. If the boat has a stern-wheel the two engines work together and are controlled from the center of the engine-room. The boilers are always placed in the center of the boat, and the two tall smokestacks are set on each side to distribute the weight. This section is, however, misleading in one respect. The engines and boilers are really wide apart, the boilers being placed quite forward of the center while the engines are at the stern. This also is to distribute the weights over the long and shallow hull. With this section is another, giving a cross-section of the *Puritan*. A comparison of the two sections will be interesting, as showing the proportions of the hulls to the houses or decks.

The usual dimensions of a first-class side-

wheel boat for the Mississippi are as follows: The hull, which may be of wood or steel, is 300 feet long, 50 feet wide, with 9 feet depth of hold. The boat draws 10 feet of water loaded and 4 feet light. The main deck overhangs the hull for the greater part of the length and is usually ninety feet wide, or twenty feet wider on each side than the hull. It will be seen that the boat is practically a long, shallow flat-boat, and to give it strength and stiffness it must be tied together by some overhead system of framing. In Eastern boats the same thing is accomplished by massive timbers, or "hog frames." In river boats heavy rods and chains are used in connection with upright struts of wood. This simple device of tying the two ends together seems to accomplish its purpose

FURNACE-ROOM, "PURITAN."

perfectly, and the hull is sufficiently strong and stiff for the smooth waters on which it moves. In a sea-way the boat would be unseaworthy and would soon break in two. This has happened on the river, when boats have been caught on a bar and the receding water has left the center resting firmly and the bow and stern unsupported. In such wrecks the hog chains break and the boat falls apart. Many curious stories have been told of the ingenious devices resorted to by Western captains to prevent such wrecks. Finding their boats aground, with the water falling, they have attempted to sustain the unsupported parts with piles driven in the river bottom and with heaps of logs and freight thrown under the hull. So elastic are these long, shallow hulls that it is not uncommon to lift them bodily over a shoal or bar by pushing stout poles or spars into the river bottom and then "jumping" them over by means of tackle, very much as a boy might vault over a ditch by means of a stout pole.

In point of design the hulls of these more recent river boats are quite equal, within the limits of their duty, to the fine boats of the East. An effort has been made to secure as high speed as may be consistent with capacity and a perfectly flat bottom. The lines are long and easy and the bows sharp. The sides are straight and are drawn in very gradually towards the square stern. In stern-wheel boats the guards do not overhang much. In side-wheel boats the guards are wide enough to inclose the paddle-boxes. There is a very slight sheer, or rise, at the bows and a smaller rise at the stern, so that the deck is practically level. When loaded, the guards are close to the water, and it is only when the boat is docked that any idea of the shape of the hull can be gained.

On this long, flat hull is erected a saloon deck extending nearly the whole length of the boat, and on it are placed two rows of staterooms, one on each side, with doors opening into the saloon and also upon the narrow gallery, or deck, outside. The saloon is always of the entire length of the house, giving a fine, large, well-lighted room that is used in part for a dining-room and in part for a general meeting-room for the passengers. Above this deck is an upper deck, or "roof," and on this is placed a smaller house for the accommodation of the officers of the boat; above this, in the center of the boat, is the lofty wheel-house, which is always entirely inclosed in glass, that the pilot may have an unobstructed view in every direction. Swinging gang-planks,

or landing stages, handled by steam-power, steam capstans, and electric search-lights that may be controlled from the pilot-house, are among the more recent improvements added to the boats. The freight capacity of such a boat is estimated at 1500 tons, and there are about 70 staterooms, with accommodations for 140 passengers. The two engines have 26-inch cylinders, with 10-foot strokes, and are of 3000 horse-power. The cost of such a boat, furnished and ready for service, will vary, according to the finish, from \$100,000 to \$120,-

WORKING-BEAM, "PURITAN."

ooo, and such a boat is good for from 12 to 18 years' service. The picture of a typical stern-wheel boat on page 361 is from a photograph of a boat now in use.

In facility in handling, and in speed and capacity, these boats are un-

doubtedly the best and cheapest river boats ever designed. They do not look very ship-shape to Eastern eyes; yet the fact remains that they do the business cheaply and with reasonable speed. While it is quite possible that they might be a little more substantial, still they are the best boats ever built for their service and climate. If any criticism might be made it would be in the color. White is not the best color for a soft-coal boat. It might also be wished that the profusion of scroll-saw work might give place to something more simple and not quite so dangerous in case of fire.

Upon the lakes both side-wheel boats and propellers are used for passenger service. The

STAIRCASE AND BULKHEAD OF THE "PURITAN."

propellers do not differ materially from the coastwise steamships, except that the state-rooms are all on the upper deck and the pilot-house is placed almost at the very bows of the boat. The side-wheel boats recently placed on the line between Cleveland and Detroit are essentially copies of the Fall River boats, and are sumptuously furnished night boats. Among the new boats on the lakes may be mentioned a very large transfer boat for use at Detroit. It is an iron boat, having both paddles and screws, and is of massive construction to enable it to break through the ice. The deck is fitted with two tracks, and will carry two locomotives and four passenger cars on each track.

In the East the most interesting new boats

are the Sound steamers *Puritan*, *Connecticut*, and *City of Worcester*, the Hudson River boat *New York*, the passenger transfer boat *Monmouth*, and the ferry-boat *Bergen*. The ferry-boat *Bergen*, built of steel at Newburg, is 200 feet long, with 37 feet beam, and with a hold of 17 feet depth. The deck overhangs the hull and is sixty-two feet wide in the center. The boat is interesting on account of its peculiar motive power. There are two screws, one at each end of the boat, designed to be used both at once. The motive power is a triple-expansion engine, and is placed fore and aft. The three cylinders are respectively 18 inches, 27 inches, and 42 inches in diameter, with a stroke of two feet. The shaft extends the whole length of the boat and con-

nects both screws, one pulling, the other pushing the boat at the same time. This peculiar form of motive power has made it possible to construct a boat with clear cabins on each side and with a wider roadway for teams in the middle. The cabins are each 137 feet long, 16 feet wide amidships, and 14½ feet high. In the center, to break the long room into two smaller rooms, open screens and archways are introduced. The windows are in groups of three, and are of large plate-glass — the most noticeable feature of the decoration.

usual massive overhead framing, at a very great gain in the appearance of the boat. The boat is 311 feet long on the main deck, the hull being 40 feet wide and the deck 74 feet wide in the center. It draws only six feet, and is of 1552 tons burden. Being designed only for passengers it has no staterooms, and the three decks are left as clear as possible. The house, or saloon, on the main deck is very light and open, the sides being wholly of glass. The dining room is on this deck aft, and is one of the most beautiful rooms afloat, as there is an unob-

DINING-ROOM OF THE "PURITAN."

"Steamboat decoration" has become a by-word, by reason of the complete lack of artistic feeling in its treatment. In many of the new boats there is a noticeable departure from the carpenter work of the past, and in the *Bergen* the decorations have been intrusted to one of the leading art firms of New York, and the result of their work is most interesting. The color in the ladies' cabin is cream and gold, with a deep frieze in a wreath pattern, while the ceiling is of a mosaic design. The seats are in the form of antique settles, and are made of mahogany. At the transom-lights is fine stained-glass. The work is harmonious and artistic and in keeping with its place.

The Hudson River boat *New York* is the finest American example of a passenger day boat afloat, and is probably the most beautiful river boat, designed for passengers only, in the world. The hull is of iron, and was built at Wilmington, Delaware, in 1887. The use of iron enabled the builders to dispense with the

constructed view on every side. The house on the second deck gives a circular saloon formed with low windows, and in the rear of this saloon are small drawing-rooms with long windows intended for the use of passengers who wish private rooms during the trip. Aft is a covered deck, while above is the hurricane deck, open for the entire length of the house, and giving a promenade 200 feet long and 70 feet wide.

In the decoration there is a complete departure from the conventional steamboat style that still rages on the Western river boats. The interior finish is in ash and mahogany, and is quiet and artistic. The dome lights and transoms are of rich mosaic glass in admirable keeping with the woodwork. Each of the drawing-rooms is decorated in a different scheme of colors, and all are furnished in good taste.

The motive power is a beam engine of the usual type with a feathering paddle-wheel.

PILASTER IN CABIN OF
"PURITAN."

room are placed on the quarter deck near the main entrance, while the ladies' cabin is still farther aft at the stern. A stairway in the café leads to the dining-saloon below. The saloon deck and the gallery decks have staterooms the entire length on each side, the main saloon being 280 feet long and 25

feet high. The staterooms, 190 in number, are of the usual type, and, with the berths in the cabin, give accommodations to 600 passengers. In external appearance the boat is very attractive, while the interior decorations are simple and in quiet good taste. The boat is 358 feet 6 inches long over all, and 87 feet wide at the guards.

The new Sound steamer *Connecticut* was built at Noank, Connecticut, in 1888, and

is of wood, with the usual massive overhead framing. The hull departs somewhat from the usual type, as it has long bow lines extending nearly half the length of the boat, with rather sharp stern lines, and a short, parallel body in the center. The forward part of the hull is designed to carry nearly all the freight burden, as the freight deck is forward of the wheels. Within the hull are five watertight bulkheads. The general arrangement of the saloons and cabins is the same as on the older boats of the Providence and Stonington Steamship Company, except that the café and lunch-

room are placed on the quarter deck near the main entrance, while the ladies' cabin is still farther aft at the stern. A stairway in the café leads to the dining-saloon below. The saloon deck and the gallery decks have staterooms the entire length on each side, the main saloon being 280 feet long and 25

feet high. The staterooms, 190 in number, are of the usual type, and, with the berths in the cabin, give accommodations to 600 passengers. In external appearance the boat is very attractive, while the interior decorations are simple and in quiet good taste. The boat is 358 feet 6 inches long over all, and 87 feet wide at the guards.

This boat is specially interesting on account of its motive power, which consists of a compound direct-acting oscillating engine. The two cylinders are inclined and placed opposite each other, the pistons being connected directly with the crank shaft. The high-pressure cylinder is 56 inches and the low-pressure cylinder 104 inches in diameter. It is the largest oscillating engine ever built, and is estimated to develop six thousand horse-power. The advantages of this type of engine are less weight and a great gain in room, as the engine is quite low in the hull, and thus gives more room in the saloon above.

Among the recent boats added to the fleet on New York Bay is the *Monmouth*, built in Philadelphia for the Central Railroad Company of New Jersey, and her sister boat the *Sandy Hook*. The *Monmouth* plies between New York and the Sandy Hook terminus of the Central Railroad of New Jersey. The trip lasts only an hour, and the *Monmouth* and the *Sandy Hook* are practically passenger transfer boats. The *Monmouth* is of iron, 250 feet long, 35 feet wide, and draws only 10 feet. There are two decks inclosed forward and provided with many large windows, so that practically the main and saloon decks are inclosed in glass, giving a fine view on every side, with ample protection from the weather. The interior fittings are in hard woods, and the decorations are quiet and in good taste. One peculiar feature is the con-

DETAIL OF PILASTER.

struction of fine drawing-rooms or day staterooms furnished as parlors. These rooms are leased by the year, each tenant having his own key, so that on his daily trips he has a room on the boat for the exclusive use of himself and family. Each room is handsomely decorated and furnished in good taste. The boat is interesting not only as an example of a fine sea-going day boat fitted with every possible luxury and comfort for the use of her passengers, but also as a departure from the conventional paddle-boat. The motive power consists of twin screws, each driven by a vertical triple expansion engine. The united power is about 3000 horse-power, and the boat has a regular speed of $18\frac{1}{2}$ knots. The twin screws and separate engines are also found useful as an aid to the rudder in docking or otherwise handling the boat.

The new steamer *Puritan*, of the Fall River line, is the largest and in every respect the finest boat of its class ever built. It marks a great advance in the art of boat-building, and its interior fittings and decoration indicate a wholly new departure in this line of work. While our boat-builders have had scant respect for the traditions of their trade, and while our boats have shown great originality in construction, there has been too much conservatism in the matter of interior decoration. The first builders were more carpenters than decorators, and later builders have clung to the scroll-saw and bracket style too long. In the *Puritan*, as in the *Bergen*, an effort has been made to produce a boat that shall be artistic as well as seaworthy, and the result is very satisfactory. The boat itself is of grand proportions, and while it follows the general plan of the four-

FORWARD CABIN OF THE "PURITAN."

deck boats, it varies sufficiently to give it a character of its own. The most noticeable feature is the absence of the conventional paddle-boxes, the wheels being inclosed in the house. Another feature is the covering of the working beam by a dome above the hurricane deck. All the decks, except the first, give a free promenade by means of galleries outside or over the wheels the entire length of the boat, excepting the space occupied by the boats on the hurricane deck.

The hull was built at Chester, Pennsylvania, in 1888, and the boat was fitted with engines and the decks and houses built and decorated in New York in the winter of 1888-89. The hull has a double bottom extending on the side

THE RAIL, "PURITAN."

DOLPHIN NEWEL ON BOARD THE
"PURITAN."

up to the water-line. In this space are fifty-two compartments, while the inner hull is divided into seven compartments by water-tight bulk-heads. To give an idea of the grand proportions of this great boat it may be noted that the hull is 404 feet long on the water-line and 420 feet long over all, 52 feet wide, 21 feet 6 inches deep, and draws 13 feet of water when loaded. The decks are much wider, being at the center 91 feet wide and inclosing the wheels. The four decks are unusually high, and, measuring from the bottom of the keel to the top of the dome over the working beam, the boat is 70 feet high. With all these immense proportions the boat is graceful, and to the nautical eye accustomed to our built-up boats looks safe, handy, and seaworthy. Passing through the Sound, where its proportions can be seen to advantage, its enormous bulk will present a

sight unlike anything in European waters. By night its rows of windows, tier on tier, will shine upon the waters like a white phantom with myriad electric eyes drifting in silence along our coasts.

The general arrangement of the saloons does not differ greatly from that of the older Sound boats, except that everything is upon a grander scale. The entrance on the main deck, with its lofty ceiling, wide stairways, and liberal doors, gives an impression of spaciousness that is wholly new afloat. This generosity of space is in key with American demands. There is

something in the spaciousness of the land that makes our people demand largeness and generosity in the way of public accommodations. The genius of our people runs more and more to *Puritans* and drawing-room cars, where there is room enough and to spare. This sense of bigness on the *Puritan* is not mere bigness and emptiness. A cathedral may be grand as well as lofty if its proportions are right, and it seems on this monster boat, with its lofty ceilings and ample saloons, that the builders knew whereof they wrought. There is size and space, yet by reason of the proportions and the treatment of the decoration there is also that sense of repose and general personal comfort so dear to the American heart.

The boat is distinctively a night boat. Its voyage begins before sunset and often ends before sunrise, and its sleeping accommodations must be ample and comfortable. It is safe to say that on the *Puritan* more attention has been paid to the lighting, heating, and ventilation of the rooms and the general comfort of the traveler who sleeps upon the Sound than on any other boat ever launched. There are 355 staterooms, many of them being regular chambers, with large windows, mirrors, and complete chamber furniture precisely as in a first-class dwelling-house. The entire boat, including berths in the cabin, gives sleeping accommodations for 1200 passengers. To place so many staterooms on the boat it was necessary to arrange them in rows. This has been done before on the Sound boats, but it has one very serious objection, and that is the want of light and air. Some of the older boats even had staterooms in the middle of the saloon, where absolutely no light or air could be obtained. On the *Puritan* this matter appears to have been carefully considered, and every stateroom has free ventilation by means of large transoms opening to the outer air. This is accomplished by covering the outside rooms with roofs, thereby leaving a space between the under side of the deck above and the roofs of these outer rooms. The rain cannot beat into this space, nor can any room be entered by the transoms, and yet there is a free circulation of air and plenty of light for the interior rooms next to the saloon. There will be no staterooms in the middle of the boat, thus doing away with all the dark rooms.

The decoration of the boat is in the style of the Italian Renaissance, the ornamentation being brought out by judicious gilding on an ivory-white ground. The railings of the galleries in the saloon are of wrought iron in the same general style, and all the interior woodwork is of the best quality and of the finest finish. The masts, which in the older boats were often overdecorated where they

passed through the saloon, are in the *Puritan* of steel, and serve as ventilators, as well as supports for the electric-light fixtures. In point of fire protection, safety, and sanitary arrangements the boat is superior to anything yet built in this country, so that the boat is a perfect and complete hotel afloat, and as comfortable, safe, and luxurious as any conveyance on land or sea.

The motive power is of the usual beam engine type, except that it is a compound engine, the two cylinders being placed fore and aft, and connected with the working beam overhead. The high-pressure cylinder is 75 inches in diameter with 9 feet stroke, and the low-pressure cylinder is 110 inches with 14 feet stroke, and the engine is designed to develop 7500 horse-power, at a steam pressure of 110 pounds per square inch. The wheels are 35 feet in diameter with steel "feathering" buckets 14 feet long and 5 feet deep. The accompanying pictures give an excellent idea of this grand boat, with some suggestions as to her interior fittings. One picture may also serve to show the massive proportions of the engine and the working beam.

Among the Sound boats the *City of Worcester*, of the Norwich line, was one of the first to

depart from the older type of night boats. This steamer was built in Wilmington, Delaware, in 1881, and has an iron hull 328 feet long, 46 feet wide, and 14½ feet deep. The gross tonnage is 1921 tons, and the boat draws when loaded 10 feet 3 inches. The *City of Worcester* is interesting because it was, when launched, regarded as the finest

boat built for our Eastern waters. There are two decks above the main deck, and the saloons and cabins are arranged on a plan that undoubtedly suggested the arrangement of some of our later boats. The entrance, at the usual place just abaft the wheels, leads to the main deck saloon, and from this saloon a grand staircase, that occupies a place usually assigned to the ladies' cabin, leads to the saloon deck. The grand saloon extends the entire length of the house, with a single row of staterooms on each side as far as the engine-well. This saloon has no gallery and makes a low, dome-lighted room that is far more cozy and homelike than the saloons on longer boats. Forward of the engine is a saloon having a gallery for upper staterooms and arranged for a dining-saloon. This plan of placing the dining-room upstairs is certainly more agreeable, as the saloon is large, lofty, well lighted, and well ventilated. The *City of Worcester* was one of the first boats to use electric lights and one of the first boats to substitute hard wood for the old style of painted pine. The decorative woodwork is all in hard woods, and inlaid in excellent designs and decorated in good taste. In point of speed, comfort, and decoration this boat was really the pioneer of the splendid new fleet headed by the *Puritan*.

It is not easy to predict what is to be the future of this great boating interest. We have over twenty thousand miles of steam navigation, we have original and enterprising boat-builders, and an enormous traveling public. We have had in the past a phenomenal fleet of steamboats, particularly on our Western rivers, and yet the business has been greatly depressed, and there are fewer boats afloat today than twenty years ago. Moreover,— and this is the most serious matter of all,— our canals

PANEL FIGURE, "PURITAN."

COLUMN IN CABIN OF "PURITAN."

are being abandoned year by year. While Europe spends millions on canals and waterways, while France is trying to make every little stream navigable, and England is trying to turn her interior cities into sea-ports, we permit our canals to fill up or foolishly give them away to impetuous railroads for road-beds. Is it wise? Are we safe in trusting all our freight business to railroad corporations? To-day we can, if the need come, send gun-boats inland from the Delaware to New York Bay. If we permit the railroads to destroy the business of the canal between our ship-yards and our navy yards, we may be sure that in every European War office the fact of our folly is carefully noted for future reference. Once Great Britain fought a great battle to destroy the water route that connects the port of New York with the back door of New England. Saratoga was

fought to destroy a vital water route. Fortunately, the English generals who planned in London thus to cut the country in two failed, and yet to-day we are abandoning our canals

and see our great internal steam navigation system decay without a thought of the consequences.

On the other hand—for there is a brighter side to every picture—there is a disposition among the traveling public to demand larger, finer, and safer boats everywhere. We are being taught by English tourists who visit us how to see our own country. We may complacently talk of our limited trains and all that. Every foreigner who visits us asks first of all for our steamboat routes, because our lake, river, and Sound boats are known of all the world.

Charles Barnard.

RAIL-FACING, "PURITAN."

THE ADVANCE IN STEAMBOAT DECORATION.

ONLY a few years ago it seemed as though sordid ugliness was nowhere so firmly entrenched as in our ferry-boats, while the "floating palaces" on which we betook ourselves to Albany or Newport were synonyms for the most pretentious bad taste. There could not be a clearer sound of our progress in art than the fact that both these classes of boats are now being built to satisfy a cultivated eye as well as to transport a comfort-loving body with safety and speed.

The most conspicuous example of a desire to put really good decorative work into a steamboat interior is the *Puritan* of the Fall

River line. The first step—and the most novel that could have been taken—was to select an artist of experience and skill and give him complete control of the task. Every item in the decoration and furnishing of the *Puritan* has been conceived by Mr. Frank Hill Smith, and designed and carried out under his careful superintendence. The success which he has achieved in a field where no precedents guided him certainly deserves great praise. I do not mean judged simply by the standard set by the boat-interiors of other days—this would be no test at all; I mean judged by the same standard we should use if a luxurious home or great public building were in question. It may be thought by some that soberer

colors and a smaller amount of ornamental detail would be more appropriate in so utilitarian an interior, Mr. Smith's scheme showing only white and very pale colors and a profuse employment of gold as well as of carved or molded decoration in low relief. But the American people are accustomed in these great inland vessels to awkward attempts at ball-room effects, and will unquestionably be better pleased with this artistic version of the same idea than with any other kind of treatment that could have been chosen; and, after all, the critic's place is not to weigh an artist's conception in the balance of other person's tastes, but to accept it frankly and only discuss the quality of its expression.

The first point of excellence to be emphasized is that Mr. Smith gives us no mere heterogeneous assemblage of pretty patterns and tints, but a systematic scheme of adornment, based on architectural principles, coherent throughout, carefully studied in all its varied details, and executed with technical skill. Italian Renaissance forms served as his inspiration, and every item from end to end of his elaborate work is harmonious in character and as well adapted in scale as in motive to the exact place it holds.

Reaching the quarter-deck we find the walls divided into panels by fluted pilasters which support a dignified frieze in low relief. The panels are filled with half-draped floating female figures, in very low relief, which were modeled by the well-known sculptor Mr. Donoghue. These figures are of an ivory-white tone, relieved against a pale yellow background. All the architectural features are likewise ivory-toned and are lavishly gilded. The ordinary staterooms are finished throughout in wood, painted white, and perfectly plain. The larger rooms are simply but prettily decorated in white, and the tender tones of blue, yellowish pink, and yellow everywhere employed, with less use of gold than appears in the saloons. The dining-room is dignified and attractive, and even the barber-shop has neither been neglected by the artist nor over-adorned. But, of course, the center of interest is the main saloon with its encircling gallery leading to the upper tier of staterooms. Here the festal effect of Mr. Smith's scheme is most strikingly apparent, and, when the great space is lighted by its multitude of incandescent burners, the "average citizen" will have his love for a gay and luxurious-looking environment fully met, while a more critical eye will be disturbed by no heavy excess or trivial fantasticality. It is impossible to dwell here upon the details of this saloon, which is covered with a pale-blue ceiling, while a red carpet gives it warmth and richness. I can only say a word about the wrought-iron screens

which, supported by solid gilded piers, form the gallery rail. Their design is extremely graceful, and, fortunately, they are not gilded, but left black to bring a needed accent of vigor and decision into the pale delicacy of the general scheme. Still more attractive and much more original than this railing are the iron-work supports for the electric lights, forming coronals around the masts and extending upward to the gilded capitals, that give the masts an architectural character, in graceful spirals from which the lights project at varied angles. Unfortunately our little illustration does not show how beautiful and dignified yet extremely effective these fixtures really are; but the general character of their design can be appreciated, and the good sense and good taste which have known how to serve a novel practical purpose thoroughly well by means of a novel and expressive manner of treatment.

In the *New York*, the new day boat of the Albany line, we find agreeable rooms, sensibly treated in those dark tones which were altogether desirable when service in the hot hours of summer was to be considered. The walls are paneled to the top with ash, and the carpets are green; and while the details can hardly be called artistic in treatment, the general color-effect is charming, except as regards the tones supplied by stained glass of rather crude and glaring tints.

But perhaps the most wholly satisfactory piece of decoration that has yet been set afloat is found—shall I be believed?—in a ferry-boat designed to carry the long-suffering "suburban resident" upon his daily trips from Hoboken to New York. The *Bergen* being a screw instead of a side-wheel steamer, the cabins run through from end to end; and the purely utilitarian reasons which prescribed her external lines have resulted in an imposing perspective of singularly graceful curvature. There would have been some monotony, however, had the whole length been left unbroken; so the artist skillfully divided it by the projecting screens shown in our picture, which cut the walls into three compartments without at all interfering with convenience or the freedom of the eye. The central compartment is much shorter than the others, and its decoration is emphasized by a large mirror against the inner wall and a more elaborate window than those on either side. All the windows are grouped in threes—a vast improvement upon the old uniform rows. The walls in the women's cabin are wainscoted with oak and then painted a neutral grayish green with a band of simple Renaissance decoration in white and a little gold. Parallel with the window tops runs a cornice-strip of oak, and above this again is a simple painted frieze. The faces of

the ceiling-beams are white touched with gold and the sunk panels between repeat the tone of the oak. The seats are mahogany with arms of cherry. The windows are of plain glass, but have small spaces at the top and sides filled with olive-green glass of two shades set in delicate ornamental leadings; and more of this glass gives a desirable touch of color in the lights above the wing-decks at each end. The men's cabin is more simply but as tastefully treated. The only features which are not as good as the rest are the electric lights; but these are unobtrusive, and nowhere can we find a hint of vulgarity, ostentation, or inap-

propriate ornament; nor anywhere a touch of crude ugliness—even the placards on the walls are engrossed in simple gold letters and framed in oak. These rooms, in short, which owe their excellence to the firm of artists that Mr. Louis C. Tiffany directs, might be shown to a foreigner to prove that the American people love not only cleanliness and decency, but beauty too, and know the difference between appropriate and inappropriate kinds of beauty. Need I point a contrast by explaining what a foreigner must have thought who stepped from his ocean steamer into a ferry-boat of the ancient pattern?

M. G. van Rensselaer.

AN ECHO OF ANTIETAM.

HE air was tremulous with farewells. The regiment, recruited within sight of the steeples of Waterville, and for three months in camp just outside the city, was to march the next morning. A series of great

battles had weakened the Federal armies and the authorities at Washington had ordered all available men to the front.

The camp was to be broken up at an early hour, after which the regiment would march through the city to the depot to take the cars. The streets along the route of the march were already being decorated with flags and garlands. The city that afternoon was full of soldiers enjoying their last leave of absence. The liquor shops were crowded with parties of them drinking with their friends, while others in threes and fours, with locked arms, paraded the streets singing patriotic songs, sometimes in rather maudlin voices, for to-day in every saloon a soldier may enter citizens vied for the privilege of treating him to the best in the house. No man in a blue coat was suffered to pay for anything.

For the most part, however, the men were sober enough over their leave-taking. One saw everywhere soldiers and civilians, strolling in pairs, absorbed in earnest talk. They are brothers maybe who have come away from the house to be alone with each other, while they talk of family affairs and exchange last charges and promises as to what is to be done if anything happens. Or perhaps they are business partners, and the one who has put the country's business before his own is giving his last counsels as to how the store or the shop shall be managed in his absence. Many of the

blue-clad men have women with them, and these are the couples that the people oftenest turn to look at. The girl who has a soldier lover is the envy of her companions to-day as she walks by his side. Her proud eyes challenge all who come, saying, "See, this is my hero. I am the one he loves."

You could easily tell when it was a wife and not a sweetheart whom the soldier had with him. There was no challenge in the eyes of the wife. Young romance shed none of its glamour on the sacrifice she was making for her native land. It was only because they could not bear to sit any longer looking at each other in the house that she and her husband had come out to walk.

In the residence parts of the town family groups were gathered on shady piazzas, a blue-coated figure the center of each. They were trying to talk cheerfully, making an effort even to laugh a little. Now and then one of the women stole unobserved from the circle, but her bravely smiling face as she presently returned gave no inkling of the flood of tears that had eased her heart in some place apart. The young soldier himself was looking a little pale and nervous with all his affected good spirits, and it was safe to guess that he was even then thinking how often this scene would come before him afterwards, by the camp-fire and on the eve of battle.

In the village of Upton, some four or five miles out of Waterville, on a broad piazza at the side of a house on the main street, a group of four persons were seated around a tea-table.

The center of interest of this group, as of so many others that day, was a soldier. He looked not over twenty-five, with dark blue eyes, dark hair cut close to his head, and a

mustache trimmed crisply in military fashion. His uniform set off to advantage an athletic figure of youthful slenderness, and his bronzed complexion told of long days of practice on the drill-ground in the school of the company and the battalion. He wore the shoulder-straps of a second lieutenant.

On one side of the soldier sat the Rev. Mr. Morton, his cousin, and on the other Miss Bertha Morton, a kindly-faced, middle-aged lady, who was her brother's housekeeper and the hostess of this occasion.

The fourth member of the party was a girl of nineteen or twenty. She was a very pretty girl, and although to-day her pallid cheeks and red and swollen eyelids would to other eyes have detracted somewhat from her charms, it was certain that they did not make her seem less adorable to the young officer, for he was her lover and was to march with the regiment in the morning.

Lieutenant Philip King was a lawyer, and by perseverance and native ability had worked up a fair practice for so young a man in and around Upton. When he volunteered he had to make up his mind to leave this carefully gathered clientage to scatter or to be filched from him by less patriotic rivals; but it may be well believed that this seemed to him a little thing compared with leaving Grace Roberts, with the chance of never returning to make her his wife. If, indeed, it had been for him to say, he would have placed his happiness beyond hazard by marrying her before the regiment marched; nor would she have been averse, but her mother, an invalid widow, took a sensible rather than a sentimental view of the case. If he were killed, she said, a wife would do him no good; and if he came home again, Grace would be waiting for him, and that ought to satisfy a reasonable man. It had to satisfy an unreasonable one. The Robertses had always lived just beyond the garden from the parsonage, and Grace, who from a little girl had been a great pet of the childless minister and his sister, was almost as much at home there as in her mother's house. When Philip fell in love with her the Mortons were delighted. They could have wished nothing better for either. From the first Miss Morton had done all she could to make matters smooth for the lovers, and the present little farewell banquet was but the last of many meetings she had prepared for them at the parsonage.

Philip had come out from camp on a three-hours' leave that afternoon, and would have to report again at half-past seven. It was nearly that hour now, though still light, the season being midsummer. There had been an effort on the part of all to keep up a cheerful tone; but as the time of the inevitable separation

drew near, the conversation had been more and more left to the minister and his sister, who, with observations sometimes a little forced, continued to fend off silence and the demoralization it would be likely to bring to their young friends. Grace had been the first to drop out of the talking, and Philip's answers, when he was addressed, grew more and more at random, as the meetings of his eyes with his sweetheart's became more frequent and lasted longer.

"He will be the handsomest officer in the regiment, that's one comfort. Won't he, Grace?" said Miss Morton, cheerily.

The girl nodded and smiled faintly. Her eyes were brimming, and the twitching of her lips from time to time betrayed how great was the effort with which she kept her self-command.

"Yes," said Mr. Morton; "but though he looks very well now, it is nothing to the imposing appearance he will present when he comes back with a colonel's shoulder-straps. You should be thinking of that, Grace."

"I expect we shall hear from him every day," said Miss Morton. "He will have no excuse for not writing with all those envelopes stamped and addressed, with blank paper in them, which Grace has given him. You should always have three or four in your coat pocket, Phil."

The young man nodded.

"I suppose for the most part we shall learn of you through Grace; but you mustn't forget us entirely, my boy," said Mr. Morton. "We shall want to hear from you directly now and then."

"Yes; I'll be sure to write," Philip replied.

"I suppose it will be time enough to see the regiment pass if we are in our places by 9 o'clock," suggested Miss Morton, after a silence.

"I think so," said her brother. "It is a great affair to break camp, and I don't believe the march will begin till after that time."

"James has got us one of the windows of Ray & Seymour's offices, you know, Philip," resumed Miss Morton; "which one did you say, James?"

"The north one."

"Yes, the north one," she resumed. "They say every window on Main street along the route of the regiment is rented. Grace will be with us, you know. You mustn't forget to look up at us as you go by"—as if the young man were likely to.

He was evidently not now listening to her at all. His eyes were fastened upon the girl's opposite him, and they seemed to have quite forgotten the others. Miss Morton and her brother exchanged compassionate glances. Tears were in the lady's eyes. A clock in the sitting-room began to strike:

"One, two, three, four, five, six, seven."

Philip started.

"What time is that?" he asked, a little huskily. No one replied at once. Then Mr. Morton said:

"I am afraid it struck seven, my boy."

"I must leave in ten minutes then," said the young man, rising from the table. The rest followed his example.

"I wonder if the buggy will be in time?" said he.

"It is at the gate," replied Miss Morton. "I heard it drive up some time ago."

Unmindful of the others now, Philip put his arm about Grace's waist and drew her away to the end of the piazza and thence out into the garden.

"Poor young things," murmured Miss Morton, the tears running down her cheeks as she looked after them. "It is pitiful, James, to see how they suffer."

"Yes," said the minister; "and there are a great many just such scenes to-day. 'Ah, well, as St. Paul says, we see as yet but in part.'"

Passing in and out among the shrubbery, and presently disappearing from the sympathetic eyes upon the piazza, the lovers came to a little summer-house and there they entered. Taking her wrists in his hands, he held her away from him and his eyes went slowly over her from head to foot, as if he would impress upon his mind an image that absence should not have power to dim.

"You are so beautiful," he said, "that in this moment, when I ought to have all my courage, you make me feel that I am a madman to leave you for the sake of any cause on earth. The future to most men is but a chance of happiness, and when they risk it they only risk a chance. In staking their lives, they only stake a lottery ticket, which would probably draw a blank. But my ticket has drawn a capital prize. I risk not the chance, but the certainty, of happiness. I believe I am a fool, and if I am killed that will be the first thing they will say to me on the other side."

"Don't talk of that, Phil. Oh, don't talk of being killed."

"No, no; of course not," he exclaimed. "Don't fret about that; I shall not be killed. I've no notion of being killed. But what a fool I am to waste these last moments staring at you when I might be kissing you, my love, my love!" And clasping her in his arms, he covered her face with kisses.

She began to sob convulsively.

"Don't, darling; don't! Don't make it so hard for me," he whispered, hoarsely.

"Oh, do let me cry," she wailed. "It was so hard for me to hold back all the time we were at table. I must cry, or my heart will

break. Oh, my own dear Phil, what if I should never see you again! Oh! Oh!"

"Nonsense, darling," he said, crowding down the lump that seemed like iron in his throat, and making a desperate effort to keep his voice steady. "You will see me again, never doubt it. Don't I tell you I am coming back? The South cannot hold out much longer. Everybody says so. I shall be home in a year, and then you will be my wife, to be God's Grace to me all the rest of my life. Our happiness will be on interest till then; ten per cent. a month at least, compound interest, piling up every day. Just think of that, dear; don't let yourself think of anything else."

"O Phil, how I love you!" she cried, throwing her arms around his neck in a passion of tenderness. "Nobody is like you. Nobody ever was. Surely God will not part us. Surely he will not. He is too good."

"No, dear, he will not. Some day I shall come back. It will not be long. Perhaps I shall find you waiting for me in this same little summer-house. Let us think of that. It was here, you know, we found out each other's secret that day."

"I had found out yours long before," she said, faintly smiling.

"Time's up, Phil." It was Mr. Morton's voice calling to them from the piazza.

"I must go, darling. Good-bye."

"Oh, no, not yet; not quite yet," she wailed, clinging to him. "Why, we have been here but a few moments. It can't be ten minutes yet."

Under the influence of that close, passionate embrace, those clinging kisses and mingling tears, there began to come over Philip a feeling of weakness, of fainting courage, a disposition to cry out, "Nothing can be so terrible as this. I will not bear it; I will not go." By a tyrannical effort of will, against which his whole nature cried out, he unwound her arms from his neck and said in a choked voice:

"Darling, this is harder than any battle I shall have to fight, but this is what I enlisted for. I must go."

He had reached the door of the summer-house, not daring for honor's sake to look back, when a heartbroken cry smote his ear.

"You have n't kissed me good-bye!"

He had kissed her a hundred times, but these kisses she apparently distinguished from the good-bye kiss. He came back, and taking her again in his embrace, kissed her lips, her throat, her bosom, and then once more their lips met and in that kiss of parting which plucks the heart up by the roots. How strong must be the barrier between one soul and another that they do not utterly merge in moments like that, turning the agony of parting to the bliss of blended being!

Pursued by the sound of her desolate sobbing, he fled away.

The stable-boy held the dancing horse at the gate, and Mr. Morton and his sister stood waiting there.

"Good-bye, Phil, till we see you again," said Miss Morton, kissing him tenderly. "We'll take good care of her for you."

"Will you please go to her now?" he said, huskily. "She is in the summer-house. For God's sake try to comfort her."

"Yes, poor boy, I will," she answered. He shook hands with Mr. Morton and jumped into the buggy.

"I'll get a furlough and be back in a few months, maybe. Be sure to tell her that," he said.

The stable-boy stood aside, the mettlesome horse gave a plunge and started off at a three-minute gait. The boy drew out his watch and observed: "He hain't got but fifteen minutes to git to camp in, but he'll do it. The mare's a stepper, and Phil King knows how to handle the ribbons."

The buggy vanished in a cloud of dust around the next turn in the road. The stable-boy strode whistling down the street, the minister went to his study, and Miss Morton disappeared in the shrubbery in the direction of the summer-house.

II.

EARLY next morning the country roads leading into Waterville were covered with carts and wagons and carriages loaded with people coming into town to see the regiment off. The streets were hung with flags and spanned with decorated arches bearing patriotic inscriptions. Red, white, and blue streamers hung in festoons from building to building and floated from cornices. The stores and places of business were all closed, the sidewalks were packed with people in their Sunday clothes, and the windows and balconies were lined with gazers long before it was time for the regiment to appear. Everybody—men, women, and children—wore the national colors in cockades or rosettes, while many young girls were dressed throughout in red, white, and blue. The city seemed tricked out for some rare gala-day, but the grave faces of the expectant throng, and the subdued and earnest manner which extended even to the older children, stamped this as no ordinary holiday.

After hours of patient waiting at last the word passes from mouth to mouth, "They are coming." Vehicles are quickly driven out of the way, and in a general hush all eyes are turned towards the head of the street. Presently there is a burst of martial music, and the

regiment comes wheeling round the corner into view and fills the wide street from curb to curb with its broad front. As the blue river sweeps along, the rows of polished bayonets, rising and falling with the swinging tread of the men, are like interminable ranks of foam-crested waves rolling in upon the shore. The imposing mass, with its rhythmic movement, gives the impression of a single organism. One forgets to look for the individuals in it, forgets that there are individuals. Even those who have brothers, sons, lovers there, for a moment almost forget them in the impression of a mighty whole. The mind is slow to realize that this great dragon, so terrible in its beauty, emitting light as it moves from a thousand burnished scales, with flaming crest proudly waving in the van, is but an aggregation of men singly so feeble.

The hearts of the lookers-on as they gaze are swelling fast. An afflatus of heroism given forth by this host of self-devoted men communicates itself to the most stolid spectators. The booming of the drum fills the brain, and the blood in the veins leaps to its rhythm. The unearthly gayety of the fife, like the sweet, shrill song of a bird soaring above the battle, infects the nerves till the idea of death brings a scornful smile to the lips. Eyes glaze with rapturous tears as they rest upon the flag. There is a thrill of voluptuous sweetness in the thought of dying for it. Life seems of value only as it gives the poorest something to sacrifice. It is dying that makes the glory of the world, and all other employments seem but idle while the regiment passes.

The time for farewells is gone by. The lucky men at the ends of the ranks have indeed an opportunity without breaking step to exchange an occasional handshake with a friend on the sidewalk, or to snatch a kiss from wife or sweetheart, but those in the middle of the line can only look their farewells. Now and then a mother intrusts her baby to a file-leader to be passed along from hand to hand till it reaches the father, to be sent back with a kiss or maybe perched aloft on his shoulder to ride to the depot, crowing at the music and clutching at the gleaming bayonets. At every such touch of nature the people cheer wildly. From every window and balcony the ladies shower garlands upon the troops.

Where is Grace? for this is the Upton company which is passing now. Yonder she stands on a balcony, between Mr. Morton and his sister. She is very pale and the tears are streaming down her cheeks, but her face is radiant. She is smiling through her tears, as if there was no such thing on earth as fear or sorrow. She has looked forward to this ordeal with harrowing expectations, only to find her-

self at the trying moment seized upon and lifted above all sense of personal affliction by the passion of self-devotion with which the air is electric. Her face as she looks down upon her lover is that of a priestess in the ecstasy of sacrifice. He is saluting with his sword. Now he has passed. With a great sob she turns away. She does not care for the rest of the pageant. Her patriotism has suddenly gone. The ecstasy of sacrifice is over. She is no longer a priestess, but a broken-hearted girl, who only asks to be led away to some place where she can weep till her lover returns.

III.

THERE WAS to be a great battle the next day. The two armies had been long manœuvring for position, and now they stood like wrestlers who have selected their holds and with body braced against body, knee against knee, wait for the signal to begin the struggle. There had been during the afternoon some brisk fighting, but a common desire to postpone the decisive contest till the morrow had prevented the main forces from becoming involved. Philip's regiment had thus far only been engaged in a few trifling skirmishes, barely enough to stir the blood. This was to be its first battle, and the position to which it had been allotted promised a bloody baptism in the morning. The men were in excellent heart, but as night settled down there was little or no merriment to be heard about the camp-fires. Most were gathered in groups discussing in low tones the chances of the morrow. Some, knowing that every fiber of muscle would be needed for the work before them, had wisely gone to sleep, while here and there a man, heedless of the talk going on about him, was lying on his back staring up at the darkening sky, thinking.

As the twilight deepened, Philip strolled to the top of a little knoll just out of the camp and sat down with a vague notion of casting up accounts a little in view of the final settlement which very possibly might come for him next day. But the inspiration of the scene around him soon diverted his mind from personal engrossments. Some distance down the lines he could see the occasional flash of a gun where a battery was lazily shelling a piece of woods which it was desirable to keep the enemy from occupying during the night. A burning barn in that direction made a flare on the sky. Over behind the wooded hills where the Confederates lay rockets were going up, indicating the exchange of signals and the perfecting of plans which might mean defeat and ruin to him and his the next day. Behind him, within the Federal lines, clouds of dust, dimly

outlined against the glimmering landscape, betrayed the location of the roads along which artillery, cavalry, infantry were hurrying eagerly forward to take their assigned places for the morrow's work.

Who said that men fear death? Who concocted that fable for old wives? He should have stood that night with Philip in the midst of a host of 125,000 men in the full flush and vigor of life, calmly and deliberately making ready at dawn to receive death in its most horrid forms at one another's hands. It is in vain that Religion invests the tomb with terror, and Philosophy, shuddering, averts her face; the nations turn from these gloomy teachers to storm its portals in exultant hosts, battering them wide enough for thousands to charge through abreast. The heroic instinct of humanity with its high contempt of death is wiser and truer, never let us doubt, than superstitious terrors or philosophic doubts. It testifies to a conviction, deeper than reason, that man is greater than his seeming self; to an underlying consciousness that his mortal life is but an accident of his real existence, the fashion of a day, to be lightly worn and gaily doffed at duty's call.

What a pity it truly is that the tonic air of battlefields—the air that Philip breathed that night before Antietam—cannot be gathered up and preserved as a precious elixir to reinvigorate the atmosphere in times of peace when men grow faint of heart and cowardly and quake at thought of death.

THE SOLDIERS huddled in their blankets on the ground slept far more soundly that night before the battle than their men-folk and women-folk in their warm beds at home. For them it was a night of watching, a vigil of prayers and tears. The telegraph in those days made of the nation an intensely sensitive organism, with nerves a thousand miles long. Ere its echoes had died away, every shot fired at the front had sent a tremor to the anxious hearts at home. The newspapers and bulletin boards in all the towns and cities of the North had announced that a great battle would surely take place the next day, and, as the night closed in, a mighty cloud of prayer rose from innumerable firesides, the self-same prayer from each, that he who had gone from that home might survive the battle, whoever else must fall.

The wife, lest her own appeal might fail, taught her cooing baby to lisp the father's name, thinking that surely the Great Father's heart would not be able to resist a baby's prayer. The widowed mother prayed that if it were consistent with God's will he would spare her son. She laid her heart, pierced through with many sorrows, before him. She had borne so

much, life had been so hard, her boy was all she had to show for so much endured — might not this cup pass? Pale, impassioned maids, kneeling by their virgin beds, wore out the night with an importunity that would not be put off. Sure in their great love and their little knowledge that no case could be like theirs, they beseeched God with bitter weeping for their lovers' lives, because, forsooth, they could not bear it if hurt came to them. The answers to many thousands of these agonizing appeals of maid and wife and mother were already in the enemy's cartridge-boxes.

IV.

THE day came. The dispatches in the morning papers stated that the armies would probably be engaged from an early hour.

Who that does not remember those battle-summers can realize from any telling how the fathers and mothers, the wives and sisters and sweethearts at home, lived through the days when it was known that a great battle was going on at the front in which their loved ones were engaged? It was very quiet in the house on those days of battle. All spoke in hushed voices and stepped lightly. The children, too small to understand the meaning of the shadow on the home, felt it and took their noisy sports elsewhere. There was little conversation, except as to when definite news might be expected. The household work dragged sadly, for though the women sought refuge from thought in occupation, they were constantly dropping whatever they had in hand to rush away to their chambers to face the presentiment, perhaps suddenly borne in upon them with the force of a conviction, that they might be called on to bear the worst. The table was set for the regular meals, but there was little pretense of eating. The eyes of all had a far-off expression, and they seemed barely to see one another. There was an intent, listening look upon their faces, as if they were hearkening to the roar of the battle a thousand miles away.

Many pictures of battles have been painted, but no true one yet, for the pictures contain only men. The women are unaccountably left out. We ought to see not alone the opposing lines of battle writhing and twisting in a death embrace, the batteries smoking and flaming, the hurricanes of cavalry, but innumerable women also, spectral forms of mothers, wives, sweethearts clinging about the necks of the advancing soldiers, vainly trying to shield them with their bosoms, extending supplicating hands to the foe, raising eyes of anguish to heaven. The soldiers, grim-faced, with battle-lighted eyes, do not see the ghostly forms that

throng them, but shoot and cut and stab across and through them as if they were not there — yes, through them, for few are the balls and bayonets that reach their marks without traversing some of these devoted breasts. Spectral, alas, is their guardianship, but real are their wounds and deadly as any the combatants receive.

Soon after breakfast on the day of the battle Grace came across to the parsonage, her swollen eyes and pallid face telling of a sleepless night. She could not bear her mother's company that day, for she knew that she had never greatly liked Philip. Miss Morton was very tender and sympathetic. Grace was a little comforted by Mr. Morton's saying that commonly great battles did not open much before noon. It was a respite to be able to think that probably up to that moment at least no harm had come to Philip. In the early afternoon the minister drove into Waterville to get the earliest bulletins at the "Banner" office, leaving the two women alone.

The latter part of the afternoon a neighbor who had been in Waterville drove by the house, and Miss Morton called to him to know if there were any news yet. He drew a piece of paper from his pocket, on which he had scribbled the latest bulletin before the "Banner" office, and read as follows: "The battle opened with a vigorous attack by our right. The enemy was forced back, stubbornly contesting every inch of ground. General ——'s division is now bearing the brunt of the fight and is suffering heavily. The result is yet uncertain."

The division mentioned was the one in which Philip's regiment was included. "Is suffering heavily" — those were the words. There was something fearful in the way the present tense brought home to Grace a sense of the battle as then actually in progress. It meant that while she sat there on the shady piazza with the drowsy hum of the bees in her ears, looking out on the quiet lawn where the house cat stretched on the grass kept a sleepy eye on the birds as they flitted in the branches of the apple trees, Philip might be facing a storm of lead and iron, or, maybe, blent in some desperate hand-to-hand struggle, was defending his life — her life — against murderous cut and thrust.

To begin to pray for his safety was not to dare to cease, for to cease would be to withdraw a sort of protection — all, alas! she could give — and abandon him to his enemies. If she had been watching over him from above the battle, an actual witness of the carnage going on that afternoon on the far-off field, she could scarcely have endured a more harrowing suspense from moment to moment. Overcome

with the agony, she threw herself on the sofa in the sitting-room and lay quivering, with her face buried in the pillow, while Miss Morton sat beside her, stroking her hair and saying such feeble, soothing words as she might.

It is always hard, and for ardent temperaments almost impossible, to hold the mind balanced in a state of suspense, yielding overmuch neither to hope nor to fear, under circumstances like these. As a relief to the torture which such a state of tension ends in causing, the mind at length, if it cannot abandon itself to hope, embraces even despair. About 5 o'clock Miss Morton was startled by an exceeding bitter cry. Grace was sitting upon the sofa. "O Miss Morton!" she cried, bursting into tears which before she had not been able to shed, "he is dead."

"Grace! Grace! what do you mean?"

"He is dead, I know he is dead," wailed the girl; and then she explained that while from moment to moment she had sent up prayers for him, every breath a cry to God, she suddenly had been unable to pray more, and this she felt was a sign that petition for his life was now vain. Miss Morton strove to convince her that this was but an effect of overwrought nerves, but with slight success.

In the early evening Mr. Morton returned with the latest news the telegraph had brought. The full scope of the result was not yet known. The advantage had probably remained with the National forces, although the struggle had been one of those close and stubborn ones, with scanty laurels for the victors, to be expected when men of one race meet in battle. The losses on both sides had been enormous, and the report was confirmed that Philip's division had been badly cut up.

The parsonage was but one of thousands of homes in the land where no lamps were lighted that evening, the members of the household sitting together in the dark—silent, or talking in low tones of the far-away starlighted battlefield, the anguish of the wounded, the still heaps of the dead.

Nevertheless, when at last Grace went home she was less entirely despairing than in the afternoon. Mr. Morton, in his calm, convincing way, had shown her the groundlessness of her impression that Philip was certainly dead, and had enabled her again to entertain hope. It no longer rose, indeed, to the height of a belief that he had escaped wholly scathless. In face of the terrible tidings that would have been too presumptuous. But perhaps he had been only wounded. Yesterday the thought would have been insupportable, but now she was eager to make this compromise with Providence. She was distinctly affected by the curious superstition that if we voluntarily concede something

to fate, while yet the facts are not known, we gain a sort of equitable assurance against a worse thing. It was settled, she told herself, that she was not to be overcome or even surprised to hear that Philip was wounded—slightly wounded. She was no better than other women that he should be wholly spared.

The paper next morning gave many names of officers who had fallen, but Philip's was not among them. The list was confessedly incomplete; nevertheless, the absence of his name was reassuring. Grace went across the garden after breakfast to talk with Miss Morton about the news and the auspicious lack of news. Her friend's cheerful tone infused her with fresh courage. To one who has despaired a very little hope goes to the head like wine to the brain of a faster, and, though still very tremulous, Grace could even smile a little now and was almost cheerful. Secretly already she was beginning to play false with fate, and, in flat repudiation of her last night's compact, to indulge the hope that her soldier had not been even wounded. But this was only at the bottom of her heart. She did not own to herself that she really did it. She felt a little safer not to break the bargain yet.

About 11 o'clock in the forenoon Mr. Morton came in. His start and look of dismay on seeing Grace indicated that he had expected to find his sister alone. He hastily attempted to conceal an open telegram which he held in his hand, but it was too late. Grace had already seen it, and whatever the tidings it might contain there was no longer any question of holding them back or extenuating them. Miss Morton, after one look at her brother's face, silently came to the girl's side and put her arms around her waist. "Christ, our Saviour," she murmured, "for thy name's sake, help her now." Then the minister said:

"Try to be brave, try to bear it worthily of him; for, my poor little girl, your sacrifice has been accepted. He fell in a charge at the head of his men."

V.

PHILIP's body was brought home for burial, and the funeral was a great event in the village. Business of all kinds was suspended, and all the people united in making of the day a solemn patriotic festival. Mr. Morton preached the funeral sermon.

"Oh, talk about the country," sobbed Grace when he asked her if there was anything in particular she would like him to speak of.

"For pity's sake don't let me feel sorry now that I gave him up for the Union. Don't leave me now to think it would have been better if I had not let him go."

So he preached of the country, as ministers

sometimes did preach in those days, making it very plain that in a righteous cause men did well to die for their native land and their women did well to give them up. Expounding the lofty wisdom of self-sacrifice, he showed how truly it was said that "whosoever will save his life shall lose it: and whosoever will lose his life . . . shall find it," and how none make such rich profit out of their lives as the heroes who seem to throw them away.

They had come, he told the assembled people, to mourn no misadventure, no misfortune; this dead soldier was not pitiable. He was no victim of a tear-compelling fate. No broken shaft typified his career. He was rather one who had done well for himself, a wise young merchant of his blood, who having seen a way to barter his life at incredible advantage, at no less a rate indeed than a man's for a nation's, had not let slip so great an opportunity.

So he went on, still likening the life of a man to the wares of a shopkeeper, worth to him only what they can be sold for and a loss if overkept, till those who listened began to grow ill at ease in presence of that flag-draped coffin, and were vaguely troubled because they still lived.

Then he spoke of those who had been bereaved. This soldier, he said, like his comrades, had staked for his country not only his own life but the earthly happiness of others also, having been fully empowered by them to do so. Some had staked with their own lives the happiness of parents, some that of wives and children, others maybe the hopes of maidens pledged to them. In offering up their lives to their country they had laid with them upon the altar these other lives which were bound up with theirs, and the same fire of sacrifice had consumed them both. A few days before in the storm of battle those who had gone forth had fulfilled their share of the joint sacrifice. In a thousand homes, with tears and the anguish of breaking hearts, those who had sent them forth were that day fulfilling theirs. Let them now in their extremity seek support in the same spirit of patriotic devotion which had

upheld their heroes in the hour of death. As they had been lifted above fear by the thought that it was for their country they were dying, not less should those who mourned them find inspiration in remembering it was for the nation's sake that their tears were shed and for the country that their hearts were broken. It had been appointed that half in blood of men and half in women's tears the ransom of the people should be paid, so that their sorrow was not in vain, but for the healing of the nation.

It behooved these therefore to prove worthy of their high calling of martyrdom, and while they must needs weep, not to weep as other women wept, with hearts bowed down, but rather with uplifted faces, adopting and ratifying, though it might be with breaking hearts, this exchange they had made of earthly happiness for the life of their native land. So should they honor those they mourned, and be joined with them not only in sacrifice but in the spirit of sacrifice.

So it was in response to the appeal of this stricken girl before him that the minister talked of the country, and to such purpose was it that the piteous thing she had dreaded, the feeling, now when it was forever too late, that it would have been better if she had kept her lover back, found no place in her heart. There was, indeed, had she known it, no danger at all that she would be left to endure that, so long as she dreaded it, for the only prayer that never is unanswered is the prayer to be lifted above self. So to pray and so to wish is but to cease to resist the divine gravitations ever pulling at the soul. As the minister discoursed of the mystic gain of self-sacrifice, the mystery of which he spoke was fulfilled in her heart. She appeared to stand in some place overarching life and death, and there was made partaker of an exultation whereof if religion and philosophy might but catch and hold the secret their ancient quest were over.

Gazing through streaming eyes upon the coffin of her lover, she was able freely to consent to the sacrifice of her own life which he had made in giving up his own.

Edward Bellamy.

BROADWAY.

I.

BETWEEN these frowning granite steeps
The human river onward sweeps;
And here it moves with torrent force,
And there it slacks its heady course:
But what controls its variant flow
A keener wit than mine must show,
Who cast myself upon the tide,
And with its current, merging, glide,—
A drop, an atom, of the whole
Of its great bulk and wandering soul.

O curbless river, savage stream,
Thou art my wilderness extreme,
Where I may move as free, as lone,
As in the waste with wood o'ergrown,
And broodings of as brave a strain
May here unchallenged entertain,
Whether meridian light display
The swift routine of current day,
Or jet electric, diamond-clear,
Convoke a world of glamour here.
Yet when of solitude I tire,
Speak comradeship to my desire,
O most companionable tide,
Where all to all are firm allied,
And each hath countenance from the rest,
Although the tie be unconfessed!

II.

I muse upon this river's brink;
I listen long; I strive to think
What cry goes forth, of many blent,
And by that cry what thing is meant,—
What simple legend of old fate
Man's voice, here inarticulate,
From out this dim and strange uproar
Still heaves upon the skyey shore!

Amid this swift, phantasmal stream
Sometimes I move as in a dream;
Then wondrous quiet, for a space,
The clanging tumult will displace;
And toil's hard gride and pleasure's hum
No longer to my ear may come:
A pantomimic haunted throng
Faeth in silence deep and strong,
And seems in summoned haste to urge,
Half prescient, towards a destined verge!

The river flows,— unwasting flows;
Nor less nor more its volume grows,
From source to sea still onward rolled,
As days are shed and years are told;
And yet so mutable its wave,
That no man twice therein may lave,
But ere he can return again,
Himself shall subtle change sustain;
Since more and more each life must be
Tide-troubled by the drawing sea.

THE "FREE COMMAND" AT THE MINES OF KARA.

THE most important of the objects that we had in view at the mines of Kara was the investigation of penal servitude in its relation to political offenders. Common, hard-labor felons, such as burglars, counterfeiters, and murderers, we had seen, or could see, in a dozen other places; but political convicts¹ were to be found only in the log prisons and penal settlements of Kara, and there, if anywhere, their life must be studied. In order to succeed in the task that we had set ourselves, it was necessary that we should personally visit and inspect one or both of the political prisons, and obtain unrestricted access, in some way, to the small body of state criminals who had finished their "term of probation" and were living under surveillance in the so-called "free command." We were well aware that these were not easy things to do; but we were no longer inexperienced and guileless tourists, dependent wholly upon letters of introduction and official consent. We had had six months' training in the school that sharpens the wits of the politicals themselves, we had learned how best to deal with suspicious police and gendarme officers, we were in possession of all the information and all the suggestions that political ex-convicts in other parts of Siberia could give us, and we saw no reason to despair of success.

It seemed to me that the best policy for us to pursue, at first, was to make as many friends as possible; get hold of the threads of social and official relationship in the penal settlement where we found ourselves; avoid manifestations of interest in the political convicts; make a careful study of our environment, and then wait — maintaining meanwhile, as Ladislav says in "Middlemarch," "an attitude of receptivity towards all sublime chances." Nothing was to be gained and everything might be risked by premature or over-hasty action. For three or four days, therefore, we did not attempt to do anything except to visit the common-criminal prisons and the mines, talk with the officials who called upon us, make ourselves agreeable to Major Potulof and his pretty wife, and study the situation. It soon became evident to me that there would be no use in asking

for permission to see the political convicts of the free command, and that if we made their acquaintance at all we should have to do it secretly. I knew most of them by name and reputation; I had a letter of introduction to one of them, — Miss Nathalie Armfeldt, — and I had been furnished by her friends with a map of the Lower Diggings, showing the situation of the little cabin in which she and her mother lived; but how to visit her, or open communications with her secretly, in a small village swarming with Cossacks and gendarmes, and, moreover, in a village where a foreigner was as closely and curiously watched and stared at as the Tsar of all the Russias would be in a New England hamlet, I did not know. But that was not the worst of it. I soon discovered that I could not even get away from Major Potulof. From the moment of our arrival he gave up all his other duties and devoted himself exclusively to us. If we staid at home all day, he remained all day at home. If we went out, he accompanied us. I could not make a motion towards my hat or my overcoat without his asking, "Where are you going?" If I replied that I was going out for exercise, or for a little walk, he would say, "Wait a minute and I will go with you." What could I do? He evidently did not intend that we should see some things in Kara, or have an opportunity to make any independent investigations. I understood and fully appreciated his situation as a high officer of the Crown, and I was sorry to cause him any uneasiness or annoyance; but I had undertaken to ascertain the real state of affairs, and I intended to do it by any means that seemed to be within the limits of honor and fairness. The most embarrassing feature of the situation, from a moral point of view, was that growing out of our presence in Major Potulof's house as his guests. It did not seem to be fair to mislead the man whose hospitality we were enjoying, or even to conceal from him our real purposes; and yet we had no alternative. Our only chance of success lay in secrecy. If we should intimate to Major Potulof that we desired to see the political convicts of the free command, and to hear what they might have to say concerning their life and the treatment to which they had been subjected, he would probably

¹ I use these words here in a somewhat restricted sense, to denote "katorzhniki" (kah'torz-nee-kee), or political criminals who are actually in penal servitude. There are political convicts, of course, in other parts

of Siberia; but all who are actually undergoing penal servitude — that is, the "katorzhniki" — live in the Kara prisons and villages.

express grave disapproval; and then we, as his guests, should be in honor bound to respect his authority. It would hardly be fair to eat a man's bread and then openly disregard his expressed wishes in a matter that might be of vital interest to him as well as to us. I revolved these and many other similar considerations in my mind for two or three days, and finally decided that if I could see the political convicts before Major Potulof had said anything to me on the subject I would do it—acting, of course, upon my own responsibility, at my own risk, and in such a way, if possible, as to relieve him from the least suspicion of complicity. I did not see why we should be tied hand and foot by accidental obligations of hospitality growing out of a situation into which we had virtually been forced. As soon as I had come to this decision I began to watch for opportunities; but I soon found myself involved in a network of circumstances and personal relations that rendered still more difficult and hazardous the course I intended to pursue. On the second day after our arrival we received a call from Captain Nikolin (Nee-ko'lin), the gendarme commandant of the political prisons. He had heard of our sudden appearance, and had come to see who we were and what we wanted in that dreaded penal settlement. He made upon me, from the first, a very unfavorable impression; but I was not prepared, nevertheless, for the contemptuous, almost insulting, coldness of the reception given to him by Major Potulof. It was apparent, at a glance, that the two men were upon terms of hostility; and for a moment I wondered why Nikolin should put himself in a position to be so discourteously treated. Most men would have regarded such a reception as equivalent to a slap in the face, and would have left the house at the first opportunity. Gendarme officers, however, are trained to submit to anything, if by submission they can attain their ends. Captain Nikolin wished to see the American travelers, and, notwithstanding the chilly nature of the reception given him, he was as bland as a May morning. It was obviously my policy to show him as much cordiality as I possibly could without irritating Major Potulof. I desired not only to remove any suspicions that he might entertain with regard to us, but, if possible, to win his confidence. "It must gratify even a gendarme officer," I thought, "to be treated with marked respect and cordiality by foreign travelers, when he has just been openly affronted by one of his own associates. We, as Major Potulof's guests, might naturally be expected to follow his lead. If we take the opposite course, Nikolin will give us credit not only for courtesy, but for independence of

judgment and clear perception of character, and we shall thus score a point." I never had any reason to doubt the soundness of this reasoning. Nikolin was evidently gratified by the unexpected evidences of interest and respect that appeared in our behavior towards him, and when he took his leave he shook my hand and expressed the hope that we might meet again. He did not dare, in Major Potulof's presence, to invite us to call upon him, nor did we venture to promise that we would do so; but we intended, nevertheless, to pay him a visit just as soon as we could escape from surveillance. Major Potulof had delicacy or prudence enough not to say a word in dispraise of Nikolin after the latter had gone; but in subsequent conversation with other officers I learned that the personal relations between the two men were greatly strained, and that Nikolin was generally hated and despised as a secret spy and informer by all the regular army officers at the post.

"He writes full reports to St. Petersburg of everything we do," said one officer to me; "but," he added, "let him write. I'm not afraid of him. We have had four or five gendarme officers in charge of the political prison here in the last three years, and he's the worst of the lot."

This information with regard to Nikolin and his relations to Potulof greatly complicated the situation. Suppose I should succeed in making the acquaintance of the political convicts of the free command; Nikolin would almost certainly hear of it, and would probably find out that I had brought the convicts letters. He would at once report the facts to St. Petersburg, and would make them the basis of an accusation against his enemy Potulof by saying: "These American travelers are Potulof's guests. They have visited the political convicts secretly at night, and have even committed a penal offense by carrying letters. They would hardly have dared to do this without Potulof's knowledge and consent; consequently Potulof has been accessory to a violation of law, and has interfered with the discharge of my duties. I cannot consent to be held responsible for the political convicts if Major Potulof is going to aid foreign travelers in getting interviews with them and carrying letters to and from them."

The result of this would be that I, while receiving Major Potulof's hospitality, should be betraying him to his enemies and getting him into trouble—a thing that went terribly against all my instincts of honor. But even this was not all. Captain Nikolin, as I subsequently learned, was strongly opposed to the ticket-of-leave organization known as the free command, and had repeatedly recommended its abolition. My

visit to the political convicts—should I make one—would furnish him with the strongest kind of argument in support of his assertion that the free command was a dangerous innovation. He would write or telegraph to the Minister of the Interior: "I understand that it is the intention of the Government to keep the more dangerous class of state criminals in complete isolation, allowing them no communication with their relatives except through the gendarmerie. It is manifestly impossible for me to give this intention effect if political convicts are allowed to live outside the prison where they can be seen and interviewed by strangers. Foreign travelers are coming more and more frequently to Siberia, and Kara is no longer an unknown or an inaccessible place. If army officers like Potulof are going to aid such foreign travelers in opening communication with the political convicts, the Government must either abolish the free command and recommit its members to prison, or else abandon the idea of keeping them in isolation."

It was not difficult to foresee the probable consequences of such a report. I might, by a single secret visit, bring disaster upon the whole free command, and cause the return of all its members to chains, leg-fetters, and prison cells. That I should be the means of adding to the miseries of these unfortunate people, instead of relieving them, was an almost insupportable thought; and I lay awake nearly all of one night balancing probabilities and trying to make up my mind whether it would be worth while to run such risks. I finally decided to adhere to my original intention and make the acquaintance of the political convicts of the free command at all hazards, provided I could escape the courteous, hospitable, but unceasing vigilance of Major Potulof.

I lived in Kara five days without having a single opportunity to get out-of-doors unaccompanied and unwatched. At last my chance came. On the sixth day Major Potulof was obliged to go to Ust Kara (Oost Kah-rah') to attend a meeting of an army board, or court

of inquiry, convened to investigate the recent destruction by fire of a large Government flour storehouse.¹ He had said nothing to me about the political convicts; he had apparently become convinced that we were "safe" enough to leave, and he went away commending us laughingly to the care of his wife. Before he had been gone an hour I tore out the pocket of my large, loose fur overcoat, dropped down between the outside cloth and the lining a few little presents that I had promised to give to the political convicts, transferred from my waist-belt to my pocket the letters that I had for them and the rough map of the village with which I was provided, and then set out on foot for the political prison. It was about 2 o'clock in the afternoon. Major Potulof expected to be absent until the following night, so that I could safely count upon twenty-four hours of freedom from surveillance. My plan was to pay a visit first to Captain Nikolin, get upon the most friendly possible terms with him, remove any lingering suspicions that he might still entertain with regard to us, and then, about dark, go directly from his house to the cabin of Miss Nathalie Armfeldt, the political convict from Kiev to whom I had a letter of introduction. My object in calling first upon Captain Nikolin was twofold. In the first place, I felt sure he would know that Major Potulof had just gone to Ust Kara, and I thought it would please and compliment the gendarme officer to see that I had availed myself of my very first moment of freedom to call upon him, notwithstanding Potulof's hostility to him. In the second place, I reasoned that if I should be seen going to the house of a political convict it would be safer and would excite less suspicion to be seen going there directly from the house of the commandant than from my own quarters. In the former case it would, very likely, be thought that I was acting with the commandant's knowledge or permission; and in any case open boldness would be safer than skulking timidity.

Captain Nikolin was an old and experienced gendarme officer of the most subtle and unscrupulous type, who had received

¹ The history of this storehouse furnishes an interesting illustration of the corruption and demoralization that are characteristic of the Russian bureaucratic system everywhere, and particularly in Siberia. The building should have contained, and was supposed to contain, at the time it was burned, 20,000 poods (360 tons) of Government flour, intended for the use of the convicts at the Kara mines. Upon making an examination of the ruins after the fire it was discovered that 20 or 30 poods of flour, which belonged to a private individual and had been stored in the building temporarily as an accommodation, was only slightly charred on the outside, and that three-fourths of it could still be used. Of the 20,000 poods of Government flour, however, not the slightest trace could be

found, and an investigation showed that it had all been stolen by somebody, and that the building had been burned to conceal the theft. A few months later, after our departure from Kara and while the investigation was still in progress, Major Potulof's house, which contained all the documents relating to the case, was destroyed by an incendiary fire in the same mysterious way. The censor has never allowed the results of the investigation to be published in the Siberian newspapers, and I do not know who, if anybody, was found to be guilty of the double crime. In most cases of this kind the relations of the criminals with the higher authorities are found to be such as to necessitate a suppression of the facts and a hushing up of the whole matter. I presume that it was so in this case.

his training under General Muraviof (Mooravy'off), "the hangman," in Poland, and had been about thirty years in the service. Personally he was a short, heavily built man fifty or fifty-five years of age, with a bald head, a full gray beard, thin, tightly-closed, rather cruel lips, an impenetrable face, and cold gray eyes. He had the suavity and courteous manners of the accomplished gendarme officer, but the unfavorable impression that he made upon me at our first meeting was deepened, rather than effaced, by subsequent acquaintance. He was in undress uniform, and he greeted me with what he evidently intended for frank, open cordiality, softening, so far as possible, all the hard lines of his face; but he could not bring a spark of good fellowship into his cold, watchful gray eyes, and I felt conscious that all his real mental processes were carefully masked. So far as I could read his character, its one weak point was personal pride in the importance and responsibility of his position — pride in the fact that he, a mere captain of gendarmes, had been selected in St. Petersburg and sent to Siberia to command this important prison; had been freed from all local control; and had been given the unusual privilege of communicating directly with the Minister of the Interior, which was the next thing to communicating directly with the Tsar. It seemed to me that a man who felt such a pride, and who knew that in spite of his position he was despised by all the regular army officers of the post, would be gratified to find that an intelligent American, living in the very house of one of his (Nikolin's) enemies, had clearness of insight and independence of judgment enough to call upon him the moment Potulof's restraint was removed, and to treat him with marked deference and respect. To what extent this reasoning was well founded I do not know, but upon it I acted. I apologized for not calling upon him before, and explained that I had been prevented from doing this by circumstances beyond my control. He bowed gracefully, said that he understood the circumstances perfectly, and asked me to do him the honor of drinking tea with him. A steaming samovar (sah'mo-vahr) was soon brought in by a soldier, our cups were filled with the beverage that cheers but does not inebriate, cigarettes were lighted, and we settled ourselves in easy chairs for a comfortable chat. I narrated with as much spirit as possible our adventures in Siberia; brought out casually the fact that I was a member of the American Geographical Society; referred to my previous connection with the Russian-American Telegraph Company; described dog-sledge travel and tent life with the wandering Koraks; and gave an account of my

pleasant interview with Mr. Vlangalli (Vlangah'lee), the Associate Minister of Foreign Affairs in St. Petersburg, in order to show him that I had come to Siberia openly and boldly, with the consent and approbation of the highest Russian officials. He seemed to like to hear me talk; and, as I had not the slightest objection to talking, I rambled on until I had given him a detailed history of my whole life up to the year of our Lord 1885. If I omitted anything, I omitted it through forgetfulness or because he failed to draw it out. He inquired whether I intended to write an account of my Siberian trip, and I replied that I certainly did; that I was in the service of *THE CENTURY MAGAZINE*; that I had already written one series of articles on Siberia, and intended to write another as soon as I should get home. This seemed to interest him, and I therefore poured out information about American magazines in general and *THE CENTURY* in particular; invited him to come to our house and look over Mr. Frost's sketches; told him how much money *THE CENTURY* purposed to spend in illustrating our papers, and expressed regret that his ignorance of English would prevent him from reading them. He remarked hopefully that they might be translated. I replied that I trusted they would be, since my first book had been twice translated into Russian; and that, in any event, he would be interested in looking at the illustrations. What else I said in the course of our long conversation I cannot now remember, but I think I never gave any other man so much information about myself and my affairs as I gave that gendarme officer.

My frankness and my childlike confidence in him finally began to produce the desired results. His manner softened and became more cordial; he poured out for me a third or a fourth cup of tea, asked me if I would not like to have some rum in it; and then, finding that I could be a sympathetic listener as well as a frank and communicative talker, he began to give me information about himself. He described to me the organization of the gendarmierie and the way in which gendarme officers are educated; gave me his own personal history; told me how many times and under what circumstances he had been promoted; how much salary he received; what decorations he had; how much longer he would have to serve before he could retire on a pension; and said, with a little pride, that he was the only officer of his rank in all Siberia who had the right to communicate directly with the Minister of the Interior. The conversation finally drifted into a discussion of common-criminal exile, and to my great surprise he vigorously condemned

the étapes and the forwarding prisons; declared that the life of common convicts on the road was simply awful; and said that the banishment of criminals to Siberia was not only ruinous to the persons banished, but very detrimental to all the interests of the country. This was to me a wholly unexpected turn, and for a moment I hardly knew what course to take. He might be merely posing as a philanthropist,—a sort of Howard in a gendarme officer's uniform,—or he might be luring me on with a view to finding out how much I knew and what my opinions were. An instant of reflection convinced me that my safest course would be to follow his lead, without betraying too much knowledge of the subject, and to lay as much stress as possible on the few good prisons that I had seen. I therefore deplored the overcrowding of the forwarding prisons and the bad sanitary condition of the étapes, but referred to the new central prison at Verkhni Udinsk (Verkh'nee Oo'dinsk) as an evidence that the Government was trying to improve the condition of things by erecting better buildings. Without any suggestion or prompting from me, Captain Nikolin then diverted the current of our conversation to another branch of the subject and began to talk about the political convicts at the mines of Kara. Their condition, he said, was much better, and their life much easier, than people generally supposed. They lived together in large, well-lighted *kameras*; they were not required to do any work; they had a good library; they could receive money from their friends; and at the expiration of their "term of probation" they were set at liberty, and were allowed to live in houses and to cultivate little gardens of their own. I expressed great surprise at this presentation of the case, and said, "Do you mean to tell me that the political convicts don't work in the mines?"

"Work!" he exclaimed. "Certainly not. They have nothing to do but sit in large, comfortable, well-lighted rooms, and read or study."

"Do they ever have communication with their friends or relatives in European Russia?" I inquired.

"Certainly," he replied. "That was one of the things that I insisted on when I came

here, that they *should* be allowed to write to their friends and relatives. Of course I read their letters, or rather their postal cards, but they can write as much as they like."

"We have always had the impression in America," I said, "that state criminals in Siberia are compelled to work in underground mines, often chained to wheelbarrows, and that their life is a constant struggle with hardships and misery."

He smiled a calm, superior sort of smile, and said that he himself had had precisely similar ideas before coming to Siberia, and that he had been surprised just as I was. "Why," said he, "if you should take a look into one of the *kameras* of the political prison at this moment you would see the prisoners sitting around a big table, reading and writing, just as if they were in some library."

I remarked that that would be a very pleasant thing to see, as well as to write about, and asked him if there would be any objection to my taking a look into one of the *kameras*.

"Well—yes," he replied hesitatingly. "I have no authority to allow any one to inspect the prison. I can show you, however, some of the books from the library—even English books."

He thereupon called a soldier from the hall and sent him to the prison with orders to bring back any English books or periodicals that happened to be in. The soldier shortly returned with a copy of Shelley's poems and a recent number of "Punch." These Nikolin handed to me triumphantly, as proofs that the political convicts had a library, and were even furnished with English periodicals.

"Not long ago," he continued, "they had theatrical performances in one of the *kameras*; and at one time they actually published a little manuscript newspaper for their own amusement."

He then got out the prison books to show me how much money the political convicts had received from their relatives that year. The total amount was 6044 rubles, or about \$3022.¹

"Do the prisoners themselves have the spending of this money?" I inquired.

"Yes," he replied. "It is not given into their hands; but they can direct the expenditure of

¹ Upon my return to Irkutsk (Eer-kootsk') I was fortunate enough to make the acquaintance of an officer who was employed in the Comptroller's Department, and who had access to all the accounts of the Kara prisons. I asked him if he would be kind enough to ascertain for me how much money had been sent to the political convicts at Kara by their relatives in the first ten months of 1885. He made the investigation and reported that the prisoners had received, on an average, 37½ cents a month per capita, or about \$375 in all. Captain Nikolin apparently had shown me a "fixed-up" and deceptive statement, for the purpose

of making me believe that the political convicts were in receipt of \$3000 or \$4000 a year over and above their subsistence, and that, consequently, they were living in comparative luxury. I have no doubt that the computation made by the officer of the Comptroller's Department in Irkutsk was an accurate one, and that \$375 was really the amount that the prisoners had received. Why the sum was not larger I shall explain in another place. Three hundred and seventy-five dollars every ten months, if divided among a hundred convicts, would give each of them about a cent and a quarter a day.

it, and buy with it anything that the prison regulations allow."

I received all these revelations with pleased surprise, and became almost enthusiastic when the humane and philanthropic gendarme officer drew for me a charming picture of happy state criminals, living contentedly together in large, airy rooms, studying English literature in a well-appointed library, reading "Punch" after dinner for relaxation, publishing a newspaper once a week for self-improvement, and getting up a theatrical entertainment in a *kamera* now and then as a safety valve for their exuberant spirits! I was grieved and shocked, however, to learn, a moment later, that these well-treated convicts were not worthy of the gracious clemency shown to them by a benevolent paternal government, and repaid its kindness with the blackest treachery and ingratitude.

"You have no idea, Mr. Kennan," said Captain Nikolin, "how unscrupulous they are, and how much criminal skill they show in concealing forbidden things, and in smuggling letters into and out of prison. Suppose that you were going to search a political convict as thoroughly as possible, how would you do it?"

I replied that I should strip him naked and make a careful examination of his clothing.

"Is that all you would do?" he inquired, with a surprised air.

I said that no other course of procedure suggested itself to me just at that moment.

"Would you look in his ears?"

"No," I answered; "I should not think of looking in his ears."

"Would you search his mouth?"

Again I replied in the negative.

"Would you look in a hollow tooth?"

I solemnly declared that such a thing as looking in a hollow tooth for a letter would never, under any circumstances, have occurred to me.

"Well," he said triumphantly, "I have taken tissue paper with writing on it out of a prisoner's ear, out of a prisoner's mouth, and once I found a dose of deadly poison concealed under a capping of wax in a convict's hollow tooth. Ah-h-h!" he exclaimed, rubbing his hands, "they are very sly, but I know all their tricks."

A cold shiver ran down my back as I suddenly thought of the things that lay hidden in my overcoat. Between the cloth and the lining were two Chinese tea-cups, a hand mirror, and a small red feather duster, which had been intrusted to me by an exiled lady in a village near Irkutsk, and which I had promised to deliver to Miss Armfeldt with assurances of the donor's remembrance and love. I had left the overcoat hanging in the hall, and if this gendarme officer was so extremely suspicious

as to look in ears for letters and in hollow teeth for poison, perhaps he had already ordered one of his subordinates to make an examination of it. How I should explain the presence between the cloth and the lining of such unusual articles of equipment as two porcelain tea-cups, a hand mirror, and a red feather duster, I did not know. I might say that Americans are constitutionally sensitive with regard to their personal appearance, and that, when making calls, they always carry looking-glasses in the tail pockets of their overcoats, in order that they may properly adjust their neckties before entering the drawing-rooms of their acquaintances; but how should I account for the tea-cups and the long-handled feather duster? I might as well try to explain the presence of a mouse-trap and a fire-extinguisher in a diving-bell! For twenty minutes I sat there in an uncomfortable frame of mind, half expecting every time the door opened that a Cossack would enter with the red feather duster in his hand. The apprehended catastrophe, however, did not occur, and Nikolin continued to pour out information concerning the political convicts and their life at the mines. Much that he said was true; but the truth was so interwoven with misrepresentation that if I had been the ignorant and credulous tourist he supposed me to be I should have been completely deceived. To an on-looker who understood the situation and could see into both hands, the game that we were playing would have been full of interest. My acquaintance with the political prison was almost as accurate and thorough as that of Captain Nikolin himself. I had a carefully drawn plan of it in a belt around my body; I had a list containing the names of all the prisoners; I could have described to him the appearance and the situation of every object in every cell; I knew exactly what the convicts had to eat and wear and how they spent their time; I knew that four of them had been chained to wheelbarrows and that several were insane; and I could have given him a detailed history of the prison for the five preceding years. With all this information in my mind, with a letter of introduction to the political convicts in my pocket, and with presents for them concealed in my overcoat, I had to sit there and listen coolly to statements that I knew to be false; assume feelings that I did not have; and play, without the quiver of an eyelash, the part of a good-humored, credulous, easy-going tourist who had nothing to conceal, who was incapable of keeping to himself even the details of his own private life, and who was naturally surprised and delighted to find that the political convicts, instead of being chained to wheelbarrows in damp subterranean mines, were really treated with humanity, considera-

A PART OF THE LOWER DIGGINGS, WITH THE POLITICAL PRISON IN THE DISTANCE.

tion and benevolent kindness, by an intelligent and philanthropic commandant.

I do not know what impression I made upon Captain Nikolin in the course of our long interview; but I have some reason to believe that I succeeded in blinding and misleading one of the most adroit and unscrupulous gendarme officers in all Eastern Siberia. I may be greatly mistaken; but if he flatters himself that he deceived me he is at least as much mistaken as I am. I cannot, of course, defend my dealings with this official upon any high moral ground; but I was playing a hazardous game, with everything at stake and no means of self-protection except diplomacy. In my baggage, or on my person, I had revolutionary documents, plans of prisons, papers from Government archives, letters to and from political convicts, and ten or fifteen notebooks that would have incriminated not only scores of exiles in all parts of Siberia but many fearless and honest officials who had trusted me and given me information. If suspicion should be aroused and I should be searched, it would not only bring disaster upon all of these people, as well as upon me, but would probably result in the loss of all my material and in the punishment of everybody who had had anything to do with furnishing it. In view of

the critical nature of my situation, and the number of lives and fortunes that might depend upon my safety, I sincerely trust that the recording angel dropped a tear or two upon some of my statements to Captain Nikolin and blotted them out forever.

Late in the afternoon the commandant and I parted, with mutual assurances of distinguished consideration, and I directed my steps towards the little cabin of Miss Nathalie Armfeldt, which was situated about midway between the political prison and the house of Major Potulof on the outskirts of the Lower Diggings. My nerves were strung up to a high state of tension by my interview with Captain Nikolin. I was flushed with a consciousness of success, and I felt equal to anything.

Miss Armfeldt, whose history I already knew, was the daughter of a prominent Russian general now dead, and was the sister of Madam Fedchenko (Fed-chen'ko), wife of a well-known Russian scientist and explorer. The family was a wealthy and aristocratic one, and both Miss Armfeldt and her mother were friends, or at least acquaintances, of the eminent Russian novelist Count Tolstoi. Miss Armfeldt herself spoke French, German, and English, drew, painted, and was an educated and accomplished woman.¹ She was arrested

¹ I regret that I am unable to give more details of Miss Armfeldt's life. A Russian revolutionist to whom I applied for information wrote me as follows:

"I knew Miss Armfeldt personally and have some idea

of her as an individual; but as to biographical details — such matters interest us so little when we are 'in action' that we hardly ever ask one another about them. I only know that her father was a general,

in Kiev on the 11th of February, 1879, while attending one of the meetings of a secret revolutionary society. They were surprised by the police late in the evening, and the men of the party resisted arrest, drawing revolvers and firing at the police and the gendarmes. A sharp skirmish followed, in the course of which one gendarme and two of the revolutionists were shot dead and several on each side wounded. The whole party was finally captured and thrown into prison. For being present at the time of this armed resistance to the police, although she had not participated in it, and for belonging to the revolutionary party, Miss Armfeldt was sentenced to four-

knocked at the heavy wooden door, and in a moment it was unbarred and opened by a young woman.

"Does Miss Armfeldt live here?" I inquired.

"I am Miss Armfeldt," she replied.

"My name is George Kennan," I said. "I am an American traveler, and I have come to Siberia to investigate the exile system. I have met many of your friends, and I bring a letter of introduction to you from Madam N——."

She looked at me for almost a minute in silent and half-incredulous amazement. Finally she seemed to recover herself and said, "Pray come in." I followed her through a small, dark entry into a wretched little room about ten

feet long by eight feet wide, with bare floor and ceiling of rough-hewn planks, rough walls of squared logs covered with dingy whitewash, and two small, nearly square windows. The furniture of the room, which was all rude and home-made,

1. TELEGRAPH STATION AND PART OF LOWER DIGGINGS. 2. HOUSES OF THE POLITICAL FREE COMMAND. 3. ROAD TO THE POLITICAL PRISON.

teen years and ten months of penal servitude, with deprivation of all civil rights and exile to Siberia for life. At the time of our visit to Kara she had finished her term of probation in prison, and was living outside in the free command with her mother, a lady sixty or sixty-five years of age, who had voluntarily come to Siberia to share her daughter's fate.

The sun had set and it was fast growing dark when I reached the little whitewashed cabin which, from the descriptions I had had of it, I thought must be the Armfeldts'. I

consisted of a square pine table without a cloth, three unpainted pine chairs, and a narrow single bedstead covered with a coarse gray blanket. On each side of the door were shelves, upon which were a few domestic vessels and utensils, such as plates, cups and saucers, knives and forks, and a tea-

and that her sister, who was a tolerably well-known writer on scientific subjects, was married to the Russian explorer Fedchenko, who perished recently on a mountain in Switzerland. Personally, Nathalie Armfeldt was not one of the striking personalities, such as Perofskaya (Per-off'ska-ya), Bardina (Bar'-dee-na), and others. She belonged to that modest set of workers in whom the beautiful moral qualities

of the Russian revolutionist are shown at their best—absolute devotion and absolute unselfishness. These simple virtues become great, both as qualities and as moving powers, when they are so elevated as to be almost perfectly pure. You have probably seen many of these types among the Siberian exiles. The touching sympathy that permeates what you write about them is a proof of this."

CABIN OF MISS ARMFELDT. (A SKETCH FROM MEMORY.)

pot. The room contained absolutely nothing else except a basket and a cheap Russian trunk under the bed. Everything was scrupulously neat and clean, but in other respects the house looked like the home of some wretchedly poor Irish laborer. I removed my heavy overcoat and was about to hand Miss Armfeldt the letter that I had for her, when she caught me suddenly by the arm and said, "Stop! Don't do that! Wait until I put up the window shutters and bar the door." She lighted a candle with trembling hands, and then ran out and closed the windows with tight board shutters, barred the door, and returning said, "You are not accustomed to the atmosphere of alarm and apprehension in which we live. You might have been seen through the window giving me a letter." She then took the letter; but without opening it fixed her eyes upon me with the expression of bewildered, half-incredulous amazement that

had not left her face since I introduced myself at the door. Finally she said, "How did you ever get here?"

I replied that I had come on horseback over the mountains from Stretinsk (Stray'tinsk).

"But how were you ever *allowed* to come here?"

"I was not allowed," I replied. "I came here without anybody's knowledge. I have been in Kara almost a week, and this is the first opportunity I have had to get out of doors unwatched."

I then told her that I had come to Siberia to investigate the life of the political convicts, and gave her a brief account of my previous Siberian experience. She looked at me like one half dazed by the shock of some great and sudden surprise. Finally she said, speaking for the first time in English: "Excuse me for staring at you so, and pardon me if I have not seemed to welcome you cordially; but I

MADAM SUKHOMLINA, A MEMBER OF THE FREE COMMAND.

can hardly believe that I am awake. I am so excited and astonished that I don't know what I am doing or saying. You are the first foreigner that I have seen since my exile, and your sudden appearance here, and in my house, is such an extraordinary event in my life that it has completely overwhelmed me. I feel as Livingstone must have felt when Stanley found him in Central Africa. How did the remarkable idea of coming to Siberia and investigating the life of the political convicts ever enter your head?"

I was answering her questions in English, when I heard a feeble and broken voice, which seemed to come from behind the oven, inquiring, in Russian, "Who is there, Nathalie? With whom are you talking?"

"It is an American traveler, mother, who has found us even here at the mines."

The feeble voice was that of Miss Armfeldt's mother, who had been asleep on a cot bed behind a low partition that partly screened the oven and who had been awakened by our conversation. In a moment she came out to greet me—a worn, broken woman, sixty or sixty-five years of age, with soft gray hair and a refined, gentle, intelligent face, but a face deeply lined by care and grief. Her eyes were swollen, with heavy, dark semicircles under them, as if she had spent many long, weary nights in weeping. It filled my heart with sym-

pathy and pity merely to look at her. I had never seen so sad, hopeless, grief-stricken a face.

I spent half an hour with the Armfeldts and then left them, promising to return at a later hour in the evening, when Miss Armfeldt said she would have the other members of the free command there to meet me. Flushed with nervous excitement, I hurried back to Major Potulof's house, where I found dinner waiting for me. Every now and then in the course of the meal Mrs. Potulof would look at me with a curious expression in her face, as if she wondered what I had been doing all the afternoon; but apparently she could not summon up resolution enough to ask me, and it did not become necessary, therefore, for the recording angel to drop any more tears upon my already blotted record.

At 7 o'clock I went back to the Armfeldts', where I found a political convict named Kurteyef (Koor-tay'eff) and a pale, delicate young woman, who was introduced to me as Madam Kolenkina (Ko-len'kin-ah). I recognized the latter by name as one of the revolutionists sent to the mines for alleged complicity in the plot to assassinate General Mezzentseff (Mez'zentseff), the St. Petersburg chief of police, but I was surprised to find her so young, delicate, and harmless-looking a woman. I had been surprised, however, in the same way many times before. The women who have taken an active part in some of the most terrible tragedies of the past fifteen years in St. Petersburg, Moscow, Kiev, and Odessa, who have shown a power of endurance and a stern inflexibility of character rarely found in men, are delicate girls from eighteen to twenty-five years of age, whom I should have taken for teachers in a Sunday-school or rather timid pupils in a female seminary.

One by one the political convicts of the free command began to assemble at Miss Armfeldt's house. Every few minutes a low signal-knock would be heard at one of the window-shutters and Miss Armfeldt would go cautiously to the door, inquire who was there, and when satisfied that it was one of her companions would take down the bar and give him admission. The small, dimly lighted cabin, the strained hush of anxiety and apprehension, the soft, mysterious knocking at the window-shutters, the low but eager conversation, and the group of pale-faced men and women who crowded about me with intense, wondering interest as if I were a man that had just risen from the dead, made me feel like one talking and acting in a strange, vivid dream. There was not, in the whole environment, a single

THE KNOCK AT THE WINDOW-SHUTTER.

suggestion of the real, commonplace, outside world; and when the convicts, with bated breath, began to tell me ghastly stories of cruelty, suffering, insanity, and suicide at the mines, I felt almost as if I had entered the gloomy gate over which Dante saw inscribed the dread warning, "Leave hope behind."

About 9 o'clock, just as I had taken out my note-book and begun to write, a loud, impera-

tive knock was heard at the side window-shutter. Madam Kolenkina exclaimed in a low, hoarse whisper, "It 's the gendarmes! Don't let them come in. Tell them who of us are here, and perhaps they 'll be satisfied." Everybody was silent, and it seemed to me that I could hear my heart beat while Miss Armfeldt went to the door and with cool self-possession said to the gendarmes, "We are

all here: my mother, I, Kurteyef, Madam Kolenkina, and"—the other names I could not catch. After a moment's parley the gendarmes seemed to go away, Miss Armfeldt shut and re-barred the door, and coming back into the room said with a smile, "They were satisfied; they did n't insist on coming in." Then, turning to me, she added in English: "The gendarmes visit us three times a day to see what we are doing and to make sure that we have not escaped. Their visits, however, have grown to be formal, and they do not always come in."

Conversation was then resumed, and for two hours or more I listened to stories of convict life in prison, on the road, or at the mines, and answered, as well as I could, the eager questions of the convicts with regard to the progress of the Russian revolutionary movement. In the course of the talk my attention was accidentally attracted to a person whom I had not particularly noticed before and to whom I had not been introduced. It was a man thirty or thirty-five years of age, with a colorless, strangely vacant face and large, protruding blue eyes. He had seated himself on a low wooden stool directly in front of me, had rested his elbows on his knees with his chin in his open hands, and was staring up at me with a steady and at the same time expressionless gaze in which there seemed to be something

unnatural and uncanny. At the first pause in the conversation he said to me abruptly, but in a strange, drawling, monotonous tone, "We—have—a—graveyard—of—our—own—here.—Would—you—like—to—see—it?"

I was so surprised and startled by his manner and by the nature of his question that I did not for a moment reply; but the conviction suddenly flashed upon me that it was a political convict who had lost his reason. As the knocking at the gate after the murder in Macbeth seemed to De Quincey to deepen the emotions excited by the tragedy and to reflect back a sort of added horror upon all that had preceded it, so this strange, unprompted question, with its suggestions of insanity and death, seemed to render more vivid and terrible the stories of human suffering that I had just heard, and to intensify all the emotions roused in my mind by the great tragedy of penal servitude.

I remained with the political convicts that night until after midnight, and then walked home with my blood in a fever that even the frosty atmosphere of a semi-arctic night could not cool. Everybody had gone to bed except Mr. Frost, who was watching anxiously for my return. I threw myself on the divan in my room and tried to get to sleep; but all that I had just seen and heard kept surging through my mind, and it was morning before I finally lost consciousness.

George Kennan.

ON THE INDIAN RESERVATIONS.

APACHE SOLDIER, OR SCOUT.

be already far away from there, even in our neighborhood. Conversation lapsed at last,

I WAS camping with a couple of prospectors one night some years ago on the south side of the Pinal Range in Arizona Territory. We were seated beside our little cooking fire about 9 o'clock in the evening engaged in smoking and drowsily discussing the celerity of movement displayed by Geronimo, who had at last been heard of down in Sonora, and might

and puffing our pipes and lying on our backs we looked up into the dark branches of the trees above. I think I was making a sluggish calculation of the time necessary for the passage of a far-off star behind the black trunk of an adjacent tree when I felt moved to sit up. My breath went with the look I gave, for, to my unbounded astonishment and consternation, there sat three Apaches on the opposite side of our fire with their rifles across their laps. My comrades also saw them, and, old, hardened frontiersmen as they were, they positively gasped in amazement.

"Heap hungry," ejaculated one of the savage apparitions, and again relapsed into silence.

As we were not familiar with Mr. Geronimo's countenance we thought we could see the old villain's features in our interlocutor's, and we began to get our artillery into shape.

APACHE.

The savages, in order to allay the disturbance which they had very plainly created, now explained.

"We White Mountain. No want fight—
want flour."

They got the flour in generous quantities, it is needless to add, and although we had previously been very sleepy, we now sat up and entertained our guests until they stretched themselves out and went to sleep. We pretended to do the same. During that night I never closed my eyes, but watched, momentarily expecting to see more visitors come gliding out of the darkness. I should not have been surprised even to see an Apache drop from a branch above me.

They left us in the morning, with a blessing couched in the style of forcible speech that my Rocky Mountain friends affected on unusual occasions. I mused over the occurrence ; for while it brought no more serious consequences than the loss of some odd pounds of bacon and flour, yet there was a warning in the way those Apaches could usurp the prerogatives of ghosts, and ever after that I used

to mingle undue proportions of discretion with
my valor.

Apaches are wont to lurk about in the rocks and *chaparral* with the stealth of coyotes, and they have always been the most dangerous of all the Indians of the Western country. They are not at all valorous in their methods of war, but are none the less effective. In the hot desert and vast rocky ranges of their country no white man can ever catch them by direct pursuit. Since railroads and the telegraph have entered their territory, and military posts have been thoroughly established, a very rigorous military system has kept them in the confines of the San Carlos reservation, and there is no longer the same fear that the next dispatches may bring news of another outbreak. But the troopers under General Miles always had their cartridge-belts filled and their saddle-pockets packed, ready at any hour of the day to jump out on a hostile trail.

The affairs of the San Carlos agency are administered at present by an army officer, Captain Bullis of the Twenty-fourth Infantry. As I have observed him in the discharge of

APACHE WOMAN WITH RATIONS.

his duties I have had no doubt that he pays high life insurance premiums. He does not seem to fear the beetle-browed pack of murderers with whom he has to deal, for he has spent his life in command of Indian scouts, and not only understands their character, but has gotten out of the habit of fearing anything. If the deeds of this officer had been done on civilized battlefields instead of in silently leading a pack of savages over the desert waste of the Rio Grande or the Staked Plain, they would have gotten him his niche in the temple of fame. Alas! they are locked up in the gossip of the army mess-room, and end in the soldiers' matter-of-fact joke about how Bullis used to eat his provisions in the field, opening one can a day from the packs, and, whether it was peaches or corned-beef, making it suffice. The Indians regard him as almost supernatural, and speak of the "Whirlwind" with many grunts of admiration as they narrate his wonderful achievements.

The San Carlos reservation, over which he has supervision, is a vast tract of desert and mountain, and near the center of it, on the Gila River, is a great flat plain where the long, low adobe buildings of the agency are built. Lines of white tents belonging to the cantonment form a square to the north. I arrived at this

place one evening, after a hot and tiresome march, in company with a cavalry command. I found a good bunk in the tent of an army officer whose heart went out to the man in search of the picturesque, and I was invited to destroy my rations that evening at the long table of the officers' mess, wondering much at the culinary miracles performed by the Chinamen who presided over its destinies. The San Carlos is a hotter place than I ever intend to visit again. A man who is used to breathing the fresh air of New York Bay is in no condition to enjoy at one and the same time the dinner and the Turkish bath which accompanies it. However, army officers are as entertaining in their way as poets, and I managed to be both stoical and appreciative.

On the following morning I got out my sketch-book, and taking my host into my confidence, I explained my plans for action. The captain discontinued brushing his hair and looked me over with a humorous twinkle in his eyes. "Young man," he said, "if you desire to wear a long, gray beard you must make away with the idea that you are in Venice."

I remembered that the year before a Black-foot upon the Bow River had shown a desire to tomahawk me because I was endeavoring to immortalize him. After a long and tedious course of diplomacy it is at times possible to get one of these people to gaze in a defiant and fearful way down the mouth of a camera; but to stand still until a man draws his picture on paper or canvas is a proposition which no Apache will entertain for a moment. With the help of two officers, who stood up close to me, I was enabled to make rapid sketches of the scenes and people; but my manner at last aroused suspicion, and my game would vanish like a covey of quail. From the parade in front of our tent I could see the long lines of horses, mules, and burros trooping into the agency from all quarters. Here was my feast. Ordinarily the Indians are scattered for forty miles in every direction; but this was ration-day, and they all were together. After breakfast

we walked down. Hundreds of ponies, caparisoned in all sorts of fantastic ways, were standing around. Young girls of the San Carlos tribe flitted about, attracting my attention by the queer ornaments which, in token of their virginity, they wear in their hair. Tall Yuma bucks galloped past with their long hair flying out behind. The squaws crowded around the exit and received the great chunks of beef which a native butcher threw to them. Indian scouts in military coats and armed with rifles stood about to preserve order. Groups of old women sat on the hot ground and gossiped. An old chief, with a very respectable amount of adipose under his cartridge-belt, galloped up to our group and was introduced as Esquimezeu. We shook hands.

to the guard-house, granted absolute divorces, and probated wills with a bewildering rapidity. The interpreter struggled with his English; the parties at law eyed one another with villainous hate, and knives and rifles glistened about in a manner suggestive of the fact that the court of last resort was always in session. Among these people men are constantly killing one another, women are carried off, and feuds are active at all times. Few of these cases come before the agent if the parties think they can better adjust their own difficulties by the blood-atonement process, but the weak and the helpless often appeal.

After leaving the office and going some distance we were startled by a gun-shot from the direction of the room we had just left. We

DISTRIBUTION OF BEEF AT SAN CARLOS AGENCY.

These Indians have natural dignity, and it takes very little knowledge of manners for them to appear well. The Apaches have no expression for a good-bye or a greeting, and they never shake hands among themselves; but they consider handshaking an important ceremony among white men, and in their intercourse with them attach great importance to it. I heard an officer say that he had once seen an Apache come home after an absence of months: he simply stepped into the jicail, sat down without a word, and began rolling a cigarette.

The day was very hot, and we retired to the shade of Captain Bullis's office. He sat there with a big sombrero pulled over his eyes and listened to the complaints of the Indians against one another. He relegated certain offenders

started back. The negro soldiers of the guard came running past; the Indians became excited; and every one was armed in a minute. A giant officer of infantry, with a white helmet on his head, towered above the throng as he forced his way through the gathering mass of Indians. Every voice was hushed, and every one expected anything imaginable to happen. The Indians began to come out of the room, the smoke eddying over their heads, and presently the big red face and white helmet of the infantry officer appeared. "It's nothing, boys—only an accidental discharge of a gun." In three minutes things were going on as quietly as before.

Captain Bullis sauntered up to us, and tipping his hat on one side meditatively scratched

his head as he pointed to an old wretch who sat wrapped in a sheet against the mud wall of the agency.

"There's a problem. That old fellow's people won't take care of him any longer, and they steal his rations. He's blind and old and can't take care of himself." We walked up and regarded the aged being, whose parchment skin reminded us of a mummy. We recoiled at the filth, we shuddered at his helplessness, and we pitied this savage old man so steeped in misery; but we could do nothing. I know not how the captain solved his problem. Physical suffering and the anguish of cast-off old age are the compensations for the self-reliant savage warrior who dozes and dreams away his younger days and relegates the toil to those within his power.

We strolled among the horses and mules. They would let me sketch them, though I thought the half-wild beasts also shrunk away from the baleful gaze of the white man with his bit of paper. Broncos, mules, and burros stood about, with bags of flour tied on their saddles and great chunks of meat dripping blood over their unkempt sides. These woe-begone beasts find scant pasture in their desert home, and are banded about by their savage masters until ever-present evils triumph over equine philosophy. Fine navy blankets and articles of Mexican manufacture were stretched over some of the saddles, the latter probably obtained in a manner not countenanced by international law.

The Apaches have very little native manufacture. They rely on their foraging into Mexico for saddlery, serapes, and many other things; but their squaws make wicker-work, some of which I have never seen surpassed. *Allas*, or water-jars, of beautiful mold and unique design, are sold

Remington -

METHOD OF SKETCHING AT SAN CARLOS.

to any one who desires to buy them at a price which seems absurdly mean when the great labor expended on them is considered. But Apache labor is cheap when Apaches will work at all. The women bring into the cantonment great loads of hay on their backs, which is sold to the cavalry. It is all cut with a knife from bunches which grow about six inches apart, and is then bound up like wheat and carried for miles.

By evening all the Indians had betaken themselves to their own rancherias, and the agency was comparatively deserted for another week.

I paused for a day on the Gila, some miles from the agency, to observe the methods of agriculture practiced by the San Carlos Indian tribe. The Gila River bottoms are bounded on each side by bluffs, and on these the Indians build their brush jicails. High above the stifling heat of the low ground the hot winds from the desert blow through the leafy bowers which they inhabit. As they wear no clothing except breech-cloth and moccasins, they enjoy comparative comfort. The squaws go back and forth between their

Frederic Remington

WICHITAS SMOKING THEIR MEDICINE.

jicails and the river carrying wicker allas filled with muddy water, and the whole people seek the river and the system of irrigating ditches at evening time to turn the water over the parched ground and nourish the corn, wheat, and vegetables which grow there. Far up the valley the distant *stump* of a musket-shot reaches our ears; then another comes from a nearer point, and still another. Two or three women begin to take away the boards of an acequia dam near as the water rises to their knees, and with a final tug the deepening water rushes through. "Bang!" goes the Springfield carbine of an Indian standing at my elbow, and after some moments another gun-shot comes to our ears from below. As the minutes pass the reports come fainter and fainter, until we are

I bethink ourselves to go back to the camps of these people to spend an evening; so, leaving the troopers about their fires, we take our way in company with an old Government Indian scout to his own jicail. The frugal evening meal was soon disposed of, and taking our cigarettes we sat on the bluffs and smoked. A traveler in the valley looking up at the squatting forms of men against the sky would have remembered the great strength of chiaroscuro in some of Doré's drawings and to himself have said that this was very like it.

I doubt if he would have discerned the difference between the two white men who came from the bustling world so far away and the dark-skinned savages who seemed a sympathetic part of nature there, as mute as any of

INDIAN TERRITORY APACHES PLAYING MONTE.

just conscious of the sounds far off down the valley.

The pile of straw round which a mounted Indian has been driving half a dozen horses all day in order to stamp out the grain has lowered now until he will have but an hour's work more in the morning. He stops his beasts and herds them off to the hills to graze. The procession of barefooted men and of women bearing jars comes winding over the fields towards their humble habitations on the bluffs. The sun sinks behind the distant Sierras, and the beautiful quiet tones of the afterglow spread over the fields and the water. As I stand there watching the scene I can almost imagine that I see Millet's peasants; but, alas! I know too well the difference.

My companion, a lieutenant of cavalry, and

its rocks and as incomprehensible to the white man's mind as any beast which roams its barren wastes.

It grew dark, and we forbore to talk. Presently, as though to complete the strangeness of the situation, the measured "thump, thump, thump" of the tom-tom came from the vicinity of a fire some short distance away. One wild voice raised itself in strange discordant sounds, dropped low, and then rose again, swelling into shrill yelps, in which others joined. We listened, and the wild sounds to our accustomed ears became almost tuneful and harmonious. We drew nearer, and by the little flickering light of the fire discerned half-naked forms huddled with uplifted faces in a small circle around the tom-tom. The fire cut queer lights on their rugged outlines, the waves of sound

rose and fell, and the "thump, thump, thump, thump" of the tom-tom kept a binding time. We grew in sympathy with the strange concert, and sat down some distance off and listened for hours. It was more enjoyable in its way than any trained chorus I have ever heard.

The performers were engaged in making medicine for the growing crops, and the concert was a religious rite, which, however crude to us, was entered into with a faith that was attested by the vigor of the performance. All savages seem imbued with the religious feeling, and everything in nature that they do not comprehend is supernatural. Yet they know so much about her that one often wonders why they cannot reason further.

The one thing about our aborigines which interests me most is their peculiar method of thought. With all due deference to much scientific investigation which has been lavished upon them, I believe that no white man can ever penetrate the mystery of their mind or explain the reason of their acts.

The red man is a mass of glaring incongruities. He loves and hates in such strange fashions, and is constant and inconstant at such unusual times, that I often think he has no mental process, but is the creature of impulse. The searching of the ethnologist must not penetrate his thoughts too rapidly, or he will find that he is reasoning for the Indian, and not with him.

THE COMANCHES.

AFTER coming from the burning sands of Arizona the green stretches of grass and the cloud-flecked sky of northern Texas were very agreeable. At a little town called Henrietta I had entered into negotiations with a Texas cowboy to drive me over certain parts of the Indian Territory. He rattled up to my quarters in the early morning with a covered spring-wagon drawn by two broncos so thin and small and ugly that my sympathies were aroused, and I protested that they were not able to do the work.

The driver, a smart young fellow with his hat brim knocked jauntily back in front, assured me that "They can pull your freight, and you can bet on it." I have learned not to trust to appearances regarding Western ponies, and so I clambered in and we took up our way.

The country was a beautiful rolling plain, covered with rank, green grass and dotted with dried flowers. Heavily timbered creeks interlaced the view and lessened its monotony. The sun was hot, and the driver would nod, go fast asleep, and nearly fall out of the wagon. The broncos would quiet down to a walk, when he would suddenly awake, get out his black snake whip, and roar "mule language" at the lazy creatures. He was a good fellow and full of interest, had made the Montana trail three times with the Hash Knife outfit, and was full of the quaint expressions and pointed methods of reasoning peculiar to Western Americans. He gave me volumes of information concerning Comanches and Indians in general; and while his point of view was too close for a philosophical treatment of the case, he had a knowledge of details which carried him through. Speaking of their diet, he "allowed anything's grub to an Injun, jus' so it hain't pisen."

We came at last to the Red River, and I then appreciated why it was called red, for its water is absolutely the reddest thing I ever saw in nature. The soil thereabouts is red, and the water is colored by it. We forded the river, and the little horses came so near sticking fast in the middle that my cowboy jumped out up to his waist and calmly requested me to do the same. I did, but to the ruin of a pair of white corduroys. We got through, however, and were in the Territory. Great quantities of plums, which the Indians gather, grow near the river.

In due course of time we came in sight of Fort Sill, which is built of stone, in a square around a parade of grass, and perched on rising ground. The plains about were dotted with the skulls of cattle killed for ration day. Sheds of poles covered with branches dotted the plains, and on our right the "big timber" of Catch Creek looked invitingly cool.

At Fort Sill I became acquainted with Mr. Horace P. Jones the Comanche interpreter, who has lived with that tribe for thirty-one years. He is an authority on the subject of Indians, and I tried to profit by his knowledge. He spoke of one strange characteristic of the Comanche language which makes their speech almost impossible to acquire. Nearly all Comanches are named after some object in nature, and when one dies the name of the object after which he was named is changed and the old word is never spoken again. Mr. Jones often uses one of the words which a recent death has made obsolete, and is met with muttered protestations from his Indian hearers. He therefore has to skirmish round and find the substitute for the outlawed word.

The Comanches are great travelers, and

A COMANCHE.

wander more than any other tribe. Mr. Jones has known Comanches to go to California, and as far south as Central America, on trips extending over years. They are a jolly, round-faced people, who speak Spanish, and often have Mexican blood in their veins—the result of stolen Mexican women, who have been ingrafted into the tribe.

The Comanches are less superstitious than Indians are generally. They apply an amount of good sense to their handling of horses which I have never seen among Indians elsewhere. They breed intelligently, and produce some of the most beautiful “painted” ponies imaginable. They take very good care of them, and in buying and selling have no lessons to learn from Yankee horse-traders. They still live in lodges, but will occupy a good house if they can obtain one. About this thing they reason rather well; for in their visits to the Caddoes and the Shawnees they observe the squalid

huts in the damp woods, with razor-back hogs contesting the rights of occupancy with their masters, and they say that the tepee is cleaner, and argue that if the Shawnees represent civilization, their own barbarism is the better condition of the two. However, they see the good in civilization and purchase umbrellas, baby-carriages, and hats, and of late years leave the Winchester at home; although, like the Texan, a Comanche does not feel well dressed without a large Colt strapped about his waist. Personal effects are all sacrificed at the death of their owners, though these Indians no longer destroy the horses, and they question whether the houses which are built for them by the Government should be burned upon the death of the tenant. Three or four have been allowed to stand, and if no dire results follow the matter will regulate itself.

The usual corps of Indian scouts is camped under the walls of Fort Sill, and is equally di-

vided between the Comanches and the Kiowas. They are paid, rationed, and armed by the Government, and are used to hunt up stray Government horses, carry messages, make arrests among their own people, and follow the predatory Texas cowboy who comes into the Territory to build up his fortunes by driving off horses and selling corn-juice to the Indians.

The Comanches are beginning to submit to arrests without the regulation exchange of fustillade; but they have got the worst of Texas law so long that one cannot blame them for being suspicious of the magistracy. The first question a Comanche asks of a white stranger is, "Maybe so you Texas cowboy?" to which I always assure them that I am a Kansas man, which makes our relations easy. To a Co-

for the race, and the throng moves to some level plain near, where a large ring is formed by the Indians on horseback.

An elderly Indian of great dignity of presence steps into the ring, and with a graceful movement throws his long red blanket to the ground and drops on his knees before it, to receive the wagers of such as desire to make them. Men walk up and throw in silver dollars and every sort of personal property imaginable. A Winchester rifle and a large nickel-plated Colt's revolver are laid on the grass near me by a cowboy and an Indian, and then each goes away. It was a wager, and I thought they might well have confidence in their stakeholder—mother earth. Two ponies, tied head and head, were led aside and left, horse against

IN THE BETTING-RING.

manche all bad men are "Texas cowboys," and all good people are "Kansas men."

At the scout camp I was allowed to sketch to my heart's content, and the people displayed great interest in the proceedings.

The morning of the Fourth of July found Mr. Jones and me in the saddle and on the way to the regulation celebration at the agency below the post. The Fourth of July and Christmas are the "white man's big Sundays" to the Indians, and they always expect the regular horse-race appropriations. The cavalrymen contribute purses and the Indians run their ponies. Extra beeves are killed, and the red men have always a great regard for the "big Sundays."

As we approach the agency it is the hour

horse. No excitement seemed to prevail. Near me a little half-Mexican Comanche boy began to disrobe until he stood clad only in shirt and breech-cloth. His father addressed some whispered admonition and then led up a roan pony, prancing with impatience and evidently fully conscious of the work cut out for him that day. With a bound the little fellow landed on the neck of the pony only half way up; but his toes caught on the upper muscles of the pony's leg, and like a monkey he clambered up and was in his seat. The pony was as bare as a wild horse except for a bridle, and loped away with his graceful little rider sitting like a rock. No, not like a rock, but limp and unconcerned, and as full of the motion of the horse as the horse's tail or any other part of him.

KIOWA BUCK STARTING A RACE.

A Kiowa with loose hair and great coarse face broke away from the group and galloped up the prairie until he stopped at what was to be the starting-point, at the usual distance of "two arrow flights and a pitch." He was followed by half a dozen ponies at an easy lope, bearing their half-naked jockeys. The Indian spectators sat about on their ponies, as unmoved in countenance as oysters, being natural gamblers, and stoical as such should be, while the cowboys whispered among themselves.

"That's the bay stallion there," said one man to me, as he pointed to a racer, "and he's never been beaten. It's his walk-over, and I've got my gun up on him with an Injun."

It was to be a flying start, and they jockeyed a good deal and could not seem to get off. But presently a puff of smoke came from the rifle held aloft by the Kiowa starter, and his horse reared. The report reached us, and with a scurry the five ponies came away from the scratch, followed by a cloud of dust. The *quirts* flew through the air at every jump. The ponies bunched and pattered away at a nameless rate, for the quarter-race pony is quick of stride. Nearer and nearer they came, the riders lying low on their horses' necks, whipping and ki-yi-yi-ing. The dust in their wake

swept backward and upward, and with a rush they came over the scratch, with the roan pony ahead and my little Mexican fellow holding his quirt aloft, and his little eyes snapping with the nervous excitement of the great event. He had beaten the invincible bay stallion, the pride of this Comanche tribe, and as he rode back to his father his face had the settled calm which nothing could penetrate, and which befitted his dignity as a young runner.

Far be it from these quaint people ever to lose their blankets, their horses, their heroism, in order to stalk behind a plow in a pair of canvas overalls and a battered silk hat. Now they are great in their way; but then, how miserable! But I have confidence that they will not retrograde. They can live and be successful as a pastoral people, but not as sheep herders, as some great Indian department reformer once thought when he placed some thousands of these woolly idiots at their disposal.

The Comanches travel about too much and move too fast for sheep; but horses and cattle they do have and can have so long as they retain possession of their lands. But if the Government sees fit to consecrate their lands to the "man with the hoe," then, alas! good-bye to all their greatness.

Bidding adieu to my friends at Fort Sill, I

INDIAN HORSE-RACE — COMING OVER THE SCRATCH.

"pulled out" for Anadarko on the Washita, where the head agency of the Comanches, Kiowas, and Wichitas is located. The little ponies made bad work of the sandy roads. Kiowa houses became more numerous along the road, and there is evidence that they farm more than the brother tribe, but they are not so attractive a people. Of course the tepee is pitched in the front yard and the house is used as a kind of out-building. The medicine-bags were hanging from the tripod of poles near by, and an occasional buck was lying on his back "smoking his medicine"—a very comfortable form of devotion.

We saw the grass houses of the Wichitas, which might be taken for ordinary haystacks. As they stand out on the prairie surrounded by wagons, agricultural implements, and cattle, one is caught wondering where is the remainder of the farm which goes with this farm-yard.

These Territory Apaches are very different from their brothers of the mountains. They are good-looking, but are regarded contemptuously by other Indians and also by the traders. They are treacherous, violent, and most cunning liars and thieves. I spent an evening in one of their tepees watching a game of monte, and the gambling passion was developed almost to insanity. They sat and glared at the cards, their dark faces gleaming with avarice, cunning, and excitement. I thought then that the good white men who would undertake to make Christian gentlemen and honest tillers of the soil out of this material would contract for a job to subvert the process of nature.

Our little ponies, recuperated by some grain and rest, were once more hooked up, and the cowboy and I started for Fort Reno to see the Arrapahoes and the Cheyennes, hoping to meet them far along on "the white man's road."¹

Frederic Remington.

CASCO BAY.

IF e'er you sail on Casco Bay
 When fields are green and skies are sweet,
 And watch the foam-capped waves at play
 Where land and sea touch hands and greet,
 As friend with friend, in rude delight,
 Your soul, like birds at break of day,
 Will rise for many a joyous flight
 Midst summer isles of Casco Bay:
 Of Casco Bay! Sweet Casco Bay!
 Where life is joy and love at play
 Midst summer isles of Casco Bay.

Oh, wild and glad and circling far,
 The ripples sparkle from your prow
 As silvery laughter from a star
 When Venus decks the evening's brow;
 And where the islands stand apart
 The ocean waves roll in to pay
 Some tribute from the sea's great heart
 To gentle, queenly Casco Bay:
 To Casco Bay! Dear Casco Bay!
 Your soul imbibes the salt-sea spray
 And sings with lovely Casco Bay.

Down smiling channels shadows run
 And shimmer on the green-blue tides;
 And, booming like a far-off gun,
 Where Harpswell sea from sea divides,
 You hear the breakers' sullen roar
 And watch the waves ascend in spray
 While all around, behind, before,
 The white sails swell on Casco Bay:
 On Casco Bay! Fair Casco Bay!
 The white sails fill and bear away
 The happy ships on Casco Bay.

ABRAHAM LINCOLN: A HISTORY.¹

LINCOLN RENOMINATED—THE WADE-DAVIS MANIFESTO— HORACE GREELEY'S PEACE MISSION.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

LINCOLN RENOMINATED.

In other chapters we have mentioned the unavailing efforts made by a few politicians to defeat the will of the people which everywhere demanded the renomination of Mr. Lincoln. These efforts were worth studying as manifestations of eccentric human nature, but they never had the least effect upon the great currents of public opinion. Death alone could have prevented the choice of Mr. Lincoln by the Union convention. So absolute and universal was this tendency that most of the politicians made no effort to direct or guide it; they simply exerted themselves to keep in the van and not be overwhelmed. The convention was to meet on the 7th of June, but the irregular nominations of the President began at the feast of the Epiphany. The first convention of the year was held in New Hampshire on the 6th of January—for the nomination of State officers. It had properly no concern with the National nominations. The convention consisted in great part of the friends of Mr. Chase, and those employees of the Treasury Department whose homes were in New Hampshire had come together determined to smother any mistimed demonstration for the President; but the first mention of his name set the assembly on fire, and before the chairman knew what he was doing the convention had declared in favor of the renomination of Lincoln. The same day a far more important demonstration came to the surface in Pennsylvania. The State legislature met on the 5th of January, and the following day a paper, prepared in advance, addressed to the President, requesting him to accept a second term of the Presidency, began to be circulated among the Union members. Not one to whom it was presented declined to sign it. Within a day or two it received the signature of every Union member of the Senate and the House of Pennsylvania, and Mr. Simon Cameron, transmitting it to the President on the 14th of January, could say:

You are now fairly launched on your second voyage, and of its success I am as confident as ever

I was of anything in my life. Providence has decreed your reelection, and no combination of the wicked can prevent it.²

This remarkable address began by congratulating the President upon the successes of the recent election, which were generously ascribed to the policy of his Administration. Referring to the Republican victory in their own State, the members of the legislature said:

If the voice of Pennsylvania became thus potential in indorsing the policy of your Administration, we consider that, as the representatives of those who have so completely indorsed your official course, we are only responding to their demands when we thus publicly announce our unshaken preference for your reelection to the Presidency in 1864.

This preference is justified by them purely on public grounds.

To make a change in the Administration until its authority has been fully reestablished in the revolted States would be to give the enemies of the Government abroad a pretext for asserting that the Government had failed at home. To change the policy in operation to crush rebellion and restore the land to peace would be to afford the traitors in arms time to gather new strength—if not for immediate victory, at least for ultimate success in their efforts permanently to dissolve the Union. . . . We do not make this communication at this time to elicit from you any expression of opinion on this subject. Having confidence in your patriotism, we believe that you will abide the decision of the friends of the Union, and yield consent to any honorable use which they may deem proper to make of your name in order to secure the greatest good to the country and the speediest success to our arms. . . . Expressing what we feel to be the language not only of our own constituents, but also of the people of all the loyal States, we claim to indulge the expectation that you will yield to the preference which has already made you the people's candidate for the Presidency in 1864.

In every gathering of the supporters of the Union the same irrepressible sentiment broke forth. The "New York Times" on the 15th of January clearly expressed the general feeling:

The same wise policy which would forbid a man of business in troublous times to change his agent of proved efficiency, impels the loyal people of our

² Cameron to Lincoln, Jan. 14, 1864. MS.

¹ Copyright by J. G. Nicolay and John Hay, 1886. All rights reserved.

country to continue President Lincoln in his responsible position; and against the confirmed will of the people politicians are powerless.

The sentiment was so potent in its pressure upon the politicians that they everywhere gave way and broke into premature indorsement of the nomination. The Union Central Committee of New York held a special meeting and unanimously recommended the renomination of the President. Senator Morgan, sending this news to Mr. Lincoln, added:

It is going to be difficult to restrain the boys, and there is not much use in trying to do so.¹

At a local election some of the ward tickets were headed, with an irrelevancy which showed the spirit of the hour, "For President of the United States in 1864, Abraham Lincoln." From one end to the other of the country these spontaneous nominations joyously echoed one another. Towards the close of January the radical legislature of Kansas, with but one dissenting voice, passed through both its Houses a resolution renominating Lincoln. All through the next month these demonstrations continued. The Union members of the New Jersey legislature united in an address to the President, saying:

Without any disparagement of the true men who surround you, and whose counsels you have shared, believing that you are the choice of the people, whose servants we are, and firmly satisfied that they desire and intend to give you four years for a policy of peace, we present your name as the candidate for President of the American people in 1864.²

Connecticut instructed her delegates by resolutions on the 17th of February; Maryland, Minnesota, and Colorado expressed in the same way the sentiment of their people. Wisconsin and Indiana made haste to range themselves with the other Northern States; and Ohio seized the opportunity to put a stop to the restless ambition of her favorite son by a resolution of the Republican members of the legislature declaring that "the people of Ohio, and her soldiers in the army, demand the renomination of Abraham Lincoln to the Presidency"—the members rising to their feet and cheering with uncontrollable clamor when the resolution passed. The State of Maine, on the extreme eastern border, spoke next: early in March, the President received this dispatch, signed by a name afterwards illustrious in our political annals:

Both branches of the Maine legislature have this day adopted resolutions cordially recommending your renomination. Every Union member voted in favor of them. Maine is a unit for you.

JAMES G. BLAINE.

¹ Jan. 4, 1864. MS.

² Feb. 18, 1864.

Nowhere except in the State of Missouri was the name of Mr. Lincoln mentioned without overwhelming adhesion, and even in the Missouri Assembly the resolution in favor of his renomination was laid upon the table by a majority of only eight. There had been some anxiety on the part of Mr. Lincoln's friends lest the powerful secret organization called the Union League, which represented the most ardent and vehement Republican sentiment of the country, should fall into the hands of his opponents; but it was speedily seen that out of Missouri these apprehensions were groundless. The Union Leagues of New York, Illinois, and even Vicksburg, where the victory of Grant had allowed the development of a robust Union sentiment, were among the first to declare for the President. The organization in Philadelphia, powerful in wealth, intelligence, and personal influence, so early as the 11th of January had resolved that to the "prudence, sagacity, comprehension, and perseverance of Mr. Lincoln, under the guidance of a benign Providence, the nation is more indebted for the grand results of the war, which Southern rebels have wickedly waged against liberty and the Union, than to any other single instrumentality, and that he is justly entitled to whatever reward it is in the power of the nation to bestow." They declared also:

That as Mr. Lincoln has had to endure the largest share of the labor required to suppress the rebellion, now rapidly verging to its close, he should also enjoy the largest share of the honors which await those who have contended for the right. They therefore recognize with pleasure the unmistakable indications of the popular will in all the loyal States, and heartily join with their fellow-citizens, without any distinction of party, here and elsewhere, in presenting him as the people's candidate for the Presidency.

The current swept on irresistibly throughout the months of spring. A few opponents of Mr. Lincoln, seeing that he was already nominated the moment the convention should meet, made one last effort to postpone the meeting of the convention until September, knowing that their only reliance was in some possible accident of the summer. So earnest and important a Republican as William Cullen Bryant united with a self-constituted committee of others equally earnest, but not so important, to induce the National Committee to postpone the convention. In their opinion "the country was not now in a position to enter into a Presidential contest; it was clear to them that no nomination could be made with any unanimity so early as June. They thought it best to see what the result of the summer campaign would be, as the wish of the people to continue their present leaders in power would depend very much upon this." The committee, of

course, took no notice of this appeal, though it was favored by so strong a Republican authority as the "New York Tribune."¹ The National Committee wisely thought that they might with as much reason take into consideration the request of a committee of prominent citizens to check an impending thunderstorm. All the movements in opposition to Mr. Lincoln were marked with the same naïveté and futility. The secret circular of Senator Pomeroy, the farcical Cleveland convention, the attempt of Mr. Bryant's committee to postpone the convention, were all equally feeble and nugatory in their effect.

Mr. Lincoln took no measures whatever to promote his candidacy. It is true he did not, like other candidates, assume airs of reluctance or bashfulness. While he discouraged on the part of strangers any suggestions as to his reelection, among his friends he made no secret of his readiness to continue the work he was engaged in, if such should seem to be the general wish. In a private letter to Mr. E. B. Washburne he said: "A second term would be a great honor and a great labor, which together perhaps I would not decline if tendered."² To another congressman he is reported to have said: "I do not desire a renomination except for the reason that such action on the part of the Republican party would be the most emphatic indorsement which could be given to the policy of my Administration." We have already mentioned the equanimity with which he treated the efforts of a leading member of his Cabinet to supplant him, and he received in the same manner the frequent suggestions of apprehensive friends that he would do well to beware of Grant. His usual reply was, "If he takes Richmond, let him have it." In reality General Grant was never at any time a competitor for the nomination. Of course, after the battle of Missionary Ridge there was no lack of such suggestions on the part of those who surrounded the victorious general; but he positively refused to put himself in the lists or to give any sanction to the use of his name. The President constantly discouraged on the part of officeholders of the Government, civil or military, any especial eagerness in his behalf. General Schurz wrote, late in February, asking permission to take an active part in the Presidential canvass, to which Mr. Lincoln replied:

¹ April 26, 1864.

² Oct. 26, 1863. MS.

³ Lincoln to Schurz, March 13, 1864. MS.

⁴ Lincoln to Schurz, March 23, 1864. Autograph MS.

⁵ General John A. Logan, in a letter addressed to General W. T. Sherman and published after General Logan's death, said that when he left the army to make speeches in Illinois he did this at the request of the President. We have been unable to find any communication in this sense among Mr. Lincoln's papers.

Allow me to suggest that if you wish to remain in the military service, it is very dangerous for you to get temporarily out of it; because, with a major-general once out, it is next to impossible for even the President to get him in again. With my appreciation of your ability and correct principle, of course I would be very glad to have your service for the country in the approaching political canvass; but I fear we cannot properly have it without separating you from the military.³

And in a subsequent letter addressed to the same general he said:⁴

I perceive no objection to your making a political speech when you are where one is to be made; but quite surely speaking in the North and fighting in the South at the same time are not possible; nor could I be justified to detail any officer to the political campaign during its continuance and then return him to the army.⁵

The experience of a hundred years of our politics has shown what perils environ a Presidential candidate who makes speeches. The temptation to flatter the immediate audience, without regard to the ultimate effect of the words spoken, has often proved too strong for the wariest politician to resist. Especially is a candidate in danger when confronting an audience belonging to a special race or class. Mr. Lincoln made no mistake either in 1860 or in 1864. Even when exposed to the strongest possible temptation, the reception of an address from a deputation of a workingmen's association, he preserved his mental balance undisturbed. To such a committee, who approached him on the 21st of March, 1864, he replied by repeating to them the passage from his message of December, 1861, in which the relations of labor and capital are set down with mathematical and logical precision, illuminated by the light of a broad humanity; and he only added to the views thus expressed the following words, than which nothing wiser or more humane has ever been said by social economists:

None are so deeply interested to resist the present rebellion as the working people. Let them beware of prejudices working division and hostility among themselves. The most notable feature of a disturbance in your city last summer was the hanging of some working people by other working people. It should never be so. The strongest bond of human sympathy, outside of the family relation, should be one uniting all working people, of all nations and

We applied to General Logan's family for the evidence on which the assertion was founded, but received no answer. There is no question that General Logan's statement was made in good faith, and that he believed that in taking a leave and assisting in the political canvass he was acting in accordance with the President's wishes. But Mr. Lincoln's action in other cases was so consistently opposed to this hypothesis, that we can only conclude that General Logan got his impression of what the President desired from some other person than the President himself.

tongues and kindreds. Nor should this lead to a war upon property or the owners of property. Property is the fruit of labor, property is desirable, is a positive good in the world. That some should be rich shows that others may become rich, and, hence, is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him labor diligently and build one for himself, thus by example asserting that his own shall be safe from violence when built.

The politicians who opposed Mr. Lincoln, whether from pure motives or from motives not so pure, met with one common fate: they were almost universally beaten in their own districts by men who, whatever their other incentives, were sufficiently adroit to perceive the sign in which they should conquer. It gave a man all this year a quite unfair advantage in his district to be known as a friend of the President, when his opponent was not equally outspoken; and many of the most radical politicians, seeing in which direction their advantage lay, suddenly turned upon their opponents and vanquished them in the President's name. General Lane, for example, who had been engaged in a bitter controversy with Pomeroy in regard to local interests in Kansas, saw his opportunity in the anti-Lincoln circular of his colleague; and although before this it would have been hard to say which of the two had been most free in his criticisms of the President, General Lane instantly trimmed his sails to catch the favoring breeze and elected himself and a full list of delegates to the Baltimore convention, whom he called, in his characteristic language, "all vindictive friends of the President." Other members of Congress, equally radical and more sincere and honest, made haste to range themselves on the side of the President against those with whom they had been more intimately associated. William D. Kelley of Philadelphia publicly proclaimed him "the wisest radical of us all"; Mr. Ashley of Ohio, to whom one of his abolitionist constituents had objected that he wanted no more of a President who had not crushed a rebellion in four years, replied that this was unreasonable, as the Lord had not crushed the devil in a much longer time.

As the day for the meeting at Baltimore drew near, and its unanimous verdict became more and more evident, the President was besieged from every quarter of the Union with solicitations to make known his wishes in regard to the work of the convention. To all such inquiries he returned an energetic refusal to give any word of counsel or to express any personal desire. During a few days preceding the convention a great many delegates took the road to Washington, either to get some intimation of the President's wishes or

to impress their own faces and names on his expectant mind. They were all welcomed with genial and cordial courtesy, but received not the slightest intimation of what would be agreeable to him. The most powerful politicians from New York and Pennsylvania were listened to with no more confidential consideration than the shy and awkward representatives of the rebellious States, who had elected themselves in sutlers' tents and in the shadow of department headquarters. "What is that crowd of people in the hall?" he said one day to his secretary. "It is a delegation from South Carolina. They are a swindle." "Let them in," said Lincoln; "they will not swindle me."

When at last the convention came together, on the 7th of June, 1864, it had less to do than any other convention in our political history. The delegates were bound by a peremptory mandate. Mr. Forney, in an article printed the day before the meeting,¹ put forth with unusual candor the attitude of the convention towards its constituents. The permanent policy of the Republican party of the nation was already absolutely established by the acts of the President and accepted and ratified by Congress and the people.

For this reason [said Mr. Forney] it is less important as a political body, as it cannot originate but will simply republish a policy. Yet for this reason it is transcendently the more imposing in its expression of the national will. Nor has the convention a candidate to choose. Choice is forbidden it by the previous action of the people. It is a body which almost beyond parallel is directly responsible to the people, and little more than the instrument of their will. Mr. Lincoln is already renominated, and the convention will but formally announce the decision of the people. If this absence of independence lessens the mere political interest of the convention in one respect, the fact that it will thoroughly and unquestionably obey national instructions gives it higher importance.

These words represented the well-nigh universal sentiment among Republicans. There were, of course, those to whom such a sentiment was not agreeable. Horace Greeley found it hard to accept an opinion which ran counter to his personal views. In an article of the same date as that last quoted, although he admitted the predestined action of the convention, he still protested vehemently against the impolicy of such action. He quoted the message sent by Mr. Lincoln to Governor Seymour in the dark winter of 1862-63, "that if he wants to be President of the United States, he must take care that there shall be a United States."

We could wish [said Greeley] the Presidency utterly forgotten or ignored for the next two months,

¹ Philadelphia "Press," June 6.

while every impulse, every effort of the loyal millions should be directed towards the overthrow of the armed hosts of the rebellion. That effected, or its speedy accomplishment proved impossible, we should be ready to enter clear-sightedly on the Presidential canvass. Now we are not. We feel that the expected nomination, if made at this time, exposes the Union party to a dangerous "flank movement" — possibly a successful one.

Among the Democratic newspapers a still more blind and obstinate disinclination to accept the existing facts is seen up to the hour of the meeting of the convention. They still insisted that the nomination of Lincoln was in the highest degree doubtful; some pretended that the delegates were equally divided between Lincoln and Grant; others insisted that the nomination of Frémont at Cleveland had electrified the country and would probably carry the convention by storm.

The convention was opened by a brief speech from Senator Morgan of New York, who was chairman of the executive committee. It contained one significant sentence. He said the party of which they were the delegates and honored representatives would fall short of accomplishing its great mission unless among its other resolves it should declare for such amendment of the Constitution as would positively prohibit African slavery in the United States. The sentence was greeted with prolonged applause, which burst at last into three cheers, in the midst of which Governor Morgan announced the choice by the National Committee of Robert J. Breckinridge of Kentucky as temporary chairman of the convention. The venerable Kentuckian on taking the chair made a speech which, though entirely extemporaneous, was delivered with great ease and dignity, and profoundly impressed his auditors.

Disregarding the etiquette which assumes that a convention is a deliberative assembly and that its choice cannot be foretold until it is made, he calmly took it for granted at the very beginning of his remarks that the Union candidate for the Presidency was already nominated, and as soon as the tumultuous cheers which greeted his mention of the name of Abraham Lincoln had died away he turned at once to the discussion of what he considered the real business of the day — the declaration of principles. Coming from a section of the country where the Constitution had been especially revered in words and vehemently assailed in action, he declared that with all the outcry about our violations of the Constitution this present living generation and this present Union party are more thoroughly devoted to that Constitution than any generation that ever lived under it; but he contended also that

sacred as was the Constitution the nation was not its slave.

We ought to have it distinctly understood by friends and enemies that while we love that instrument, while we will maintain it, and will with undoubted certainty put to death friend or foe who undertakes to trample it under foot; yet, beyond a doubt, we will reserve the right to alter it to suit ourselves from time to time and from generation to generation.

This speech was full of brief and powerful apothegms, some of which were startling as coming from an aged theologian of an aspect equally strong and benignant.

The only enduring, the only imperishable cement of all free institutions [he said], has been the blood of traitors. . . . It is a fearful truth, but we had as well avow it at once; and every blow you strike, and every rebel you kill, every battle you win, dreadful as it is to do it, you are adding, it may be a year, it may be ten years, it may be a century, it may be ten centuries, to the life of the Government and the freedom of your children.¹

Though presiding over a political convention, he declared himself absolutely detached from politics. "As an Abolition party, as a Republican party, as a Whig party, as a Democratic party, as an American party, I will not follow you one foot. As a Union party I will follow you to the ends of the earth, and to the gates of death." He echoed the brief speech in which Governor Morgan had struck the keynote. He said:

I unite myself with those who believe that slavery is contrary to the brightest interests of all men and of all governments, contrary to the spirit of the Christian religion, and incompatible with the natural rights of man. I join myself with those who say, Away with it forever; and I fervently pray God that the day may come when throughout the whole land every man may be as free as you are, and as capable of enjoying regulated liberty. . . . I know very well that the sentiments which I am uttering will cause me great odium in the State in which I was born, which I love, where the bones of two generations of my ancestors and some of my children are, and where very soon I shall lay my own. . . . But we have put our faces towards the way in which we intend to go, and we will go in it to the end.

In the evening the permanent organization of the convention was effected, William Dennison of Ohio being made chairman. He, also, in a brief and eloquent speech took for granted the unanimous nomination for the Presidency of the United States "of the wise and good man whose unselfish devotion to the country, in the administration of the Government, has secured to him not only the admiration but the warmest affection of every friend of constitutional liberty"; and

¹ McPherson, "History of the Rebellion," p. 404.

also, in the tone of both the speakers who had preceded him, said that the loyal people of the country expected the convention

to declare the cause and the support of the rebellion to be slavery, which, as well for its treasonable offenses against the Government as for its incompatibility with the rights of humanity and the permanent peace of the country, must, with the termination of the war, and as much speedier as possible, be made to cease forever in every State and Territory of the Union.

There were in fact but three tasks before the convention. The first was to settle the status of contesting delegations from the States and Territories; the second, to agree upon the usual platform; and the third, to nominate a candidate for the Vice-Presidency. All of these questions were handled skillfully, and with a spirit of moderation which led to the most successful result in the canvass.

There were no questions of consequence in regard to the delegations of any of the Northern States, nor did any questions arise in regard to those from Kentucky and West Virginia, Delaware and Maryland. There were two delegations from Missouri, both making special claims of loyalty and of regularity of election. The committee on credentials decided that those styling themselves the "Radical Union" delegates should be awarded the seats. As this was the only delegation which had presented itself opposed to the nomination of Lincoln, and as a large majority, not only of the convention, but of the committee on credentials, were of the contrary opinion, their action in admitting the recalcitrant Missourians was sagacious. It quieted at once the beginnings of what might have been a dangerous schism. The question as to admitting the delegates from Tennessee also raised some discussion, but was decided in their favor by more than a two-thirds vote. The delegates from Louisiana and Arkansas were also admitted by a vote nearly as large. The delegates from Nevada, Colorado, and Nebraska were admitted with the right to vote; those from the States of Virginia and Florida, and the remaining Territories, were admitted to the privileges of the floor without the right to vote; and those from South Carolina were rejected altogether.

The same wise spirit of compromise was shown in the platform, reported by Henry J. Raymond of New York. The first resolution declared it the highest duty of every citizen to maintain the integrity of the Union and to quell the rebellion by force of arms; the second approved the determination of the Government to enter into no compromise with the rebels; the third, while approving all the acts hitherto done against slavery, declared in favor of an

amendment to the Constitution terminating and forever prohibiting the existence of slavery in the United States. This resolution was received with an outburst of spontaneous and thunderous applause. The fourth resolution gave thanks to the soldiers and sailors; the fifth applauded the practical wisdom, unselfish patriotism, and unswerving fidelity with which Abraham Lincoln had discharged, under circumstances of unparalleled difficulty, the great duties and responsibilities of the Presidential office, and it enumerated and approved the acts of his Administration. The sixth resolution was of sufficient significance to be given entire:

Resolved, That we deem it essential to the general welfare that harmony should prevail in the national councils, and we regard as worthy of public confidence and official trust those only who cordially indorse the principles proclaimed in these resolutions and which should characterize the administration of the Government.

This resolution, like the admission of the Missouri radicals, was intended in general to win the support and heal the dissatisfaction of the so-called radicals throughout the Union. Its specific meaning, however, was not entirely clear. There were not many of the delegates who voted for it who would have agreed upon all the details of a scheme for reorganizing the Cabinet. If measures for ostracizing all the objectionable members of the Government had been set on foot in the hall of the convention, it is probable that the name of every member of the Cabinet would have been found on some of the shells. It is altogether likely, however, that the name of the Postmaster-General would have occurred more frequently than that of any other minister. The controversy between his brother and the radicals of Missouri, in which he had, in accordance with his habit and temperament, taken an energetic part, had embittered against him the feelings of the radical Republicans, not only in the West but throughout the North, and his habit of candid and trenchant criticism had raised for him enemies in all political circles.

The seventh resolution claimed for the colored troops the full protection of the laws of war. The eighth declared that foreign emigration should be fostered and encouraged. The ninth spoke in favor of the speedy construction of a railroad to the Pacific coast. The tenth declared that the national faith pledged for the redemption of the public debt must be kept inviolate; and the eleventh declared against the efforts of any European power to establish monarchical governments sustained by foreign military forces in near proximity to the United States.

This last resolution showed the result of an adroit and sagacious compromise. The radicals in the convention desired to make it a censure upon the action of the President and the Secretary of State; but the friends of the Administration, while accepting to its utmost results the declaration in favor of the Monroe doctrine, assumed that the President and his Cabinet were of the same mind, and therefore headed the resolution with the declaration:

That we approve the decision taken by the Government that the people of the United States can never regard with indifference the attempt of any European power to overthrow by force or to supplant by fraud the institutions of any republican government on the Western continent.

There was nothing more before the convention but the nominations, and one of those was in fact already made. The only delay in registering the will of the convention occurred as a consequence of the impatience of members to do it by irregular and summary methods. Mr. Delano of Ohio made the customary motion to proceed to the nomination; Simon Cameron moved as a substitute the renomination of Lincoln and Hamlin by acclamation. A long wrangle ensued on the motion to lay this substitute on the table, which was brought to a close by a brief speech from Henry J. Raymond, representing the cooler heads, who were determined that whatever opposition there might be should have the fullest opportunity of expression; and by a motion, which was adopted, to nominate in the usual way, by the call of States. The interminable nominating speeches of recent years had not come into fashion: Mr. Cook, the chairman of the Illinois delegation, merely said, "The State of Illinois again presents to the loyal people of this nation, for President of the United States, Abraham Lincoln—God bless him!" and those who seconded the nomination were equally brief. Every State gave its undivided voice for Lincoln, with the exception of Missouri, which cast its vote, as the chairman stated, under positive instructions, for Grant. But before the result was announced Mr. Hume of Missouri moved that the nomination of Lincoln be declared unanimous. This could not be done until the result of the balloting was made known—484 for Lincoln, 22 for Grant. Missouri then changed its vote, and the secretary read the grand total of 506 for Lincoln. This announcement was greeted with a storm of cheering, which during many minutes as often as it died away burst out anew.

The principal names mentioned for the Vice-Presidency were, besides Mr. Hamlin, the actual incumbent, Andrew Johnson of Tennessee, and Daniel S. Dickinson of New York; besides these General Rousseau had the vote

of his own State, Kentucky. The radicals of Missouri favored General B. F. Butler, who had a few scattered votes also from New England. But among the three principal candidates the voters were equally enough divided to make the contest exceedingly spirited and interesting. For several days before the convention the President had been besieged by inquiries as to his personal wishes in regard to his associate on the ticket. He had persistently refused to give the slightest intimation of such wish. His private secretary, Mr. Nicolay, was at Baltimore in attendance at the convention; and although he was acquainted with this attitude of the President, at last, overborne by the solicitations of the chairman of the Illinois delegation, who had been perplexed at the advocacy of Joseph Holt by Mr. Swett, one of the President's most intimate friends, Mr. Nicolay wrote a letter to Mr. Hay, who had been left in charge of the Executive office in his absence, containing among other matters this passage:

Cook wants to know confidentially whether Swett is all right; whether in urging Holt for Vice-President he reflects the President's wishes; whether the President has any preference, either personal or on the score of policy; or whether he wishes not even to interfere by a confidential intimation. . . . Please get this information for me if possible.

The letter was shown to the President, who indorsed upon it this memorandum:

Swett is unquestionably all right. Mr. Holt is a good man, but I had not heard or thought of him for V. P. Wish not to interfere about V. P. Cannot interfere about platform. Convention must judge for itself.

This positive and final instruction was sent at once to Mr. Nicolay, and by him communicated to the President's most intimate friends in the convention. It was therefore with minds absolutely untrammelled by even any knowledge of the President's wishes that the convention went about its work of selecting his associate on the ticket.

It is altogether probable that the ticket of 1864 would have been nominated without a contest had it not been for the general impression, in and out of the convention, that it would be advisable to select as a candidate for the Vice-Presidency a war Democrat. Mr. Dickinson, while not putting himself forward as a candidate, had sanctioned the use of his name by his friends on the especial ground that his candidacy might attract to the support of the Union party many Democrats who would have been unwilling to support a ticket avowedly Republican; but these considerations weighed with still greater force in favor of Mr. Johnson, who was not only a Democrat, but

also a citizen of a border slaveholding State, and had rendered distinguished services to the Union cause. At the first show of hands it was at once evident that the Tennessean was stronger than the New Yorker, receiving four more votes than Mr. Dickinson even in the New York delegation. When the votes on the first ballot were counted it was found that Mr. Johnson had received 200, Mr. Hamlin 150, Mr. Dickinson 108; but before the result was announced almost the whole convention turned their votes to Johnson, and on motion of Mr. Tremain of New York his nomination was declared unanimous. The work was quickly done. Mr. Lincoln, walking over to the War Department in the afternoon as usual for military news, received the dispatch announcing the nomination of Andrew Johnson before he was informed of his own. The telegram containing the news of his own nomination had gone to the White House a few minutes before.

In the evening the National Grand Council of the Union League came together. A large proportion of the members had participated in the National Convention, and their action was therefore a foregone conclusion. They adopted a platform similar to that of the convention, with the exception that they declared, as the Cleveland people had done, in favor of the confiscation of the property of rebels. They heartily approved and indorsed the nominations already made, and passed a resolution to the effect that as Lincoln and Johnson were the only candidates who could hope to be elected as loyal men, they regarded it as the imperative duty of the Union League to do all that lay in its power to secure their election. They also earnestly approved and indorsed the platform and principles adopted by the convention, and pledged themselves, as individuals and as members of the League, to do all in their power to elect the candidates. The seal of secrecy was removed from this action and a copy of the resolution transmitted to the President by W. R. Erwin, the Grand Recording Secretary.¹

A committee, headed by Governor Dennison, came on the next day² to notify the President of his nomination.

I need not say to you, sir [said Mr. Dennison], that the convention, in thus unanimously nominating you for reelection, but gives utterance to the almost universal voice of the loyal people of the country. To doubt of your triumphant election would be little short of abandoning the hope of the final suppression of the rebellion and the restoration of the authority of the Government over the insurgent States.

The President answered:

I will neither conceal my gratification nor restrain the expression of my gratitude that the Union people,
Vol. XXXVIII.—54.

through their convention, in the continued effort to save and advance the nation, have deemed me not unworthy to remain in my present position. I know no reason to doubt that I shall accept the nomination tendered; and yet perhaps I should not declare definitely before reading and considering what is called the platform. I will say now, however, I approve the declaration in favor of so amending the Constitution as to prohibit slavery throughout the nation. When the people in revolt, with a hundred days of explicit notice that they could within those days resume their allegiance without the overthrow of their institutions and that they could not so resume it afterwards, elected to stand out, such amendment to the Constitution as is now proposed became a fitting and necessary conclusion to the final success of the Union cause. Such alone can meet and cover all cavils. Now the unconditional Union men, North and South, perceive its importance and embrace it. In the joint names of Liberty and Union, let us labor to give it legal form and practical effect.

On the same day a committee of the Union League presented themselves to inform him of the action taken the night before. The President answered them more informally, saying that he did not allow himself to suppose that either the convention or the League had concluded that he was either the greatest or the best man in America, but rather that they had decided that it was not best "to swap horses while swimming the stream." All day the throngs of shouting and congratulating delegates filled all the approaches to the Executive Mansion. In a brief speech at night, in answer to a serenade from citizens of Ohio, the President said:

What we want, more than Baltimore conventions or Presidential elections, is success under General Grant. I propose that you constantly bear in mind that the support you owe to the brave officers and soldiers in the field is of the very first importance, and we should therefore bend all our energies to that point.

He then proposed three cheers for General Grant and the officers and soldiers with him, and, swinging his own hat, led off in the cheering.

The more formal notification of the convention was made in a letter written by George William Curtis of New York, in which he paraphrased the platform and expressed the sentiment of the convention and of the people of the country with his usual elegance and force.

They have watched your official course, therefore, with unflagging attention; and amid the bitter taunts of eager friends and the fierce denunciation of enemies, now moving too fast for some, now too slowly for others, they have seen you throughout this tremendous contest patient, sagacious, faithful, just; leaning upon the heart of the great mass of the people, and satisfied to be moved by

its mighty pulsations. It is for this reason that, long before the convention met, the popular instinct had plainly indicated you as its candidate, and the convention therefore merely recorded the popular will. Your character and career prove your unswerving fidelity to the cardinal principles of American liberty and of the American Constitution. In the name of that liberty and Constitution, sir, we earnestly request your acceptance of this nomination, reverently commending our beloved country and you, its Chief Magistrate, with all its brave sons who, on sea and land, are faithfully defending the good old American cause of equal rights, to the blessing of Almighty God.

In accepting the nomination the President observed the same wise rule of brevity which he had followed four years before. He made but one specific reference to any subject of discussion. While he accepted the resolution in regard to the supplanting of republican government upon the Western continent, he gave the convention and the country distinctly to understand that he stood by the action already adopted by himself and the Secretary of State.

There might be misunderstanding [he said] were I not to say that the position of the Government in relation to the action of France in Mexico, as assumed through the State Department and indorsed by the convention among the measures and acts of the Executive, will be faithfully maintained so long as the state of facts shall leave that position pertinent and applicable.

THE WADE-DAVIS MANIFESTO.

IN his message to Congress of the 8th of December, 1863, Mr. Lincoln gave expression to his ideas on the subject of reconstruction more fully and clearly than ever before. He appended to that message a proclamation of the same date guaranteeing a full pardon to all who had been implicated in the rebellion, with certain specified exceptions, on the condition of taking and maintaining an oath to support, protect, and defend the Constitution of the United States and the Union of the States thereunder; to abide by and support all acts of Congress and proclamations of the President made during the rebellion with reference to slaves, so long and so far as not repealed, modified, or held void by Congress or by decision of the Supreme Court. The exceptions to this general amnesty were of those who, having held places of honor and trust under the Government of the United States, had betrayed this trust and entered the service of the Confederacy, and of those who had been guilty of treatment of colored troops not justified by the laws of war. The proclamation further promised that when in any of the States in rebellion a number of citizens equal to one-tenth of the voters in the year 1860 should

HENRY WINTER DAVIS.
(AFTER A PHOTOGRAPH BY POLLOCK.)

reestablish a State government republican in form, and not contravening the oath above mentioned, that such should be recognized as the true government of the State, and should receive the benefits of the constitutional provision that "The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion; and, on application of the legislature, or of the executive (when the legislature cannot be convened), against domestic violence." The President also engaged by this proclamation not to object to any provision which might be adopted by such State governments in relation to the freed people of the States which should recognize and declare their permanent freedom and provide for their education, "and which may yet be consistent, as a temporary arrangement, with their present condition as a laboring, landless, and homeless class." He suggested that in reconstructing the loyal State governments, the names, the boundaries, the subdivisions, the constitutions, and the general codes of laws of the States should be preserved. He stated distinctly that his proclamation had no reference to States where the loyal State governments had all the while been maintained; he took care to make it clear that the respective Houses, and not the Executive, had the constitutional power to decide whether members sent to Congress from any State should be admitted to seats; and he concluded by saying:

This proclamation is intended to present the people of the States wherein the national authority has been suspended, and loyal State governments have been subverted, a mode in and by which the national authority and loyal State governments may be reestablished within said States, or in any of them. And while the mode presented is the

best the Executive can suggest, with his present impressions, it must not be understood that no other possible mode would be acceptable.¹

The message contained an unusually forcible and luminous expression of the principles embraced in the proclamation. The President referred to the dark and doubtful days which followed the announcement of the policy of emancipation and of the employment of black soldiers; the gradual justification of those acts by the successes which the national arms had since achieved; of the change of the public spirit of the border States in favor of emancipation; the enlistment of black soldiers, and their efficient and creditable behavior in arms; the absence of any tendency to servile insurrection or to violence and cruelty among the negroes; the sensible improvement in the public opinion of Europe and of America. He then explained the purpose and spirit of his proclamation. Nothing had been attempted beyond what was amply justified by the Constitution; the form of an oath had been given, but no man was coerced to take it; the Constitution authorized the Executive to grant or withhold a pardon at his own absolute discretion, and this includes the power to grant on terms, as is fully established by judicial authority. He therefore referred to the provision of the Constitution guaranteeing to the States a republican form of government as providing precisely for the case now under treatment; where the element within a State favorable to republican government in the Union might "be too feeble for an opposite and hostile element external to or even within the State."

An attempt [said the President] to guaranty and protect a revived State government, constructed in whole or in preponderating part from the very element against whose hostility and violence it is to be protected, is simply absurd. There must be a test by which to separate the opposing elements, so as to build only from the sound; and that test is a sufficiently liberal one which accepts as sound whoever will make a sworn recantation of his former unsoundness.

In justification of his requiring in the oath of amnesty a submission to and support of the antislavery laws and proclamations, he said:

Those laws and proclamations were enacted and put forth for the purpose of aiding in the suppression of the rebellion. To give them their fullest effects, there had to be a pledge for their mainte-

nance. In my judgment they have aided and will further aid the cause for which they were intended. To now abandon them would be not only to relinquish a lever of power, but would also be a cruel and an astounding breach of faith. I may add, at this point, that while I remain in my present position I shall not attempt to retract or modify the Emancipation Proclamation, nor shall I return to slavery any person who is free by the terms of that proclamation, or by any of the acts of Congress.

The President called attention to the fact that this part of the oath is subject to the modifying and abrogating power of legislation and supreme judicial decision; that the whole purpose and spirit of the proclamation is permissive and not mandatory.

The proposed acquiescence [he said] of the National Executive in any reasonable temporary State arrangement for the freed people is made with the view of possibly modifying the confusion and destitution which must at best attend all classes by a total revolution of labor throughout whole States. It is hoped that the already deeply afflicted people in those States may be somewhat more ready to give up the cause of their affliction if, to this extent, this vital matter be left to themselves, while no power of the National Executive to prevent an abuse is abridged by the proposition.

He had taken the utmost pains to avoid the danger of committal on points which could be more safely left to further developments. "Saying that on certain terms certain classes will be pardoned with rights restored, it is not said that other classes or other terms will never be included; saying that reconstruction will be accepted if presented in a specified way, it is not said it will never be accepted in any other way." The President expressed his profound congratulation at the movement towards emancipation by the several States, and urged once more upon Congress the importance of aiding these steps to the great consummation.

It is rare that so important a state paper has been received with such unanimous tokens of enthusiastic adhesion. However the leading Republicans in Congress may have been led later in the session to differ with the President, there was apparently no voice of discord raised on the day the message was read to both Houses. For a moment all factions in Congress seemed to be of one mind. One who spent the morning on the floor of Congress wrote on the same day: "Men acted as though the millennium had come. Chandler

¹ In some instances this proclamation was misunderstood by generals and commanders of departments, so that prisoners of war were allowed on their voluntary application to take the amnesty oath. This was not the President's intention, and would have led to serious embarrassment in the matter of the exchange of prisoners.

He therefore, on the 26th of March, 1864, issued a supplementary proclamation declaring that the pro-

clamation applied only to those persons who, being yet at large and free from any arrest, confinement, or duress, should voluntarily come forward and take the said oath with the purpose of restoring peace and establishing the national authority; and that persons excluded from the amnesty offered in the proclamation might apply to the President for clemency, like all other offenders, and that their application would receive due consideration.

was delighted, Sumner was joyous, apparently forgetting for the moment his doctrine of State suicide,¹ while at the other political pole Dixon and Reverdy Johnson said the message was highly satisfactory."² Henry Wilson said to the President's secretary: "He has struck another great blow. Tell him for me, God bless him." The effect was similar in the House of Representatives. Mr. Boutwell, who represented the extreme antislavery element of New England, said: "It is a very able and shrewd paper. It has great points of popularity, and it is right." Lovejoy, the leading abolitionist of the West, seemed to see on the mountain the feet of one bringing good tidings. "I shall live," he said, "to see slavery ended in America." Garfield gave his unreserved approval; Kellogg of Michigan went shouting about the lobby: "The President is the only man. There is none like him in the world. He sees more widely and more clearly than any of us." Mr. Henry T. Blow, the radical member from St. Louis (who six months later was denouncing Mr. Lincoln as a traitor to freedom), said: "God bless old Abe! I am one of the radicals who have always believed in him." Mr. Greeley, who was on the floor of the House, went so far as to say the message was "devilish good." The Executive Mansion was filled all day by a rush of congressmen, congratulating the President and assuring him of their support in his wise and humane policy. The conservatives and radicals vied with each other in claiming that the message represented their own views of the crisis. Mr. Judd of Illinois said to the President: "The opinion of people who read your message to-day is, that on that platform two of your ministers must walk the plank—Blair and Bates." To which the President answered: "Both of these men acquiesced in it without objection; the only member of the Cabinet who objected was Mr. Chase." For a moment the most prejudiced Democrats found little to say against the message; they called it "very ingenious and cunning, admirably calculated to deceive." This reception of the message was extremely pleasing to the President. A solution of the most important problem of the time which conservatives like Dixon and Reverdy Johnson thoroughly approved, and to which Mr. Sumner made no objection, was of course a source of profound gratification. He took it as a proof of what he had often said, that there was no essential contest between loyal men on this subject if they would consider it reasonably. He said in conversation on the 10th of December: "The only

BENJAMIN F. WADE.
(FROM A DAGUERREOTYPE.)

question is, Who constitute the State? When that is decided, the solution of subsequent questions is easy."³ He wrote in his original draft of the message that he considered "the discussion as to whether a State had been at any time out of the Union as vain and profitless. We know they were, we trust they shall be, in the Union. It does not greatly matter whether in the meantime they shall be considered to have been in or out." But afterwards, considering that the Constitution empowered him to grant protection to States "in the Union," he saw that it would not answer to admit that the States had at any time been out of it; he erased that sentence as possibly suggestive of evil. He preferred, he said, "to stand firmly based on the Constitution rather than to work in the air." He was specially gratified by reports which came to him of the adhesion of the Missourians in Congress to his view.

I know [he said] these radical men have in them the stuff which must save the state and on which we must mainly rely. They are absolutely incorrosive by the virus of secession. It cannot touch or taint them; while the conservatives, in casting about for votes to carry through their plans, are attempting to affiliate with those whose record is not clear. If one side must be crushed out and the other cherished, there cannot be any doubt which side we must choose as fuller of hope for the future; but just there [he continued] is where their wrong begins. They insist that I shall hold and treat Governor Gamble and his supporters, men appointed by the loyal people of Missouri as representatives of Missouri loyalty, and who have done their whole duty in the war faithfully and promptly, who when they have disagreed with me have been silent and

¹ See resolutions introduced in Senate Feb. 11, 1862.

² J. H., Diary.

³ J. H., Diary.

kept about the good work — that I shall treat these men as copperheads and enemies of the Government. This is simply monstrous.

For the first few days there was no hint of any hostile feeling in Congress. There was, in fact, no just reason why the legislative body should regard its prerogative as invaded. The President had not only kept clearly within his constitutional powers, but his action had been expressly authorized by Congress. The act of July 17, 1862, had provided that the President might thereafter at any time, by proclamation, extend pardon and amnesty to persons participating in the rebellion, "with such exceptions and on such conditions as he might deem expedient for the public welfare." Of course a general amnesty required general conditions; and the most important of these was one which should provide for the protection of the freedmen who had been liberated by the war.

It soon enough appeared, however, that the millennium had not arrived; that in a Congress composed of men of such positive convictions and vehement character there were many who would not submit permanently to the leadership of any man, least of all to that of one so gentle, so reasonable, so devoid of malice as the President. Mr. Henry Winter Davis at once moved that that part of the message relating to reconstruction should be referred to a special committee, of which he was made chairman, and on the 15th of February he reported "a bill to guarantee to certain States whose governments have been usurped or overthrown a republican form of government." Mr. Davis was a man of too much integrity and elevation of character to allow the imputation that his action on public matters was dictated entirely by personal feeling or prejudice; but at the same time it cannot be denied that he maintained towards the President from beginning to end of his administration an attitude of consistent hostility. This was a source of chagrin and disappointment to Mr. Lincoln. He came to Washington with a high opinion of the ability and the character of Mr. Davis, and expected to maintain with him relations of intimate friendship. He was cousin to one of the President's closest friends in Illinois, Judge David Davis, and his attitude in the Congress which preceded the rebellion was such as to arouse in the mind of Mr. Lincoln the highest admiration and regard. But the selection of Mr. Blair of Maryland as a member of the Cabinet estranged the sympathies of Mr. Davis and his friends, and the breach thus made between him and the Administration was never healed, though the President did all in his power to heal it. In the spring of 1863 Mr. Davis, assuming that the President might be inclined to favor unduly the conservative candidate in the election for

the next Congress, sought an interview with him, the result of which the President placed in writing in a letter dated March 18:

There will be in the new House of Representatives, as there were in the old, some members openly opposing the war, some supporting it unconditionally, and some supporting it with "buts" and "ifs" and "ands." They will divide on the organization of the House — on the election of a speaker. As you ask my opinion, I give it, that the supporters of the war should send no man to Congress who will not pledge himself to go into caucus with the unconditional supporters of the war, and to abide the action of such caucus and vote for the person therein nominated for speaker. Let the friends of the Government first save the Government, and then administer it to their own liking.

Mr. Davis answered:

Your favor of the 18th is all that could be desired, and will greatly aid us in bringing our friends to a conclusion such as the interests of the country require.

In spite of all the efforts which the President made to be on friendly terms with Mr. Davis, the difference between them constantly widened. Mr. Davis grew continually more confirmed in his attitude of hostility to every proposition of the President. He became one of the most severe and least generous critics of the Administration in Congress. He came at last to consider the President as unworthy of even respectful treatment; and Mr. Seward, in the midst of his energetic and aggressive campaign against European unfriendliness, was continually attacked by him as a truckler to foreign powers and little less than a traitor to his country. The President, however, was a man so persistently and incorrigibly just, that even in the face of this provocation he never lost his high opinion of Mr. Davis's ability nor his confidence in his inherent good intentions. He refused, in spite of the solicitations of most of his personal friends in Maryland, to discriminate against the faction headed by Mr. Davis in making appointments to office in that State; and when, during an important campaign, a deputation of prominent supporters of the Administration in Maryland came to Washington to denounce Mr. Davis for his outspoken hostility to the President, saying that such a course, if it continued unchecked, would lose Mr. Lincoln the electoral vote of the State, he replied:

I understood that Mr. Davis is doing all in his power to secure the success of the emancipation ticket in Maryland. If he does this, I care nothing about the electoral vote.

In the preamble to his bill Mr. Davis expressed, with his habitual boldness and lucidity, his fundamental thesis that the rebellious States were out of the Union.

Whereas [he said], the so-called Confederate States are a public enemy, waging an unjust war, whose injustice is so glaring that they have no right to claim the mitigation of the extreme rights of war which are accorded by modern usage to an enemy who has the right to consider the war a just one; and,

Whereas, none of the States which, by a regularly recorded majority of its citizens, have joined the so-called Southern Confederacy can be considered and treated as entitled to be represented in Congress or to take any part in the political government of the Union.

This seemed to Congress too trenchant a solution of a constitutional knot which was puzzling the best minds of the commonwealth, and the preamble was rejected; but the spirit of it breathed in every section of the bill. Mr. Davis's design was to put a stop to the work which the President had already begun in Tennessee and Louisiana, and to prevent the extension of that policy to other Southern States. The bill authorized the appointment of a provisional governor in each of the States in rebellion, and provided that, after the military resistance to the United States should have been suppressed and the people sufficiently returned to their obedience to the Constitution and laws, the white male citizens of the State should be enrolled, and when a majority of them should have taken the oath of allegiance the loyal people of the State should be entitled to elect delegates to a convention to reestablish a State government. The convention was required to insert in the constitution three provisions: First, to prevent prominent civil or military officers of the Confederates to vote for or to be members of the legislature or governor; second, that involuntary servitude is forever prohibited, and the freedom of all persons guaranteed in said States; third, no debt, State or Confederate, created by or under the sanction of the usurping power shall be recognized or paid by the State. Upon the adoption of the constitution by the convention, and its ratification by the electors of the State, the provisional government shall so certify to the President, who, after obtaining the assent of Congress, shall by proclamation recognize the government so established, and none other, as the constitutional government of the State; and from the date of such recognition, and not before, congressmen and Presidential electors may be elected in such State. Pending the reorganization, the provisional governor shall enforce the laws of the Union and of the State before rebellion. Another section of the bill emancipated all slaves in those States, with their posterity, and made it the duty of the United States courts to discharge them on habeas corpus if restrained of their liberty on pretense of any claim to service or

labor as slaves, and to inflict a penalty of fine or imprisonment upon the persons claiming them. Another section declared any person hereafter holding any important office, civil or military, in the rebel service not to be a citizen of the United States.

This bill was supported by Mr. Davis in a speech of extraordinary energy. Without hesitation he declared it a test and standard of antislavery orthodoxy; he asserted boldly that Congress, and Congress alone, had the power to revive the reign of law in all that territory which through rebellion had put itself outside of the law. "Until," he said, "Congress recognizes a State government organized under its auspices, there is no government in the rebel States except the authority of Congress." The duty is imposed on Congress to administer civil government until the people shall, under its guidance, submit to the Constitution of the United States, and, under the laws which it shall impose and on the conditions Congress may require, reorganize a republican government for themselves and Congress shall recognize that government. He declared there was no indication which came from the South, from the darkness of that bottomless pit, that there was a willingness to accept any terms that even the Democrats were willing to offer; he believed that no beginning of legal and orderly government could be made till military opposition was absolutely annihilated; that there were only three ways of bringing about a reorganization of civil governments. One was to remove the cause of the war by an amendment to the Constitution of the United States, prohibiting slavery everywhere within its limits: that, he said, "goes to the root of the matter, and should consecrate the nation's triumph"; but this measure he thought involved infinite difficulty and delay. Though it met his hearty approval, it was not a remedy for the evils to be dealt with. The next plan he considered was that of the President's amnesty proclamation. This he denounced as utterly lacking in all the guarantees required:

If, in any manner [he said], by the toleration of martial law, lately proclaimed the fundamental law, under the dictation of any military authority, or under the prescriptions of a provost-marshal, something in the form of a government shall be presented, represented to rest on the votes of one-tenth of the population, the President will recognize that, provided it does not contravene the proclamation of freedom and the laws of Congress.

Having dismissed both of these plans with brief censure, he then made a powerful plea for the bill he had reported. He called upon Congress to take the responsibility of saying:

In the face of those who clamor for speedy recognition of governments tolerating slavery, that the

safety of the people of the United States is the supreme law; that their will is the supreme rule of law, and that we are authorized to pronounce their will on this subject; take the responsibility to say that we will revise the judgments of our ancestors; that we have experience written in blood which they had not; that we find now, what they darkly doubted, that slavery is really, radically inconsistent with the permanence of republican governments, and that being charged by the supreme law of the land on our conscience and judgment to guarantee, that is, to continue, maintain, and enforce, if it exists, to institute and restore when overthrown, republican governments throughout the broad limits of the Republic, we will weed out every element of their policy which we think incompatible with its permanence and endurance.

The bill was extensively debated. It was not opposed to any extent by the Republicans of the House; the Democrats were left to make a purely partisan opposition to it. The President declined to exercise any influence on the debate, and the bill was passed by a vote of seventy-four to sixty-six. It was called up in the Senate by Mr. Wade of Ohio, who, in supporting it, followed very much the same line of argument as that adopted by Mr. Davis in the House. Mr. B. Gratz Brown of Missouri, believing that as the session was drawing near its close there was no time to discuss a measure of such transcendent importance, offered an amendment simply forbidding the States in insurrection to cast any vote for electors of President or Vice-President of the United States, or to elect members of Congress until the insurrection in such State was suppressed or abandoned, and its inhabitants had returned to their obedience to the Government of the United States; such returning to obedience being declared by proclamation of the President, issued by virtue of an act of Congress hereafter to be passed authorizing the same. The amendment of Mr. Brown was adopted by a bare majority, seventeen voting in favor of it and sixteen against it. Mr. Sumner tried to have the Proclamation of Emancipation adopted and enacted as a statute of the United States, but this proposition was lost by a considerable majority. The House declined to concur in the amendment of the Senate and asked for a committee of conference, in which the Senate receded from its amendment and the bill went to the President for his approval in the closing moments of the session.

Congress was to adjourn at noon on the Fourth of July; the President was in his room at the Capitol signing bills, which were laid before him as they were brought from the two Houses. When this important bill was placed before him he laid it aside and went on with the other work of the moment. Several prominent members entered in a state of intense anxiety over the fate of the bill. Mr. Sumner and Mr. Bout-

well, while their nervousness was evident, refrained from any comment. Mr. Chandler, who was unabashed in any mortal presence, roundly asked the President if he intended to sign the bill.¹ The President replied: "This bill has been placed before me a few moments before Congress adjourns. It is a matter of too much importance to be swallowed in that way." "If it is vetoed," cried Mr. Chandler, "it will damage us fearfully in the North-west. The important point is that one prohibiting slavery in the reconstructed States." Mr. Lincoln said: "That is the point on which I doubt the authority of Congress to act." "It is no more than you have done yourself," said the senator. The President answered: "I conceive that I may in an emergency do things on military grounds which cannot be done constitutionally by Congress." Mr. Chandler, expressing his deep chagrin, went out, and the President, addressing the members of the Cabinet who were seated with him, said: "I do not see how any of us now can deny and contradict what we have always said, that Congress has no constitutional power over slavery in the States." Mr. Fessenden expressed his entire agreement with this view.

I have even had my doubts [he said] as to the constitutional efficacy of your own decree of emancipation, in such cases where it has not been carried into effect by the actual advance of the army.

The President said:

This bill and the position of these gentlemen seem to me, in asserting that the insurrectionary States are no longer in the Union, to make the fatal admission that States, whenever they please, may of their own motion dissolve their connection with the Union. Now we cannot survive that admission, I am convinced. If that be true, I am not President; these gentlemen are not Congress. I have laboriously endeavored to avoid that question ever since it first began to be mooted, and thus to avoid confusion and disturbance in our own councils. It was to obviate this question that I earnestly favored the movement for an amendment to the Constitution abolishing slavery, which passed the Senate and failed in the House. I thought it much better, if it were possible, to restore the Union without the necessity of a violent quarrel among its friends as to whether certain States have been in or out of the Union during the war—a merely metaphysical question, and one unnecessary to be forced into discussion.

Although every member of the Cabinet agreed with the President, when, a few minutes later, he entered his carriage to go home, he foresaw the importance of the step he had resolved to take and its possibly disastrous consequences to himself. When some one said to him that the threats made by the extreme radicals had no foundation, and that people

¹ J. H., Diary.

would not bolt their ticket on a question of metaphysics, he answered: "If they choose to make a point upon this, I do not doubt that they can do harm. They have never been friendly to me. At all events, I must keep some consciousness of being somewhere near right. I must keep some standard or principle fixed within myself."

After the fullest deliberation the President remained by his first impression that the bill was too rigid and too restrictive in its provisions to accomplish the work desired. He had all his life hated formulas in government, and he believed that the will of an intelligent people, acting freely under democratic institutions, could best give shape to the special machinery under which it was to be governed; and, in the wide variety of circumstances and conditions prevailing throughout the South, he held it unwise for either Congress or himself to prescribe any fixed and formal method by which the several States should resume their practical legal relations with the Union. Thinking in this way, and feeling himself unable to accept the bill of Congress as the last word of reconstruction, and yet unwilling to reject whatever of practical good might be accomplished by it, he resolved, a few days after Congress had adjourned, to remit the matter to the people themselves and to allow them their choice of all the methods proposed of returning to their allegiance. He issued, on the 8th of July, a proclamation giving a copy of the bill of Congress, reciting the circumstances under which it was passed, and going on to say:

Now, therefore, I, Abraham Lincoln, President of the United States, do proclaim, declare, and make known that while I am—as I was in December last, when by proclamation I propounded a plan of restoration—unprepared by a formal approval of this bill to be inflexibly committed to any single plan of restoration, and while I am also unprepared to declare that the free State constitutions and governments, already adopted and installed in Arkansas and Louisiana, shall be set aside and held for naught, thereby repelling and discouraging the loyal citizens who have set up the same as to further effort, or to declare a constitutional competency in Congress to abolish slavery in the States, but am at the same time sincerely hoping and expecting that a constitutional amendment abolishing slavery throughout the nation may be adopted, nevertheless, I am fully satisfied with the system for restoration contained in the bill as one very proper for the loyal people of any State choosing to adopt it; and that I am, and at all times shall be, prepared to give the executive aid and assistance to any such people, so soon as military resistance to the United States shall have been suppressed in any such State, and the people thereof shall have sufficiently returned to their obedience to the Constitution and the laws of the United States, in which cases military governors will be appointed, with directions to proceed according to the bill.

The refusal of the President to sign the reconstruction bill caused a great effervescence at the adjournment of Congress. Mr. Chase, who had resigned from the Cabinet, made this entry in his diary:

The President pocketed the great bill providing for the reorganization of the rebel States as loyal States. He did not venture to veto, and so put it in his pocket. It was a condemnation of his amnesty proclamation and of his general policy of reconstruction, rejecting the idea of possible reconstruction with slavery, which neither the President nor his chief advisers have, in my opinion, abandoned.

This entry, made by Mr. Chase in the bitterness of his anger, places the basest construction upon the President's action; but this sentiment was shared by not a few of those who claimed the title of extreme radicals in Congress. Mr. Sumner reported a feeling of intense indignation against the President. Two days later the ex-Secretary gleefully reported, on the authority of Senator Pomeroy, that there was great dissatisfaction with Mr. Lincoln, which had been much exasperated by the pocketing of the reconstruction bill.

When Mr. Lincoln, disregarding precedents, and acting on his lifelong rule of taking the people into his confidence, issued his proclamation of the 8th of July, it was received by each division of the loyal people of the country as might have been expected. The great mass of Republican voters, who cared little for the metaphysics of the case, accepted his proclamation, as they had accepted that issued six months before, as the wisest and most practicable method of handling the question; but among those already hostile to the President, and those whose devotion to the cause of freedom was so ardent as to make them look upon him as lukewarm, the exasperation which was already excited increased. The indignation of Mr. Davis and Mr. Wade at seeing their work of the last session thus brought to nothing could not be restrained. Mr. Davis prepared, and both of them signed and published on the 5th of August, a manifesto, the most vigorous in attack that was ever directed against the President from his own party during his term. The grim beginning of this document, which is addressed "To the Supporters of the Government," is in these terms:

We have read without surprise, but not without indignation, the proclamation of the President of the 8th of July, 1864. The supporters of the Administration are responsible to the country for its conduct; and it is their right and duty to check the encroachments of the Executive on the authority of Congress, and to require it to confine itself to its proper sphere.

The paper went on to narrate the history of the reconstruction bill, and to claim that its treatment indicated a persistent though un-

avowed purpose of the President to defeat the will of the people by the Executive perversion of the Constitution. They insinuated that only the lowest personal motives could have dictated this action:

The President [they said], by preventing this bill from becoming a law, holds the electoral votes of the rebel States at the dictation of his personal ambition. . . . If electors for President be allowed to be chosen in either of those States, a sinister light will be cast on the motives which induced the President to "hold for naught" the will of Congress rather than his governments in Louisiana and Arkansas.

They ridiculed the President's earnestly expressed hope that the constitutional amendment abolishing slavery might be adopted:

We curiously inquire on what his expectation rests, after the vote of the House of Representatives at the recent session and in the face of the political complexion of more than enough of the States to prevent the possibility of its adoption within any reasonable time; and why he did not indulge his sincere hopes with so large an installment of the blessing as his approval of the bill would have secured?

When we consider that only a few months elapsed before this beneficent amendment was adopted, we can form some idea of the comparative political sagacity of Mr. Lincoln and his critics. The fact that the President gave the bill of Congress his approval as a very proper plan for the loyal people of any States choosing to adopt it seemed to infuriate the authors of the bill: they say, "A more studied outrage on the legislative authority of the people has never been perpetrated." At the close of a long review of the President's proclamation, in which every sentence came in for its share of censure or of ridicule, this manifesto concluded:

Such are the fruits of this rash and fatal act of the President—a blow at the friends of his Administration, at the rights of humanity, and at the principles of republican government. The President has greatly presumed on the forbearance which the supporters of his Administration have so long practiced, in view of the arduous conflict in which we are engaged, and the reckless ferocity of our political opponents. But he must understand that our support is of a cause and not of a man; that the authority of Congress is paramount and must be respected; that the whole body of the Union men of Congress will not submit to be impeached by him of rash and unconstitutional legislation; and if he wishes our support he must confine himself to his executive duties—to obey and to execute, not make the laws—to suppress by arms armed rebellion, and leave political reorganization to Congress. If the supporters of the Government fail to insist on this they become responsible for the usurpations which they fail to rebuke, and are justly liable to the indignation of the people whose rights and

security, committed to their keeping, they sacrifice. Let them consider the remedy of these usurpations, and, having found it, fearlessly execute it.

HORACE GREELEY'S PEACE MISSION.

NOT least among the troubles and the vexations of the summer of 1864 was the constant criticism of sincere Republicans who were impatient at what they considered the slow progress of the war, and irritated at the deliberation with which Mr. Lincoln weighed every important act before decision. Besides this, a feeling of discouragement had taken possession of some of the more excitable spirits, which induced them to give ready hospitality to any suggestions of peace. Foremost among these was Horace Greeley, who in personal interviews, in private letters, and in the columns of the "Tribune" repeatedly placed before the President, with that vigor of expression in which he was unrivaled, the complaints and the discontents of a considerable body of devoted, if not altogether reasonable, Union men. The attitude of benevolent criticism which he was known to sustain towards the Administration naturally drew around him a certain number of adventurers and busybodies, who fluttered between the two great parties, and were glad to occupy the attention of prominent men on either side with schemes whose only real object was some slight gain or questionable notoriety for themselves. A person who called himself "William Cornell Jewett of Colorado" had gained some sort of intimacy with Mr. Greeley by alleging relations with eminent Northern and Southern statesmen. He was one of those newspaper laughing-stocks who come gradually to be known and talked about. He wrote interminable letters of advice to Mr. Lincoln and to Jefferson Davis, which were never read nor answered, but which, printed with humorous comment in the "New York Herald," were taken seriously by the indiscriminating, and even quoted and discussed in the London papers. He wrote to Mr. Greeley in the early part of July from Niagara Falls, and appears to have convinced the latter that he was an authorized intermediary from the Confederate authorities to make propositions for peace. He wrote that he had just left George N. Sanders of Kentucky on the Canada side.

I am authorized to state to you [he continued], for our use only, not the public, that two ambassadors of Davis & Co. are now in Canada with full and complete powers for a peace, and Mr. Sanders requests that you come on immediately to me at Cataract House to have a private interview; or, if you will send the President's protection for him and two friends, they will come and meet you. He says the

whole matter can be consummated by me, you, them, and President Lincoln.

This letter was followed the next day by a telegram saying :

Will you come here? Parties have full power.

Mr. Greeley was greatly impressed by this communication. The inherent improbabilities of it did not seem to strike him, though the antecedents of Sanders were scarcely more reputable than those of Jewett. He sent the letter and the telegram to the President, inclosed in a letter of his own, the perfervid vehemence of which shows the state of excitement he was laboring under. He refers to his correspondent as "our irrepressible friend Colorado Jewett." He admits some doubt as to the "full powers," but insists upon the Confederate desire for peace.

And therefore [he says] I venture to remind you that our bleeding, bankrupt, almost dying country also longs for peace; shudders at the prospect of fresh conscriptions, of further wholesale devastations, and of new rivers of human blood. And a widespread conviction that the Government and its prominent supporters are not anxious for peace, and do not improve proffered opportunities to achieve it, is doing great harm now, and is morally certain, unless removed, to do far greater in the approaching elections.

He then rebukes Mr. Lincoln for not having received the Stephens embassy, disapproves the warlike tone of the Baltimore platform, urges the President to make overtures for peace in time to affect the North Carolina elections, and suggests the following plan of adjustment: 1. The Union is restored and declared perpetual. 2. Slavery is utterly and forever abolished throughout the same. 3. A complete amnesty for all political offenses. 4. Payment of \$400,000,000 to the slave States pro rata for their slaves. 5. The slave States to be represented in proportion to their total population. 6. A National convention to be called at once.

The letter closes with this impassioned appeal:

Mr. President, I fear you do not realize how intensely the people desire any peace consistent with the national integrity and honor, and how joyously they would hail its achievement and bless its authors. With United States stocks worth but forty cents in gold per dollar, and drafting about to commence on the third million of Union soldiers, can this be wondered at? I do not say that a just peace is now attainable, though I believe it to be so. But I do say that a frank offer by you to the insurgents of terms which the impartial will say ought to be accepted will, at the worst, prove an immense and sorely needed advantage to the national cause; it may save us from a Northern insurrection.

In a postscript Mr. Greeley again urges the President to invite "those at Niagara to ex-

hibit their credentials and submit their ultimatum."

Mr. Lincoln determined at once to take action upon this letter. He had no faith in Jewett's story. He doubted whether the embassy had any existence except in the imagination of Sanders and Jewett. But he felt the unreasonableness and injustice of Mr. Greeley's letter, while he did not doubt his good faith; and he resolved to convince him at least, and perhaps others of his way of thinking, that there was no foundation for the reproaches they were casting upon the Government for refusing to treat with the rebels. That there might be no opportunity for dispute in relation to the facts of the case, he arranged that the witness of his willingness to listen to any overtures which might come from the South should be Mr. Greeley himself. He answered his letter at once, on the 9th of July, saying:

If you can find any person, anywhere, professing to have any proposition from Jefferson Davis, in writing, for peace, embracing the restoration of the Union, and abandonment of slavery, whatever else it embraces, say to him he may come to me with you, and that if he really brings such proposition he shall at the least have safe conduct with the paper (and without publicity, if he chooses) to the point where you shall have met with him. The same if there be two or more persons.

Mr. Greeley answered this letter the next day in evident embarrassment. The President had surprised him by his frank and prompt acquiescence in his suggestions. He had accepted the first two points of Mr. Greeley's plan of adjustment—the restoration of the Union, and the abandonment of slavery—as the only preliminary conditions of negotiations upon which he would insist, and requested this vehement advocate of peace to bring forward his ambassadors. Mr. Greeley's reply of the 10th seems somewhat lacking both in temper and in candor. He thought the negotiators would not "open their budget" to him; repeated his reproaches at the "rude repulse" of Stephens; referred again to the importance of doing something in time for the North Carolina elections; and said at least he would try to get a look into the hand of the men at Niagara, though he had "little heart for it." But on the 13th he wrote in a much more positive manner. He said:

I have now information, on which I can rely, that two persons, duly commissioned and empowered to negotiate for peace, are at this moment not far from Niagara Falls in Canada, and are *desirous* of conferring with yourself, or with such persons as you may appoint and empower to treat with them. Their names (only given in confidence) are Hon. Clement C. Clay of Alabama, and Hon. Jacob Thompson of Mississippi.

He added that he knew nothing and had proposed nothing as to terms ; that it seemed to him high time an effort should be made to terminate the wholesale slaughter. He hoped to hear that the President had concluded to act in the premises, and to act so promptly as to do some good in the North Carolina elections.

On the receipt of this letter, which was written four days after Mr. Greeley had been fully authorized to bring to Washington any one he could find empowered to treat for peace, and which yet was based on the assumption of the President's unwillingness to do the very thing he had already done, Mr. Lincoln resolved to put an end to a correspondence which promised to be indefinitely prolonged, by sending an aide-de-camp to New York to arrange in a personal interview what it seemed impossible to conclude by mail. On the 15th he sent Mr. Greeley a brief telegram expressing his disappointment, saying, "I was not expecting you to send me a letter, but to bring me a man or men," and announced the departure of a messenger with a letter. The letter was of the briefest. It merely said :

Yours of the 13th is just received, and I am disappointed that you have not already reached here with those commissioners, if they would consent to come, on being shown my letter to you of the 9th inst. Show that and this to them, and if they will come on the terms stated in former, bring them. I not only intend a sincere effort for peace, but I intend that you shall be a personal witness that it is made.

This curt and peremptory missive was delivered to Mr. Greeley by Major John Hay early on the morning of the 16th. He was still somewhat reluctant to go ; he thought some one not so well known would be less embarrassed by public curiosity ; but said finally that he would start at once if he could be given a safe conduct for four persons, to be named by him. Major Hay communicated this to the President and received the required order in reply. "If there is or is not anything in the affair," he said, "I wish to know it without unnecessary delay."

The safe conduct was immediately written and given to Mr. Greeley, who started at once for Niagara. It provided that Clement C. Clay, Jacob Thompson, James P. Holcombe, and George N. Sanders should have safe conduct to Washington in company with Horace Greeley, and should be exempt from arrest or annoyance of any kind from any officer of the United States during their journey. Nothing was said by Mr. Greeley or by Major Hay to the effect that this safe conduct modified in any respect the conditions imposed by the President's letter of the 9th. It merely carried into effect the proposition made in that letter. On arriving at Niagara, Mr. Greeley placed

himself at once in the hands of Jewett, who was waiting to receive him, and sent by him a letter addressed to Clay, Thompson, and Holcombe, in which he said :

I am informed that you are duly accredited from Richmond as the bearers of propositions looking to the establishment of peace ; that you desire to visit Washington in the fulfillment of your mission ; and that you further desire that Mr. George N. Sanders shall accompany you. If my information be thus far substantially correct, I am authorized by the President of the United States to tender you his safe conduct on the journey proposed, and to accompany you at the earliest time that will be agreeable to you.

No clearer proof can be given than is afforded in this letter that Mr. Greeley was absolutely ignorant of all the essential facts appertaining to the negotiation in which he was engaged. As it turned out, he had been misinformed even as to the personnel of the embassy, Jacob Thompson not being, and not having been, in company with the others ; none of them had any authority to act in the capacity attributed to them ; and, worse than all this, Mr. Greeley kept out of view, in his missive thus shot at a venture, the very conditions which Mr. Lincoln had imposed in his letter of the 9th and repeated in that of the 15th. Yet, with all the advantages thus afforded them, Clay and Holcombe felt themselves too bare and naked of credentials to accept Mr. Greeley's offer, and were therefore compelled to answer that they had not been accredited from Richmond, as assumed in his note. They made haste to say, however, that they were acquainted with the views of their Government, and could easily get credentials, or other agents could be accredited in their place, if they could be sent to Richmond armed with "the circumstances disclosed in this correspondence." It is incomprehensible that a man of Mr. Greeley's experience should not have recognized at once the purport of this proposal. It simply meant that Mr. Lincoln should take the initiative in suing the Richmond authorities for peace, on terms to be proposed by them. The essential impossibility of these terms was not apparent to Mr. Greeley ; he merely saw that the situation was somewhat different from what he had expected, and therefore acknowledged the receipt of the letter, promised to report to Washington and solicit fresh instructions, and then telegraphed to Mr. Lincoln the substance of what Clay and Holcombe had written. The President, with unwearied patience, drew up a final paper, which he sent by Major Hay to Niagara, informing Mr. Greeley by telegraph that it was on the way. This information Mr. Greeley at once sent over the border, with many apologies for the delay.

Major Hay arrived at Niagara on the 20th

of July with a paper in the President's own handwriting, expressed in these words:

EXECUTIVE MANSION,
WASHINGTON, July 18, 1864.

To whom it may concern: Any proposition which embraces the restoration of peace, the integrity of the whole Union, and the abandonment of slavery, and which comes by and with an authority that can control the armies now at war against the United States, will be received and considered by the Executive government of the United States, and will be met by liberal terms on other substantial and collateral points, and the bearer or bearers thereof shall have safe conduct both ways.

ABRAHAM LINCOLN.

Mr. Greeley had already begun to have some impression of the unfortunate position in which he had placed himself, and the reading of this straightforward document still further nettled and perplexed him. He proposed to bring Jewett into conference; this Major Hay declined. He then refused to cross the river to Clifton unless Major Hay would accompany him, and himself deliver the paper to the Confederate emissaries. They therefore went together and met Mr. Holcombe in a private room of the Clifton House (Mr. Clay being absent for a day), and handed him the President's letter. After a few moments' conversation they separated, Mr. Greeley returning to New York and Major Hay remaining at Niagara to receive any answer that might be given to the letter. Before taking the train Mr. Greeley had an interview with Jewett, unknown to Major Hay, in which he seems to have authorized Jewett to continue to act as his representative. Jewett lost no time in acquainting the emissaries with this fact, informing them of the departure of Mr. Greeley, of "his regret at the sad termination of the initiatory steps taken for peace, in consequence of the change made by the President in his instructions to convey commissioners to Washington for negotiations, unconditionally, and that Mr. Greeley would be pleased to receive their answer" through him (Jewett). They replied to Jewett with mutual compliments, inclosing a long letter to Mr. Greeley, arraigning the President for his alleged breach of faith, which Jewett promptly communicated to the newspapers of the country without notice to Major Hay, informing him afterwards in a note that he did this by way of revenging the slight of the preceding day.

In giving the letter of the rebel emissaries to the press instead of sending it to its proper destination, Jewett accomplished the purpose for which it was written. It formed a not ineffective document in a heated political campaign. It would be difficult to ascertain, at this day, whether Mr. Greeley ever communi-

cated to Jewett or Sanders, and whether they, in their constant flittings to and fro over the Suspension Bridge, ever made known to Clay and Holcombe the conditions of negotiation laid down by Mr. Lincoln in his letters of the 9th and 15th of July. At all events they pretended to be ignorant of any such conditions, and assumed that the President had sent Mr. Greeley to invite them to Washington without credentials and without conditions, to convey to Richmond his overtures of peace. They did not say with any certainty that even in that event his overtures would have been accepted, but expressed the hope that in case the war must continue there might "have been infused into its conduct something more of the spirit which softens and partially redeems its brutalities." They then went on to accuse the President of a "sudden and entire change of views," of a "rude withdrawal of a courteous overture," of "fresh blasts of war to the bitter end"; attributing this supposed change to some "mysteries of his cabinet" or some "caprice of his imperial will." They plainly intimated that while the South desired peace, it would not accept any arrangement which bartered away its self-government; and in conclusion they called upon their fellow-Confederates to strip from their "eyes the last film of delusion" that peace is possible, and "if there were any patriots or Christians" in the North, they implored them "to recall the abused authority and vindicate the outraged civilization of their country."

Even this impudent and uncandid manifesto did not convince Mr. Greeley that he had committed an error. On the contrary, he adopted the point of view of the rebel emissaries, and contended after his return to New York that he regarded the safe conduct given him on the 16th of July as a waiver by the President of all the conditions of his former letters. Being attacked by his colleagues of the press for his action at Niagara, he could only defend himself by implied censure of the President, and the discussion grew so warm that both he and his assailants at last joined in a request to Mr. Lincoln to permit the publication of the correspondence between them. This was an excellent opportunity for Mr. Lincoln to vindicate his own proceeding. But he rarely looked at such matters from the point of view of personal advantage, and he feared that the passionate, almost despairing appeals of the most prominent Republican editor in the North for peace at any cost would deepen the gloom in the public mind and have an injurious effect upon the Union cause. He therefore proposed to Mr. Greeley, in case the correspondence should be published, to omit some of the most vehement

phrases of his letters and those in which he advocated peace negotiations solely for political effect; at the same time he invited him to come to Washington and talk with him freely. Mr. Greeley, writing on the 8th of August, accepted both suggestions in principle, but he querulously declined going to Washington at that time, on the ground that the President was surrounded by his "bitterest personal enemies," and that his going would only result in further mischief, as at Niagara. "I will gladly go," he continued, "whenever I feel a hope that their influence has waned." Then, unable to restrain himself, he broke out in new and severe reproaches against the President for not having received Mr. Stephens, for not having sent a deputation to Richmond to ask for peace after Vicksburg, for not having taken the Democrats in Congress at their word, and sent "three of the biggest of them as commissioners to see what kind of a peace they could get." He referred once more to Niagara, and said magnanimously, "Let the past go"; but added the stern admonition, "Do not let this month pass without an earnest effort for peace." He held out a hope that if the President would turn from the error of his ways he would still help him make peace; but for the time being, "knowing who are nearest you," he gave him up. The only meaning this can have is simply, Dismiss Seward from your Cabinet and do as I tell you, and then perhaps I can save your Administration.

The next day, having received another telegram from the President, who, regardless of his own dignity, was still endeavoring to conciliate and convince him, Mr. Greeley wrote another letter, which we shall give more fully than the rest, to show in what a dangerous frame of mind was the editor of the most important organ of public opinion in the North. He begins by refusing to telegraph, "since I learned by sad experience at Niagara that my dispatches go to the War Department before reaching you."

I fear that my chance for usefulness has passed. I know that nine-tenths of the whole American people, North and South, are anxious for peace — peace on almost any terms — and utterly sick of human slaughter and devastation. I know that, to the general eye, it now seems that the rebels are anxious to negotiate and that we refuse their advances. I know that if this impression be not removed we shall be beaten out of sight next November. I firmly believe that, were the election to take place to-morrow, the Democratic majority in this State and Pennsylvania would amount to 100,000, and that we should lose Connecticut also. Now if the rebellion can be crushed before November it will do to go on; if not, we are rushing to certain ruin.

What, then, can I do in Washington? Your trusted

advisers nearly all think I ought to go to Fort Lafayette for what I have done already. Seward wanted me sent there for my brief conference with M. Mercier. The cry has steadily been, No truce! No armistice! No negotiation! No mediation! Nothing but surrender at discretion! I never heard of such fatuity before. There is nothing like it in history. It *must* result in disaster, or all experience is delusive.

Now I do not know that a tolerable peace could be had, but I believe it might have been last month; and, at all events, I know that an honest, sincere effort for it would have done us immense good. And I think no Government fighting a rebellion should ever close its ears to any proposition the rebels may make.

I beg you, implore you, to inaugurate or invite proposals for peace forthwith. And in case peace cannot now be made consent to an *armistice for one year*, each party to retain unmolested all it now holds, but the rebel ports to be opened. Meantime let a national convention be held, and there will surely be no more war at all events.

In a letter of the 11th of August, Mr. Greeley closed this extraordinary correspondence by insisting that if his letters were published they should be printed entire. This was accepted by Mr. Lincoln as a veto upon their publication. He could not afford, for the sake of vindicating his own action, to reveal to the country the despondency — one might almost say the desperation — of one so prominent in Republican councils as the editor of the "Tribune." The spectacle of this veteran journalist, who was justly regarded as the leading controversial writer on the antislavery side, ready to sacrifice everything for peace, and frantically denouncing the Government for refusing to surrender the contest, would have been, in its effect upon public opinion, a disaster equal to the loss of a great battle. The President had a sincere regard for Mr. Greeley also, and was unwilling to injure him and his great capacities for usefulness by publishing these ill-considered and discouraging utterances. His magnanimity was hardly appreciated. Mr. Greeley, in this letter of the 11th of August, and afterwards, insisted that the President had in his letter and his dispatch of the 15th of July changed his ground from that held in his letter of the 9th, which ground, he asserted, was again shifted in his paper "To whom it may concern." This was of course wholly without foundation. The letter of the 9th authorized Mr. Greeley to bring to Washington any one "professing to have any proposition from Jefferson Davis, in writing, for peace, embracing the restoration of the Union, and abandonment of slavery"; the letter of the 15th repeats the offer contained in that of the 9th, saying, "Show that and this to them, and if they will come on the terms

stated in former, bring them." The next day Major Hay gave Mr. Greeley a formal safe conduct for himself and party, and neither of them thought of it as nullifying the President's letters. Indeed, Mr. Greeley's sole preposterous justification for his claim that his safe conduct superseded the President's instructions was that Major Hay did not say that it did not.

It was characteristic of Mr. Lincoln that, seeing the temper in which Mr. Greeley regarded the transaction, he dropped the matter and submitted in silence to the misrepresentations to which he was subjected by reason of it. The correspondence preceding the Niagara conference was not published until after the President's death; that subsequent to it sees the light for the first time in these pages. The public, having nothing of the record except the impudent manifesto of Clay and Holcombe, the foolish chatter of Jewett, and such half-statements as Mr. Greeley chose to make in answer to the assaults of his confrères of the press, judged Mr. Lincoln unjustly. Some thought

he erred in giving any hearing to the rebels; some criticized his choice of a commissioner; and the opposition naturally made the most of his conditions of negotiation, and accused him of embarking in a war of extermination in the interest of the negro.¹ So that this well-meant effort of the President to ascertain what were the possibilities of peace through negotiation, or, failing that, to convince the representative of a large body of Republicans of his willingness to do all he could in that direction, resulted only in putting a keener edge upon the criticisms of his supporters, and in arming his adversaries with a weapon which they used, after their manner, among the rebels of the border States and their sympathizers in the North. Nevertheless, surveying the whole transaction after the lapse of twenty-five years, it is not easy to see how any act of his in relation to it was lacking in wisdom, or how it could have been changed for the better. Certainly every step of the proceeding was marked with his usual unselfish sincerity and magnanimity to friend and to foe.

NILS'S GARDEN.

AMONG a thousand students in a university town there will always be two or three in whom science and poetry hold each other at a deadlock. The headquarters for these few was, in my time, the delightful room of Edward Tenniman on the spot where the new Law

School now stands. He himself was the high priest of this double altar, the professor of these incompatible elective studies. The room was in an old colonial house of the humbler description, the ceiling was low with a cross-timber, the walls were wainscoted, and there was a large, open fireplace. The arrangements of the room followed half unconsciously the double bent of the owner's mind. All one side was devoted to serve botanical science: tin boxes, specimens, herbaria, microscopes, and a recess filled with Latin and German botanical works. The middle of the room was, as it were, transitional: there was a desk with an

Æschylus forever open, and a great copy of Liddell and Scott's lexicon, then a novelty. On the other side one passed into high philosophy and dreamland: a portrait of Coleridge, his framed autograph, a picture of his study, and a whole library of mystical philosophy, including, I remember, the folio edition of Jacob Behmen in five volumes, over whose symbolic plates we used to pore. With what delight after a rather stiff lesson in botany—for he took a few of us as private pupils—did we turn to the other side of the room, when Tenniman would unfold for us Behmen's "Aurora, or Day-Spring," and, better yet, the "Signatura Rerum, or the signature of all things, showing the Sign and Signification of the several Forms and Shapes in the Creation; and what the Beginning, Ruin, and Cure of every Thing is, it proceeds out of Eternity into Time, and again out of time into Eternity, and comprehends all Mysteries. Written in High Dutch, 1622, by Jacob Behmen, alias Teutonicus Phylosophus." No doubt this side of the room was very unscientific, in the modern sense, but it was certainly refreshing after an hour or two at the microscope. It

¹ On the morning that the letter of the rebel emissaries was printed Major Hay, returning to Washington, heard this colloquy between two draymen on a Jersey City ferry-boat: "Have you heard the news?" "No; what is it?" "Old Abe and Jeff. Davis have been trying to make peace." "How did they make out?" "Old

Abe, he says, 'Let the niggers go free, and we'll stop fighting.' Jeff, he says, 'I'll let them be free that's free now, and the rest stay as they are.' Old Abe, he says, 'No, they got to be all free'; and so they broke up on that." These draymen were not the only citizens who gave this brief and dramatic form to the negotiations.

perhaps made bad poets out of those whom Tenniman might otherwise have made into good observers, like himself; but a moderate amount of it certainly contributed to the enriching and enlarging of the whole man, and I have never regretted having been steeped for hours together in the perilous fascinations of that old room.

Walter Vose, Tenniman's favorite pupil, followed him alike in his profounder studies and his whims, and had a sunny, boyish temperament of his own that carried him cheerfully through all. One day at the Botanic Garden library, where Tenniman used sometimes to send us to practice analysis, the dear old professor, Amos Greene, came in upon Walter and found him with a copy of Pliny's Natural History before him.

"Do you get your botany from Pliny, my dear boy?" said the brisk and kindly professor.

"No," said Walter, "but Tenniman thinks that all botany should still be written in Latin, as he wrote his little book on the Algæ, you know; so I am reading up my Pliny, and came upon a passage that set me thinking, for once."

"Read it out," said the professor; and Walter Vose read and translated:

"No one can doubt that magic is the greatest of the sciences, seeing that it is the only one which embraces three other sciences having power over the human mind, and reduces them to one. No one doubts that it has sprung from medicine and become something loftier and holier than its parent."

"Yes, yes, yes," said the professor; "but really now"—

"Dear," said a woman who had just entered—a woman with a face so sweet that Pliny might have found some of his favorite magic in it,—“you should refer this young gentleman to old Nils and his garden.”

"Yes, indeed," said the professor; "my wife has the right of it. You know old Nils?"

"Never heard of him," said the young man, rather nipped in the bud.

"Come, come, come," said Professor Greene, with his usual eagerness; "we shall find him in the fern-room." As they entered an old man rose from his seat, where he was inspecting a minute fern in a vase.

Nils Bergen, as I remember him at that time, was a tall, thin, elderly man, with a seamed and weather-worn face, twinkling blue eyes, and a smile between shy and sly. He still wore in the greenhouses the Norwegian knee-breeches and short waistcoat, as well as the jacket thickly set with silver buttons. It was believed among the students that he kept in his little house a great box full of garments just like this, and that when his suit was hopelessly soiled from the garden he simply laid it aside

and took out a duplicate from the chest, while his granddaughter Sanna brushed, folded, and replaced the other. He always had his pockets stuffed with plants, and carried other plants stuck in the rim of his woolen cap, a head-dress which he wore when the greenhouses were at the hottest. He straightened himself up at our approach and said only, "So?"

"Good morning, Nils," said the cheery professor. "This is one of my students. I found him reading Pliny on magic, and I brought him to you."

"I do know nothing of magic," said Nils, guardedly, "and of magic plants I know only what all may know who do read the authors. Some claim to know magic: there was one acquainted with me, in the Hardanger Valley, he did claim to know it well; but he who reads Plineius, or Apuleius, or Théophrastus Eresius, he must know well that there are magic plants."

"But those authors are not read in our colleges," said sweet Mrs. Greene.

"It is that the professors not take the care to theirselves," said Nils, impatiently. "But they do read about the powerful herbs of Medea, the enchanting plants of Lucan, the Nepenthe of Homer, the venomous flowers of Colchis and of Thessaly. Why then do they not know that in plants at least there is magical force?"

"Take them to your garden," said the professor, "and they will certainly know it."

Grumbling to himself, yet with a certain air of self-satisfaction, Nils finished his work of repotting, led the party through the back door of the main greenhouse, then up through a little open garden, sacred to rarities,—where grew, for instance, the *edelweiss*, so hard to rear in our climate,—and then passed to a locked door in a hedge, which he opened. They found themselves in a curious scene of confused and ill-assorted plants, some of them of coarse and lurid growth, among which were mingled many of the commonest and most innocent. But what first arrested attention was the curious plan of the little plantation itself.

The garden lay before them divided in twelve small domains, each of these being subdivided into three, so that the effect was like the ribbon-shaped subdivisions of a French farm. Each parterre had plants of its own, some plain, some gorgeous, planted without regard to regularity or general effect; while some plots were entirely empty, as if waiting for occupants.

"These are Nils's twelve signs of the zodiac," said the cheerful professor.

"This is a quite tolerable collection," said the old gardener proudly, "of the famed chemical plants mentioned by Origen and Stobæus:

the plants named for the Decani, or the divinities that do rule the thirty-six parts of the man's body. Three there are for each sign of the zodiac, and I have them thus divided here. For each divinity some plant was thus for him sacred; use as medicine that plant—it do cure that member or organ. My acquaintance in Hardanger Valley, he did try this garden of chemical plants; foolish! it were too cold. Even in the great garden at Christiania, where they do raise twelve different maizes, they could not do that."

"Does Sanna help you in this garden, Nils?" said the professor's wife.

"Sanna," he said, indifferently, "she never do come inside this gate. She is a woman; she do like to amuse herself. When it comes Sunday she shall take little Katrina to the fernery and read religious books, like as in Norway. By and by she do recommend herself for a teacher in the schools."

As they walked towards the upper end of the little garden, after passing the twelve beds, they came to seven smaller plots laid crosswise.

"These are for the seven plants," said Nils. "This for another way of magic, that of Egypt. For example, this bed contains the *compositæ*, or composite plants, only—the aster, the *chrysanthemum*. Why? Because it is they which do resemble to the sun. All things that do resemble to that in shape were known by the wise Egyptians to be good for the heart, because they did hold the heart to be, as it were, the sun of a smaller world. See you not?"

"Did they cure the patient?" asked Walter.

"They cured whom they did cure," said Nils, indifferently. "There is no kind of medicine that shall do more than that. But this is not the art of the Egyptians. They did cure also by the aid of numbers with the wondrous plants. There is much in numbers. In Norway we still have a proverb when we see magpies—'One is for sorrow, and two is for joy; three must be a marriage, and four do bring good fortune.' But the Egyptians they did go much further, as you will see by Proclus, his book on sacrifices and magic. They did anticipate Linne the Great in counting every part of the least plant; but they knew, as he did not, what the numbers did signify. They did choose ten gods whom they numbered in order. Thus they did connect sacred numbers with sacred gods, as is right."

"A celestial numeration table," remarked Walter.

"Then," went on the old man, unheeding, "they did search all plants for their various numbers of leaves, flowers, seeds; they did number the joints in the stems; they did observe the three-sided and four-sided stalks, the

stamens, the pistils; then they did dedicate these plants to the proper gods, and when they had dreamed of any god in the temple, they did take his consecrated plants for medicine and were cured."

"But how came the invalids to be in the temple?" objected Walter. "With us, the more an invalid a man is the more he stays at home from church."

"So! that was for the beauty of the ancient religion," said Nils, devoutly. "Does not Jamblichus say, 'In the temple of *Æsculapius* diseases are cured by holy dreams'? Does not Aristophanes say, 'Let us lie down in the temple of *Æsculapius*'? It wonders one that you come from college with long lists of knowledge that make no use, and do not learn either from Greek or Latin what really concerns us all to know."

"It is certainly true," mused Walter, "that we never were encouraged to have holy dreams during morning prayers. It's odd, but a doctor's certificate excuses us from the temple instead of sending us there. But, after all, what a dangerous kind of medical practice!"

"It shall not be dangerous at all," retorted Nils, impatiently. "Plants are very near to us; they do mean us no harm. Every plant it do correspond in form to some part of the body; thus the peony and poppy-buds to the head, any one can see that; then the *caltha* and *anthesis*,—what you call cowslip and may-weed,—these resemble to the eye, these shall cure the eye; the *dentaria* for the teeth—you do call it toothwort even now; yonder it grows."

"Was it a Norwegian poet, Nils," interrupted the professor, "who talked about man's being one world and having another to attend him?"

"It shall be that it must be a different poet," said Nils, discontentedly; "but it shall be true for all that."

On the next Sunday afternoon Walter found himself near the Botanic Garden, and met the professor and his wife on their way to church.

"You will not find Nils to-day," said Mrs. Greene. "He usually shuts himself up on Sunday and reads religious books."

"Or magical ones," said her husband. "But he ought to be visiting the greenhouses about this time, as it happens. However, you cannot always count upon him. He tells me that his national proverb says, 'When a Norwegian says immediately, look for him in half an hour.'"

And they walked on. Walter Vose wandered through the gardens and up to the gate of the little corner which had been assigned to Nils as his own pleasure-ground. The wicket was locked; he could merely look through upon the fantastically arranged flowers. "What

a curious crotchet," he said to himself, "for such a learned old fellow." Returning, he strolled through the fernery, and suddenly stopped before a scene prettier than any mere magic garden could afford.

An isolated mass of tree-ferns occupied the center of the greenhouse. Around them spread a broad seat of stone, inclosing a tiny water tank, holding a few pond-lilies and fringed with feather-moss. On this stone parapet sat a tall young girl, lithe and erect as any of the tree-ferns above her, but essentially Norse in every fiber of her strength, every tint of her coloring. She had a head so delicately formed that it seemed poised like a lily on its stem, and a child four or five years old and of much darker coloring was busily putting down great braids of soft brown hair from the other's neck and wreathing it with fern-cuttings that lay around. The elder girl was patiently reading; she had on a plain, tight-fitting black dress of some coarse material, that would have given her almost a peasant look but for the great sweetness and refinement of her face. Suddenly the little one sprung up impulsively and threw her arms about her companion, dragging her to look at herself in the calm mirror of the lily tank. "See, see!" she exclaimed; "you look just like one of grandpapa's water-nixies." From the doorway the young man could see a double image of the group, and accepted the child's interpretation. This done, there was a pause, and presently the eager little voice exclaimed, "What shall I do now? What are you reading?"

"I am reading Wordsworth's Poems," said the elder girl.

"What does it say?" asked the child.

"It tells about little Barbara Lewthwaite, a child of beauty rare," answered the other.

"Oh, I know about her," said the little one, half impatiently. "But who was Wordsworth? Where did he live? Did he know that little girl? Was he a kind man?" Then she began again upon the fern-cuttings, then, throwing them away, exclaimed, "O Sanna! you don't do a single thing to amuse me. You call me your sweet little sister, and then you don't do anything for me. If Wordsworth was here, he would do something to amuse me."

"You might eat your apple," suggested the sister, smiling.

"Oh, I forgot all about that," the child said eagerly, and tugging from her pocket a large red one she suddenly stopped, and, looking at her sister, cried out, "O you sweet, sweet, sweet! I must just kiss you—yes, I will, I will"; and rushing at her with a stormy embrace she upset Wordsworth, fern-leaves, and apple, so that the ruddy fruit went rolling into the water-tank and disappeared beneath the lily-pads.

With instantaneous reaction she set up a wailing cry. "O Sanna! O you very unkind person! You threw it away, you know you did. O my beautiful, lovely apple!" And pushing her sister vigorously, she burst into passionate tears. Walter came quickly forward, pulled the treasure from the water, and presented it, still dripping, to the small owner.

In a moment the child stopped crying and stiffened herself within that armor of delicious shyness which drops so instantly, like a nun's or Quaker's vestments, over these young creatures; and stood, speechless, tightly grasping the elder girl's dress.

"Say 'Thank you,'" said the girl addressed as Sanna.

"No—you," murmured the little one; but she sent a sudden smile with the thanks and then buried her face in the scant dress.

"Aha!" said a voice from behind, "is it that I have found you at last? Oh, yes, this is my granddaughter, a good girl, but she do not read the authors; she will be a woman. Go, Sanna, and take the little Katrina; the greenhouse is too warm." In a moment he had forgotten their existence, and was again discoursing upon his hobby.

"It is not reason to think," he said, "that Egypt supplied all its own magic plants; there shall be no reason why we shall not raise them here. Here we have the woods, the Veratrum, and Juniperus, powerful for routing the demons; these grow wild, but others we must raise in gardens."

"Are these both your granddaughters?" asked Walter, irrelevantly.

"Yes," said Nils; "Sanna, she do tend little Katrina. Then there is the asphodel, irresistible against gloomy deities."

"I should think little Katrina would be quite irresistible," said Walter.

"Hein?" asked Nils, puzzled. "Then there is laurel, which will grow in your own woods, good to bring on madness, ravings, and sleep; and strychnon and mandragora, which do make love-potions; and ever your common autumnal dandelion, the leontodon, can rouse from death itself."

"I think," said Walter, looking at his watch, "that I must go to dinner."

Meantime there was never a poor girl so plied with questions as Sanna. "Who was he?" asked the child incessantly. "Why did he come there? What was his name? Why did she not know his name? Was he kind?" and so on indefinitely. "But I love him very much," added she.

"You do not know him," said Sanna.

"I have known him a long time," said the child indignantly—"as much as ten minutes; that is almost half an hour. I love him better

than anybody that there is; that is, I love you better than anybody in the world, but I love him better than any person that ever lived. Do you think he is kind to little girls?"

"Very kind," Sanna said, and she thought of the merry look which Walter had cast on them.

As we sat in Tenniman's window one evening about that time, content to have all our botany brought within the limits of one narcotic weed, there came up a question about Walter Vose, why he kept away from us. "He studies at the Botanic Garden mostly now," said Tenniman. "He got hold of a passage about magic in Pliny one day, and has never been able to get it out of his head."

"Like the poet in 'Festus,'" said one of the young men, "who fell into himself and was missing ever after."

"There is a studious old party at that garden," said another, "who knows all about magic."

"There's a pretty girl there," replied the first, "who practices it. She's the daughter or granddaughter of old Nils. This young innocent of mine"—indicating a blushing younger brother—"got a glimpse of her the other day, and he has never been himself since. Somehow she belongs in that garden: she's a regular white lily-in-the-flesh, if ever there was one; I'll say that for the girl."

But this led to a rather eager discussion of the comparative charms of several different college belles, and we got no further. It is perfectly true, though, that from that time forth Walter discovered that to study botany from books only was useless work, and that the real place for it must be a botanic garden. He was certainly quite exemplary in his attendance there. He tried to learn about magic plants; he really learned about Sanna and little Katrina. Their mother, it seemed, was an American and well taught—she was the daughter of a country pastor, and had fallen in love with the young Norwegian gardener; but both had died, and Sanna was left to care for the grandfather and the little sister. Their sex excluded them, the old man thought, from all knowledge of his authors and his magic plants; and, as he said, they never entered the quaint garden. But he would keep Walter there for hours, discoursing, explaining, experimentalizing.

"You shall remember," he said, "that the heavenly bodies also shall be regarded for the plucking of plants at fixed times. Thus the stems of *Hypericum* must be dug up on the feast of St. John—hence you do call it St. John's wort; also the twigs of the wild cherry at St. Martin's, for divining rods; and the ash-wood must be split at noon, when

the sun is in the sign Virgo and the moon crescent."

"Is Miss Sanna well to-day?" asked Walter at this point.

"She shall be well enough," said Nils, carelessly. "But Kircherus, he shall maintain that at the time of the solstice the leaves of the willow, white poplar, elm, lime, and olive do turn their under side to the sky. That shall prove that we cannot omit all notice of the heavenly bodies; indeed, Gesnerus shall have it that plants do be affected in shape by the sun and moon. So with the plant *nectanebus*, which is a love-potion."

"Do you really believe in love-potions?" said Walter.

"So!" said Nils, doggedly, looking at him; "there shall be love-potions. It is easy by magic to produce love. Orpheus and Archelaus do say that arrows drawn out of a wounded body, if they have not yet touched the ground, may be placed beneath persons as they sleep, and produce love; but the Egyptians, they did produce it by love-potions. That was better."

"I have seen the thing done without either," said Walter; but Nils heeded not.

FROM this time Nils began to confide to Walter that he had himself tested many of his favorite plants, but with little effect; and he evidently would have liked very much to see what result they would produce on a fresher constitution. Walter willingly nibbled a leaf here and there, not so much for a knowledge of magic plants, which had already grown a little wearisome to him, as for the sake of a still older and surer magic which had begun its operation. Sanna spent more and more time in the greenhouses with him, and the innocent sweetness of an unspoiled nature became more fascinating day by day. For her sake he would have heard about Paracelsus and Kircherus for hours at a time. Meanwhile into Nils's mind, which had the practical as well as the ideal bent of his nation, came a vision by no means sentimental in behalf of these two young people. If the youth did at times show a little levity, he was by far the best listener the old man had ever met; and there was Sanna to be provided for! What was the use of all his magic lore, if he could not bring something to pass that should secure the future comfort of his granddaughters? So he pored over his well-thumbed Pliny and Dioscorides, and muddled his brain with potions and mixtures dire, little knowing that a more powerful force was all the while doing his work for him.

Had he looked into the fern-house at dusk one summer evening he would have seen

Walter and Sanna sitting absorbed in a rather low-voiced talk, with occasional inexplicable pauses, while little Katrina hunted for glow-worms in the grass-plot beyond the lifted sash. The great *Virgilia* tree waved its lingering white clusters within sight, dim and ghostly in the evening; the blue-green Colorado spruce rustled gravely in the light breeze; the frogs croaked in the pond. After a long pause Sanna was just speaking.

"You know very well," she said, softly, "that you do not believe a word he tells you — about the plants, I mean. You think — I don't know what you think. You think he is a silly old man."

"What an outrageous thing to say now!" cried Walter, with a successful effort at indignation. "Your grandfather is the most learned man I ever knew. How can it be that at the University of Christiania they train such men?"

"I know it," said the girl, proudly. "But does his learning convince you?" she asked, looking shyly at him.

"Of what?" said Walter.

"That there is such a thing as magic?" she answered.

"Upon my word," said he, looking at her significantly, "I have more than half believed that for this long while."

"But in plants," she said, hastily; "in plants?"

"Do you believe it yourself?" he evasively answered.

"How should I know?" she replied. "You yourself say he is very learned, and he believes in it. At least he thinks he does; nobody can doubt that."

"True enough," said Walter, thoughtfully. "Talks well about it, too. That was very true what he said the other day about plants and human beings — that they were so nearly related. Now they must seem like that to you, I take it — a sort of sisters."

"Of course," she said, simply; "I was brought up among them."

"Queer," mused Walter, "I was brought up so differently."

"I know you were," answered the girl, "and that is the very thing —" But there she stopped.

She sat leaning forward a little in the dim light; the fern plants drooped over her; she was dressed in white, which was unusual for her, and she might have been one of the lily-maidens in the German legend of the *Mumelsee*. Suddenly the little Katrina raced uproariously in, holding up a great glow-worm, which she put on Sanna's lap in a little pile of leaves. The elder girl bent over it in silence, and suddenly there fell upon the insect a large drop, which, had its light been made of earthly flame, would have put it out forever. Even as

it was, the little creature curled itself up and dropped upon the floor.

"Why, you are crying, Sanna!" exclaimed the excited child. "Walter always makes you cry now, after he goes away, and to-night you are crying before he goes. O you naughty, unkind man!" she went on, turning with her usual precipitation upon him. "Why do you make my Sanna cry?"

"I did not know I did," he answered, honestly.

"But you do, you do," insisted the child. "Why, why, why? Tell her to stop, and she will stop this minute. Besides, when I cried the other day you kissed me to make it well. Kiss Sanna!" And she went at him with one of her boisterous charges, to enforce her prescription.

"O Katrina!" cried Sanna very hastily, "there is the very largest glow-worm you ever saw just outside the window. Run, run, or it will be lost!"

"Kiss her!" persisted the merciless child, now looking towards the doorway, then returning towards him.

Then, as if guided by an irresistible and delicious fate, Walter Vose bent down and kissed the fair head, prevented from withdrawing itself by the interlacing branches of the fern-trees, while the satisfied child bounded away to seek the real or imaginary glow-worm. "Sanna!" he said, wondering equally at himself and her, for it was the first time he had called her by that name. He felt as if he and she were floating away together on a cloud large enough to hold precisely two persons, while the world of men, women, and botany sunk away unregretted beneath their feet. "Sanna," he repeated, "will you be my wife?" At the instant she sprung from him and said impetuously:

"You must never speak to me again." Flinging the leaves from her lap she ran as for life from the fern-house; and grasping little Katrina, swept her from before his sight as with a whirlwind, in the eagerness of her renunciation. The child struggled and screamed as she was borne off; and the last words that came back were: "But I wanted to stay with Walter! O you cruel two persons!"

For some days Walter avoided the green-houses altogether, as did Sanna also. He could not, however, forsake the garden itself. Little Katrina, with a child's oblivion of what had passed, sometimes ran to him from afar, climbing eagerly upon him; then she also grew shy. Old Nils went pottering about his own domain and muttered to himself, evidently puzzled by the situation. One day he came to Walter with some Norwegian tobacco, as he said; and the young man, unwilling at this juncture to

refuse anything from him, filled his pipe from the proffered pouch.

"But," said Walter, "they certainly do not raise tobacco at those high latitudes."

"They do prepare it," was the answer, "after the manner of our ancestors."

"Queer taste they get into it too," said the youth; "but it is aromatic and pleasant. Magic herbs, eh, Nils?"

"It shall not be for a joke," retorted Nils, severely. "It shall be for a sweet flavor, not?"

There was certainly something pleasant about it, with a soothing influence, and Walter took the pouch with him; but he let the pipe go out almost as soon as lighted, being absorbed in vexatious thoughts of Sanna. The next day he reverted to the new supply and smoked furiously.

Meanwhile poor Sanna sought the professor's wife, her kind adviser since childhood, and unfolded her grief.

"But, Sanna," said Mrs. Greene, "why not marry him?"

"Ach!" she answered, "it is all so different in our positions."

"I don't see why," said the older woman, with courageous philosophy, tempted by the love of match-making. "He is the son of a country clergyman, and you are the granddaughter of one—on your mother's side, you know. You are poor and so is he, I suppose. It is not likely that there is in his family a sweeter woman than your mother was, or a more learned man than your grandfather—I mean Nils. What then is the trouble? Why should you not marry? Certainly little Katrina is fond enough of him, and he and your grandfather talk by the hour together."

"It is no matter," was the despairing answer. "What am I? A Norwegian peasant girl who happened to be born in America, that is all. I have nobody but Katrina and grandfather; and you know—oh, you know very well, Mrs. Greene—that he thinks grandfather queer and strange. Everybody does, I suppose, but Katrina and I."

"Because of his fancy about magic plants?" said Mrs. Greene, smiling a little.

"Yes," said the girl defiantly, straightening up her slender figure. "You know well that most people do not believe in them at all; but there must be something in them, or a great learned man like my grandfather would not give up so much of his time to them."

"If Walter is enchanted, my child," said Mrs. Greene, kissing the fresh cheek, "you are the magic flower."

"Ach! so?" said the blushing girl, falling unconsciously into the old man's vocabulary as well as his arts, and retreating through the greenhouses.

Walter meanwhile had wandered into the now deserted fernery, listlessly plucking a dead leaf or pulling a weed from the flower-pots. "The air is too warm," he thought presently; "my head swims." Suddenly a surge of blood seemed to go upwards from his body to his brain; his head seemed like a bulb expanding to twice its usual size, and he felt himself falling. Instantly a pair of strong young arms were clasped about him and he knew vaguely that he was being dragged from the hot greenhouse and laid upon a bank outside, a green sward, made golden by the early flowers of the yellow autumnal dandelion. He lost all consciousness, and when he awaked his forehead was moist with water that had been profusely showered upon it, and warm, eager lips were pressed against his cheek. He sat up, still dizzy, his head resting against Sanna's shoulder, and looked where old Nils stood, with an air of supreme triumph in his face, and with the little wandering Katrina lurking shyly behind.

"It shall be quite well," he said. "Now you know that plants do have magic. It is well too that you did place him on the dandelions, which do revive a person from death, as saith Kircherus."

The old man had builded better than he knew with the strange herbs, that when mingled in the tobacco had so nearly brought Walter to death's door. Had it not been for this dangerous intermeddling, who knows whether young love would ever have reached its happy end? As Mrs. Greene summed it up, Sanna's magic might after all have proved ineffectual without his. Nor did it ever occur to him to doubt that he did all. At any rate he wrote down in his old copy of Dioscorides, still to be seen in the Botanic Garden library:

NOTE.—Take nectanebus and mandragora, they shall be inhaled for a love-potion. (N. B.—*This I myself have proved by actual experiment!*) Should these herbs have been taken in excess, place the patient on a bed of leontodon, which do have power, as Kircherus hath said, to raise from death itself. (N. B.—*This I myself have seen in case of the leontodon autumnale, or autumnal dandelion, in this very garden!*)

Thomas Wentworth Higginson.

WOMAN IN EARLY IRELAND.

AN IRISH CHILD OF THE UPPER CLASS.

IT has become the fashion to say that a civilization may be measured by the treatment it accords to woman. Hence it may profit to look a little into the position of woman in ancient Ireland so far as one may penetrate the darkness of the past and in such measure as can be given here. The Irish woman of to-day might well inspire a wish to know something of her ancestresses, if it were only to learn whence her qualities are derived; for the women of no country surpass and those of few lands equal her in charm of face and manner, modesty and decorum, brightness and strength of wits. We need not rest our belief concerning the attractiveness of Irish women upon modern statements, nor upon the Lady Blessingtons and Anne Boleyns, nor upon Irish princesses famous in medieval ballads like Kudrun of Ireland in the German poem and Iseult of Ireland in that of France. We have the great romantic literature of Ireland in part still remaining as witness, together with references to many lost poems and prose tales in which queens and noble ladies take the lead.

A long list of Tochmarca, or "courtships," existed of which the bard was expected to

know some by heart, and among which a favorite was the courtship of the Lady Eimer by Cuchulinn. Then there were the Áitide, or elopements, among them a very famous one, the tragedy of Deirdré and the sons of Uisneach, first translated in 1808 and told again in English verse by the late Dr. Joyce of Boston. Then there were the Serca, or loves of gallant men and fair dames. Such tragedies and comedies must have been very popular at fairs and in towns, at moated granges of Gaelic farmers and in the triple-fossed strongholds of chiefs; for though stories of battle, voyage by sea, foray and revenges, are far more numerous, the love-tales were sufficient to warrant Giolla na Naem in characterizing the Gaels of Ireland as remarkable among nations for beauty and amorousness.

The verses attributed to him were translated by Eugene O'Curry from the version given by Macfirbis. The composer starts from Asia Minor and names the nations in succession, the Danes and Picts coming last because known to him by their colonies in Ireland and North Britain.

For building the noble Jews are found,
And for truly fierce envy;
For size the guileless Armenians,
And for firmness the Saracens;
For acuteness and valor the Greeks;
For excessive pride the Romans;
For dullness the creeping Saxons;
For haughtiness the Spaniards;
For covetousness and revenge the French,
And for anger the true Britons—
Such is the knowledge of the trees.
For gluttony the Danes, and commerce;
For high spirits the Picts are not unknown,
And for beauty and amorousness the Gaedhils.

The same difficulty we found in drawing the line between god and hero, between mythical allegorical figure and person of history, follows us when we turn to women. A trait that appears very early is the respect paid to women by tradition, showing itself in the large number of female leaders of swarms that invaded Ireland in primitive times. Not only their names are recorded, but where they were buried. Undoubtedly the Gaelic war-goddesses are reflected in some of the queens who fall on the field of battle; or, like Macha Redhair, seize a throne and hold it against all comers; or, like Queen Meave, marrying Ailill for her second spouse, treat their partner with small respect and show him plainly that the woman

THE LAST OF THE FORESTS.

sits the higher on the throne. How much is myth, how much poetic exaggeration, how much history, nobody can tell; but the first pages of the ancient Irish chronicles teem with instances of female prowess and the leadership of women.

We can be certain, however, that Morrighu, or Great-Queen, was a war-sprite; for in the "Battle of Magh Rath," translated by John O'Donovan and published in 1842 by the Irish Archæological Society, we read of her apparition in the air above the head of the chief king, bent on vengeance for the misdeeds of Congall Claen.

There is over his head shrieking
A lean, nimble hag, hovering
Over the points of their weapons and shields—
She is the gray-haired Morrighu.

Perhaps Morrighu, Badb, and Macha are the "three daughters of the wicked Cain" whom the wise men of the Christian period mention, as quoted by Geoffrey Keating; they occupied Ireland first, and may be the war-goddesses of non-Keltic tribes. But Kesair, "granddaughter of Noah"—was she in any sense a historical person?

She is the first queen to whom Keating refers with confidence, though he was a learned and pious cleric who ought to have protested against a legend which improves on Genesis. For Kesair advised her father Bith to forsake Noah's God and consult an idol, and the idol

counseled them to build a ship of their own and put to sea. This they did, with Ladra, Fintann, Barran, and Balba; they remained seven years and a quarter afloat, and landed near Bantry in Cork. Hitherto it has been the rule to smile at such legends, which are put to the account of vainglorious monks of Ireland. But since we have evidence from Babylonia of various versions of the deluge myth, and especially now that the connection of the ancient dwellers in Ireland with the first peoples of Babylonia and the Ugrians and Finns of Russia has been shown in former articles in *THE CENTURY MAGAZINE*, it is better to examine a legend like this with all seriousness, and debate whether or not the Irish version is not, beneath the biblical varnish, a sister myth preserved in Ireland by a branch of the Finno-Ugrian race instead of a direct imitation of the story we get in the Old Testament. Fintann, who accompanies Kesair, is connected with fish myths similar to those discovered in the present century in old Babylonia and which reappear in the Finnish *Kalewala* among exploits of *Wainamöinen*.

The earliest immigration myths preserved by Keating point to polygamy. The leadership of women does not preclude, as we know from African examples, both slavery and certain forms of polygamy. Against these the orthodox Keltic, and later on the Roman Catholic Church, waged steady conflict as soon as they came to power. In attacking matters common to man on lower stages of development Christians introduced the Oriental way of looking at woman; they strove to deprive her of much of her freedom of action in order

HAND-MILLS IN THE DUBLIN MUSEUM.

to improve morals; and, while making her chaster, limited very seriously the chances of independent life and the pursuit of a career on the part of a woman of enterprise. Beyond the veil of the Christian centuries woman in Ireland can be found pursuing many of the professions usually monopolized by man. It was as if the Christian priests wanted to get women out of public life as much as possible and cause them to devote most of their leisure to affairs of religion.

But as regards the ordinary woman there was no relief to her toil save the fairs, where trouble was always brewing between the valiant men of different tribes, septs, departments, and where bloodshed was always in order unless some powerful prince kept a strong guard and disarmed all who entered the precincts. The stone quern, or hand-mill, was the badge of the common woman's slavery in Ireland. If there were no slaves, the women of the tribe had to do this hard work; but in the pagan period, and far down into the Christian, "foreign bondwomen" were staples in Ireland. They form one of the commonest articles mentioned in the metrical lists of fines and tributes preserved in the Book of Rights. It is recorded of St. Brigit that her father, the Druid Dubthach, became so incensed with her for giving away property to the poor that he put Brigit in his chariot to dispose of her, saying, "It is not through honor or regard for thee that I am bringing thee into a chariot, but to take thee and sell thee to grind at the quern for Dunlaug, son of Enda, the king of Laigen."¹

Eri, Fodla, and Banba, three sisters, appear to be mere impersonations of Ireland under female forms; Badb, Macha, and Morighan, or Morrighu, as we have seen, are battle goddesses, such as the Scandinavians called Valkyrs, or Choosers of the Battle. Brighid, the patroness of literature, handed down to Brigit, a Druidess and daughter of a famous pagan lawyer, some of her preëminence in wisdom, for she is the Pallas Athene of the ancient Irish. St. Brigit, first Abbess of Kildare, whose father threatened to sell her for a slave, according to the pious legend, may have been a historical character, but her worship carried over many pagan practices, of which perhaps the longest to survive was the divination as to a husband. In the last century, and probably far down into the present, unmarried women

¹ President W. K. Sullivan has noted the resemblance between *rudzi*, the name for rye among the Letts near the Baltic, and the Irish word *ruadan*. Wheat was called *tarai*. According to Pictet, the Mongolian for wheat is *tarân*.

FINNISH WOMAN IN OLD COSTUME, SHOWING EMBROIDERY, NECKLACES, AND OTHER SILVER AND BRONZE ORNAMENTS SIMILAR TO THOSE FOUND IN IRELAND. (FROM "THE KALEVALA IN ENGLISH," PUBLISHED BY JOHN B. ALDEN, NEW YORK: ORIGINAL PUBLISHED AT HELSINGFORS BY THE FINNISH LITERARY SOCIETY.)

of the people used to fashion an effigy of St. Brigit on the eve of the day she rules in the calendar. By various incantations and ceremonies with this puppet they sought to learn who was to be their husband. The magicians of the ancient Finns did the same; modern Samoyeds and Lapps fabricate and conjure with similar puppets, which with us are now relegated to the nursery in the form of the

"HEAVY-HEADED" PIN OF INLAID BRONZE USED BY
MEN AND WOMEN.

child's doll. As St. Brigit has the honor of introducing nunneries into Ireland, her appearance in the amiable office of match-maker would not be easy to explain did we not now perceive that the pagans of Ireland, like the pagans of Peru and of Rome, were provided with similar establishments long before nunneries became general. The Vestal virgin did not marry while in office, but she was not debarred forever from matrimony, nor did her vows imply any horror for the married state. Hence the contradiction when a Christian saint took over the rites and superstitions proper to a heathen goddess or priestess. An ancient Gaelic poem in the Burgundian Library of Brussels attributed to this saint begins:

I should like a great lake of ale
For the king of kings;
I should like the family of heaven
To be drinking it through time eternal.

Another queen whose name signifies a race is *Scota*, the wife of that *Miledh* of Spain whose sons led the last great Celtic immigration. She is called the daughter of the king of Egypt, and from her the *Scoti* of Ireland and northern

Britain are fabled to get their name. Certainly this swarm has Egyptian traces, such as the Lady *Dil*, daughter of *Miledh*, being also the wife of her brother *Donn*, like the *Ptolemies* of Egypt; but marriages of state between brother and sister are not confined to Egypt—they appear in Greek mythology. What is important to note about these earliest queens and heroines is the fact that they engage in battle and are often slain, just like any man of note, by warriors whose names are given in history without a sign of disapproval. They afford a clue to the *Amazons* of Asia Minor, who have been a great puzzle.

Divorce was easy under the old laws, and the wife took back with her the "*tindsca*," or marriage portion given by her parents, as well as the "*coibche*," or reward for her virginity received from the husband. Here are some of the reasons which might be alleged by a quick-tempered or a frail woman as a cause for separation: refusal of her rights in domestic matters, misconduct of her husband with other women, abandonment, a public charge of infidelity, ridicule from her husband, a mark on her person showing maltreatment. If a love-potion had been administered, it might be cited as a cause for leaving the man who gave it. In fine, divorce in heathen Ireland was so easy, and the laws were so favorable to the weaker sex, that the man who "caught a Tartar" must have had every chance of continuing to regret it.

Yet the lateness of date at which we find women fighting in battles is surprising. One of the glories of the Church in Ireland was a law passed by the efforts of St. Adamnan, about A. D. 690, putting a stop to the employment of women in war. The legend runs that he was once carrying his mother on his back near a battle when a woman was seen to thrust a sickle into the breast of another and drag her off the field. Adamnan's mother bade him put her down, and refused to be carried farther until he should swear to free women from such services. This he promised, and at the next grand assembly obtained a passage of the law.

The *Sidhe*, that race which swallowed up the most important persons of the *Firbolg* and *Dé Danann* swarms when the latter gave way before the *Kelts* under the sons of *Miledh*, has many female representatives in history and legend. They were called in general *Bansidhe*, or "*banshee*," a word which has become narrowed down to a ghost that haunts certain old families and shrieks pitifully when one of the family is about to die. The banshee sometimes gave success to a chief by her wise counsels, sometimes lured him into vice, as did *Shin*, a banshee who seduced *Muirheartach*, son of *Erca*, a monarch who repudiated his wife

and drove his own children from Cleitech, his palace on the Boyne. In the Four Masters we hear of this king, A. D. 524, killing Sidhe (fairy), son of Dian (god). But under the date 526 we read of the revenge. For it appears that Shin was the daughter of Sidhe, and made love to her father's slayer until he had destroyed his home as we have seen. Then she burned his palace over his head and brought him to a terrible end.

The male fairy is a Fearsidhe (farshee). He would sometimes solicit and obtain aid from human beings in his wars with other supernatural tribes, just as the gods of Olympus were aided by Hercules. We know now that the Sidhe were early peoples and their gods, incorporated into the following races, who assumed in the eyes of the latter the character of supernaturals living in hills and under the water. Heathen Turks and Tatars of southern Siberia still worship their gods Kudai; on the Volga the Chuwasses worship Sjduztunzi. We find under the Arctic Circle and among the Finns and other "Altaic" or Turanian tribes of Russia the same belief in "Tshuds," or vanished supernatural inhabitants of the land, pointing to the same mixture of ideas we find in Ireland concerning dispossessed peoples of a different tongue but high civilization whose record remains only in legend. The "shee" of Ireland is the same word we find in Asia, but softened down in pronunciation. Among the early Russians and Irish we can safely infer the Turanian underfolk with its myths and manners of life, its subterranean dwellings and repute as magicians; in both we perceive remarkably clever members of the Finno-Ugrian womenfolk gaining a power over chiefs of the conquering hordes and going down into legend as supernatural Sidhes or Tshuds.¹ The foot-note considers the Gaelic words for woman and may well be forgiven, as it also relates to our common English term.

¹ The old word for daughter, *ni* or *nu*, which is now obsolete in the spoken language of Ireland, points to the Turanian peoples by its appearance among the Hungarians and other Finno-Turks as *nő*, wife. With regard to *bean* or *ban*, the ordinary word in Gaelic for woman, we find the root again in Latin *Venus* and *venia* with the meaning to love, venerate; in Sanskrit also as *van*, to love, serve, honor. From this we may provisionally class the living Irish word as Aryan, the obsolete as Turanian. According to Mr. Skeat we get it again in the English words to "win," "winsome." But though the great authority of Mr. Skeat upholds the ordinary derivation of "woman" from *wifman*, analogies are in favor of supposing that the spelling *wifman* in Anglo-Saxon arose from a mistake of the Saxon writers, who strove to explain in that way a word having no explanation in their tongue, which really came in from the Keltic spoken in Britain. When we find Irish turning *bean* into *vān* and *van* under certain circumstances, in accordance with those changes in consonants which are common to Keltic tongues, we have cause to suspect the old derivation

Unfortunately we cannot point to any pictures of early Irish women to aid us in calling up their appearance, the female figures of illuminated missals being conventional; but we must be content with the descriptions of Gaelic novelists and poets, whose ideals were necessarily more Keltic than Finno-Ugrian. But we can gain some idea of the earliest from Finland; accordingly a Finnish woman of the heroic period is reprinted from the picture in the Kalewala as published by the Finnish Literary Society of Helsingfors. The clothes of plebeian women found in Denmark and Ireland

INLAIN BRONZE BROOCH OF THE PAGAN EPOCH, THE FINEST EXAMPLES BEING FOUND IN IRELAND.

in oaken coffins, preserved by the action of oak-sap and peat, are not unlike those we see here, though a woolen girdle and a close-fitting

of woman from *wifman*, leman from *lofman*, and incline to believe that when a proper study has been made of the Keltic and subject tongues, we shall find that the Keltic women of Britain brought into use in place of *wif* (German *weib*) a word which the old Saxon philologists forced into the unreasonable reading "wife-man." Whether they were married or enslaved by the conquerors would not alter matters; they would necessarily affect the tongue with words from their own language. An exact parallel is found in Irish Gaelic; for whereas the Kelts who entered Ireland had their own word *ban* springing from an Aryan root, they assimilated into their tongue the Finno-Ugrian *ni* or *nu* and used it as the feminine equivalent of *mac*, "son of," before proper names down to a few centuries ago. This is only one out of a number of words in English the origin of which might be traced through Keltic tongues if scholars would remove from their minds prejudices engendered on the one hand by politico-social matters, on the other by the wild assertions of the Keltic scholars before the time of Zeuss and his grammar.

cap of woven wool with strings to it are found in place of the decorated belt and headdress of this Finnish woman of property. So far as descriptions of attire are concerned, we get them in abundance for men of all ranks belonging to parts of Ireland and even to foreign countries; but also for women not a few. Thus when Queen Meave determined to go into Ulster and seize the wonderful bull for which the foray called Táin Bo Chualgné was undertaken, she was surprised by an apparition seated on the shaft of her chariot. It was a woman engaged in weaving. "She had a green spot-speckled cloak upon her, and a round, heavy-headed brooch in that cloak over her breast. Her countenance was crimson, rich-blooded; her eyes gray and sparkling; her lips red and thin; her teeth shining and pearly so that you would think it was a shower of fair pearls that had been set in her head; like fresh coral were her lips; as sweet as the strings of sweet harps played by the hands of long-practiced masters were the sound of her voice and her fine speech; whiter than the snow shed in one night were her skin and her body appearing through her dress; she had long, even, white feet, and her nails were crimson, well-cut, circular, and sharp; she had long, fair, yellow hair; three wreaths of her hair were braided around her head and an-

BOX OF BEATEN GOLD TO HOLD JEWELS OR COSMETICS.
PAGAN EPOCH.

other braid descending as low down as the calves of her legs." This lady was a fairy, but her specialty was prophecy, so that we must infer that only certain of the fairies were gifted in that way.

There are many objects in the museums of Dublin, Belfast, and other places the exact use of which is a problem owing to the lack of pictures of early men and women. The poets exaggerate and the medieval writers relate ancient events in the light of their own times without regard to probabilities; though it must be said that the Irish writers of legendary fiction have

shown more of the historical sense than those of other northern nations, perhaps because of the existence in manuscript of sober histories from a very early period. The Irish had a musical instrument like the circle of little bells in a Turkish band, and many of these crotals have been found. But they appear at one time to have used them for the adornment of women, though now the crotal is only found as a cow-bell, sheep-bell, and as a sleigh-bell with us. There are strings of little bells in the Dublin Museum which can only have been worn by human beings. The tribes of Central Asia still decorate their unmarried women in this way, perhaps partly in order that their whereabouts should always be known from the sound, lest they steal away to lovers who come with no bride-price in their hands. Gold diadems for the hair, spirals of soft gold to twist round a thick plait, combs of bone ingeniously contrived, moccasins like those still used by the Lapps, oval decorated bosses of gold or bronze such as the Finnish medieval lady shows in the woodcut, are a few of the treasures from the ancient women of Ireland.

The pawnshop, or the *Mont de Piété*, of the present period is only the survival of a fashion which anybody might follow without loss of honor. The Brehon laws provide for the exact values a queen could demand if an article placed in pawn by her was not forthcoming when she demanded it, and the same for wives lower in the social scale. At Yule, or Christmas, at Easter, at the Midsummer festival, at a fair or other day of meeting, it was necessary to take jewels and other ornaments out of pawn in order to be appareled as befitted rank. Severe were the laws if these were withheld unjustly. The workbag of a queen was supposed to contain the following articles: a veil of one color, a crown of gold, a crescent of gold, a thread or cord of silver.

Should this bag be withheld, the fine is three cows. The fine for the complete contents of a workbag belonging to the wife of a chief is three heifers—reminding us of the first meaning of *pecunia*. These are its proper contents: one veil, a diadem of gold, a crescent of silver, a thread or cord of silver, a painted face or mask for assemblies, a kerchief of silk, gold thread.

O'Curry quotes a stanza from a ninth-century manuscript wherein it appears that blue was considered the proper and modest color for woman's dress, while fops had their garments dyed of many colors:

Mottled to simpletons, blue to women,
Crimson to the kings of every host,
Green and black to noble laymen,
White to clerics of proper devotion.

OFF FOR AMERICA.

From the *Táin Bo Chuailgné* we get a good description of Queen Meave herself, Shelley's Queen Mab, drawn at a period when she was thought of less as a fairy, more as a historical person, but yet with some traces of the supernatural about her. Cuchulinn having defended Ulster a long while against Queen Meave's army, and having killed at the ford his old schoolmate and friend Ferdiadh, whom Meave enlisted in her cause, has retired to Ulster to cure his wounds, when Cethern, also grievously wounded, joins him. Cethern describes to him and the physician the appearance of each hero who inflicted a wound on him; among these Queen Meave has a place.

"Look at this blood for me, my good Fingin," said Cethern. Fingin examined this blood. "This is the deed of a haughty woman," said the physician. "It is true," said Cethern. "There came to me one beautiful, pale, long-faced woman with long flowing, golden-yellow hair upon her; a crimson cloak with a brooch of gold in that cloak over her breast; a straight-ridged *slegh* [or light spear] blazing red in her hand. She it was that gave me that wound; and she got a slight wound from me." "We know that woman well," said Cuchulinn; "she is Medbh, the daughter of Eochaid Feidlig, high king of Erin."

In one copy of the *Táin* the brooch which this Amazon carries on her breast, and which she offers to Ferdiadh as another bribe to induce him to fight Cuchulinn, weighs thirty ounces. The queen appears to have had a tart temper. She left her first husband, Conchobar mac Nessa of Ulster, returned to her father, was made by him sub-queen of Connaught, married and lost a second husband, and finally chose Ailill for his youth and beauty. Even with him she was prone to quarrel. It was envy of a wonderful bull in the flocks of her husband that made her long to own the bull of Chuailgné, about which the war waged. Yield-

ing to her bribes, Ferdiadh agrees to fight Cuchulinn in the following stanza:

O Medb, abounding in venom,
Thou art not a sweet-tempered spouse to a consort.
It is true thou art the Brachial (shepherd?)
Of Cruachan of the ramparts,
With lofty speech and despotic power.
Send me the beautiful speckled satin,
Give me thy gold and thy silver,
Since to me thou hast proffered them.

The *Tochmarc*, or courtship, of Eimer by Cuchulinn, as we get it in Irish literature, has traces of customs of two great subdivisions of men, the Turanians as well as the Aryans. For though he sets to work to gain the hand of Eimer in the Aryan way, and is refused because he is a mere champion and a youth, he ends by taking her in the Turanian way, at the point of the sword. The nations roughly embraced by that term have preserved till a late date the habit of going outside of the tribe for a bride. The Esthonians have the word *Tombamine* for bride-seizure, though the practice has gone out. Although in the *Kalewala* the tribes of Pohjola, or the Lapps, are considered foul magicians, and ever the foe of the heroes of Kaleva, or the Finns, yet it is from Pohjola that Wainamoinen and his comrades always take their brides by force or by purchase. Wainamoinen and Ilmarinen generally take the civilized method and bribe the hostess of Pohjola for her daughters, but Lemminkäinen seizes against her will the beauty who says:

Why come wooing at my fireside,
Wooing me in belt of copper?

Have no time to waste upon thee;
Rather give this stone its polish,
Rather would I turn the pestle
In the heavy sandstone mortar.

But Lemminkainen has not made himself a shepherd and fascinated the other dames and maidens of the village by his pranks and dancing for nothing. He comes in his wagon or sledge to the level meadow where the dance is to begin.

With the stallion proudly prancing,
Fleetest racer of the Northland,
Fleetly drives beyond the meadow
Where the maidens meet for dancing,

Lemminkainen and the coy Kyllikki, who presently resigns herself to her fate, turns out badly because the latter breaks her word and goes to the village dances after having made a compact with her husband that she should remain quietly at home while he refrained from war. When she breaks the compact Lemminkainen not only prepares for war, but says that he purposes to get another wife—plainly a wife from the same hostile tribe as before. This rule obtains still among Lapps and Samoyeds, poor and ignorant branches of the same race as the Finns, and among very many nations of the Turkish blood. We may look with confi-

MOTHER GRABALL'S BAY, OUTLET OF EMIGRATION FROM SOUTHERN IRELAND.

Snatches quick the maid Kyllikki,¹
On the settle draws the maiden,
Quickly draws the leathern cover
And adjusts the birchen crossbar,
Whips his courser to a gallop,
With a rush and roar and rattle,
Speeds he homeward like the stormwind.

In another bride-seeking in the Kalewala the luckless Aino appears to have had no choice when Wainamöinen the rich asked for her hand; so she drowned herself. But Kyllikki disposed of her own life as she chose. So in Ireland the rule seems to have been that the parents of the bride decided when she should marry; but many exceptions are found. It is curious to note that the marriage between

dence among the non-Keltic tribes of Ireland for traces of similar customs, which are founded on the true instinct against interbreeding.

Eocaidh Ainkenn, a king of the province of Leinster, was so well pleased with one daughter of Tuathal Techtmar, the king of all Ireland, that he came for another before his first wife died. The king gave him his second daughter, Fithir, to wife, but when she reached her palace at Magh Lugadh and found her sister alive she fell dead from shame; whereupon Darinni, the first wife, lamented her for a time and died of grief. The story is obviously parallel with the classic one in Greece which accounts for the song of the nightingale, but is not necessarily an echo in Ireland of that tale; it may easily

¹ This maiden's name, Kylli or Kyllikki, means the "tinkling one," owing to the use of metal plates and even little bells on the clothes of a rich man's daughter. It appears in Irish as *kill*, "church," owing to the impression made on the pagans by the tinkling hand-bells of the missionaries, and comes obviously up out of the Turanian underfolk of Ireland. But it has been shown conclusively that our word church, which is "kirk" in

the dialect of Scotland, derives through *kilicne*, *kiricne* from the same root "kil," and signifies the place of bells. *Kilkka* in Finnic, it became *cirice* in Anglo-Saxon. It is only one of a thousand instances where Turanian words, having become excellent Gaelic in Ireland and Scotland, have entered our own tongue very early and are to all appearance English from the old rock until their origin is shown.

be native there also. A volume were needed to cite the adventures of noted women in Irish history of the pagan and early Christian epochs, point out their Aryan qualities and habits and customs similar to those prevalent among women of Turanian stock in Central Asia, define their status before the law, and give particulars in connection with bride-buying, bride-seizing, elopements, childbirth, and customs at funerals. In a long poem on the Fair of Carmán the poet brushes aside all other derivations for that word, which O'Curry thought was the ancient Gaelic name for the site of Wexford, a late Norse colony :

It was not men, and it was not an angry man,
But a single woman, fierce and revengeful,
Loud her rustling and her tramp,
From whom Carmán received its first name.

This magician queen and her sons came to Ireland from Greece by way of Spain, so it would appear, and wrought frightful injuries to the fields and cattle of the Dé Danann tribes; but the Druids of the latter were too strong for them. They were forced to depart, leaving their mother Carmán in pledge. She was placed in a tomb alive, where apparently she starved to death. But her captors thought enough of her to come every third August to mourn her, and the wake of the old war-witch was the fair. Horse-races and trials of power between men were part of the triennial honors to "old crooked Garmán," her husband, as well as to Carmán, his wife, as another verse has it. These rites over the graves of great leaders are exactly the same among the Turkish tribes of Central Asia, according to Vámbéry. The fair of Carmán must have grown to very large proportions before A. D. 1000, if we are to believe the poet whose account of it is preserved in the Book of Leinster.

No man goes into the women's assembly,
No woman into the assembly of fair clean men;
No abduction here is heard of,
Nor repudiation of husbands nor of wives.

Seven mounds without touching each other,
For the oft-lamenting of the dead;
Seven plains, sacred, without a house,
For the sports of joyous Carmán were reserved.

Three markets were held within its borders:
A market for food; a market for live cattle;
The great market of the foreign Greeks,
In which are gold and noble clothes.

The slope of the steeds, the slope of the cooking,
The slope of the assembly of embroidering women.
No man of the happy host
Receives adulation, receives reproach.

A right understanding of the Irishman is difficult for Englishmen and Americans because those immigrants who are recognized as Irish are, as a general thing, from the rural popula-

tion, and do not represent the educated classes. But to Americans the difficulty is much increased by the fact that Ireland furnishes also the great body of women servants, whose ignorance of our ways of life forms the despair of housewives. Americans who despair of Irish servants will do well to remember that the women of Ireland also present the most remarkable extremes of dullness and quickness. Some there are whom it is hopeless to train; but others, by the readiness with which they acquire skill in all the walks of life, show that their ancestry was an educated one.

The right of women to inherit property was admitted at a very early period, certainly long before their exemption from war, if we can be sure that it really was St. Adamnan who secured their freedom from obligation to serve, and not some early pagan legislator of whose act this is merely a Christian echo. Tradition states that it was a learned woman who secured for women in Ireland a part of any succession, namely, a third part of the landed estate if there were no sons. Later the whole property went to the daughters in default of male heirs.

The one who effected this change for women was Brig or Brigit Ambui, the daughter of Senchan, chief poet and judge to King Conchobar mac Nessa of Ulster, and the third of her name. For her mother was Brig Brethach, or Brigit of the Judgments, and her grandmother Brig ban Brughad, or Brigit the Farmer-woman. The name recurring so often makes one suspect that we have to do with matters so far back that the name of Brig the goddess of learning has been varied to suit poetic treatment. It also shows that there were women who practiced the profession of the law, as there were those who taught the military art, like Scatach the teacher of Cuchulinn, and female physicians like Eaba, a lady who accompanied the queen who led one of the first swarms into Ireland; teachers like Fuaimnech, a princess who brought up the sons of kings and nobles; and poetesses like Fedelm and Ailbhe.

The last mentioned was a bluestocking of the deepest dye. Grainné having preferred the beautiful Diarmait to her affianced lord, Fion mac Cumhal, and eloped, the latter finally made the best of it and sought consolation in a lady of mind, but, it is to be feared, of little physical beauty. Ailbhé, daughter of Cormac mac Airt, was reputed the wisest woman of her time, and with her Fion entered into a conversation designed to show each speaker as the wisest and most eloquent person in the world. Doubtless he wooed her with success; wisdom might inhere in one of the multitudinous variants on the sungod, while she was granddaughter of the constellation called the Great Bear. Nothing is more indicative of the

cultivation of Irish literature for a long period than the completeness with which cosmical ideas became humanized and filled up in all details — the dates, characters, appearance, and family relations being supplied. That this should go on without being extinguished by the changes of thought in the rest of Europe is most singular; it could only have existed among a people of imagination walled off from the rest of the world by straits of the sea and by prejudices of antique date.

We have poems by various ladies of early Ireland, generally daughters of kings. Another Meave, called the Half-red, has some of the characteristics of Queen Meave just noticed. "The strength and power of Meave was great over the men of Erin," says the introduction to her poem over the grave of her first husband, whom she deserted for a better man; "for it was she that would not permit any king in Tara without his having herself as wife."

My noble king, he spoke not falsehood;
His success was certain in every danger.
As black as a raven was his brow,
As sharp was his spear as a razor,
As white was his skin as the lime.
Together we used to go on refectations;
As high was his shield as a champion,
As long his arm as an oar;
The house-prop against the kings of Erin sons of chiefs,
He maintained his shield in every cause.
Countless wolves fed he with his spear,
At the heels of our man in every battle.

Records of such women are all the more precious because few nations keep any account of early women famous for literature. The Japanese, however, have a mythical account of the beginnings of literature with a woman deity, and mention many famous ladies who were wits and authors. The Muses and Sappho represent the same idea among the Greeks. Despite the degraded condition of women in early times, the Irish appear to have given them more chance and encouragement than other races. When all seems brutality in other nations of northern Europe, the Irish have traces of a nobler outlook and seem to be cherishing the seed of ideas from which sprung later the romantic view of women in countries of greater size and wealth — the view we express by the word chivalry. In all probability it was from Ireland that the troubadours got the spirit and many of the subjects of their lays; from Irish impulse came the revival in Wales of music and the ballads and stories clustering round the name of King Arthur, mixed with a great deal of old British matter. The high view of women which is the honor of the present may be traced back through English,

Italian, and French romancers to little Ireland, where we may confidently predicate living women of the highest character as the cause and continuance of such ideas.

In perfecting the Irish woman the Christian faith did a great deal, though it is only fair to paganism to say that virtues existed in the people even before St. Patrick. But if we can recall the existence of woman in family life under the old paganism by what we are now learning of her habits among the nomad, half-nomad, and settled tribes of Asia, who are practically heathen still, the picture is indeed dark. It was an existence of relentless toil, with few periods of festivity and rare chances to improve her condition. A rich and powerful husband could put away his wife or force her to accept a rival. Unless hired mourners could be engaged she was expected to do the mourning on occasion of a death. If her husband died she must shriek and wail for a year, or until a mound or cairn was raised over his corpse. A very crude morality existed in pagan times which permitted a chief or hero rights over the persons of women that are sufficiently startling when met with all their unconscious naïveté in the oldest tales. Christianity tried to put order into this promiscuous condition of affairs, but it would never have succeeded as it has, were it not that the material for the work was superior. In other matters heathenism held its own; but in morals, using the word in the stricter sense, it gave way. Christianity was not so successful in this particular elsewhere: the inference is that the Irish woman has high qualities by nature. From goddesses and banshees, from Druidesses who understand weapons as well as the black art, through queens and saints who are human in a gentler fashion, the line of brilliant and charming Irish women runs on unbroken from the very dawn of history to the present day. Surrey's poem on Elizabeth, the Fair Geraldine, might apply to many of the early women of Ireland, if we can judge by the adventures undertaken in their behalf and the expressions of bards in all centuries:

From Tuscan came my lady's worthy race,
Fair Florence was sometime her ancient seat,
The Western isle whose pleasant shore doth face
Wild Camber's cliffs did give her lively beat.
Fostered she was with milk of Irish breast,
Her sire an Earl, her dame of Prince's blood,
From tender years in Britain doth she rest.

One generalization may be added. Irish women resume in themselves a good deal of this trait of the nation, a temperament in extremes. They are found in the old literature very feminine or very masculine, never lukewarm or doing things by halves.

Charles de Kay.

THE TEMPERANCE QUESTION IN INDIA.

Thenatives of India could not have adopted a more proper term by which to designate their intoxicating liquors than "Apka Shrab," or "Government Shame Water." By this they denote their contemptuous estimate of the fluids, and also of the strong hand of the Government which furnishes it to the 260,000,000 of the people of India at the very reasonable rate of four cents a bottle.

The most ancient Hindu books, giving information which dates back three thousand years, inform us that the Aryans made intoxicating fluid of the juice of the soma, or moon plant. The gods drank freely of it, and the early Hindu sculptors were candid enough to bequeath to us images in stone of the more convivial gods in a state of drunkenness. But drinking by a god was generally regarded by a devotee as an infirmity, and never as a real virtue. Rishi says of Indra: "Thy inebriety is most intense, nevertheless thy acts for our good are most beneficent." During all of the ages of the development of the Indian race, after the Aryan conquest, the people remained temperate. When Vasco da Gama landed on the Indian coast he found a thoroughly abstemious population. The caste system of the Hindus prohibited intemperance, while the Koran enjoins total abstinence upon every Mohammedan.

The manufacture and use of all intoxicating liquors were discouraged by all the rulers, both Hindu and Mohammedan. Some of the Mogul emperors, and, notably, the great Akbar, indulged freely, but the people recognized the infirmity with both pity and censure. When the Maharajah of Kashmir gave encouragement to the Europeans to plant grapes and hops for wine and brewing, the orthodox Hindus seriously considered whether he ought not to be put out of caste. But his sickness and death followed soon after, and his subjects believed his fate to be an act of Heaven in its own behalf. All authority shows that, until the English Government took the manufacture of intoxicating liquors into its own hands, and then deliberately made itself the barkeeper for the Indian Empire, no native governments had ever reaped an excise revenue from the making and selling of an intoxicating liquor; that

tradition and social customs were in favor of temperance; and that the great body of the people not only were temperate by habit, but never acquired the passion for intoxicating drinks.

The excise regulations of the Government of India began in Bombay in the year 1790. It was claimed that the people began to develop a taste for liquor, and that the cost of a quart of *mowah* spirit, made of the juice of the palm, was so low — only a half-penny — that anybody could get drunk on it. Then the fallacy came at once to the front. Tax, and therefore restrict. Put a tax on the tree, and the people will drink less. This was the outspoken argument, a good exoteric weapon in defense of the excise. The real argument was nothing of the kind. Tax the juice of the tree, and the Government will have all the money it wants — that was the whole philosophy, and it has been steadily adhered to in India for a whole century. The object of the Government of India has been to grind money out of a vice, and not to pulverize the vice.

Two systems have been adopted by the Government, which is the real purveyor of liquors to the people of India. The manufacture has not been allowed to everybody. That important work must be conducted in such way that fraud cannot be perpetrated; in other words, that every gallon of liquor distilled must be sure to pay its tax into the treasury of the Empire.

The first method adopted was that of the Government distillery. Its general name was the Sudder (District) Still system. There was one still, or only a very few, in the district. The arrangement was beautifully patriarchal. The Government was the responsible proprietor of every distillery in the land. It built large sheds for the distilleries, provided all the necessary utensils for distillation and measurement, and set apart special police to watch the pandemonium. It was the owner of the machinery. To do the work, there was a native contractor. He was closely watched. The amount turned out by each distillery was fixed by law. A duty was levied on still head; that is, a certain rate was levied per gallon according to strength. Only a certain number of distilleries were permitted in each district. Then only a limited amount of London proof liquor was allowed to be produced from a certain amount of material. For example, the rule was that only two and a half gallons of proof spirits were to be manufactured from eighty pounds of *mowah cassia latifolia*. The size of the stills was limited, and only pure liquor could be

manufactured, and that must be from wholesome material. The distillery was strictly watched by the Government police, and the fluid left under lock and key. There were other safeguards by which the output of liquor was comparatively limited. What was the result? The Government did not make all the money it wanted for its general treasury. In order to carry on the Government, £640,000 were assigned to the Excise Department of Bengal, as its share to meet demands. But under the Government distillery plan only from £550,000 to £600,000 had been raised for years. Seldom did the revenue go beyond £600,000. Then came the demand for £640,000. What was to be done? The old principle could not be worked up to that paying basis.

Now came a happy thought. The old Sudder system must be given up. It did not put money enough into the treasury. Mr. C. T. Buckland must go down to posterity as the brilliant man who was equal to this occasion. His genius evolved the Out Still system. He laid it before the Government. It was adopted. The treasury soon had all the money it wanted. The Government distillery was a ruin, and the Out Still was erected on the site. The new arrangement was introduced in the year 1876, but did not go into complete operation until two years later. But when once in full motion it answered all expectations — except those of the friends of temperance. It filled the treasury to overflowing, but covered many a fair plain with drunkards.

Let us look at this brilliant invention — the Out Still of New India. All the Sudder distilleries for country spirits must be shut up. The right to set up Out Stills, or stills outside Government control, must be offered at auction to the highest bidder. He can distill what he likes, and as much as he likes, on condition that he keep his bargain with the Government to pay the price at which he bought his right to distill. He buys for one year, just as he would hire a house. The auction is held by a district officer, near the magistrate's office, and superintended by a district officer or a deputy-magistrate, as the case may be. In this way the Government is released from all expense and from all supervision.

"The Times" of India thus describes one of these Government auctions:

Yesterday afternoon the town hall was the scene of a good deal of excitement. The last public auction sale of liquor licenses was held there by the collector of Bombay. Parsis, Hindus, Goanese, and native Christians mustered in great force. The large hall was nearly full of men, women, and children. The first-class shops were put up first, at the reserved price of five hundred rupees each; and in spite of the moan made to Government regarding

the rigid laws that obtain with regard to spirit licenses, every shop fetched a considerable amount over the price fixed on it by Government. Though there will be no sale next year, these prices will hold good for three years, as the licenses will only be renewed on payment of their value at this auction. After that, of course, the value will be assessed by the Abkari inspectors. Out of the fifty licenses put up forty-nine were sold; the fiftieth was bought in, as the police objected to the locality. The sale will continue to-morrow and for some days to come yet, as 450 licenses remain to be sold. It is hardly worth mentioning that the Government are turning a pretty penny by the rivalry of the bidders, for even here every caste seems to exult over the downfall of another. The sales are fetching more this year than they did this time twelve months ago.

The direct result of this system is that the number of distilleries has been enormously increased. The people can now get all the liquor they desire. The Out Still is before all eyes. The increase in revenue is enormous. In 1873-74 the excise revenue from drink was £2,300,000. By 1878-79 it had increased to £2,600,000. Every year afterward it increased. In 1883 it was £3,609,000; in 1884, £3,836,000; in 1885, £4,012,000; in 1886, £4,152,000; and in 1887, £4,266,000. During the last five years, therefore, we find an increase of India's revenue from liquor to be £660,000, or nearly 20 per cent. Such is the financial triumph of the Out Still.¹ No wonder the Commissioner of Revenue could exclaim in his report, for the joy of the Government in London, "The expansion of revenue under this system has been marvelous."

It is but just to the Government to say that it claims for its defense that there is no real increase in intemperance and the general consumption of intoxicants; that a larger revenue is from a larger duty; that there has been increased vigilance on the part of the revenue officers, and that there is, under the Out Still system, less chance for fraud. But the testimony of tea planters in Assam, of publicists, and of wise and observant missionaries, long resident in India, is to the effect that the doubling of the revenue on liquor in ten years betokens increased consumption and drunkenness. The great increase in the number of stills and in the revenue cannot be accounted for on the Government line of defense. The Government has never claimed that it adopted the original plan of the Government Still, or the new Out Still to take its place, in order to lessen intemperance, but simply to increase its revenue. Here it has been honest — it gained its end. Besides, the special Bengal commission was appointed in 1886 for the express

¹ No. 166 of Government of India's Papers for 1887. Also, Report of the Second Decennial Missionary Conference, Calcutta, 1883, p. 433.

purpose of investigating this very subject. What was its conclusion? That there is a vast increase in consumption. It declares that in Bengal, which is one-fourth of all India and contains a population of 66,000,000, the quantity of liquor distilled and sold in 1874-75 was one and a half million gallons. The population at the utmost had increased only 8 or 9 per cent., but the output and consumption of liquor increased 135 per cent., and in some districts 180 per cent.¹ Here we have the Government against itself.

This very subject was the theme of an important debate in the House of Commons in March, 1888, during which the enormity of the Government share in promoting intemperance — though we by no means claim such to be its motive — came out in strong light. Mr. Caine, a member of the House of Commons, said:

The fact is the Indian Government are in the position of licensed victuallers, who hold a monopoly of the liquor traffic, and are responsible entirely for the amount of the liquor that is sold and for the methods by which it is sold. . . . According to the evidence laid before the commission the Out Stills are frequented by large numbers of people, young and old, who are found often in a high state of intoxication, singing ribald songs, and creating all kinds of disorders; in fact, the condition of things you would expect to find — if uncontrolled and unchecked public houses should exist in this country — in the lowest slums of London. . . . I contend that the whole tendency of the excise system is to increase consumption, and that I have proved it to the hilt from the very documents which the Government of India, misled by some mendacious official, has put forward to prove the contrary. The Government are driving this license trade as hard as they can. Collectors find it the easiest way to increase their contribution to the revenue, and for years they have been stimulating the consumption of liquor to the utmost. If the Government continue their present policy of doubling the revenue every ten years, in thirty years India will be one of the most drunken and most degraded countries on the face of the earth.²

The most careful study of the Sudder Still system, contrasted with the Out Still system, leads us to conclude that the Government safeguards against smuggling and other methods of concealment were much stronger and more numerous in the former than in the latter. When the auction is over, the tenant of the Out Still is not the Government, but the highest bidder. He has farmed the job, just as a man farms the rents of a landlord holding an Irish estate, and it is his interest to get all the money out of it he can. When he attended the auction, and his highest bid was accepted, his motive was purely financial, and not the lessening of

intemperance. This motive, it is very supposable, controls all his methods.

IS INTEMPERANCE IN INDIA INCREASING?

To this serious question we are compelled to answer affirmatively. The proof is overwhelming that the temperate Hindus are gradually becoming a nation of drunkards. Roadside grog-shops are multiplying. Crime is fostered by them, and "the roads near by are made unfit for respectable people and unsafe for passengers."³ In one well-known district in Bengal, that of Monghyr, the Government distillery used to turn out five hundred gallons a day. Now, under the new Out Still system, the average is fifteen hundred gallons a day, or three times the former amount. The increased production means more drunkenness and crime. Private drinking is now indulged in by nearly nine-tenths of the Bengalis instructed in the English colleges and schools. Keshub Chunder Sen says:

So long as the men are in the university we can hold them, because they are not allowed to drink; but the moment they pass, away they go, and now the Sabbath day in Calcutta is simply a bacchanalian festivity for the educated Bengalis of the city. . . . Friends never meet nowadays without spirit being consumed. Crime and immorality are also in large measure attributable to this cause. The instances of petty crimes and heinous offenses committed under the influence of drink are of frequent occurrence, as may be proved by the criminal records of the country. . . . It is, indeed, harrowing and painful to contemplate the extent to which sensuality, profligacy, and brutal revels on the one hand, and irreligion, blasphemy, and practical atheism on the other, are making ravages among all classes of the native community in consequence of the spread of drunkenness, and undermining the religious and moral life of the nation. . . . In short, the use of intoxicating liquor has done more than anything else to degrade the physical, moral, and social condition of my countrymen, and has proved a stupendous obstacle in the path of reformation.

An English medical officer says:

The quantity of intoxicating liquor drunk on holidays is incredible. In the course of practice I have met patients who have astonished me by describing their powers of drinking. One, a Mohamadan moonshe, asserted that he had finished a bottle of brandy and three bottles of beer at an evening sitting; another, a Kayasth a vakil, that he had swallowed a bottle of brandy almost at a draught.

The way in which the ever-increasing temptations to drink are breaking down all old religious restraints of the Hindus and Mohammedans is easily seen. The education in the schools has loosened the bonds, and now

¹ Ridley, "One Aspect of the Present Outcry against Foreign Missions," p. 9.

debate in the House of Commons, March 13, 1888, pp. 3, 7.

³ Pringle, Extracts, etc., p. 3.

come the vices of the civilized West. Native doctors say that delirium tremens is a common disease among their patients. Drunkenness is the almost invariable result of a native dinner party. Indeed, liquor is being introduced into the zenana, and women are acquiring the passion. The Mohammedans are yielding, in spite of the Koran. Scarcely a social meal takes place among the better class without European wines being used.¹ All barriers are falling down before the enlarging facilities for drinking. The rush is towards the still. When there was no tax on the palm furnishing the juice which served as a simple beer for the natives, the natives contented themselves with that. But now the Government taxes every tree which produces that juice. The people having gotten the taste of the strong drink, now prefer it. It is quite convenient to reach the roadside groggery, and the liquor is furnished so cheaply that it requires but a small sum of money to drink at will. Nothing can give one a clearer idea of the illusions of intoxicating liquors than the way they blind one to his religious vows. The Shrastras of the Nepali castes — the Bahur, the Khas, and the Thakuri — prohibit drinking, but these very people now indulge freely.

Their caste rules could restrain them from making intoxicants in their own houses, or from going to the other castes to procure them; but they have not sufficed to save them from the seductions of the Government liquor shops, whose keepers are only too willing to connive at secrecy, though even secrecy is now but little practiced. Such cases generally commence with brandy obtained on the sly, or as "medicine," in the imported spirits shops, and finish with "country spirits," taken in open and shameless defiance of religion and morality from the Out Still shops.²

The Rev. A. Turnbull, a missionary in Darjeeling, addressed postal cards to the proprietors of the 199 tea plantations of the district, and inquired whether or not they considered the excise shops, established by the Government along every public road and in every private and public bazar, a public evil, injurious to the local tea industry and to the material and moral interest of the tens of thousands of tea Kulis. One hundred and forty-four replies were returned, and all except three were positive in the declaration of the curse of intemperance to the tea industry. One manager says ten per cent. of his laborers get drunk, and that the Brahmans of Darjeeling are breaking all caste by selling liquor in the bazar. Mr. N. L. Roy says:

The liquor traffic has corrupted the morals so that the laws of religion and the binding customs of society are being totally disregarded for the sake of

strong drink. Why is it so? Because the temptations to drink are great — the facilities and opportunities for drinking are ample and daily increasing. And how should it be otherwise, since Government is at the head of the drink traffic? It defies competition with any other trade. I have been now eighteen years in Darjeeling. When I first came there was, to my knowledge, only one grog-shop; now there are nine such shops in one bazar.

Poresh Ram Patni of Dinapore, an honored native, thus describes the curse of the Out Still system:

I remember the time when the Out Stills were first in use many years ago. After that we had the Sudder distillery system, and the shopkeepers were not allowed to distill liquor in their own houses. At that time it was only possible to buy liquor at a rupee a bottle. If you wanted half a bottle the man would charge you eight annas, and four annas for quarter of a bottle, and so on. Now that the Out Stills have been established, you can buy four kinds of liquor — the cheapest at two annas, the next at four annas, then at eight annas, and the last at one rupee a bottle. The liquor we can now buy for one rupee is much stronger than that we could buy for the same price in former years. The bottle now sold for eight annas is equal to that we could buy for one rupee before.

Mr. J. H. Newberry, Collector of Rungpore, declares

that the natives, when they drink at all, drink to excess. Laziness, poverty, crime, and disease are the usual moral effects of excessive drinking. Natives of this country who drink any intoxicating liquor at all never seem able to restrain themselves to healthy and moderate drinking. They all drink to excess.

All these testimonies relate to the tea districts of India. The increase is equally great elsewhere, and equally destructive of the local industries. The Bengal excise commissioner makes the following important declaration:

There has been undoubtedly a very great increase of late years in the number of spirit-drinkers among the wage-earning classes, including those who cultivate land on their own account in addition to working for hire. This has been most marked in the Behar spirit-drinking tract, in the cities of Bengal, and in the centers of the jute-pressing, cotton and jute spinning, and coal mining industries. . . . The city of Monghyr rivals Patna in drunkenness, and the evidence taken at Jamalpore, even after the necessary deductions have been made for exaggerations and inaccuracy, proves that there has been a great increase of drinking among the workmen of that place.

Mr. French, the manager of the Churaman Ward's estate in Dinapore, a man who has had fifty-two years' experience of the country, gives this evidence:

After forcibly describing the increase in drinking observed by him, he stated his belief that it is entirely due to the increased facilities with which

¹ Gregson, "Drinking and the Drink Traffic in India," p. 11.

² "The Traffic in Strong Drink" (Darjeeling), pp. 5, 6.

liquor can be obtained at his very door. A deputation of the East Bengal Landowners' Association, who met the president of the commission at Dacca, stated to him that in their opinion the increase of drinking among the lower classes is in a great measure due to the shops being situated in markets and such-like places, and there can be no doubt that the selection of improper sites for shops has had much to do in most districts with the increase of drinking and drunkenness.

As to the quality of the liquor now served to the people of India by the Government there is but one opinion. It is a miserable decoction, adulterated and diluted, and can be sold at a profit for two cents a bottle. The natives can go to the grog-shop, and, poor as they are, are known to barter their smaller articles, such as shawls and umbrellas, for liquor. The liquor is anything but attractive in odor to the average European in India, and it now passes under the name of "Billy Stink." But, the passion for it being formed, the ill odor has no power to repel. It is a terrible arraignment which the Archdeacon of Bombay makes when he says of the English in India, "For every Christian we have made in India we have made one hundred drunkards."

MOVEMENTS TO ARREST INTemperance.

It cannot be supposed that such a great increase in intemperance could take place, and move steadily forward, without exciting profound attention, not only among the Christians of India, led by the vast missionary force, but by the English at home. The protest has gone from India to England, and now a sentiment is rapidly forming in the latter country which is giving great hope to all the churches represented in India. The debate in the House of Commons on March 15, 1888, was remarkable in every respect. Mr. Caine took up the cause of temperance in India, and proved that even the statistics had been manufactured, especially in the cases of Ahmedabad, the island of Bombay, and Cawnpore. The debate was participated in by Lord Randolph Churchill, Sir G. Campbell, Sir J. E. Gorst, Mr. S. Smith, Sir Richard Temple, Mr. Boyce, and Sir J. Fergusson. Defense of the present system was made by some of the speakers. But the great array of facts presented by Mr. Caine was such that no amount of apology could mitigate the fact itself—that the Government, without intending to increase the traffic and intemperance, is nevertheless the real author of the astounding growth of the passion for intoxicating drinks and its subsequent crimes.

In Darjeeling, where the tea plantations are

the most important industry, there has been formed the Darjeeling Temperance Society, which is supported by prominent civilians, missionaries, and educated natives. It has issued a pamphlet, giving an account of an anniversary held in June, 1888, and containing addresses by influential speakers and a large correspondence from tea planters, testifying to the increase of intemperance and to the responsibility of the Government for it. An influential native writer, Dinshaw Edulji Wacha, has published a large pamphlet showing the injurious effect of the present policy of the Government in promoting crime by intemperance.¹ The British Soldiers' Association is an important organization in India, which has resulted in the signing of the pledge of total abstinence by ten thousand soldiers in the Indian army. Perhaps of all the organizations now operating for lessening the crime of intemperance in India, the Native Races and Liquor Traffic United Committee of London is the most important. It publishes valuable documents, sees that the public is well informed, and is using all proper methods to influence English opinion in favor of temperance in India.

The missionaries in India are alert in this important work. There seems to be no dissenting voice that the crime of intemperance is rapidly on the increase. All the churches are interesting themselves. When union conventions are held the discussion of the subject forms an important part of the programme.

But the most hopeful of all the signs is that the natives themselves are arousing, with great energy, against the growth of intemperance. It is safe to say that if they had the power of local self-government they would break up every still in the country. They well know that their religions with all the traditions are against the drinking of intoxicants. Some of the native princes are unwilling to give any indorsement to any system for collecting excise from the sale of liquors. The Prince of Mysore has not yet allowed the Out Still to be auctioned off in his dominions. The late Rajah of Travancore, a highly intelligent man, said he could not understand the English people. They held a great many meetings, and had a very strong political agitation against the opium traffic: if it was wrong to get money out of it in India, it must be equally wrong to get revenue out of intoxicating liquor in India. Why is it not just as criminal to degrade Hindus as it is to degrade John Chinaman? Why is it not just as wrong to send brandy and whisky to Calcutta as to send opium to Shanghai or Hong Kong?²

There is in Bombay a native temperance league, the special object of which is to arrest the growth of drunkenness among the Mah-

¹ "Indian Abkari Administration." Bombay, 1888.

² Gregson, "Drinking and the Drink Traffic in India," p. 10.

rattas in Bombay and in western India in general. A native gentleman of Bombay, who seems to be connected with no society, is laboring as an individual in the interests of temperance in the Colabba district of that great city. Mr. Gregson, wishing to find out the motive for his crusade, inquired :

"Is it against the Government?"

"No," was the reply.

"Do you threaten the people with violence?"

"No."

"Do you obstruct them in going to the shops?"

"No. My only reason is that I do not want the vice of drunkenness to spread among my countrymen," was his grand reply.

The native Indian writer is a master in the art of arraying English authorities and example in England against English example in India. An illustration of this keenness of criticism may be seen in the manner in which a native author, Wacha, introduces a fact in English history, supported by no less an author than Lecky, in his "History of England in the Eighteenth Century," in condemnation of the present wholesale reaping of financial profit by England in India from the revenue from intoxicating liquors, and in proof of the groundlessness of the Government plea that restriction of the liquor traffic is a real barrier against increased intemperance :

By the year 1736 so frightful was the drunkenness that even the sluggish Parliament under Walpole was moved to strong measures; a duty of 20 shillings a gallon was imposed on all spirituous liquors, and a license of £50 a year was required for selling them in less quantities than two gallons. But these measures, which would have well-nigh extirpated gin-drinking could they have been enforced, were overstrained. The consumption of spirits, indeed, sank from 5,394,000 gallons in 1735, to about 3,000,000 in 1737, but at the cost of violent riots; and soon a clandestine retail trade arose, very lucrative and very popular, till, in 1742, no less than 7,000,000 gallons were distilled. Then the law swung from one extreme to the other, and in 1743 the duty of 20 shillings was reduced to a penny, the license of £50 was reduced to 20 shillings; but neither drunkenness nor even clandestine selling yielded to this new mode of treatment. . . . At last, in 1751, wise and practical measures avoided the excess of the law of 1736 and the defect of the law of 1743. . . . These laws were not beyond the capacity of the nation, and although not extirpating the chronic evil of spirit drinking and drunkenness, allayed the acute malady of the previous thirty years, and caused a notable diminution in the consumption of spirits, in drunkenness, and in disease.

THE RESULTS.

THE effects of intemperance are the same the world over. Crime and poverty fatten on the vice. But there is a difference in countries.

The evils of intemperance magnify in the ratio of the unevangelized state of the people who are cursed by it. The self-restraint possessed even by people living in a Christian land, and yet themselves not practical Christians, is one of the most patent of the indirect effects of the Christian religion. The atmosphere of Christian life has its effect on all who breathe it. But in such a vast conglomeration of races as India presents, where the number of Christians is very small compared with the entire population, the general effect of the easy access to intoxicating liquors by every individual in the land must be terrible. The missionaries are united in their testimony of the invasion of their hard-won Christian folds by the growing vice. The Rev. H. Onasch of Ranchi, in the district of Lohardugga, for example, makes the following report of the danger to his work among the aboriginal people of Chota Nagpore :

Having been now for more than seven years here, and having plenty of opportunity to see the natives in their villages, I, with a sorrowful mind, state that drunkenness amongst Christians, Hindus of all classes, and Mussulmans is increasing rapidly. Referring to the native Christians of my own church here, I will prove my assertion from the annual statistics since 1880, which I have with me, viz. : In 1880, amongst 29,000 Christians: habitual drunkards, 41; moderate drunkards, 160. In 1881, amongst 30,000 Christians: habitual drunkards, 79; moderate drunkards, 163. In 1882, amongst 30,000 Christians: habitual drunkards, 61; moderate drunkards, 356. In 1883, amongst 30,000 Christians: habitual drunkards, 250; moderate drunkards, 274. Though we missionaries have done our utmost to check the evil, and though we have been successful in many cases, yet we have not been able to obtain a satisfactory result. Now if people under the word of God and under church discipline show an increase of drunkenness, how much more will this be the case with those who are under no obligation whatever; and it is indeed deplorable to observe how drunkenness affects the non-Christian Kols, both in their moral and material condition. They are daily to be found in large numbers drunk in their houses, in the public places of their villages, such as the weekly village or town bazars, near Government distilleries, and on the roads. A few instances will confirm what I say. In February last I came along the road from Kalamati to Ranchi. At the Government distillery at Topadana a large number of Hindus and non-Christian Kols were sitting near the distillery, and all of them in a more or less drunken state. The Chaukidar from Hatya was amongst them, and on seeing me came up to my cart and tried to stop me from going. I reached Doranda before sunset. Passing through the Government distillery I observed a large number of men, women, and children sitting and drinking liquor. I stopped and looked at them, and found most of the men drunk and quarreling, and thirteen women in a state of intoxication.

There is, however, not a mission field in India to-day which is not endangered by the

growing intemperance. The Syrian Christians are cursed with the vice. The Roman Catholics are indulging in the same way, "even children learning early to drink, going with their parents and getting a little from them."¹

The hill tribes, who are the descendants of the races conquered by the Aryans, and have ever remained more impervious to foreign influence because of their gross life and dense ignorance, are particularly affected by habits of intemperance. The liquors which they drink, and are growing fonder of all the while, kill with astonishing rapidity. The indigenous races have neither self-respect nor the power of self-discipline. They drink until they are drunk. The wayside shop, with the sign-board "Wines and Spirits Sold Here," means certain death to the pre-Aryan. There is no diversity of opinion as to the fatal effects upon these defenseless natives. The missionaries among them, in both the south and the north, declare the effects to be simply devastating. These poor people, more than any others, when once possessed of the demon of the passion, barter any possession for a bottle of liquor.

An army surgeon, of twenty years' intimate knowledge of India, in a paper read before the Colonial Temperance Congress in 1886, wrote thus:

Twenty years' personal observation in the North-western provinces has demonstrated to me the appalling fact that the entire race of hereditary owners of the soil have all been swept off by drink. Brandy or Government rum is what these poor

creatures take to when the taste has been lighted up; and it is certainly a subject for thoughtful consideration, that, while we in this country are rejoicing at the reduction of the excise revenue in Britain, what are we to say of the gradually increasing liquor revenue in India?²

What wonder? A penny's worth is all that is needed to intoxicate, madden, and wreck. Even if a poor native has no money, he can manage to get liquor. He can get it on credit, and mortgage his few possessions, if so be he can quaff the intoxicating cup.³ Then the back door—that invention of the saloon-keeper in Great Britain and the United States—is made to do its full work, if the proprietors prevent ingress by the front door.

Now, dark as this picture is which we have unwillingly been compelled to draw, there is no real ground for discouragement. The Gospel has never been carried to a country without at the same time, if not earlier, the transportation of the vices of the land which sends the truth. Already the missionaries are awake to the danger. The English people are becoming aroused to it. The real rulers of India do not hold council in Calcutta, or enact laws in the Westminster Houses of Parliament, but are the vast commonalty of the British Isles—or, rather, are the whole Anglo-Saxon race. India will be conquered for Christ. It will be a complete conquest—alike over the evils of false faiths and over the vices which still grow, as tares among the wheat, in Christian lands.

¹ Mateer, "Native Life in Travancore," p. 284. This author furnishes some sad proofs of the invasion of the Travancore congregations by intemperance; and also some beautiful illustrations of the rescue of natives from the habit of becoming Christians. Pp. 284, 285.

SLEEP.

IN MEMORIAM: A. B. P.

THOU best of all, God's choicest blessing, Sleep;
 Better than Earth can offer—wealth, power, fame;
 They change, decay; thou always art the same;
 Through all the years thy freshness thou dost keep;
 Over all lands thine even pinions sweep.
 The sick, the worn, the blind, the lone, the lame,
 Hearing thy tranquil footsteps, bless thy name;
 Anguish is soothed, sorrow forgets to weep.
 Thou ope'st the captive's cell and bid'st him roam;
 Thou giv'st the hunted refuge, fre'st the slave,
 Show'st the outcast pity, call'st the exile home;
 Beggar and king thine equal blessings reap.
 We for our loved ones wealth, joy, honors crave;
 But God, he giveth his beloved—sleep.

Thomas Nelson Page.

GENTILE DA FABRIANO (1347?-1427-8).

(GENTILE DI NICCOLO DI GIOVANNI DI MASO DA FABRIANO.)

(ITALIAN OLD MASTERS.)

THE more closely we study the history of the Italian schools of art the more clearly we see that the lines of distinction and demarcation which the critics draw are hypothetical, and often neither distinguish nor delimit, but that, in effect, all central and northern Italy was from 1100 to 1600 in a ferment with the new vitality of awakening political life, and that even in the case of artists of widely separated regions there is a confusion in the attribution of work which shows that the distinctions are so subtle as not always to be traceable. We find pictures credited to one school after another, and the work of one master given to another so often and on such positive grounds that we are obliged to come to the conclusion that the differences were often more personal than territorial, and that as Cimabue did not invent Italian art, so no district of this wide region is entitled to the distinction of having been its cradle. The art of Umbria had as legitimate beginnings as were those of Tuscany, and the names of famous miniature painters (descendants in craft no doubt from the same Byzantines who had kept up the traditions of Greek art) and of famous potters (the elements of whose technique and decoration are to be found as early as the eleventh century) are preserved to us, as Oderisio of Gubbio and Master Giorgio. The latter, we are told, was an ancestor of Gentile da Fabriano, who was on the whole the most remarkable of his generation in the region which was, later, to be the home of Raphael. Dante speaks of Oderisio (as among the dead), as well as of his successor Franco Bolognese; and other painters are known, showing that Umbria was no more dependent on Florence for its inspiration than was Siena.

The artistic genealogy of Gentile indicates a cross of Flemish strain. Lindsay justly notes this, and it is one of the evidences of the immense circulation of the art ideas of that epoch that the influence of Flanders had penetrated

into Italy when no other element of civilization can be shown to have done so. The year of Gentile's birth is unknown, but it must have been about 1348; as he is shown by a document lately discovered at Fabriano to have died about 1428, and is said to have died at the age of eighty. (Before the discovery of this document the dates were commonly taken as 1370?-1450.) Of the details of the lives of their great painters the authorities of the day, as of many days before and after, did not concern themselves; artists were craftsmen like all others of any other trade, apprenticed and dealt with like the carpenters and the masons of the time, and no one thought it a matter of interest that the day of the birth or the death of a Gentile or a Giotto should be recorded.¹ This obtained as long as the painter was the servant of the commune, so that it is only when he becomes the servant of personal vanity that he appears as a man of any individual importance. Gentile was the pupil of one of the Umbrian successors of Oderisio, Allegretto Nuzi da Fabriano; but his range of study included the Siennese as well as the Florentine and the Flemish, and his work is of wider range than that of any other artist of his day. He was the contemporary of the brothers Van Eyck, the elder of whom, Hubert, was born about 1366, and died in 1426, while John was twenty or thirty years younger, and died not far from the same time as Gentile, probably in 1446. In Venice the works of John Van Eyck were well known, and may well have been familiar to Gentile during his abode in that city. At all events, Gentile exhibits in his work the love of luster and the jewel-like quality of the Flemish brothers, and his pictures seem a prophecy of those of Albert Dürer. But in the essential of the art-spirit of the great Italian schools, the manner of looking at nature, and the subjective treatment of even the details, Gentile remains true to his immediate ancestry. He never falls into the realism of the Flemings; he loves the gorgeous color and the

¹ A protocol of the notary Giovanni di Ser Federico da Cerreto existing in the archives of Fabriano shows the act of acceptance of the bequest of Master Gentile, dead in Rome, in behalf of his relative Maddalena, daughter of Ser Egidio da Fabriano, with the date 1428, November 22. However, the date of the death may be 1427, Gentile having worked in St. John

Lateran from the 28th of January till the end of July, 1427, with the salary of twenty-five florins a month, and there being no information of work done subsequent to that date. ["The Year of the Death of Gentile da Fabriano." By Aurelia and Augusto Zonghi. Tipografia Sonciniana; Fano.]

jeweled glitter, and he gets a glimpse of the naturalistic future of art; but this, in his work, is merely seen through the invincible habit due to his idealistic education. The necessity of working on large surfaces in fresco was with Gentile, as with all of his fellow-workers in Italy, a barrier to the adoption of the realistic method, while with the Flemings, whose work was on a restricted scale, the direct study of nature was facile and tempting. Over and above this, the far more conservative nature of the Italian was an impediment to any change of method or type.

Vasari has it that Gentile was the pupil of Fra Angelico; but the spirit of their work is so different that there seems no indication of affiliation between them, if we except the common parentage of the Italian schools in the Byzantine. Moreover, as, according to the latest discoveries, Gentile was born forty years before Fra Angelico, it is in the last degree improbable that he should have seen any work of the latter before his style was as far determined as it ever became, and it is far more likely that the work of Orcagna was the common cause of any similarity there may be in that of the two younger men. A fragment of fresco by Gentile at Orvieto, where he worked in extreme old age, shows, in the opinion of Cavalcaselle, the influence of Siena; but considering the age at which it was done I should be more disposed to regard the Siennese influence as due to subsequent repainting. At Fabriano is the predella of an altar-piece—the other parts of which have been taken to Milan—which recalls work of Taddeo Bartolo's at Siena. The figures in this altar-piece are clumsy in proportion and attitude, their drapery complicated and full of meaningless folds, while the hands and feet are coarse and ungainly. The details are most elaborate and highly finished.

Gentile, on leaving Fabriano, first went to Brescia, where he decorated a chapel for Pandolfo Malatesta. He then went to Venice and painted one wall of the great hall of the ducal palace with a battle scene, a combat between Barbarossa and the Venetians. He also executed two altar-pieces, for the churches of San Giuliano and San Felice. Records recently discovered state that the walls in the ducal palace were undecorated up to 1411, and that the paintings were all completed by 1422, showing that Gentile and Pisano must have worked on them between those two dates. The battle piece above mentioned has disappeared, nor do any of his works executed in Venice survive, with the exception of one madonna in the Venice Academy. We know, however, that Jacopo Bellini, father of Gentile Bellini and Giovanni Bellini, entered his work-

shop as pupil, and that a strong friendship existed between master and disciple, Gentile standing sponsor to Jacopo's first child.

In 1422 we find Gentile at Florence; but though he had left Venice, he continued to have many orders from that city, where his style was immensely admired, and where a great number of his works were collected. Says Cavalcaselle:

From his shop in the Popolo St. Trinità at Florence, Gentile doubtless sent forth much that is undiscoverable at the present day. In 1423, he completed an order for the church of his adopted parish; and the "Adoration of the Magi" . . . is now the ornament of the Florentine Academy of Arts [of which Mr. Cole has engraved a portion]. He enriched the foreground of the composition by the introduction of a copious retinue of followers, grooms, and huntsmen, accompanied by dogs and monkeys, filling the distance with well-arranged episodes and groups. The Saviour, the Virgin, and the angel appear in the medallions of the gables, whilst the predella comprises the Nativity, the Flight into Egypt, and the Presentation in the Temple. Grace in the shape of the females attendant on the Virgin, ease in the motion of the king, whose spurs a page removes, are combined with individuality in heads, which seem portrayed from nature. The harmonies of color are Umbrian in their gayety, but there is no aerial perspective, and gilt-relief ornament is luxuriously applied. The profile of a female to the left of the Virgin recalls the types of the old Siennese period, whilst the turbaned king seems impressed with that softness which becomes a more charming feature in Perugino. The figures in the gables are pretty and in fair condition, whilst the principal subject is not free from injury. This is Gentile's best extant effort, proving that his stay in Florence had taught him something more than he had learnt at home, yet, that like his precursor, Nuzi, he could not alter his Umbrian nature, nor forget his primitive education so far as to adopt any of the innovations due to Uccello, Brunelleschi, Masaccio,¹ or Donatello. He may have been struck by a miniaturist like Lorenzo Monaco, he may have admired the creations of Angelico; but he remained inferior to the first, and *a fortiori* at a respectful distance from the second.

With so much disparagement of Gentile I am not disposed to agree. He was unequal in his work and changeable in his temper, with less respect for the conventions of which the art of his day was in great part composed; but if in the vein of Fra Angelico he was not to be compared to him, he was admirable in decorative qualities of which the Dominican had but a faint perception.

We know that Gentile remained in Florence till 1425, when he was called to Orvieto to decorate a part of the cathedral. Vasari speaks of work of his at Siena, and a Virgin and Child supposed to be by him, and stated to have been

¹ As Gentile was fifty-four when Masaccio was born, the latter is not likely to have influenced him much. They died at nearly the same time.

painted in 1425, is much praised by Facius, but there is no record of his having been in Siena. During his abode of three years in Florence he painted several pictures. Vasari praises much a Virgin and Child in the church of San Niccolò, of which only the side panels are now extant, very gracefully and richly designed. A panel has lately been discovered in the same church, representing the Holy Ghost in the shape of a dove descending from God upon Christ and the Virgin, who kneel below on a rainbow. At the sides are the figures of various saints and the resurrection of Lazarus.

Gentile was called from Orvieto to Rome by Martin V. to decorate the newly restored church of St. John Lateran, and he worked on the frescos until the time of his own death.¹ Most unfortunately all have perished, though one still remained in the sixteenth century.

Vasari tells us of a saying of Michael Angelo's, referring to Gentile: "Aveva la mano simile al nome" ("His touch was like his name"), Gentile meaning delicate, graceful. Van der Weyden, after seeing the frescos in the Lateran, declared that Gentile was the greatest man in Italy, and no doubt the Flemish artist found much that was sympathetic and interesting to him in Gentile's work.

Gentile did other work for Pope Martin, all of which has disappeared; and he was probably at Perugia at some time of his life, judging from the fragments of a fresco in San Domenico. There are some works at Città di Castello attributed to him, but their authorship is doubtful.

Gentile died at Rome, according to the lately discovered document mentioned above, in 1427-28.

W. J. Stillman.

NOTES BY TIMOTHY COLE, ENGRAVER.

FLORENCE, January 13, 1888.—The detail sent is from the "Adoration of the Kings," by Gentile da Fabriano, in the Academy of Fine Arts, Florence. It is in the long gallery leading off from the Tribuna del David, where are arranged in chronological order examples from the earliest period of Italian painting down through the decline of art. The picture is about nine feet square, including the frame, which is architectural in design and highly ornamented. It is filled with figures, and the kingly procession which has come to pay homage to the Child winds away off into the distance through a picturesque and hilly landscape. There is a variety of gay and cheerful life—neighing horses, barking dogs, chivalric men and graceful women, with dwarfs, monkeys, asses, camels, and tigers. Doves circle in the air above and play at mating, at which the men look up in smiling interest. The guiding star rests above the Child. The ornamentation of the garments and halos is indescribably rich and delicate, being both embossed and incised, and in places in exceeding high relief, as, for instance, in the crown of the figure behind the one kneeling and in the curious hat upon the ground. The details are worked out with the greatest possible minuteness; every individual pebble on the ground is separately painted, and if you get near enough you can see the grain of the wood in the manger delicately and beautifully laid in. I did not discover this until after I had engraved it, which I did on a dull day; but when upon a bright day I again viewed it through my glass I discovered—to my mortification—the delicate graining and the knots in the wood, which only a few feet distant appeared a flat, smooth color as in my engraving; for though the details are so carefully worked in, the effect is broad. The halos of gold around the heads are especially rich and delicate. I could make no attempt to get in the

wealth of ornament there ingrained. The color of the whole is very rich—the Madonna's robe being a middle tone of blue; that of Joseph an agreeable yellow of a lighter tone; that of the maid next him a rich deep purple; that of the kneeling figure a rich purplish-brown, with gold worked through it and the whole incised, which gives depth and softness, while the other portion of the garment of this figure is worked in the same way with whitish tints mingled with gold. This is very curious and beautiful work. In the gold border of the garment colored stones were inset, which are now broken off. Over the arches which frame the picture—three in number—are three medallions, built in with the frame and forming a part of it, one over each arch. These are busts of prophets, except the middle one, which represents God the Father. On each side of the medallions are reclining figures, similar in position to the "Night and Day" of Michael Angelo, and above each one is a sitting figure, so that a triangular form is given to the space above each arch; and finally the separate parts of the frame terminate above each in an ornamental point. The predella, or base of the picture, comprised "The Nativity," 24 by 10 inches; "The Flight into Egypt," 36 by 10 inches; and "The Presentation in the Temple," 24 by 10 inches. The last of these is now in the Louvre at Paris. "The Flight into Egypt" is the central panel. The Madonna is seated upon the ass and conducted by Joseph; a servant follows; it is evening, and the sun is setting in a clear blue sky over a rich and charming landscape. The sun is a golden ball in relief. This, being burnished, shines where the light touches it. The leaves of the burdened fruit-trees, and the hills, are illumined with touches of gold mingled with delicate tones of yellow and orange, with cooler shades interspersed, and the realistic effect of sunlight is delightful. A city in sunlight rises in the distance.

¹ Lindsay makes Gentile appear at Orvieto in 1423, and go from there to Florence (as the date 1425 is on a picture in San Niccolò), and supposes that he went to Rome

in the following year. Cavalcaselle, on the contrary, believes the Orvieto madonna to have been painted later, and that he went to Rome immediately after.

PRESENTIMENTS, VISIONS, AND APPARITIONS.

One question more than others all
Of thoughtful minds implores reply:
It is, as breathed from star and pall,
"What fate awaits us when we die?"

If these words are true, certainly next in importunate demand is whether men shall direct their conduct by practical wisdom and right motives, or look for and follow occult intimations which may either confirm or contradict the judgment.

Exclusive of the sphere of true religion,—which does not claim to be an infallible guide except to repentance, purity of motive, and the life beyond,—omens, premonitions, presentiments, visions, and apparitions have exerted the greatest influence over the decisions and actions of mankind.

Omens are extraordinary events which, on account of the opinions held of them, are thought to presage disaster. They are not true presentiments, but generalizations from imperfect data. Astrology and divination exhibit on a large scale the fallacies underlying such conclusions, belief in them being sustained by the observation of occasional coincidences between events and preceding actions or conditions that could have had no causal connection with them. Dreams often afford similar materials for erroneous reasonings, but as they originate in the mind, they are sometimes so similar to presentiments that it is impossible to decide whether a presentiment caused the dream, or the dream the presentiment.

A presentiment in the strictly etymological sense is a previous conception, sentiment, opinion, or apprehension; but its secondary meaning, which has almost supplanted the primary, both in the French and English use of the word, is an antecedent impression or conviction of something about to happen. Though presentiments of good are common and often fulfilled, as their results are not tragical they are seldom remembered or attributed to supernatural causes; and for this reason the word presentiment is confined almost exclusively to inward premonitions of evil, and is practically the equivalent of "foreboding" in such passages as Dryden's, "My heart forebodes I ne'er shall see you more."

Few would consider general forebodings of evil worthy of special investigation. To some

temperaments they are peculiar, and prosperity, however great, cannot dissipate them. They may arise from overwork, old age, or from prolonged sickness of any kind except consumption; and as evil overtakes the majority of mankind, such general forebodings are certain of general fulfillment. It is only when time and events concur with the presentiment that it becomes a phenomenon requiring scientific treatment; and being a product of the mind allied to many other experiences, it is a philosophical problem of the first magnitude.

A writer in the "Cornhill Magazine" for October, 1886, attempts to lay down the essence of a true presentiment. He says that "it must be spontaneous; it must come at a time when you have no reason to look for it." He explains these conditions by saying that you must not be ill and think you have a presentiment that you will not recover; you must not be away from home and think that some calamity has happened there; you must not know that a friend is in danger and have a presentiment of his death; you must not have reason to suspect a man and have a presentiment that he will cheat you.

In laying down these conditions he justifies himself by saying that they are necessary, "because in all these instances there is a simple natural cause for fear or uneasiness." I cannot admit that all these conditions are exact. The person may indeed be sick, yet the illness may be slight, and its seat removed from any fatal possibility; and if in opposition to every indication he have a foreboding that he will not recover, which persists in defiance of reason, and does or does not end in death, it has the mental and emotional characteristics of a presentiment. Of course if a person have yellow fever, and a presentiment of his death, it is in harmony with popular belief; though, according to the statistics of the epidemic in Jacksonville, the proportion of deaths is but about one to ten cases, and the rational expectation would be that an ordinary person attacked had nine chances in ten for recovery. Again, if a person leave his family in perfect health, knowing no cause of danger either to them or to his property, and have a presentiment impelling him to go back, and on arriving find his worst fears realized, although his peculiar state of mind arose during an absence from home, it has the characteristics of a presentiment, both in its origin and in the relation of time and events.

Conclusions drawn from reasoning and generalizations from data may produce convictions so strong that men would die for them. Under their influence they may risk their lives and fortunes in the pursuit of objects which cannot be attained, if at all, until after many years. These are not presentiments, for the sum of the reasonings and experiences of the man becomes the unconscious test which he applies to everything submitted to his judgment.

But if there be genuine presentiments which foretell future events they must have an external source, human or extra-human. That God could produce such impressions none who admit his existence can doubt. Whether other beings, in or out of human bodies, could do so is an unproven theory. Clairvoyance and telepathy do not apply to the subject of presentiments in the sense now under consideration. The clairvoyant theory of perception is the power to read the past, discern the present, and forecast the future; that of telepathy a transfer of ideas and feelings spontaneously or intentionally from a living person called the agent to another called the percipient. These theories will hereafter receive attention upon their own merits.

Most persons holding that God could at any time create a presentiment will incline to the comfortable belief that he sometimes does so, and that this is one of the means whereby he cares for those who put their trust in him. But the fact that God can produce presentiments is not in itself an evidence, nor does it even rise to the dignity of a presumption that he will produce them. He could preserve all his servants from destruction by sea or by land, he could impart to all his people a knowledge of future events; but he does not. The righteous often die in the pestilence and in calamities at sea; the wicked may escape, while those who pray sink.

While it would be presumptuous to affirm that no such presentiment as we are considering is ever imparted by the Spirit of God to human beings, two propositions may be supported without irreverence: first, that the human mind without special influence from God or other beings may originate presentiments; second, that the probability is that this is their true explanation.

UNSUSPECTED MENTAL RESOURCES.

SELF-ESTEEM is common and self-conceit general, yet few persons have an adequate idea of the resources of their own minds. Most fancy that what they recollect is the measure of what they know; whereas, in addition to every fact or idea that any person remembers, there are countless others which have entered

his mind, and are liable at any moment to cross the plane of his consciousness. He who, when a thought arises, will ask, "How came I to think of this?" in the effort to trace the successive steps by which the mind traveled from the last conscious thought or experience to that which is the subject of retrospection will be compelled to conclude that these lightning-like movements of the mind have as often been directed by associations of which we are unconscious as by those whose significance and relations are perceived. Experiments to determine the rapidity of thought, by uttering a sentence or command and noting the time before the rational perception of it is manifest, are deceptive, because they involve the rate of motion of the senses, which is slow compared with the movement of ideas in the mind.

Revery frequently affects the emotions powerfully, and produces an influence which is felt for days and even months, and that when the mind, calmly reflecting, rejects the idea that there is any cause for the depression. A common experience of foreign travelers is that the mind runs over the whole field of personal interest illuminating it as with flashes, bringing before him who pursues his way "remote, unfriended, melancholy, slow," vivid thoughts of home and friends. Such pensive states are often accompanied by intense concern, which crystallizes into conviction, that death or some other calamity has already taken place. Thousands of letters and many telegraphic dispatches inspired by such feelings cross the sea every summer to receive responses indicating that there is no occasion for anxiety. Many business men will also acknowledge that at different times in the course of their careers, for reasons which they have not been able to fathom, an impression of impending calamity has possessed them, which was so strong as to make them ready to dispute the truth of the trial-balance which showed them to be solvent and prosperous.

The observation of the reader will doubtless furnish instances of persons whose forebodings of calamity—sometimes confirmed by the event, but oftener otherwise—are recognized by their business partners and friends, and call for the exercise of patience and the use of every means to dissipate the mysterious, unwelcome, and paralyzing impression. A manufacturer whose name is known in every city in the Union, and in most foreign countries, whose riches are estimated at many millions, whose employees are numbered by thousands, whose charities are munificent, whose piety is undoubted, and whose sanity is unquestioned, has had presentiments of disaster a score of times within the last twenty-five years, no one of which has been fulfilled; but all were as

intense and overpowering while they lasted as any could be.

Two other mental phenomena must be observed. No discipline, however protracted and rigid, can exclude thoughts which start mysteriously concerning life, business, home, friends, investments, etc. The mathematician may be engaged in solving the most intricate problems, the theologian in preparing discourses, the essayist in the flow of composition, the accountant in adding a column of figures, but none of these can be certain of fifteen consecutive minutes undisturbed by ideas or impressions almost as vivid as a living personality. The difference between the disciplined and the undisciplined mind consists chiefly in the ability to expel the intruder, and not in exemption from such visits.

The other phenomenon is, that the mind, in a voluntary or an involuntary review of the situation, will frequently pause upon one phase of it, which will predominate over others without any apparent reason. A parent absent from home may be particularly anxious about one of three children and be for weeks under the shadow of a causeless fear. As every mental state must have a cause, in the labyrinth of associated ideas and feelings, some occasion must exist; but introspection may never reveal it. To demonstrate that the mind cannot originate presentiments is, therefore, impossible; and we are brought to the question whether, in the number or character of such presentiments, there be convincing evidence that they have a supernatural origin.

Many experiences called presentiments are not of that nature. Dr. Forbes Winslow's "Psychological Journal" gives a tragic account of a presentiment to the great master of kings, Talleyrand. Dr. Sigmond received it from the widow of the private secretary and friend of Talleyrand, M. Comache. It shows signs of having been written afterwards and embellished. Talleyrand said, "Upon one occasion I was gifted for a single moment with an unknown and mysterious power." He had fled from France with an intimate friend named Beaumetz. They had arrived in New York together, and, considering that they could not return to France, decided to improve the little money that was left by speculation, and freighted a small vessel for India. Bills were all paid and farewells taken; but there was a delay of some days for a fair wind, during which the time of departure was uncertain. Beaumetz was irritated to an extraordinary degree, and unable to remain quietly at home. He hurried back and forth from the city with an eager, restless activity. He had been ever remarkable for great calmness and placidity of temper. One day he entered, evidently laboring under great excite-

ment, though trying to seem calm. Talleyrand was writing letters to Europe. Beaumetz, with forced gaiety, said: "What need to waste time penning those letters? They will not reach their destination. Let us take a turn on the Battery. The wind may be chopping round; we may be nearer our departure than we imagine." The language in which the dénouement is described is graphic:

We walked through the crowded streets to the Battery. He had seized my arm and hurried me along, seemingly in eager haste to advance. We had arrived at the broad esplanade, the glory then, as now, of New York. Beaumetz quickened his steps still more until we arrived close to the water's edge. He talked loud and quickly, admiring in energetic terms the beauty of the scenery, the Brooklyn Heights, the shady groves of the island, the ships riding at anchor, and the busy scene on the peopled wharf, when suddenly he paused in his mad, incoherent discourse, for I had freed my arm from his grasp, and stood immovable before him. Staying his wild and rapid steps, I fixed my eye upon his face. He turned aside cowed and dismayed. "Beaumetz," I shouted, "you mean to murder me. You intend to throw me from the height into the sea below. Deny it, monster, if you can." The maniac stared at me for a moment, but I took especial care not to avert my gaze from his countenance, and he quailed beneath it. He stammered a few incoherent words, and strove to pass me, but I barred his passage with extended arms. He looked vacantly right and left, and then flung himself upon my neck and burst into tears. "'T is true, 't is true, my friend. The thought has haunted me day and night like a flash from the lurid fire of hell. It was for this I brought you here. Look! You stand within a foot of the edge of the parapet. In another instant the work would have been done." The demon had left him. His eye was unsettled, and the white foam stood in bubbles on his white lips, but he was no longer tossed by the same mad excitement under which he had been laboring, for he suffered me to lead him home without a single word. A few days' repose, bleeding, abstinence, completely restored him to his former self, and, what is more extraordinary, the circumstance was never mentioned between us. My Fate was at work.

What there is in this narrative to imply anything extraordinary, in view of the extraordinary circumstances, I am unable to perceive. Beaumetz had been unusually calm; he became greatly excited. Every action he performed and every word he said, for several days, was sufficient to excite alarm as to his mental condition. He was on the verge of an attack of acute mania. That Talleyrand had recognized his condition to some extent is apparent; that his mind perceived the danger, and that he took the only natural course to escape, is also clear; and the history of lunatic asylums abounds in accounts by friends or attendants of their discerning at the right moment that the maniac meant to perpetrate a tragic deed.

In some instances it has been foreseen, and the wife, after predicting her own death at his hands, has succumbed to the maniacal fury of the once loving husband rather than allow him to be placed under restraint. A case of this sort, originating in the highest circles of American society, but culminating in Europe, has startled the world within a few years.

IMPRESSIONS AND "IMPERATIVE CONCEPTIONS."

IMPRESSIONS are closely allied to presentiments, and many both devout and undevout persons yield to their influence. Baseball pitchers, prize-fighters, soldiers, and politicians are subject to them. The celebrated Dr. Nathan Bangs, a minister of great influence and strength of character, early in life was accustomed to believe in and follow impressions. The manner in which he was delivered from the fear of them is described in Stevens's "Life of Bangs," page 101 :

On a certain occasion, when the weather was very cold and the snow deep, the mind of Dr. Bangs became more than usually impressed with the value of souls. As he rode along he came opposite a dwelling which stood quite a distance back in the field, and instantly he became impressed with the thought that he ought to go and talk and pray with that family. He was in a feeble condition, no path had been made to the house, and he knew it would be dangerous for him to wade that distance and expose himself to the cold. So he resisted the impression and passed on ; but no sooner had he passed the house than it became doubly strong, and "he finally turned back, tied his horse to the fence, waded through the snow to the house, and *not a soul was there!*"

His friend and successor in Canada, Dr. Fitch Reed, who communicated these facts to Dr. Stevens, says, "From that time he resolved never to confide in *mere impressions.*"

A ludicrous instance of an impression connected with a supposed answer to prayer was notorious in the city of New York forty years ago. A gentleman of excellent character prayed that he might receive an impression from God when he should come into the presence of the person who would make him a suitable wife. He received assurance that his prayer would be answered, and tried to maintain a devout and expectant frame of mind.

The months passed without a sign, but one day, while walking up Broadway, he saw a lady walking ahead of him whose motions were exceedingly graceful, and instantly came the impression, "This is the woman whom God hath chosen for thee." For a long time he followed her in silence. At last the object of his anxiety turned into a side street. He turned also, and at that moment she dropped her handkerchief. He hastened forward to take it from the ground, and as she lifted her veil to thank him he perceived that she was of African descent! In an instant his faith in impressions was forever destroyed, and it was his custom in speaking of the occurrence to say that he had learned that prayer could not be substituted for common sense.

The number of impressions of which nothing comes is so much greater than those which appear to be fulfilled as to satisfy rational minds that they are not to be relied upon ; and this requires on moral grounds the further conclusion that they are not of supernatural origin.

"Imperative conceptions," known among the insane, often have parallels among the sane. It is common for lunatics who have committed some atrocious act to assign, and often with absolute truth, that "it had to be done," or that they "had to do it." Certain crimes committed by sane persons under a powerful influence have also been excused upon that ground, when a just view would show that though strongly impelled they were not incapable of resisting the impression, and were therefore responsible. I venture to affirm that there are few persons who have not at some time in their lives felt almost irresistibly drawn to do some act, make some decision, or utter some word which they knew was not expedient ; but the conviction that "it had to be done" predominated, and in many instances they have yielded. Where the consequences are not serious the effects may still be evil, for when the "ego" yields contrary to the judgment its power of resistance is lessened. These imperative impressions, which in the purely insane absolve from guilt, are often seen in their germs in the conduct of children who are dominated by their imaginations and sensibilities.

These are all akin to the state of mind in which presentiments arise.¹

¹ Dr. Henry M. Hurd, the justly distinguished superintendent of the Eastern Michigan Asylum for the Insane at Pontiac, in speaking of imperative conceptions says : "By this term is understood a mental concept or impression arising in the mind without external cause, or an emotional basis, or logical connection with any previous train of thought, which dominates the will and often compels to actions which are known to be ludicrous or improper, or contrary

to the judgment of the individual. The imperative conception differs from the delusion in the fact that it is not elaborated by any process of reasoning, and does not commend itself to the reason or to the judgment. . . . *It is not necessarily an evidence of insanity*, unless it persists and dominates the conduct habitually. All persons have imperative conceptions arising spontaneously in the mind, which momentarily influence action and compel attention." He gives as

CONSEQUENCES.

PRESENTIMENTS concerning hours of death have sometimes been defeated by deceiving the subjects of them. Well-authenticated instances exist of chloroforming those who had made preparation for death, but whose gloomy apprehension was dispelled when they found that the time had passed and they were still living.

The case of the dissipated Lord Lytton, who was subject to "suffocating fits," and who claimed that his death had been predicted to occur in three days, at twelve o'clock, midnight, is easily explained. On the evening of that night some of his friends to whom he told the story said, when he was absent from the room, "Lytton will frighten himself into another fit with this foolish ghost story"; and thinking to prevent it they set forward the clock which stood in the room. When he returned they called out, "Hurrah, Lytton! Twelve o'clock is past, you've jockeyed the ghost; now the best thing to do is to go quietly to bed, and in the morning you will be all right." But they had forgotten about the clock in the parish church tower, and when it began slowly tolling the hour of midnight he was seized with a paroxysm and died in great agony. The opinion of those who knew the circumstances was that the sudden revulsion of feeling caused such a reaction as to bring on the fit which carried him off. This is a rational view, for when one nearly dead believes that he is about to die the incubus of such an impression is as effective as a dirk or poison.

Many extraordinary tales are told of presentiments on the eve of battle, and the particulars are given; but this is not wonderful. Soldiers and sailors are proverbially superstitious. The leisure they frequently have favors the recital of marvelous experiences, and battles depend upon so many contingencies, and are liable to be controlled by such inexplicable circumstances, as to give to even the bravest of men a tinge of superstition. It has been observed that the most unrighteous battles, fought against an oppressed people, have been attended by victories turning upon circumstances that may have been accidental; and that the most heroic patriotism has been defeated in the same way. That soldiers should have presentiments is not strange; and that those who have been exceedingly fortunate through a score of battles should sometimes in moments of depression conclude that they would die in the next battle is not extraordi-

nary. In these voluminous narratives we hear little or nothing of presentiments of certain escape, though they too are often fulfilled and as often disappointed.

A correspondent of "Notes and Queries," second series, thirty-fourth volume, having spent several months in the Crimea during the severest period of the bombardment, says: "I can state that many cases of presentiment were fulfilled; as also that some were falsified. There were also many deaths without any accompanying presentiment having been made known." The great Turenne exclaimed, "I do not mean to be killed to-day"; but a few moments afterwards he was struck down in battle by a cannon ball.

The possibilities of chance in the fulfillment of presentiments are incomputable, as a fact which occurred in this country during the civil war, and which is known by thousands yet living to be true, may serve to show. Joseph C. Baldwin, a young gentleman residing in Newark, N. J., was a journalist of more than local fame. He wrote under several pen names, one of which was "Ned Carrol," and another "Frank Greenwood." The articles written under the latter name were unlike any of his other productions, being personal and censorious in character; and Frank Greenwood was in consequence most unpopular in Newark and vicinity, while Ned Carrol was a general favorite. Early in the war Mr. Baldwin enlisted in the 11th regiment of New Jersey Volunteers, and after arriving at the seat of war wrote several letters for publication, in one of which, sent to the Newark "Courier," he described the death of the mythical Greenwood in these words:

ARMY OF THE LOWER POTOMAC,
GENERAL HOOKER'S DIVISION.

MR. EDITOR:

I only fulfill the dying request of a beloved comrade in apprising you of his sad fate. Two months ago Frank Greenwood joined our company (C, 5th regiment), and soon became a general favorite, owing to his great sociability and undaunted courage. He received his death-wound from a shell, which was thrown from the Cockpit Point rebel battery, and burst within twenty feet of him, while holding the signal halyards at a review on the 3d inst. We mourn him as a brother.

NED CARROL.

On the 15th of May, 1864, Lieutenant Baldwin, who had been in the battles of Bull Run, Gettysburg, Fredericksburg, Chancellorsville, Antietam, and the Wilderness, and a score or more of skirmishes; who had had many narrow escapes and many wounds in the active

illustrations the common experience of an overpowering impression that a watch has not been wound, or a window fastened, or that some other regular duty has not been performed, which is enough to destroy a person's

peace of mind after he has retired, and compels him to leave his bed only to find that there is no foundation for the impression.

service, sat in camp knowing of no danger near, when a piece of iron from a shell "thrown from a rebel battery," which "burst within twenty feet of him," struck him in the back of the head, killing him instantly.

Let those who propose to prove supernatural portents by mathematics determine what the "probability" was that in a mere spirit of jest he should describe in detail the manner of his own death months afterwards.¹

Just after the close of the civil war I concluded to go South by steamer, and took passage from St. Louis on the steamship *Luminary* for New Orleans. Navigation on the Mississippi River at the close of the war was uncertain. Many old vessels were employed, the condition of the river was dangerous, and during the preceding twelve or fifteen months nine steamers had been blown up, or otherwise destroyed, resulting in great loss of life. Nearly all the accidents had been caused by the explosion of what are known as tubular boilers, and a great prejudice existed against vessels having boilers of that kind. The *Luminary* was of the old-fashioned sort, and quite a number of passengers had taken it on that account.

I was accompanied to the vessel by my brother, who up to that time had traveled with me, and was about to return to the East. As he was upon the point of bidding me farewell, I was seized without a moment's thought or preparation with the most appalling conviction that the vessel would be lost, that I was looking upon my brother for the last time, and seemed to see with almost the vividness of an actual perception the scene of the explosion, to hear the shrieks of the passengers, and to feel myself swallowed up in the general destruction. Composing myself as much as possible, I said to my brother: "If ever a man had a presentiment of death, I have it now; but you know I have for years held that presentiments spring from physical weakness, superstition, or cowardice. Would you yield to these terrible feelings?" He replied, "No! If you do, you will always be a slave to them." After some further conversation he went ashore, and the boat started.

For several hours the dread of disaster overhung me, but gradually wore off, and late at night I fell asleep. The distance from St. Louis to New Orleans is about twelve hundred miles. The time taken by the *Luminary* was seven days. It was in all respects, after the first day,

a delightful voyage. After remaining in New Orleans a few days I reëmbarked on the same vessel, continuing up the river eight hundred miles, making in all more than two thousand miles without any accident.

Since that experience, in many voyages I have made it an object to inquire of travelers and others concerning presentiments and have found that they are very common, occasionally fulfilled, generally not so; and that it is the tendency with practically all persons who have had one presentiment come true to force themselves into all, and to become tyrants over those dependent upon them or those traveling with them. It is to be frankly admitted that no matter how vivid the supposed presentiment might be, its non-fulfillment would not demonstrate that there are no presentiments which must have originated external to the mind of the subject; but having been led by my experience to induce many persons to defy such feelings without a single instance of reported evil results, it confirms strongly the hypothesis of their subjective origin.

That presentiments are governed by no moral principle in the character of the subjects to which they are applied, the persons who receive them, the occasions upon which they are given, and their effects, is apparent. The most immoral have claimed to have them, have communicated them to others, and they have sometimes been fulfilled by events from which the persons having them have derived great personal advantages. The best of men have had presentiments, but the great majority of good people have not; and the greatest calamities which have befallen most persons have come without any warning whatsoever, except such as could be inferred from existing situations. Experience, foresight, and guidance by ordinary sagacity have been all that mankind have had to rely upon; and to be governed only by these, combating or disregarding presentiments, impressions, and powerful impulses for which no foundation can be found in the nature of things, is the only safe and stable rule.

VISIONS.

By visions, I mean appearances to the mind's eye when there is no corresponding reality. Of the hallucinations of the insane it is necessary to say but little, as there is no doubt as to their nature and source. Gener-

¹ Such dreams as these, without any proper authentication of detail, are published and republished. "The night that President Lincoln was murdered, a neighbor of mine," writes a physician, "declared that the President was killed, and by an assassin. It was several hours before the news reached the town."

The wife of a New York clergyman made a similar statement just before the news arrived of the as-

sassination of President Garfield, and said that she saw him in a railway station, surrounded by ladies and others.

But we hear nothing of the seventeen persons who communicated to Andrew Johnson, in the course of the three years that he was President, dreams describing his death by assassination; nor of similar communications made to the late President Arthur.

ally the insane think them to be true perceptions, and endeavor to conform their conduct to them. Yet in some instances, and very often in the beginning of insanity, they admit that they are morbid and contend against them.

A question of deeper interest, and of closer relation to the subjects treated in these articles, is whether subjective visions are possible to the *sane*; and, if so, whether they are at all common, and liable to occur as isolated circumstances. On a full survey of the subject, both these questions will be answered in the affirmative. To say nothing of the visions produced by alcohol, opium, hasheesh, fever, blows upon the head, prolonged abstinence, deep anxiety, or those which precede attacks of epilepsy or of apoplexy, it is certain that hallucinations often arise without assignable cause or subsequent effect; and the subjects of them demonstrate their sanity by recognizing the unreal character of their perceptions.

Griesinger, one of the most eminent and discriminating writers on mental diseases, says: "Nothing would be more erroneous than to consider a man to be mentally diseased because he had hallucinations. The most extended experience shows rather that such phenomena occur in the lives of very distinguished and highly intellectual men, of the most different dispositions and various casts of mind, but especially in those of warm and powerful imagination." In illustration he speaks of Tasso, who, in the presence of Manco, carried on a long conversation with his protecting spirit; and of Goethe's well-known blue-gray vision, and his ideal flowers with their curious buds. He speaks briefly also of the hallucinations of Sir Walter Scott, Jean Paul, Benvenuto Cellini, Spinoza, Pascal; of Van Helmont, who saw his own soul in the form of a light with a human countenance; of Andral, the great physician, who experienced an hallucination of sight; and of Leuret, who, in his "Fragments of Psychology," gives an account of a phantasm of hearing which he experienced.

A. Brierre de Boismont divided hallucinations that are compatible with sanity into two kinds—those which are corrected by the understanding, and those which, on account of superstition, sluggishness of thought, love of the marvelous, inability to interpret them correctly, or because the emotions which they excite make calm consideration impossible, are not corrected. The cases which he adduces are numerous and striking. One is that of Talma, who, when he trod the stage, could by the force of his will make all the brilliant dresses of his numerous audience disappear and substitute skeletons for the living characters. When he had thus filled the theater with these singular spectators, his emotions were

such as to give to his playing a force which produced the most striking effects. The case of an intelligent lady who would see a robber enter her chamber and conceal himself under her bed is in point. Though the spectacle produced violent palpitation of the heart and universal trembling, she was aware of its falsity, and after some moments her judgment and reason would triumph so that she could approach the bed and examine it without fear.

Another case was communicated by a physician of acknowledged reputation to Sir Walter Scott. The first hallucination was that of the presence of a great cat. After a few months the cat disappeared, and a phantom of a higher grade took its place—that of a gentleman usher dressed as though he was in the service of a lord lieutenant, or of some great functionary of the Church. But after some months he disappeared, and a phantom horrible and distressing, a skeleton, appeared. The fact of these visions was concealed by the subject of them, who was an important officer in a department of justice, for several years. Though he knew that they were of subjective origin, they wore him out, and he died a victim to the agony in which his years were passed.

Dr. Abercrombie gives a case of a man who had been all his life beset by hallucinations: when he met a friend in the street, he was uncertain whether he was a real person or a phantom, but by paying close attention he could distinguish between them. Dr. Abercrombie declares that he was at the time of writing in good health, of a clear intellect, and occupied in business.

Many striking instances, the most valuable of which are those personally attested by Boismont, or by the authorities whom he quotes, are given where the mind was *sane*, though the hallucinations were *not* corrected by it. It must not be supposed that these hallucinations of the sane are confined to persons of distinction, of sedentary habits, or of poetic temperaments. Many have had once or twice in their lives spectral illusions, or instances of hallucination; and among plain men, mechanics, laborers, and the peasantry of all nations, they are very common. Griesinger, after giving a list of distinguished men who, though sane, had hallucinations, says: "Judging from what we have heard and observed on this subject, hallucinations doubtless occur also in men of very average minds, not as *rare* but as *frequently overlooked* phenomena."

Spectral illusions are very common in children, and are most frequently, though not always, perceived in the night between waking and sleeping.

The persistence of dreams after one is fully awake is also a suggestive occasional experi-

ence. After the appearance of the article on "Dreams, Nightmare, and Somnambulism," the editor of *THE CENTURY* received a letter written by a gentleman of the city of New York describing a dream which he had had a few weeks before, in which he dreamed that he was lying on his back in his own room and saw a frightful black hobgoblin, well defined in shape, which stood by the side of his bed and acted as if about to attack him. In the midst of the horror produced by the specter he awoke, found himself lying on his back just as he had dreamed, looked around the room and recognized the furniture and other things in the room, but continued to see the hobgoblin as plainly as he saw anything else, heard him growl, and distinctly saw him going on with his hostile demonstrations. Reasoning upon what he should do, he struggled to move, was unable to stir hand or foot for some time, but finally did move, and that instant the uncanny specter vanished. He says: "I had my eyes on the hobgoblin at the moment when I made the movement, and at once tried to see whether there was any object in the room which I could have mistaken for it, but could find none."

The books of marvels contain narratives which sometimes afford the evidence of their explanation, but frequently omit details which a person not disposed to the marvelous would be sure to examine if he had the opportunity. In Stilling's "Pneumatology," translated from the German and edited by Dr. George Bush, there are many of these. Stilling endeavors to show that people who see themselves are generally likely to die soon afterwards. He says: "When a person sees himself out of himself, while others who are present observe nothing, the apparition may be real, or it may be merely imaginary; but when it is also perceived by others it is no fantasy, but something real." He then gravely adds, "I myself know of persons having seen themselves and dying shortly afterwards."

He tells of one of the Government secretaries who went, as he was wont to do, to the archives to look for a paper which was very important. On arriving there he saw himself sitting on a chair. Much terrified, he went home and sent a woman servant to fetch the documents. It is asserted that the woman found him there also. Dr. Stilling does not say that the man died "shortly afterwards"; but that he did die some time after is probable, as the book is nearly a hundred years old.

Another case is that of a professor who was having a theological dispute with a number of his friends. Having occasion to go to the library for a book, he saw himself sitting on a chair at the table where he usually sat.

Going nearer, he looked over the shoulder of the person and saw that this figure of himself pointed with one finger of the right hand to a passage in the Bible. He looked at the passage indicated and saw that it was, "Set thine house in order, for thou shalt die." Full of astonishment and fear, he went back to the company and related the occurrence; and in spite of all they could say he was firm in the opinion that this apparition betokened his death, and accordingly took leave of his friends. "The day after, at six o'clock in the evening, he expired, *being advanced in years*." Many persons can be found who are not advanced in years who would be killed by such an experience as this.

The origin of such visions is readily traced. To imagine one's self in a familiar place with almost the vividness of life is not uncommon. Whether the vision shall be that of one's self or of another, when the mind is in such a state as to develop visions, depends much on the general belief at the time. The same principle is illustrated where it seems impossible not to see, in his accustomed seat at the table, a person who has died; and when worn with anxiety and long watching, even strong-minded men have been for a moment almost certain that they saw the familiar figure pass through the room. They have felt "the touch of a vanished hand" and heard "the sound of a voice that is still." Add a belief in the marvelous to such impressions and the vision is complete.

Sudden flashes of the imagination may develop the phenomenon instantaneously. Thus a sea captain engaged in his duty saw in the mist the figure of a boyhood companion beckoning to him. He was certain that it portended his death or that of the friend whose figure he saw, but nothing came of it. A gentleman passing along the street suddenly saw his brother whom he had not seen for twenty-five years. The figure was plain, and he was about to speak to him when he disappeared. Sometime afterwards the news came of his death at about the time of the vision. Taken alone it might seem as if there was some connection between the two circumstances; but so many have such occasional experiences which seem remarkably real, and yet are not followed by any noteworthy event, that the natural explanation is adequate to cover the cases.

The visions and hallucinations of hypnotism and animal magnetism require special examination.

HABITUAL VISIONS.

HALLUCINATIONS may become frequent, and to a certain extent systematic, especially if a belief in their supernatural origin exists; in which case a person may be for a long period

of sound and discriminating understanding, except when in a trance, or beholding a vision.

The visions of St. Theresa have, for three hundred years, formed an important chapter in religious literature, and another in pathology. At twelve she was devoutly pious, becoming so after the death of her mother. About the age of fifteen she fell off into a very worldly state, and against her will was placed by her father in a convent. She was frequently ill, and finally, after a year and a half, owing to dangerous sickness, returned home. Sometime afterwards she was seized with a violent fever, and upon recovery determined to devote herself to a religious life, and in opposition to her father's wishes entered a Carmelite convent and took the veil. This was in her twentieth year. Her biographer, as translated by Dr. Madden, says that she was attacked "with frequent fits of fainting and swooning, and a violent pain at her heart, which sometimes deprived her of her senses." Her first trance was in 1537, in her twenty-third year; it lasted for four days, and during it through excess of pain she bit her tongue in many places—a phenomenon common to fits of various kinds. At last she was reduced almost to a skeleton, had a paralytic affection of her limbs, and remained a cripple for three years. Her first vision was three years later, when she had allowed herself some dissipation of mind. "The apparition of our Lord was suddenly presented to the eyes of her soul, with a rigorous aspect testifying to the displeasure occasioned by her conduct."

There were great differences of opinion as to the source of her visions. Several very learned priests and confessors judged her to be deluded by the devil. One of them instructed her to make the sign of the cross, and to insult the vision as that of a fiend. In one of her visions, according to her statement, the Lord appeared angry at her instructions, and bade her tell them it was tyranny. She acknowledged that she frequently saw devils in hideous figures, but she drove them away by the cross or by holy water. She also claimed to see St. Joseph, the blessed Virgin, and other saints; had visions of purgatory, and saw a great number of souls in heaven who had been there.

There is no difficulty in explaining her visions on natural principles. She was a religious woman, in such a state of health as to be subject to trances, and they took their character from her conventual and other religious instruction. Visions of this kind have been common in the excitable of all sects. The early Methodists had many of them, which Mr. Wesley could not understand; and he expelled some persons from the society because they persisted against his commands in narrating visions which even he could not accept as of divine origin.

Luther suffered from hallucinations of a religious character for a considerable period of his life. The opposition he encountered, his sedentary life, taken in connection with the extraordinary powers attributed to Satan in the Middle Ages, fully explain his visions. Luther thought that the devil removed a bag of nuts, transformed himself into a fly, hung on his neck, and lay with him in bed. His visions would sometimes come on after nightmare. Here is his own account: "I awoke in the middle of the night. Satan appeared to me. I was seized with horror. I sweated and trembled. My heart beat in a frightful manner. The devil conversed with me. His logic was accompanied by a voice so alarming that the blood froze in my veins."

Zuinglius had a similar experience when he was half asleep. A phantom, black or white, he could not say which, appeared before him, called him a coward, and stirred him up to fight. This is explained by Forbes Winslow as a case of overheated sensorium, "during the transient continuance of which the retina became so disturbed as to conjure up a phantom which the patient not only mistook for a reality, but, what is still worse, acted upon his mistaken or diseased imagination."

Swedenborg's visions were of the same class. He was educated, devoted himself for many years to science, and up to his fifty-fourth year had the reputation of a scientific and philosophic student; was a professor in the mineralogical school, and believed to be a simple-minded man of the world. About 1743 he had a violent fever, in which for a little time he was mad, and rushed from the house stark naked, proclaiming himself the Messiah. After that period a change took place in him, and he lived twenty-nine years in the firm conviction that he held continual intercourse with angels and also with deceased human beings. He says that he conversed with St. Paul during the whole year, particularly in reference to the text Romans iii. 28. He asserted that he had conversed three times with St. John, once with Moses, a hundred times with Luther, and with angels daily "for twenty years."

Swedenborg had an elevated style of thought, and when reasoning upon the fundamental principle which underlies his theological views he is acute and profound. Attention has frequently been called to his shrewdness in explaining why when he claimed to hear the voices of angels those who stood by could not, by his declaring that he was accustomed to see and hear angels when perfectly wide awake, and adding: "The speech of an angel or of a spirit sounds like and as loud as that of a man, but it is not heard by the bystanders. The reason is that the speech of an angel,

or of a spirit, finds entrance first into a man's thoughts, and reaches his organs of hearing from within." It is necessary only to read his literal statements to perceive the subjective character of the visions. He gives detailed accounts of the habits, form, and dress of the angels. He sends his opponents mostly to Gehenna and sees them there. The chief representatives of the reformed churches go to heaven, but Catholics and some of his Protestant opponents he sees in vision elsewhere.

The visions and hallucinations of men of this class are quoted against each other in the ecclesiastical conflicts of the Middle Ages, and more lately, as proofs of the doctrines held by them. But as proofs they are mutually destructive, exist in all religions, true or false, and are liable to occur apart from religion. In the revivals which occurred in the early part of this century in the United States, and which sometimes take place now, visions are not infrequently connected with religious experience. When men pray without attending to the necessary cares of the body days and weeks together, the result is faintings and trances accompanied by visions. Where they are believed to be of divine origin they produce profound impressions, but there is no reason to think their cause different from those already discussed, nor have unbelievers in Christianity escaped them.

The autobiography of Lord Herbert of Cherbury relates one of the most remarkable visions, and an equally remarkable illustration of inconsistency. Lord Herbert did not believe in Christianity, and wrote a book against the miracles recorded in the Bible. When it was completed he exhibited it to Grotius and Tilenus, whom he met in France. They praised it much and exhorted him to publish it; but he foresaw that it would encounter great opposition, and hesitated for some time, not knowing whether to print it or not. The history of what followed is given in his own words:

One fine day, about noon, my windows being open, I took my book, knelt down, and pronounced aloud these words: "O eternal God, creator of the light which illuminates me, thou who enlightenest souls when thou wouldst, tell me by a celestial sign if I should publish or suppress my work." I had hardly uttered these words than a loud but agreeable sound proceeded from heaven, which impressed me with such great joy that I felt convinced that my request was granted. Howsoever strange this may appear, I protest, before God, not only that I heard the sound, but saw, in the clearest sky on which I ever gazed, the spot whence it came. In consequence of this sign I published my book, and spread it throughout all Christian lands, amongst all the learned capable of reading and appreciating it.

This circumstance is of great importance. No doubt has ever been thrown upon the

truth of the recital, which shows how a person not subject to hallucinations may, under circumstances of deep meditation, or under the influence of strong desire and expectation,—if I may so speak,—generate an hallucination, which may be the only one that he will experience in the course of a lifetime, and leave no evil effects except the false inferences which he will draw from it when he supposes it to be of supernatural origin. It shows that the absence or the presence of any form of faith may not be an essential, and it is clear that Lord Herbert might easily have passed into a state of habitual visions in all respects analogous to those of Swedenborg and St. Theresa.

VISIONS OF THE DYING.

THE visions which the dying are supposed to see are regarded by many with reverence bordering upon awe. The explanation given by Dr. Edward H. Clarke, a devout physician of Boston, in his "Visions: a Study of False Sight," is strictly physiological. After a long and very suggestive philosophical exposition, he says:

Should a bright ray of light falling from some object in the chamber on the retina of a dying person excite the visual apparatus and cells, the hieroglyphic of a departed child, husband, lover, or friend be brought into the field of subjective sight, the beloved one would be reproduced, and at once projected into space. Intense emotion, engendered by such a sight, would for an instant break through the stupefying power of nature's anæsthetic, as the surgeon's knife sometimes momentarily breaks the spell of ether, and the dying individual springing, with eyes intent, features transfigured, and arms outstretched, towards the vision, would naturally pronounce the long-remembered name, and then fall back and die. Such scenes have occurred. Few could witness them without an overwhelming sense of awe, oppressed "with thoughts beyond the reaches of our souls," at beholding for a moment the apparent lifting of the veil and the glory within. To the dying such a vision would not be false. It would not be imagination. It would be real to him. The well-known features would be there, and yet they would be a creation or reproduction of a dissolving brain, and not a messenger from the opened heavens. The vision would be a physiological effect, not a supernatural intervention.

Dr. Clarke is not willing to say that it is impossible that there shall be to the dying a revelation of the future into which they are about to enter. He says: "Probably all such visions as these are automatic. But yet, who, believing in God and personal immortality, as the writer rejoices in doing, will dare to say *absolutely all?*—will dare to assert there is no *possible* exception?"

During the past thirty years I have seen many persons die, and many who supposed

themselves to be dying who afterwards recovered, but I have no ground to suppose any of the visions supernatural, nor have seen any indication of the development of a faculty of cognizing another world. The single case given by Dr. Clarke appears insufficient to raise a presumption, much less to support a conclusion.¹

The following facts cannot be disputed nor disregarded in the elucidation of the subject:

First. Such dying visions occur in all parts of the world, under every form of civilization and religion, and if the dying appear to see anything, it is in harmony with the traditions which they have received.

Second. Such visions are often experienced by those whose lives have not been marked by religious consistency, while many of the most devout are permitted to die without such aid, and sometimes experience the severest mental conflicts as they approach the crisis.

Third. Where persons appear to see angels and disembodied spirits, the visions accord with the traditional views of their shape and expression; and where wicked persons see fiends and evil spirits, they harmonize with the descriptions which have been made the materials of sermons, poems, and supernatural narratives.

Fourth. Many of the most remarkable visions have been seen by persons who supposed themselves to be dying, but were not; and who when they recovered had not the slightest recollection of what had occurred. When a student I was called in with the others to witness the death-scene of the most popular young man in the institution. He had professed on the bed of death a religious experience, and was supposed to be dying of typhoid fever. Never have I heard more vivid descriptions or more eloquent words. It seemed as though he must see another state of being. After the scene he sunk into a lethargic state, so remained for some days, and gradually recovered. Both his religious conversion and visions were entirely forgotten, and not until many years afterwards did he enter upon a religious life.

Fifth. A consideration of great weight is this: the Catholic Church confers great honor upon the Holy Virgin; Protestants seldom make any reference to her. Trained as the Roman

Catholics are to supplicate the sympathy and prayers of the mother of our Lord, when they have visions of any kind I am informed by devout priests and by physicians that she generally appears in the foreground. Among the visions which dying Protestants have been supposed to see I have heard of only two in which the Virgin figured, and these were of persons trained in their youth as Catholics.

APPARITIONS.

THE passage most frequently quoted on the subject of apparitions is that which Dr. Johnson in "Rasselas" puts into the mouth of the sage Imlac:

That the dead are seen no more I will not undertake to maintain against the concurrent testimony of all ages and all nations. There is no people, rude or unlearned, among whom apparitions of the dead are not related and believed. This opinion, which prevails as far as human nature is diffused, could become universal only by its truth; those that never heard of one another would not have agreed in a tale which nothing but experience could make credible. That it is doubted by single cavaliers can very little weaken the general evidence; and some who deny it with their tongues confess it with fears.

All authorities agree that Dr. Johnson was very superstitious, and this passage when critically examined does not seem to be entitled to the weight which his great name and its clearness of statement have given to it. The concurrent testimony of all ages and nations can hardly create a presumption, unless it be assumed that there have been no universal errors. The assertion that the opinion could become universal only by its truth compels the assumption that all universal opinions are true. To prove that the dead are seen no more, or cannot appear to living beings, is of course impossible. But that a thing cannot be proven impossible is not a reason for believing it actual. No one can demonstrate that the spirit of Mahomet is not now embodied in the present Sultan of Turkey, but no one believes it to be so.

The belief in apparitions, common in all ages, was generally dying out in the middle of the last century, but was revived in the

¹ Some years ago I was visiting at the house of a citizen of Brooklyn, now one of the editors of a leading scientific publication. A gentleman, the father of his wife, was very ill. His disease was consumption complicated with extreme age. It was thought that he could not survive the day. For several days he had been in a state of stupor bordering upon coma, nor had he spoken for some hours. During the absence of his daughter from the room I sat by his bedside watching his painful breathing and anticipating the end, which could not be long delayed. Suddenly the dying man opened his eyes and said, "Old Virginia, old Virginia, old Virginia." I immediately summoned his daughter, but he never

uttered another syllable or showed any sign of consciousness, and died in a few hours. On asking members of the family if he had ever been connected in any way with Virginia, they said he had not, but was a native of Kentucky. Three months afterwards his son-in-law informed me that inquiry suggested by the circumstance revealed the fact that he was born in Virginia and lived there until he was ten years old. The sole explanation was that the vital force was so nearly exhausted as to be incapable of stimulating any of the brain cells, except those early impressed; and a vision of the lovely scenes of his childhood rose in his mind, and his intelligence was sufficient only to recognize it as in a dream.

antagonisms created by the excesses of materialistic and infidel opinions, which denied the truth of the miracles recorded in the Christian Scriptures. John Wesley says, "It is true that the English in general, and indeed most of the men in Europe, have given up all accounts of witches and apparitions as mere old wife's fables." He expresses great sorrow at this and says, "If but one account of the intercourse of men with superior spirits be admitted, their whole castle in the air (deism, atheism, materialism) falls to the ground."

The discussion of Mr. Wesley's views of the relation of witchcraft to true Christianity is not in place here. His testimony as to the opinions of men of his time is the best of which the case admits, and the assertion quoted concerning the value of proof of that kind in the then pending conflicts with the free-thinkers justifies the use made of it by Dr. Hibbert in his "Philosophy of Apparitions," published not more than forty years after Wesley's death.

Two subjects which have a bearing upon any theory of apparitions, telepathy and modern spiritualism, are also postponed. Telepathy does not bear directly upon apparitions in the sense of the direct manifestations of the dead only so far as it is connected with alleged perceptions of persons just dead or dying. At the close of the second part of "A Theory of Apparitions," published by the Society of Psychical Research, the writer says, "Of apparitions after death we say nothing here," and makes use of telepathy merely for the purpose of analogy. Modern spiritualism has so many phases, and its alleged and real phenomena are many of them so dissimilar in matter and manner to the spontaneous apparitions referred to by Lord Byron in

I merely mean to say what Johnson said,

That in the course of some six thousand years,
All nations have believed that from the dead

A visitant at intervals appears,

as to make it necessary to consider it separately.

What I design is to show that when the evidence is rigorously though fairly examined, the Scotch verdict of "Not proven" must be rendered concerning the reality of apparitions; and that the presumptions of their natural origin are so strong as to leave little doubt in minds not intoxicated by a love of the marvelous, or who do not desire to find by sensuous evidence an "Elysian road which will conduct man undoubtingly to such beliefs as his heart most craves."

The belief in apparitions was universal before the development of the scientific spirit. Scarce an instance can be given from antiquity of a tale of supernatural events carefully in-

vestigated, because to be told of the appearance of a ghost excited no more surprise than to be informed of a storm at sea, or of an extraordinary flash of lightning. In Greece and Rome such narratives furnish the materials of poetry, and for ages after the hold of the marvelous upon ordinary writers was broken the impression of primeval superstitions was so strong that the questions which science now asks—nay, more, the questions which practical men now ask—were not propounded.

To believe in such cases what antiquity believed, because antiquity believed it, is but to tighten the swaddling-clothes of the infant about the grown man and force him back into the cradle.

The testimony of a single witness to an apparition can be of little value, because whatever he thinks he sees may be a spectral illusion or an hallucination. The state of mind of a person who thinks that he sees an apparition is entirely unfavorable to calm observation; and after he has seen it he has nothing but his recollection of what he saw, unsupported by analogies or memoranda taken during the vision. To say that immediately after he witnessed such a thing he made a note of it, is at best to say only that he wrote down what he could remember at that time.

The identification of the dead must be a matter of very great difficulty to a living person, particularly as in many of the ghost stories the deceased has not been seen for twenty or twenty-five years, or perhaps was never seen by the person to whom he is alleged to appear. In view of the mental excitement, not to say trepidation, induced by the belief that he sees a spontaneous and unexpected apparition, the one who fancies that he sees the dead must be the least competent to determine whether it be a subjective vision or an actual object.

It has frequently been laid down as indisputable that if two persons see a vision at the same time its objective and authentic character is conclusively demonstrated. This by no means follows; on the contrary, a hundred persons may be confident that they see an apparition, and the proof that they do not may be conclusive. In the Middle Ages thousands believed in Vampirism. Less than two hundred years ago in Hungary, Moravia, Silesia, and Lorraine it was prevalent. "Some dreamed that these malicious specters took them by the throat, and, having strangled them, sucked their blood." Others believed that they actually saw them. At times when the imagination is greatly excited, and a belief in ghosts exists, they can be manufactured by the thousand, and thousands can see them. The colored people in the South have no trouble on this point. It is a common occur-

rence for the ghosts of persons hanged to appear to the prisoners in the jail, and though the officers may look at midnight, or whenever the ghost is said to appear, and can see nothing, scores of the prisoners are certain that they see the dreadful vision, and great revivals occur among them. An instance of this kind has occurred within a few years, resulting in the permanent reformation of several persons.

Sailors, naturally superstitious, have great powers as seers of ghosts. A vessel that sailed from Newcastle-upon-Tyne had on board a cook one of whose legs was shorter than the other, so that he walked in that way which in the vulgar idiom is called "with an up and a down." He died on the trip and was buried at sea. A few nights afterwards the captain was told by the mate that the cook was walking before the ship, and that all hands were on deck to see him. Angry at being awakened, the captain told the mate to let the cook alone and race with him to see whether the ship or he would get first to Newcastle. But being further importuned the captain finally turned out. I will now quote the words of Mr. Ellis (who published "*Brand's Popular Antiquities*") as they were received from the captain:

He honestly confessed that he had like to have caught the contagion, and on seeing something move in a way so similar to that which an old friend used, and withal having a cap on so like that which he was wont to wear, verily thought there was more in the report than he was at first willing to believe. A general panic diffused itself. He ordered the ship to be steered towards the object, but not a man would move the helm. Compelled to do this himself, he found on a nearer approach that the ridiculous cause of all their terror was part of a maintop, the remains of some wreck, floating before them.

If he had really caught the contagion the evidence would have been complete; the Society for Psychical Research might make much of it, and it would be declared to be a convincing proof of a future state.

Dr. Tuke gives an instance of a general misapprehension of vision. At the conflagration in the Crystal Palace, in the winter of 1866-67, when the animals were destroyed by fire, it was supposed that the chimpanzee had succeeded in escaping from his cage. Men saw the unhappy animal holding on to the roof and writhing in agony while trying to get hold of one of the iron ribs. They watched its struggles with sickening dread—but there was no animal there. "It was a tattered piece of blind, so torn as to resemble, to the eye of fancy, the body, arms, and legs of an ape!"

When Brigham Young asserted that he saw the angel of the Lord from Ensign Point, making signs that that was the place where the great city and tabernacle of the Latter Day

Saints would be established, the surrounding Mormons thought they beheld it, and nothing could shake their conviction of its reality.

Mistaken identity accounts for many apparitions. Resemblances between persons in no way related are much more numerous and striking than is generally supposed. Many instances of this were given in an article in this series entitled, "*Astrology, Divination, and Coincidences.*" Lord Byron, who was superstitious, in speaking of ghosts said:

And what is strangest upon this strange head
Is that, whatever bar the reason rears
'Gainst such belief, there's something stronger still
In its behalf, let those deny who will.

Yet he occasionally laughed at ghosts. In 1811, writing to Mr. Murray, he says, "My old school and form fellow Peel, the Irish Secretary, told me he saw me in St. James street; I was then in Turkey. A day or two afterwards he pointed out to his brother a person across the way and said, 'There is the man I took for Byron.' His brother answered, 'Why, it is Byron, and no one else.' I was at this time *seen* to write my name in the Palace book. I was then ill of a malaria fever. If I had died, here would have been a ghost story." According to the telepathic theory, Byron's self might have left his body in Turkey where he was sick and made an excursion to London. It would be interesting to have an account of the state of his body on that day; whether much agitated, or enjoying a calm and refreshing sleep in the absence of the perturbed spirit of the poet, who must have been an uneasy tenant at the best of times. But these details were omitted, and the natural explanation would be "mistaken identity."

A whole city was excited by the appearance of a person known to be dead—a silent man, who entered a hotel, registered his name, and looked wistfully about, speaking to no one, and not willing to explain his business. Terror seized upon the people. Every person who looked at him affirmed that he was the dead man. He was compelled after a few days to account for himself, and had no difficulty in proving, not only that he was a living man, but that he had never seen the man whom he so strongly resembled. A remarkable fact about this case was, that both the dead man and his double had three moles on the left cheek.

Jugglery and intentional deception, subsequently confessed, have explained many cases of apparition which within a short period previous to the exposure had been generally believed real in the communities where they were reported. One of the most common sources of supposed supernatural interference with ordinary laws is unexplained noises, especially

those that appear to respond to questions. Many of these have been subsequently explained by chemical conditions; others by the wind shrieking through bottles, down chimneys, and occasionally by pendulum motions caused by gravitation, shakings, or motions by the movements of distant bodies; one famous case by changes that had taken place, the result of mining operations beneath the ground upon which the house stood. The ringing of bells when it was obvious no one was pulling the wires—occasionally the result of electricity, at other times of cats—has terrified some ordinarily intelligent persons almost out of their senses. The disturbances produced by dogs, cats, and even rats, magnified by large rooms, immense fireplaces, and the transformation of innocent objects in nights when the moon is at the full, and the deep shadows produced by the movements of the limbs of trees reflected in mirrors, have all contributed to the production of awful impressions.

In a certain rectory within forty miles of the city of New York stood an old-fashioned candlestick surrounded by prisms of glass which were pendent from the top. On several occasions the family were awakened by the ringing of these in the night, the effect of which was to terrify the servants and all the inmates of the house, except the wife of the rector, who determined to solve the mystery. For a long time the sounds were not produced except in total darkness, but by gradually introducing the practice of burning a light at night the ringing was finally heard one night when there was a light in the room. The lady of the house then went quietly down to the dining-room and saw a large rat with every expression of pleasure leaping forward and with his forelegs striking the prisms so as to make them ring, and evidently taking the keenest delight in the sound thus produced.

In an article on Apparitions written by Andrew Lang, in the second volume of the "Encyclopædia Britannica," ninth edition, he says:

The writer once met, as he believed, a well-known and learned member of an English university who was really dying at a place more than a hundred miles distant from that in which he was seen. Supposing, for the sake of argument, that the writer did not mistake some other individual for the extremely noticeable person whom he seemed to see, the coincidence between the subjective impression and the death of the learned professor is, to say the least, curious.

To determine whether or not it was a case of mistaken identity is very important, but no opportunity is given in the passage quoted. If it was a subjective impression, the coincidence would be curious and nothing else; and not

more so, as I have shown abundantly, than many coincidences in trifles, and many other circumstances absolutely disconnected, and many subjective impressions without any coincidences. Mr. Lang, in the article referred to, has written like one who has crammed with the literature of the subject without being at the pains to reason closely upon the alleged facts. He refers to the superstitious horror shown by a dog at the moment of a supposed apparition to his master. That the dog exhibited horror when his owner thought he saw an apparition may be readily believed. And one familiar with dogs knows that nothing will terrify them more than a great appearance of alarm on the part of their masters without any visible cause. Of the same nature is the remark concerning the mysterious disturbances at the house of the Wesleys: "The mastiff was more afraid than any of the children." The volatile imaginations of children have never shown any great horror of mysteries; they were sustained, too, by confidence in their parents. But the dog heard mysterious noises which naturally greatly agitated him.

Mr. Lang closes his remarks on this part of the subject by naïvely saying, "The case of Baalam's ass is sufficiently well known." This case is not pertinent. Balaam's ass, according to the record, not only saw a supernatural appearance, but engaged in a process of reasoning in which his past life as an ass was called up to vindicate him from abuse, and further engaged in a conversation with his master in the latter's vernacular. Indeed, according to the record, he exhibited a cogency of reasoning which applied to most of the tales attested to prove the reality of apparitions would effectually "lay" the ghosts.

Many persons fancy that mysterious noises which will appear to respond to questions, to make raps or answer raps, conclusively prove that they are directed by intelligence. Sometimes they may, and the intelligence is quite likely to be of human origin; but noises of atmospheric, chemical, or electrical origin may furnish astonishing coincidences, just as the fissures in the rocks are extremely difficult to be distinguished from hieroglyphics. Some years ago an alphabet based on the spiritualistic alphabet was applied to the successive gusts of wind of a stormy autumn day, and the coincidences were astonishing. Whole sentences of a very significant character at times appeared to respond to the arbitrary standard. And in any case the conclusion that a noise the cause of which is not yet understood must be supernatural is a process of reasoning *ab ignorantia*.

That ghosts do not come to those most interested in them, and seldom or never to any who

long for them, has been a matter of note from the earliest times. Wordsworth's words, often quoted, state the conclusion drawn from this in language natural and almost convincing :

'T is falsely said
That there was ever intercourse
Betwixt the living and the dead,
For surely then I should have sight
Of him I wait for day and night
With love and longings infinite.

The ceremonies practiced by the Christian Church in the Middle Ages in the successful exorcising of ghosts are not less striking than the sort of evidence on which the ghosts were accepted. Two or three clergymen are necessary and the ceremony must be performed in Latin, "the language which strikes the most audacious ghost with terror." According to history and tradition the ghost may be laid for any term less than a hundred years, "in any place or body, filled or empty." But what a ghost hates most is the Red Sea. It is related on the most indisputable authority that the ghosts have earnestly besought exorcists not to confine them in that place; nor is any instance given of their escaping before the time!

When we consider the horrible injustice inflicted upon orphans whose estates are squandered by trustees, the concealment or destruction of wills, the ingratitude to destitute benefactors, the diverting of trust funds for benevolent purposes to objects abhorrent to those who with painful toil accumulated them and with confidence in the stability of human laws

bequeathed them, the loneliness and despair that fill human hearts, and the gloomy doubts of the reality of a future existence,—all of which would be rendered impossible if actual apparitions took place,—the conclusion that neither in the manner of the alleged comings nor in the objects for which they come is there any evidence to be found of their reality gathers almost irresistible force.

If it be assumed that the testimony of one person or of one hundred persons to a supernatural event is not sufficient to prove that it occurred, the question, "What becomes of the testimony of the Apostles and the five hundred brethren to the resurrection of Christ, and of Stephen to his seeing the heavens open," comes up again. It admits of but one answer. If they had nothing to give us but the fact that they saw a person alive who had been dead, it would be necessary to reject it on the ground that it is far more probable that they were deceived than that such a thing occurred. But that is not the case. They present to us the whole body of Christian doctrine, declaring that it was received from that person who predicted that he would rise from the dead, and whom they believed themselves to see, and with whom on various occasions they conversed after his resurrection. If the body of Christian doctrine in its relation to the moral nature of the thinker does not convince him of the divine origin and consequent truth of the record, we know of no means of doing so.

J. M. Buckley.

In *THE CENTURY* for July, 1888, in an article of this series entitled "Dreams, Nightmare, and Somnambulism," a quotation concerning Laura Bridgman, taken from an article by Joseph Jastrow, was erroneously attributed to the "Presbyterian Review" instead of to the "New Princeton Review," and the language to Prof. G. Stanley Hall. The facts were derived by Mr. Jastrow from an unpublished manuscript of Professor Hall, but the language quoted was his own.—J. M. B.

THE KING'S DIARY.

JULY 14, 1789.

"RIEN," he wrote, because it chanced that day
There was no hunt of fawn or stag or boar.
All else was nothing to the man who wore
The crown which once the brows of Hugh Capet
Had ached beneath, eight centuries away.
Since then what well-beloved and hated more
Had worn it lightly, or with anguish sore,
Some strong to rule and many but to slay.

"Nothing!" And, while he wrote the senseless word,
The tocsin rang in Paris; the human flood
Poured onward raging till it came where stood
The Bastille. Soon the foolish King had heard
How prone it lay. Behold his aimless wit:
He and his kingdom were as he had writ.
